1. This authorization shall only apply to Therma-Tru's three lines of fibreglass door panels, namely the Classic-Craft, Fiber-Classic and Smooth-Star models.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

   (a) any change has been made to:

      (i) the material, system or building design that is the subject matter of this Authorization;

      (ii) the address of the applicant specified in Section 1 of this Authorization; or,

(iii) the ownership of the company specified in Section 1 of this Authorization.

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 30th day of March, 2000.

BUILDING MATERIALS EVALUATION COMMISSION (BMEC) AUTHORIZATION REPORT

DATE OF AUTHORIZATION **February 24th 2000**
BMEC REFERENCE **BMEC 00-03-243**
BMEC APPLICATION # **BMEC # A2000-01**

JETVAC INC.
Engineered Water Collection Vacuum System

1. Applicant

JETVAC Inc.
333 Wyecroft Road
Unit 11B
Oakville, Ontario
L6K 2H2

Tel: 905) 842-9540
Fax: (905) 842-9542

2. Manufacturing Facilities

JETVAC Inc.
333 Wyecroft Road
Unit 11B
Oakville, Ontario
L6K 2H2

3. Description

The **JETVAC INC. Engineered Water Collection Vacuum System** is comprised of a vacuum generating unit (vacuum pumps and control module); vacuum valves and timers which control opening of the valves; and collection boxes/interceptors which receive water draining from the refrigerated food displays. Using the vacuum generating unit and multiple collection points, the **JETVAC INC. Engineered Water Collection Vacuum System** accumulates condensate, washdown and misting water from refrigerated food displays, moves it overhead to a collection tank, then discharges it to the sanitary drain system.

- Each refrigerated food display drains by gravity to a collection box / interceptor via a drain pipe having a water trap.

- Each refrigerated food display drain is equipped with and served by a dedicated vacuum make-up air opening located between the trap and the collection box/interceptor and terminating below the bottom level of the food display.

- One collection box/interceptor may serve up to eight refrigerated food displays and each collection box/interceptor is equipped with a triggering device causing the vacuum valve (which isolates it from the vacuum piping) to open when the water level in the collection box/interceptor reaches a set point.

- As the vacuum valve opens, water is drawn out by vacuum and transferred overhead (maximum vertical rise of 24 feet) to the collection tank. From the collection tank, the waste water is pumped through an indirect connection to the sanitary drain system.

4. Authorization Requested

The applicant sought authorization for the **JETVAC INC. Engineered Water Collection Vacuum System** as providing a level of performance equivalent to that required by Subclause 7.4.2.1.(1)(d)(i) of the Ontario Building Code, 1997 (the OBC).

5. Assessment

Reports and assessments provided by the applicant demonstrate that:

1) The indirect connection to the sanitary drain system at the discharge from the vacuum pumps of the **JETVAC INC. Engineered Water Collection Vacuum System** provides an equivalent level of performance to the prescribed individual food display connections required by Subclause 7.4.2.1.(1)(d)(i) of the OBC, in protecting the food in the displays from possible contamination caused by the sanitary drainage system.

2) The make-up air opening in the drain pipe exiting each refrigerated display ensures, that should the vacuum system fail, waste water from a display or from other displays, will exit to the floor and not back up into the food displays.

3) The make-up air opening is not a vent pipe for the purpose of Sentence 7.5.5.5.(1) of the OBC.

Accordingly, if the **JETVAC INC. Engineered Water Collection Vacuum System** as described in Section 3 above is designed, manufactured, installed and maintained in accordance with the limitations and conditions stated in this Authorization, it will provide a level of performance equivalent to that which would be achieved by conformance with Subclause 7.4.2.1.(1)(d)(i) of the OBC.

Reports submitted and reviewed:

1. Quality Control Manual relating to Vacuum Collection System Components

2. Description and Specification of System

3. Quality Control Manual

4. Installation Guide

5. JETVAC Vacuum System - Maintenance Manual

6. Authorization

The **JETVAC INC. Engineered Water Collection Vacuum System** as described above, is authorized as providing a level of performance equivalent to that which would be achieved by conformance with Subclause 7.4.2.1.(1)(d)(i) of the OBC, when designed, manufactured, installed and maintained in accordance with the manufacturer's recommendations and the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1. This Authorization is valid only for the **JETVAC Inc. Engineered Water Collection Vacuum System**.

2. The **JETVAC Inc. Engineered Water Collection Vacuum System** shall only be installed to collect condensate, washdown and misting water from refrigerated food displays.

3. The connection to the sanitary drainage system shall be made by terminating the **JETVAC Inc. Engineered Water Collection Vacuum System** discharge, a minimum of 25 mm above the flood level rim of the fixture that is directly connected to the sanitary system.

B. GENERAL CONDITIONS

1. The use of JETVAC Inc. Engineered Water Collection Vacuum System must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

2. A copy of this Authorization shall accompany each application for a building permit and shall be maintained on the site of the construction with the building permit.

3. The Applicant named in Section 1. hereof shall promptly notify the BMEC of:

   (a) the failure of the Applicant, or of the material, system or building design that is the subject matter of this Authorization, to comply with any of the terms and conditions set out in Section 6. A. above; or

(b) the occurrence of any of the events described in Sections 6. B. 4. (a) and (b) (ii) below.

4. The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

(i) the material, system or building design that is the subject matter of this Authorization;

(ii) the address of the applicant specified in Section 1 of this Authorization; or,

(iii) the ownership of the applicant specified in Section 1 of this Authorization.

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ.

(c) the Applicant, or the material, system or building design that is the subject matter of this Authorization, has failed to comply with any of the terms and conditions set out in Section 6. A. above; or

(d) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 24th day of February 2000

SPRUCEWOOD PRODUCTS
K-Joist™ Steel Reinforced 2X8 Wood Joist

1. Applicant

Sprucewood Products, a division of
855856 Ontario Limited
80 Morrow Road
Barrie, Ontario
L4N 3V8

Tel: (705) 728-7567
Fax: (705) 728-1973
Mobile: (416) 616-8305

2. Manufacturing Facilities

Sprucewood Products
80 Morrow Road
Barrie, Ontario
L4N 3V8

3. Description

K-Joist™ longitudinal steel reinforced wood joists are composite joists made up of No. 2 or better 2X8 lumber and four sheet steel strips (1" X 14 gauge grade A steel with a minimum tensile strength of 45 ksi) that are glued (epoxied) into routed grooves in the top and the bottom edges. The strips are embedded in at least 64% of the joist length and centred on the joist.

4. Authorization Requested

The applicant sought authorization for the use of K-Joist™ longitudinal steel reinforced 2X8 wood joists in standard wood-frame construction in accordance with Clauses 4.1.1.3. (i) and 4.3.1.1. (i) and Article 9.23.4.2. of the Ontario Building Code, 1997.

5. Assessment

Reports and assessments provided by the applicant show that if K-Joist™ longitudinal steel reinforced 2X8 wood joists are manufactured and installed in accordance with the limitations and conditions stated in this authorization, they will provide the level of performance equivalent to that which would be achieved by conformance with Article 9.23.4.2. of the Ontario Building Code, 1997.

Reports submitted and reviewed:

1. Letter dated October 4, 1999, summarizing the Evaluation conducted by Quaile Engineering Ltd. on the 2x8 K-Joist.

2. Report No. 94-43-1: STRUCTURAL TESTS OF REINFORCED WOOD JOISTS, Quaile Engineering Ltd., October 13, 1995.

3. Report No. 96-160-1: PERFORMANCE TESTS OF K-JOIST AND CONVENTIONAL WOOD JOIST FLOORS, Quaile Engineering Ltd., November 12, 1996.

4. United States Patent, Patent Number 5,497,595, March 12, 1996.

5. Canadian Intellectual Property Office (CIPO), Patent # 2,156,453

6. Installation Guide for K-Joists, Sprucewood Products, November 1999.

7. Quality Control Manual for K-Joists, Sprucewood Products, November 1999.

6. Authorization

The Sprucewood Products longitudinal steel reinforced 2X8 wood joists (K-Joist™) are authorized for use as floor joists in standard wood frame building construction when designed, manufactured and installed in accordance with the manufacturer's recommendations and the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1. K-Joist™ longitudinal steel reinforced wood joists are only authorized for use as floor joists in Part 9 buildings.

2. K-Joist™ longitudinal steel reinforced wood joists shall be used in conjunction with the load tables provided by the manufacturer bearing the seal of a professional engineer licenced in the province of Ontario.

3. K-Joist™ longitudinal steel reinforced wood joists shall be installed in accordance with standard requirements for conventional dimension lumber as required in Part 9 of the Ontario Building Code, including end restraint, bridging, sheathing, and bearing.

4. K-Joist™ longitudinal steel reinforced wood joists shall be painted or marked in a permanent manner for the purpose of clearly identifying them as containing metal.

5. K-Joist™ longitudinal steel reinforced wood joists shall not be used in exposed or wet conditions.

6. K-Joist™ longitudinal steel reinforced wood joists shall not be used for lintels, trimmers for openings, beams or headers.

7. K-Joist™ longitudinal steel reinforced wood joists shall not be used to support concentrated loads.

8. K-Joist™ longitudinal steel reinforced wood joists shall not be used in applications requiring a rated assembly or a fire separation.

9. The Applicant named in Part 1. of this Authorization shall perform all quality control measures in accordance with the "Quality Control Manual for K-Joists" submitted with the application and dated November 1999.

B. General Conditions

1. The use of K-Joist™ longitudinal steel reinforced 2X8 wood joists must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

2. A copy of this Authorization shall accompany each application for a building permit and shall be maintained on the site of the construction with the building permit.

3. The Applicant named in Section 1. hereof shall promptly notify the BMEC of:

   (a) the failure of the Applicant, or of the material, system or building design that is the subject matter of this Authorization, to comply with any of the terms and conditions set out in Section 6. A. above; or

(b) the occurrence of any of the events described in Sections 6. B. 4. (a) and (b) (ii) below.

4. The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

(i) the material, system or building design that is the subject matter of this Authorization;

(ii) the address of the applicant specified in Section 1 of this Authorization; or,

(iii) the ownership of the applicant specified in Section 1 of this Authorization.

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ.

(c) the Applicant, or the material, system or building design that is the subject matter of this Authorization, has failed to comply with any of the terms and conditions set out in Section 6. A. above; or

(d) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

CLEARSTREAM ALTERNATE TERTIARY DISCHARGE SYSTEM

1. Applicant / Manufacturer

Clearstream Wastewater Systems
P.O. 9337
Beaumont, Texas
USA 77709

Ph: (409) 755-1550 X 7
Fax: (409) 755-6500

2. Manufacturing Facilities

Clearstream Wastewater Systems
P.O. 9337
Beaumont, Texas
USA 77709

3.* Description

The Clearstream - Alternate Tertiary Discharge System consists of a septic tank connected to a 500N, 600N, 750N, 1000N or 1500N Model Clearstream Treatment Unit referenced in the Supplementary Guidelines to the Ontario Building Code 1997 as meeting the tertiary effluent quality criteria and which deliver effluent to an absorption system other than a leaching bed as referenced in Article 8.6.1.2. of the Ontario Building Code ("OBC").

The system requires influent sewage pretreatment in a standard two-compartment septic tank equipped with an effluent filter to screen out particles larger than 3.2 mm. Effluent from the septic tank flows to the Clearstream Treatment Unit, then passes through either a free access sand filter, a Model CS -1100 Effluent Filter or other filter that at minimum screens out particles larger than 100 microns. The filtered effluent then flows to an absorption system consisting of a layer of stone overlying a layer of sand as described in the Specific Terms and Conditions below. All below ground structures meet the 'General Requirements for All Tanks' as specified in the "CAN/CSA-B66-M90" Standard.

4. Authorization requested

The Applicant seeks to have the Clearstream - Alternate Tertiary Discharge System, incorporating a treatment unit meeting the tertiary effluent quality criteria referenced in Table 8.6.2.2.A. of the OBC, authorized for use as a Class 4 System connected to an absorption system other than the leaching bed referred to in Article 8.6.1.2. of the OBC.

5. Assessment

The Clearstream - Alternate Tertiary Discharge System incorporates a treatment unit meeting the tertiary effluent quality criteria referenced in Column 3 of Table 8.6.2.2.A. of the OBC, connected to an absorption system other than a leaching bed as referred to in Article 8.6.1.2. of the OBC. Reports and assessments provided, demonstrate that if constructed, installed, operated, maintained and monitored in accordance with the manufacturer's specifications and the conditions stated in this Authorization, the Clearstream - Alternate Tertiary Discharge System will provide a level of performance equivalent to that of a Class 4 Sewage System. .
Reports submitted and reviewed:

1. Clearstream Systems Owners Manual, Models 500N, 600N, 750N, 1000N, 1500N.

2. Branch Opinion letters relating to Ecoflo, ® ST-650 Biofilter System dated June 5th, 1998 and Waterloo Biofilter System, dated September 21, 1998.

3. CAN/CSA-B66-M90 - Prefabricated Septic Tanks and Sewage Holding Tanks, Plumbing Products and Materials - a National Standard of Canada.

4. Universal Laboratory, Inc., Garland, Texas, Test # 17158 dated 5-8-92.

5. Letter approving Models 500N, 600N, 750N, 1000N and 1500N from the Municipal Engineer, City of Colwood, File 6.1.2(a) dated May 19, 1995.

6. Letter approving Models 500N, 600N, 750N, 1000N and 1500N from Environmental Health Protection Services, Ministry of Health, Province of British Columbia dated October 6, 1994.

7. Gast Oilless and Lubricated Compressors Report.

8. Report of NSF International on Evaluation of Clearstream Wastewater Systems, Inc. (Model 500N) under provisions of NSF Standard No. 40 and dated August, 1991.

9. Universal Laboratory, Inc., Garland, Texas, Test # 24341 dated 6-6-97 and Certification of test by D. Greenfield, P.Eng., dated August 17th, 1999.

10. ASTM D 4021-92 Standard Specification for Glass-Fiber-Reinforced Polyester Underground Petroleum Storage Tanks.

11. NSF International Evaluation Report of Clearstream Wastewater Systems, Inc. Model 500N and Clearstream Wastewater Systems, Inc. Model 500N with a Clearstream Model 1100 Effluent Filter, under the provisions of ANSI/NSF Standard 40 and dated October 1999.

* 12. NSF International Evaluation Report of Clearstream Wastewater Systems, Inc. Model 500N and Clearstream Wastewater Systems, Inc. Model 500N with a Clearstream Model 1100 Effluent Filter, under the provisions of ANSI/NSF Standard 40 and dated November 1999.

* 13. The '*Continuing Maintenance Manual*' which lists the maintenance items to be conducted on the Clearstream - Alternate Tertiary Discharge System every six (6) months.

6. Authorization

* The Clearstream - Alternate Tertiary Discharge System incorporating;

1) a septic tank,
2) a Clearstream Treatment Unit approved in the Supplementary Guidelines to the Ontario Building Code 1997 as meeting the tertiary effluent quality criteria in Table 8.6.2.2.A. of the OBC, and
3) a free-access sand filter or a Model CS -1100 Effluent Filter or another filter that at minimum screens out particles larger than 100 microns;

is authorized for use as a Class 4 sewage system that may be connected to an absorption system other than a leaching bed as required by Article 8.6.1.2. of the OBC, when designed, installed, operated, maintained and monitored in accordance with the manufacturer's recommendations and the following terms and conditions:

A. Specific Terms and Conditions

1. Only manufacturer trained and authorized agents or employees shall install, maintain or service the Clearstream - Alternate Tertiary Discharge System.

* 2. The Service and Maintenance Agreement prescribed by Sentence 8.9.2.3.(2) of the OBC shall require that the persons authorized by the Manufacturer to service and maintain the Clearstream - Alternate Tertiary Discharge System, and who have entered into the agreement with the person operating the treatment unit, shall:

(a) conduct and record at least once during every six month period, an inspection and servicing as specified by the manufacturer of the Clearstream Treatment Unit in the "*Continuing Maintenance Manual*" copyrighted 07/00,

(b) provide a copy of the "*Continuing Maintenance Manual*" and a copy of each service record prepared in compliance with (a) above, to the person operating the Clearstream - Alternate Tertiary Discharge System, and

(c) conduct sampling and testing in accordance with the requirements of Clauses 8.9.2.4.(1)(a) and (b) of the OBC;

i) once during the first 12 months after the Clearstream - Alternate Tertiary Discharge System is put into use, and

ii) thereafter, once during every 48 month period after the previous sampling has been completed,

(d) promptly submit the sampling test results to the person operating the Clearstream - Alternate Tertiary Discharge System and to the Applicant / Manufacturer named in Part 1 of this Authorization, and

(e) promptly notify the chief building official in writing, if this maintenance agreement is terminated or access to permit any of the maintenance or monitoring requirements of this Authorization is denied by the person operating the Clearstream - Alternate Tertiary Discharge System.

3. The Applicant named in Part 1 of this Authorization shall retain records of the sampling test results for each Clearstream - Alternate Tertiary Discharge System received pursuant to Condition A. 2. (c) above, for a period of 10 years and shall promptly forward copies of those records to the chief building official upon request of the chief building official.

4. The Clearstream - Alternate Tertiary Discharge System shall only receive effluent from a septic tank or other treatment unit that:

   a) is fitted with an effluent filter, the model and type as recommended by the manufacturer, provided that at minimum, such filter will screen out particles larger than 3.2 mm, and

   b) has frost resistant and watertight maintenance ports accessible at grade.

* 5. All pipe connections joining the Clearstream - Alternate Tertiary Discharge System components, i.e., treatment units, accessory treatment units, tanks, pumps and filters where incorporated, shall be flexible and watertight. Where a pump is incorporated in a tank, the tank shall be made watertight.

* 6. Clearstream Treatment Units Models as detailed in the manufacturer's technical data sheets and listed as providing tertiary treatment in the Supplementary Guidelines to the Ontario Building Code 1997, shall be used in the Clearstream - Alternate Tertiary Discharge System in accordance with the following daily design sewage flows (DDSF):

500N	-	DDSF of 850 L to 1900 L
600N	-	DDSF of 1900 L to 2280 L
750N	-	DDSF of 2280 L to 2850 L
1000N	-	DDSF of 2850 L to 3800 L
1500N	-	DDSF of 3800 L to 5700 L"

7. All components of the Clearstream - Alternate Tertiary Discharge System shall be waterproof and shall be insulated to manufacturer specifications. When components are totally or partially underground they shall be concrete, fibreglass-reinforced polyester or polyethylene structures that meet the Strength Test requirements of CAN/CSA-B66-M90 for Prefabricated Septic Tanks and Sewage Holding Tanks, and resist soil mineral degradation.

* 8. Effluent exiting either the free access sand filter, the Model CS -1100 Effluent Filter or other 100 micron filter identified in Part 3 above, shall be evenly distributed over an absorption system comprised of a stone layer overlying an unsaturated sand layer and having a total minimum depth of 500 mm, and:

   a) the stone layer shall be a minimum 200 mm in depth and be comprised of stone meeting the requirements of either Subclause 8.7.3.3.(1)(b)(i) or (ii) of the OBC, and

   b) the sand layer shall be a minimum 250 mm in depth and have a percolation time of six to 10 minutes per centimetre, provided that where the underlying native soil has a percolation time of less than six minutes per centimetre, the water table shall be a minimum of 600 mm below the bottom of the stone layer required in (a) above.

9. The stone layer required by Condition A. 8. (a) above, shall have a minimum area as specified by the manufacturer but be not less than the following:

   a) where the total daily design sanitary sewage flow does not exceed 3 000 L, the area shall be such that the loading on the surface of the stone layer does not exceed 75 L/m² per day or

   b) where the total daily design sanitary sewage flow exceeds 3 000 L, the area shall be such that the loading on the surface of the stone layer does not exceed 50 L/m² per day.

10. The stone layer required by Condition A. 8. (a) above, shall be protected with a permeable geo-textile fabric in such a manner so as to prevent soil or leaching bed fill from entering the stone.

11. The sand layer required by Condition A.8. (b) above:

   a) shall have a minimum area that is the greater of;

      i) the area of the stone layer required by Condition A. 9. above, and

      ii) the area calculated on the basis of the following formula:

         $A = QT/850$

         where:

         A is the area of contact in m² between the base of the sand layer and the underlying native soil,

         Q is the total daily design sanitary sewage flow in litres,

         T is the percolation time of the underlying native soil in min/cm to a maximum of 50, and

   b) in raised absorption systems, shall extend at least 15 m beyond the perimeter of the distribution pipes, in any direction which the effluent entering the soil will move horizontally.

* 12. Effluent exiting either the free access sand filter, the Model CS -1100 Effluent Filter or other 100 micron filter shall be evenly distributed by means of a header connecting to distribution pipes within the stone layer required by Condition A. 8. (a) above and the distribution pipes shall:

   a) be spaced evenly and not greater than 1.2 m apart over the area required by Condition A. 9 above,

b) comply with the requirements of Clauses 8.7.3.3.(1)(a)-(d) and Sentences 8.7.3.3.(3)-(4) of the OBC, and

c) comply with the requirements of Article 8.2.1.6. of the OBC.

* 13. The absorption system required by Condition A. 8. above shall comply with the requirements of Subsection 8.7.2. of the OBC that apply to leaching beds.

B. General Conditions

1. The use of the Clearstream - Alternate Tertiary Discharge System must comply with the *Building Code Act, 1992* as amended or re-enacted from time to time and except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

2. A copy of this Authorization shall accompany each application for a building permit and shall be maintained on the site of the construction with the building permit.

* 3. The Applicant named in Part 1 hereof shall promptly notify the BMEC of:

(a) the failure of the Applicant, or of the material, system or building design that is the subject matter of this Authorization, to comply with any of the terms and conditions set out in 6. A. above; or

(b) the occurrence of any of the events described in Conditions 6. B. 4. (a) and (b) (ii) below.

* 4. The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

(i) the material, system or building design that is the subject matter of this Authorization;

(ii) the address of the applicant specified in Part 1 of this Authorization; or,

(iii) the ownership of the applicant specified in Part 1 of this Authorization.

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the *Building Code Act, 1992* or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ.

(c) the Applicant, or the material, system or building design that is the subject matter of this Authorization, has failed to comply with any of the terms and conditions set out in this Authorization; or

(d) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

ENVIRO-SHAKE™
A COMPOSITE CELLULOSIC FIBRE AND POLYMER SIMULATED CEDAR SHAKE ROOFING MATERIAL

1. Applicant

* Wellington Polymer Technology Inc.
650 Riverview Drive, Unit 1
PO Box 1462
Chatham, Ontario
N7M 5W8

Tel: (519) 767-2372
Fax: (519) 767-9302

2. Manufacturing Facilities

* Wellington Polymer Technology Inc.
650 Riverview Drive, Unit 1
PO Box 1462
Chatham, Ontario
N7M 5W8

3. Description

ENVIRO-SHAKE™ roofing shingles are manufactured from cellulosic fibres, post-industrial polyethylene and polypropylene polymers, post-industrial rubber elastomers and stabilizing additives blended in a proprietary formulation and reformed to a fibre reinforced product resembling tapersawn cedar shingles in appearance .

4. Authorization Requested

The applicant sought authorization for the use of *ENVIRO-SHAKE*™ shingles as a roofing material on roof slopes of 1:3 and steeper.

5. Assessment

Reports and assessments provided by the applicant show that if *ENVIRO-SHAKE*™ roofing shingles are manufactured in accordance with the limitations and conditions stated in this authorization, they will provide the level of performance equivalent to that which would be achieved by conformance with Article 9.26.2.1. of the Ontario Building Code.

Reports submitted and reviewed:

1. Application information dated May 12, 1999 which included:
   - the Expanded Application with supporting documentation
   - CAN/ULC-107 Standard Test
   - Installation Manual
   - Quality Control Sheet

2. WPTI Supplemental Submission dated August 12th, 1999 including the results of tests conducted by Cambridge Materials Testing Limited, Underwriters' Laboratory of Canada and a further report on the UV tests done by Mobil Chemicals in New Jersey.

3. WPTI - Supplemental Submission dated August 31, 1999 regarding Ultra Violet Exposure Tests.

4. Quality Control Programme for *Enviro-Shake*™ " dated November 30, 1999.

6. Authorization

ENVIRO-SHAKE™ roofing shingles as described in Section 3. **Description** above, are authorized as a roofing material as required by Article 9.26.2.1. of the Ontario Building Code, as amended or remade from time to time, subject to the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1. The Applicant named in Section 1. above, shall undertake testing of representative samples of *Enviro-Shake*™ roofing shingles in accordance with the "Quality Control Programme for *Enviro-Shake*™ - the simulated cedar shake" dated November 30th, 1999 which includes tests for compliance with the following standards:

   a) Water absorption in accordance with ASTM D570-95 Standard,

   b) Impact testing in accordance with ASTM D2794-93 Standard,

c) Wind Resistance in accordance with ASTM D3161 Standard,

d) Freeze/Thaw Resistance in accordance with ASTM C666 Standard,

e) Tear Strength/Nail Head Resistance in accordance with ASTM D1037 Standard, and

f) Ultra Violet Exposure Test in accordance with ASTM G-53 Standard

2. A professional Engineer having a Certificate of Authorization under the *Professional Engineers Act* and engaged by the Applicant named in Section 1. shall annually certify that sampling and testing in respect of the standards referenced in Section 6. 1. A. a) to f) above, has been undertaken in accordance with the "Quality Control Programme for *Enviro-Shake*™ - the simulated cedar shake" dated November 30th, 1999 and that the results demonstrate compliance with these standards.

3. The Applicant named in Section 1. above, shall retain records of the testing required by 6. A. 1. & 2. above for a period of not less than 10 years.

B. GENERAL CONDITIONS:

1. The use of *ENVIRO-SHAKE*™ shingles must comply with the Building Code Act, 1992, as amended or re-enacted from time to time and, except as specifically authorized herein with the Ontario Building Code as amended or remade from time to time.

2. A copy of this Authorization shall be kept and maintained on the site of the construction with the building permit.

3. The Applicant named in Section 1. hereof shall promptly notify the BMEC of:

   (a) the failure of the Applicant, or of the material, system or building design that is the subject matter of this Authorisation, to comply with any of the terms and conditions set out in Section 6. A. above; or

   (b) the occurrence of any of the events described in Sections 6. B. 4. (a) and (b) (ii) below.

4. The BMEC may amend or revoke this Authorization where it determines that:

   (a) any change has been made to:

      (i) the material, system or building design that is the subject matter of this Authorization;

      (ii) the address of the applicant specified in Section 1 of this Authorization;

or,

(iii) the ownership of the applicant specified in Section 1 of this Authorization.

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ.

(c) the Applicant, or the material, system or building design that is the subject matter of this Authorisation, has failed to comply with any of the terms and conditions set out in Section 6. A. above; or

(d) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 14th day of December 1999.

BMEC APPLICATION	**# A1998-07**
DATE OF AMENDMENT	**OCTOBER 25, 2001**

* **Denotes a new or amended clause October 25,2001**

A Resolution of the BMEC dated February 28, 2002 which amended this authorization was quashed by an order of the Divisional Court dated June 18, 2002.

WATERLOO BIOFILTER® AREA BED SYSTEM
WATERLOO BIOFILTER SYSTEMS INC.

1. Applicant

* Waterloo Biofilter Systems Inc.
143 Dennis Street
PO Box 400
Rockwood, Ontario
N0B 2K0

2. Manufacturing Facilities

* Waterloo Biofilter Systems Inc.
143 Dennis Street
PO Box 400
Rockwood, Ontario
N0B 2K0

3. Description

The Waterloo Biofilter® Area Bed System consists of a septic tank connected to a Waterloo Biofilter® treatment unit referenced in the Supplementary Guidelines to the 1997 Ontario Building Code, which delivers effluent to an absorption system other than a leaching bed as referred to in Article 8.6.1.2. of the Ontario Building Code ("OBC"). The system requires pretreatment of raw sewage with a standard two-compartment septic tank equipped with an effluent filter to screen out particles larger than 3.2 mm. Effluent from the septic tank overflows by gravity to a pump tank (pump vault in retrofit applications) providing demand or timed dosing to a biofilter treatment unit enclosed in an insulated-as-needed, waterproof, concrete or reinforced polyester or polyethylene structure with access hatches and screened vents.

An internal distribution system sprays the effluent over modules of plastic foam pieces (a patented biofilter medium) sized according to a maximum loading of 750 L daily design flow, per cubic metre of filter medium. The treated effluent is either

pumped to an absorption system or flows by gravity to an absorption system beneath the treatment unit. The absorption system is a layer of stone overlying a layer of sand.

4. Authorization requested

The applicant seeks to have the Waterloo Biofilter® Area Bed System, which incorporates a treatment unit designed so that the effluent meets the tertiary effluent quality criteria referenced in Table 8.6.2.2.A. of the OBC, authorized for use as a Class 4 System that is connected to an absorption system other than the leaching bed as referred to in Article 8.6.1.2. of the OBC.

5. Assessment

The Waterloo Biofilter® Area Bed System incorporates a treatment unit designed so that the effluent meets the tertiary effluent quality criteria referenced in Column 3 of Table 8.6.2.2.A. of the OBC and this treatment unit is connected to an absorption system other than a leaching bed as referred to in Article 8.6.1.2. of the OBC. Reports and assessments provided by the applicant demonstrate that if the Waterloo Biofilter® Area Bed System is constructed, installed, operated, maintained and monitored in accordance with the limitations of the manufacturer's specifications and the conditions stated in this Authorization, a level of performance equivalent to that required of a Class 4 Sewage System will be provided.

6. Authorization

The Waterloo Biofilter® Area Bed System which incorporates the Waterloo Biofilter® treatment unit, is authorized for use as a Class 4 sewage system that may be connected to an absorption system other than a leaching bed as referred to in Article 8.6.1.2. of the OBC, when designed, installed, operated, maintained and monitored in accordance with the manufacturer's recommendations and the following terms and conditions:

A. Specific Terms and Conditions

1. Only manufacturer trained and authorized agents or employees shall install, maintain or service the Waterloo Biofilter® Area Bed System.

2. The Service and Maintenance Agreement prescribed by Sentence 8.9.2.3.(2) of the OBC shall require that the persons authorized by the manufacturer to service and maintain the Waterloo Biofilter® Area Bed System, and who have entered into the agreement with the person operating the treatment unit, shall:

   a) conduct an annual maintenance service as specified by the manufacturer of the Waterloo Biofilter® Area Bed System, at least once during every twelve month period after the sewage system is put into use,

   b) conduct sampling and testing in accordance with the requirements of Clauses 8.9.2.4.(1)(a) and (b) of the OBC;

      i) once during the first 12 months after the Waterloo Biofilter® Area Bed System is put into use, and

      ii) thereafter, once during every 48 month period after the previous sampling has been completed,

   c) promptly submit the sampling test results to the person operating

the Waterloo Biofilter® Area Bed System and to the Applicant and Manufacturer named in Parts 1. and 2. respectively, of this Authorization, and

d) promptly notify the chief building official in writing, if this maintenance agreement is terminated or access to permit any of the maintenance or monitoring requirements of this Authorization is denied by the person operating the Waterloo Biofilter® Area Bed System.

3. The Manufacturer named in Part 2. of this Authorization shall retain the records of the sampling test results for each Waterloo Biofilter® Area Bed System received pursuant to Condition A. 2. (c) above for a period of 10 years and shall promptly forward copies of those records to the chief building official upon request of the chief building official.

4. The Waterloo Biofilter® Area Bed System shall only receive effluent from a septic tank or other treatment unit that:

a) is fitted with an effluent filter as recommended by the manufacturer, provided that at minimum such filter will screen out particles larger than 3.2 mm, and

b) has frost resistant and watertight maintenance ports accessible at grade.

5. All pipe connections joining the Waterloo Biofilter® treatment unit to accessory treatment units, tanks and pumps where incorporated, shall be flexible and watertight. Where a pump is incorporated in a tank, the tank shall be made watertight.

6. Only the Waterloo Biofilter® patented plastic foam medium may be used in the Waterloo Biofilter® Area Bed System. The internal distribution system shall spray the received effluent evenly over modules of the plastic foam medium, designed to a maximum loading rate of 750 L daily design flow per cubic metre of biofilter medium.

7. The Waterloo Biofilter® Area Bed System Enclosure shall be designed to be waterproof, insulated to the manufacturer's specifications and provide air and access to the enclosed biofilter medium. When such enclosures are totally or partially underground, the enclosure shall be concrete, fibreglass-reinforced polyester or polyethylene structures that:

    a) meet the Strength Test requirements of CAN/CSA-B66-M90 for Prefabricated Septic Tanks and Sewage Holding Tanks, and

    b) resist water infiltration and soil mineral degradation.

8. Effluent exiting the biofilter medium shall be evenly distributed over an absorption system comprised of a stone layer overlying an unsaturated sand layer and having a total minimum depth of 500 mm, and:

    a) the stone layer shall be a minimum 200 mm in depth and comprised of stone meeting the requirements of either Subclause 8.7.3.3.(1)(b)(i) or (ii), and

    b) the sand layer shall be a minimum 250 mm in depth and have a percolation time of six to 10 minutes per centimetre, provided that where the underlying native soil has a percolation time of less than six minutes per centimetre, the water table shall be a minimum of 600 mm below the bottom of the stone layer required in (a) above.

9. The stone layer required by Condition A. 8. (a) above, shall have a minimum area as specified by the manufacturer but be not less than the following:

    a) where the total daily design sanitary sewage flow does not exceed 3 000 L, the area shall be such that the loading on the surface of the stone layer does not exceed 75 L/m² per day, or

    b) where the total daily design sanitary sewage flow exceeds 3 000 L, the area shall be such that the loading on the surface of the stone layer does not exceed 50 L/m² per day.

10. The stone layer required by Condition A. 8. (a) above, shall be protected with a permeable geo-textile fabric covering all areas beyond the confines of the Waterloo Biofilter® Area Bed System Enclosure, in such a manner so as to prevent soil or leaching bed fill from entering the stone.

11. The sand layer required by Condition A.8. (b) above:

    a) shall have a minimum area that is the greater of;

        I) the area of the stone layer required by Condition A. 9. above, and

ii) the area calculated on the basis of the following formula:

$A = QT/850$

where:

A is the area of contact in m^2 between the base of the sand layer and the underlying native soil,
Q is the total daily design sanitary sewage flow in litres,
T is the percolation time of the underlying native soil in min/cm to a maximum of 50, and

b) in raised absorption systems shall extend at least 15 m beyond the perimeter of the Waterloo Biofilter® Area Bed System Enclosure and distribution pipes where utilized, in any direction which the effluent entering the soil will move horizontally.

12. Where the effluent exiting the biofilter medium, is pumped to an absorption system located other than beneath the biofilter, the effluent shall be evenly distributed by means of a header connecting to distribution pipes within the stone layer required by Condition A. 8. (a) above and the distribution pipes shall:

a) be spaced evenly and not greater than 1.2 m apart over the area required by Condition A. 9. above, and

b) comply with the requirements of Clauses 8.7.3.3.(1)(a)-(d) and Sentences 8.7.3.3.(3)-(4).

13. For purposes of determining the clearance distances prescribed by Article 8.2.1.6., where the absorption system required by Condition A. 8. above is:

a) directly beneath and in contact with the biofilter medium, the perimeter of the Waterloo Biofilter® Area Bed System Enclosure, shall not be located closer than the minimum horizontal distances set out in Table 8.2.1.6.B. and these clearances shall be increased by twice the height that the stone layer stone layer required by Condition A. 8. (a) above, is raised above the original grade, or

b) located other than beneath the biofilter medium and the biofilter effluent is pumped and distributed in accordance with Condition A. 12. above, no distribution pipe shall be located closer than the minimum horizontal distances set out in Table 8.2.1.6.B. and these clearances shall be increased by twice the height that the stone layer required by Condition A. 8. (a) above is raised above the original grade.

14. No part of the absorption system required by Condition A. 8. above shall:

a) be located in an area that has an average slope that exceeds one unit vertically to four units horizontally,
b) be located in an area that is subject to flooding that may be expected to damage or impair the operation of the absorption system, or
c) be covered with any material having a hydraulic conductivity less than 0.01 m/day, other than the Waterloo Biofilter® Area Bed System Enclosure,
d) be sloped steeper than one unit vertically to four horizontally, or
e) be located in soil or leaching bed fill having a percolation time less than one minute or greater than 50 minutes.

15. The absorption system required by Condition A. 8. above shall be designed to be protected from compaction or any stress or pressure that may result in the impairment of the system function or the smearing of the soil or leaching bed fill.

16. All above-ground backfill and leaching bed fill added to the Waterloo Biofilter® Area Bed System installation shall be stabilized against erosion.

B. General Conditions

1. The use of the Waterloo Biofilter® area bed System must comply with the *Building Code Act, 1992* as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

2. A copy of this Authorization shall accompany each application for a building permit and shall be maintained on the site of the construction with the building permit.

3. The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

(i) the material, system or building design that is the subject matter of this Authorization;
(ii) the address of the applicant specified in Section 1 of this

Authorization; or,

(iii) the ownership of the company specified in Section 1 of this Authorization.

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the *Building Code Act, 1992* or any relevant legislation as may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

DATE OF AMENDMENT OCTOBER 26, 2000 BMEC APPLICATION # A 2000-12

*** denotes a new or amended clause**

A Resolution of the BMEC dated February 28, 2002 which amended this authorization was quashed by an order of the Divisional Court dated June 18, 2002.

Ecoflo® ST-650 Biofilter SystemECOFLO-ONTARIO

1. Applicant

2. Manufacturing Facilities

Ecoflo-Ontario, a division of Premier Tech G*Met Environmental Technologies, 1, avenue Premier, 2450 Lancaster Road, Unit 27, C.P. 3500, Ottawa, ON Rivière-du Loup, PQ K2B 5N3 G5R 4C9

3. Description

The Ecoflo® ST-650 Biofilter System consists of a septic tank connected to an Ecoflo® ST-650 Biofilter treatment unit referenced in the Supplementary Guidelines to the 1997 Ontario Building Code, which delivers effluent to an absorption system other than a leaching bed as referred to in Article 8.6.1.2. of the Ontario Building Code (“OBC”). The

Ecoflo® ST-650 Biofilter treatment unit is a 7,500 L fibreglass shell, 4,000 mm long by 2,200 mm wide by 1,340 mm in height, with an open bottom. The shell is a fibreglass reinforced polyester containing 35% glass fibres (type 292ct) and 65% resin (type AK2631) having a minimum thickness of 1/8" over all of the shell surface. The treatment unit receives effluent by gravity or pump, from a standard two-compartment septic tank equipped with an effluent filter to screen out particles larger than 3.2 mm. An internal distribution system consisting of a gravity-fed, fibreglass tipping cradle and four corrugated and perforated plates, distribute the effluent uniformly over a patented peat-based filter medium referred to as Premier Tech PFB-150 Peat. The Premier Tech PFB-150 Peat is confined within the Ecoflo® ST-650 Biofilter shell and has a minimum volume of 3.125 m^3. The system has a device to sample the effluent at the bottom of the peat bed. The shell is installed above an absorption system comprised of a layer of crushed stone over a layer of sand.

4. Authorization requested

The applicant seeks to have the Ecoflo® ST-650 Biofilter System, which incorporates a treatment unit designed so that the effluent meets the tertiary quality criteria referenced in Table 8.6.2.2.A. of the OBC, authorized for use as a Class 4 System that is connected to an absorption system other than the leaching bed as referred to in Article 8.6.1.2. of the OBC.

5. Assessment

The Ecoflo® ST-650 Biofilter System incorporates a treatment unit meeting the tertiary quality criteria referenced in Column 3 of Table 8.6.2.2.A. of the OBC and this treatment unit is connected to an absorption system other than a leaching bed as referred to in Article 8.6.1.2. of the OBC. Reports and assessments provided by the applicant demonstrate that if the Ecoflo® ST-650 Biofilter System is constructed, installed, operated, maintained and monitored in accordance with the limitations of the manufacturer's specifications and the conditions stated in this authorization, a level of performance equivalent to that required of a Class 4 Sewage System will be provided.

Reports submitted and reviewed:

1. Installation and Sampling -A compendium of the sampling and analyses conducted to assess the performance of Premier Tech Ltd.’s peat-based biofiltration technology for the period 1989-1997.
2. Letter of February 9, 1998 from the Assistant Director of the Approvals Branch of the Ministry of the Environment, classifying the Ecoflo® Biofiltration

Treatment Unit as an acceptable Class 6 sewage system as defined in Ontario Regulation 358 (Sewage Systems), under the Environmental Protection Act.

3. Development of a Biofilter Using an Organic Medium for On-site Wastewater Treatment -Paper by Talbot, Bélanger, Pelletier, Laliberté and Arcand (Water Quality International, Singapore '96).

4. Planning Guide for Installation - Premier Tech Ltd. Dated 1997-04-15.

5. Owner's Manual Ontario for Ecoflo® ST-650 Biofilter - Premier Tech Environment - Edition 1.0 : 1998-01-26.

6. Installation Guide for the Ecoflo® ST-650 Biofilter - Premier Tech Environment, Installation Guide ONT ST-650, Version 1.0: 1998-01-26 and Edition 1.0: 1998-02-20 as revised by letter of November 27, 1998.

7. Pennsylvania Department of Environmental Protection - letter of February 25, 1998 advising of the Department's interim guidance provisions for the Ecoflo® Biofilter.

8. State of Alabama Department of Public Health - letter of March 9, 1998, extending until March 9, 1999 the conditional variance from the Onsite Sewage Disposal Rules, for the Ecoflo® ST-650 Biofilter.

9. Arizona Department of Environmental Quality, Certificate of Product Approval for the Ecoflo Peat-Based Biofilter subject to conditions -Certificate dated July 27, 1998.

10. Florida Department of Health - letter of March 17, 1998 granting the Premier Tech Ecoflo® ST-650 Biofilter approval as an engineer-designed performance-based OSTDS, under the Florida Administrative Code.

11. Gouvernement du Québec, Regulation O.C. 995-95, dated 19 July 1995, amending the Regulation respecting waste water disposal systems for isolated dwellings to permit a "PEAT MOSS BIOFILTRATION SYSTEM".

12. Ministry of Municipal Affairs and Housing -letter dated June 5, 1998 from the Housing Development & Buildings Branch, providing an opinion that if the Ecoflo® ST-650 Biofilter System is installed in accordance with the manufacturer's instructions and the conditions stated in the letter, that an equivalent level of performance to a "Class 4" system as described in the Ontario Building Code will be provided.

6. Authorization

The Ecoflo® ST-650 Biofilter System which incorporates the Ecoflo® ST-650 Biofilter treatment unit, is authorized for use as a Class 4 sewage system that may be connected to an absorption system other than the leaching bed as referred to in Article 8.6.1.2. of the OBC, when the system is designed, installed, operated, maintained and monitored in accordance with the manufacturer's recommendations (Premier Tech Environment - Installation Guide ONT ST-650, Version 1.0: 1998-01-26 and Edition 1.0: 1998-02-20 as revised by letter dated November 27, 1998) and the following terms and conditions:

A. Specific Terms and Conditions

1. Only manufacturer trained and authorized agents or employees shall install, maintain or service the Ecoflo® ST-650 Biofilter System.
2. The Service and Maintenance Agreement prescribed by Sentence 8.9.2.3.(2) of the OBC shall require that the persons authorized by the manufacturer to service and maintain the Ecoflo® ST-650 Biofilter System, and who have entered into the agreement with the person operating the treatment unit, shall:
a) conduct an annual maintenance service as specified by the manufacturer of the Ecoflo® ST-650 Biofilter System, at least once during every twelve month period after the sewage system is put into use,
b) conduct sampling and testing in accordance with the requirements of Clauses 8.9.2.4.(1)(a) and (b) of the OBC;
i) initially, once during the first 12 months after the Ecoflo® ST-650 Biofilter System is put into use, and
ii) thereafter, once during every 48 month period after the previous sampling has been completed,
c) promptly submit the sampling test results to the person operating the Ecoflo® ST-650 Biofilter System and to the Applicant and Manufacturer named in Parts 1. and 2. respectively, of this Authorization, and
d) promptly notify the chief building official in writing, if this maintenance agreement is terminated or access to permit any of the maintenance or monitoring requirements of this Authorization is denied by the person operating the Ecoflo® ST-650 Biofilter System.
3. The Manufacturer named in Part 2. of this Authorization shall retain the records of the sampling test results for each Ecoflo® ST-650 Biofilter System received pursuant to Condition A. 2. (c) above for a period of 10 years and shall promptly forward copies of those records to the chief building official upon request of the chief building official.
4. The Ecoflo® ST-650 Biofilter System shall only receive effluent from a septic tank or other treatment unit that:
a) is fitted with an effluent filter as recommended by the manufacturer, provided that at minimum such filter will screen out particles larger than 3.2 mm, and
b) has frost resistant and watertight maintenance ports accessible at grade.
5. All pipe connections joining the Ecoflo® ST-650 Biofilter System to accessory treatment units and pumps where incorporated, shall be flexible and watertight. Where a pump is incorporated in a tank, the tank shall be made watertight.
6. The Ecoflo® ST-650 Biofilter shell:
a) shall have a minimum thickness of 1/8" over all of its surface,
b) shall meet the Strength Test requirements of CAN/CSA-B66-M90 for Prefabricated Septic Tanks and Sewage Holding Tanks, and
c) shall be resistant to water infiltration and soil mineral degradation.
7. Only Premier Tech PFB-150 Peat may be used in the Ecoflo® ST-650 Biofilter System. The Premier Tech PFB-150 Peat biofilter medium;
i) shall be confined within the Ecoflo® ST-650 Biofilter shell,

ii) shall have a minimum volume of 3.125 cubic metres, and
iii) shall be replaced in its entirety, after eight years of service.

* 8. Effluent exiting the biofilter medium shall be evenly distributed over an absorption system comprised of a stone layer overlying an unsaturated sand layer and having a total minimum depth of 500 mm, and:

a) the stone layer shall be a minimum 200 mm in depth and comprised of stone meeting the requirements of either Subclause 8.7.3.3.(1)(b)(i) or (ii) of the OBC, and

b) the sand layer shall be a minimum 250 mm in depth and have a percolation time of six to 10 minutes per centimetre, provided that where the underlying native soil has a percolation time of less than six minutes per centimetre, the water table shall be a minimum of 600 mm below the bottom of the stone layer required in (a) above.

9. The stone layer required by Condition A. 8. (a) above, shall have a minimum area as specified by the manufacturer, but be not less than the following:

a) where the total daily design sanitary sewage flow does not exceed 3 000 L, the area shall be such that the loading on the surface of the stone layer does not exceed 75 L/m² per day, or

b) where the total daily design sanitary sewage flow exceeds 3 000 L, the area shall be such that the loading on the surface of the stone layer does not exceed 50 L/m² per day.

10. The stone layer required by Condition A. 8. (a) above, shall be protected with a permeable geo-textile fabric covering all areas beyond the confines of the Ecoflo® ST-650 Biofilter shell in such a manner so as to prevent soil or leaching bed fill from entering the stone.

11-1. Where the effluent exiting the biofilter medium is pumped to an absorption system located other than beneath the biofilter, the effluent shall be evenly distributed by means of a header connecting to distribution pipes within the stone layer required by Condition A. 8. (a) above and the distribution pipes shall:

a) be spaced evenly and not greater than 1.2 m apart over the area required by Condition A. 9. above, and

b) comply with the requirements of Clauses 8.7.3.3.(1)(a)-(d) and Sentences 8.7.3.3.(3)-(4).

*11-2. For purposes of determining the clearance distances prescribed by Article 8.2.1.6., where the absorption system required by Condition A. 8. above is:

a) directly beneath and in contact with the biofilter medium, the perimeter of the Ecoflo® ST-650 Biofilter Shell, shall not be located closer than the minimum horizontal distances set out in Table 8.2.1.6.B. and these clearances shall be increased by twice the height that the stone layer required by Condition A. 8. (a) above, is raised above the original grade, or

b) located other than beneath the biofilter medium and the biofilter effluent is pumped and distributed in accordance with Condition A. 11-1. above, no distribution pipe shall be located closer than the minimum horizontal distances set out in Table 8.2.1.6. B. and these clearances shall be increased by twice the

height that the stone layer required by Condition A. 8. (a) above is raised above the original grade.
12. The sand layer required by Condition A. 8. b) above, shall:
a) have a minimum area that is the greater of;
i) the area of the stone layer required by Condition A. 9. above, and
ii) the area calculated on the basis of the following formula:

$$A = QT/850$$

where:

A is the area of contact in m^2 between the base of the sand layer and the underlying native soil, Q is the total daily design sanitary sewage flow in litres, T is the percolation time of the underlying native soil in min/cm to a maximum of 50, and

b) in raised absorption systems extend at least 15 m beyond the perimeter of the Ecoflo® ST-650 Biofilter shell, in any direction which the effluent entering the soil will move horizontally.
*13. The absorption system required by Condition A. 8. above shall comply with the requirements of Subsection 8.7.2. of the OBC that apply to leaching beds.

B. General Conditions

1. The use of the Ecoflo® ST-650 Biofilter System shall comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.
2. A copy of this Authorization shall be included with an application for a building permit and shall be maintained on the site of the construction with the building permit.
* 3. The Applicant named in Part 1 hereof shall promptly notify the BMEC of:

(a) the failure of the Applicant, or of the material, system or building design that is the subject matter of this Authorization, to comply with any of the terms and conditions set out in 6. A. above; or

(b) the occurrence of any of the events described in Conditions 6. B. 4. (a) and

(b) (ii) below.

*4. The BMEC may amend or revoke this Authorization where it determines that:
(a) any change has been made to:

(i) the material, system or building design that is the subject matter of this Authorization;

(ii) the address of the applicant specified in Part 1 of this Authorization; or,

(iii) the ownership of the applicant specified in Part 1 of this Authorization.

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ.

(c) the Applicant, or the material, system or building design that is the subject matter of this Authorization, has failed to comply with any of the terms and conditions set out in this Authorization; or

(d) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

As amended at Toronto this 26th day of October, 2000

BUILDING MATERIALS EVALUATION COMMISSION

BUILDING MATERIALS EVALUATION COMMISSION (BMEC)
AUTHORIZATION REPORT

DATE OF AUTHORIZATION	**March 25, 1999**
BMEC REFERENCE	**BMEC 99-06-234**
BMEC APPLICATION	**BMEC # A1999-05**

SHELF AND RACK STORAGE SYSTEM
Warehouse Equipment Inc.,

1. Applicant

Warehouse Equipment Inc.,
2500 York Road
Elk Grove
Illinois, USA
60007

2. Description

The shelf and rack storage system is a self contained structural system within a building, having one or more solid intermediate platforms or walkway levels for personnel access. The walkways and platforms may also support conveyors and other distribution equipment.

3. Authorization Requested

The applicant sought authorization for the use of an innovative shelf and rack storage system designed for material handling, storage and distribution in warehouse facilities.

4. Assessment

Reports and assessments provided by the applicant show that if the shelf and rack system is used in accordance with the limitations and conditions stated in this authorization, it will provide the level of performance that would be achieved by conformance with the Ontario Building Code.

5. Authorization

The shelf and rack storage system is authorized for use within a building as a self contained structural system for material handling, storage and distribution, subject to the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1. This Authorization is valid only for Warehouse Equipment Inc.

2. Deck and walkway levels in structures used for the storage of Class I, II, III and IV commodities, shall be constructed of:

   (a) steel roof decking with a top substrate that forms a serviceable floor area;
   (b) open steel grating; or,
   (c) open steel floor planking.

   Deck and walkway levels in structures used for the storage of Group A, B, and C plastics as defined in NFPA 231C-1995, and rubber tires, shall be constructed of steel roof decking as required in (a) above.

3. The structural design of the entire shelf and rack storage system support structure, including posts, beams, decks, walkways, connections, and their supports such as concrete slabs, separate foundations or similar, shall be in accordance with Part 4 of the Ontario Building Code as amended or remade from time to time.

4. The design and general review of the rack and storage system shall be carried out by a Professional Engineer as defined in the Professional Engineers Act (Ontario). The Professional Engineer shall provide the Chief Building Official with a document certifying that the installation conforms with this Authorization. The construction drawings shall require the provision of an appropriate sign to indicate the maximum permissible design loads for each rack storage system and such sign shall be permanently fixed to the building interior and displayed in a prominent unobstructed viewing position.

5. An automatic sprinkler system shall be designed, constructed, installed and tested for the entire shelf and rack storage system in conformance with NFPA 13-1994, NFPA 231C-1995 and NFPA 231D-1994, as amended, or the appropriate NFPA Standard for the most severe hazard to which the storage facility is exposed.

6. Except where the deck is of open steel grating, any opening in a deck for egress, convenience stairs, ramps or chutes, shall be protected by smoke baffles and close spaced sprinklers as per Condition A.5 of this Authorization.

7. A sprinkler system located in a cold storage or freezer environment shall be designed to address any possibility of freeze-up resulting from condensation of water vapour internal to the system.

8. The automatic sprinkler system shall be electrically supervised to indicate a trouble signal on the building fire alarm system annunciator or where the building does not have a fire alarm system to notify the person controlling the operation of the building, for each of the following:

   (a) movement of a control valve handle;
   (b) loss of excess water pressure required to prevent false alarms in a wet pipe system;
   (c) loss of air pressure in a dry pipe system;
   (d) loss of air pressure in a pressure tank;
   (e) a significant change in water level in any water storage container used for fire fighting purposes;
   (f) loss of electrical power to any automatically starting electrical fire pump; and,
   (g) a temperature approaching the freezing point in any dry pipe valve enclosure or water storage container used for fire fighting purposes.

9. The automatic sprinkler system shall be designed to notify the fire department that a waterflow switch has been activated.

10. The notification to the person controlling the building and the fire department referred to in Conditions A.8 and A.9 of this Authorization shall be provided by way of:

   (a) an independent central station conforming to NFPA-71, "Standard for the Installation, Maintenance, and Use of Signaling Systems for Central Station Service", as amended;
   (b) a proprietary control centre conforming to Chapter 4 of NFPA-72, Standard for the Installation, Maintenance, and Use of Protective Signaling Systems", as amended;
   (c) a central station conforming to ULC/ORD-C693-1994, “Central Station Fire Protective Signalling Systems and Services”; or,
   (d) if the above mentioned facilities are not available in the municipality in which the shelf and rack storage system is to be built, an independent system is permitted to be used to transmit signals to the fire department.

11. The maximum height of the shelf and rack storage system, from the floor supporting the shelf and rack system to the topmost portion of the shelf and rack system shall not exceed 18 m.

12. Each deck, walkway or platform level shall be provided with not less than two exit stair shafts that conform to all requirements for exits as stated in the Ontario Building Code (i.e. fire separations having a fire resistance rating, etc.) as amended, except as follows:

   (a) access to exit may be provided from a platform level by means of open unenclosed stairs for shelf and rack storage facilities comprising not more than three platform levels, the highest of which may not be more than 9 m above the main floor; and,

12. cont'd...

    (b) any single platform, deck or walkway may be served by a single unenclosed egress stair leading to the platform or walkway level immediately below provided the:

        (i) platform, deck or walkway does not exceed 200 m² in area;
        (ii) travel distance on the platform, deck or walkway to the level below, including the travel distance along the single unenclosed egress stair does not exceed 25 m; and,
        (iii) the platform, deck or walkway below is provided with two separate egress stairs or exits.

13. The maximum travel distance on an elevated platform to the ground floor level, including the travel distance along unenclosed stairs shall not exceed 45 m. The maximum travel distance from the bottom of an unenclosed stair to an exit on the main floor level shall not exceed 45 m. The maximum travel distance to an enclosed exit on an elevated platform shall not exceed 45 m.

14. Fire extinguishers shall be installed on every platform or walkway level of the shelf and rack storage system in accordance with the provisions of Part 6 of the Ontario Fire Code, as amended or remade from time to time.

15. Dead end travel distance to a point of choice of direction of horizontal travel to an egress facility from an elevated deck or walkway, shall not exceed 9 m where the deck or walkway is required to be provided with at least 2 egress facilities.

16. The clear aisle width shall not be less than 760 mm (30 in). This clearance is for access to exits and shall not be used for conveyors, trolleys, tracks or any other similar mode of product transportation within an aisle or walkway.

17. The shelf and rack storage system is not permitted in a High Hazard Industrial Occupancy (F1) as defined in Article 1.1.3.2. of the Ontario Building Code, as amended or remade from time to time.

18. The shelf and rack storage system may, except as otherwise specifically stated herein, be used for the storage of Class I, II, III, and IV commodities and Group A, B and C plastics, as defined in NFPA 231C-1995, and rubber tires, subject to the limitations of Condition A.17 of this Authorization, and shall;

    (a) conform to the indoor storage requirements of Part 3 of the Ontario Fire Code or, in the absence of requirements in the Ontario Fire Code, to Part 3 of the National Fire Code, as amended and remade from time to time, and

    (b) not be used for the manufacturing, production, wrapping or assembly of materials.

19. A plain legible sign or signs, with contrasting letters and titled "NOTICE", shall describe the above Class and the sprinkler design criteria used for each shelf and rack storage facility. This sign or signs shall be permanently mounted, at or near the sprinkler control valve.

20. The shelf and rack storage system shall be accessible to employees only and shall be designated, signed and posted as a "NO SMOKING" area conforming to the Ontario Fire Code O. Reg. 388/97 as amended or remade from time to time.

21. A standpipe and hose system shall be installed in accordance with the Ontario Building Code where the shelf and rack storage system height is more than 14 m (45 ft.) in height or where there are more than 3 elevated platforms of walkway level.

22. Where a standpipe and hose system is required, 63.5 mm (2 1/2 in.) diameter hose connections shall be provided, except that 38.1 mm (1 1/2 in.) hose connections are permitted in the shelf and rack storage systems which:

    (a) do not exceed 6 levels including the floor level; and,
    (b) do not exceed 3,716 m^2 (40,000 ft^2) in the sum total of all levels of the shelf and rack storage system.

23. Lighting levels of decks, walkways and platforms shall conform to the Ontario Building Code, as amended or remade from time to time.

24. Emergency lighting shall be provided on walkways, decks, platforms, unenclosed egress stairs and exits providing means of egress to not less than the average level of illumination prescribed in Sentence 3.2.7.3.(2) of the Ontario Building Code, as amended or remade from time to time.

25. Guards and toe boards shall be installed in accordance with the Ontario Building Code, as amended or remade from time to time.

B. GENERAL CONDITIONS

1. The use of the shelf and rack storage system must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

2. A copy of this Authorization shall be included with an application for a building permit and shall be posted and maintained on the site of the construction with the building permit.

3. The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

(i) the material, system or building design that is the subject matter of this Authorization;

(ii) the address of the applicant specified in Section 1 of this Authorization; or,

(iii) the ownership of the applicant specified in Section 1 of this Authorization.

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

SHELF AND RACK STORAGE SYSTEM
CIVELEC CONSULTANTS INC.

1. Applicant

Civelec Consultants Inc.
3900 Cote Vertu
Suite 200
St. Laurent, Quebec
H4R 1V4

2. Description

The shelf and rack storage system is a self contained structural system within a building, having one or more solid intermediate platforms or walkway levels for personnel access. The walkways and platforms may also support conveyors and other distribution equipment.

3. Authorization Requested

The applicant sought authorization for the use of an innovative shelf and rack storage system designed for material handling, storage and distribution in warehouse facilities.

4. Assessment

Reports and assessments provided by the applicant show that if the shelf and rack system is used in accordance with the limitations and conditions stated in this authorization, it will provide the level of performance that would be achieved by conformance with the Ontario Building Code.

5. Authorization

The shelf and rack storage system is authorized for use within a building as a self contained structural system for material handling, storage and distribution, subject to the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1. This Authorization is valid only for Civelec Consultants Inc.

2. Deck and walkway levels in structures used for the storage of Class I, II, III and IV commodities, shall be constructed of:

   (a) steel roof decking with a top substrate that forms a serviceable floor area;
   (b) open steel grating; or,
   (c) open steel floor planking.

   Deck and walkway levels in structures used for the storage of Group A, B, and C plastics, as defined in NFPA 231C-1995, and rubber tires, shall be constructed of steel roof decking as required in (a) above.

3. The structural design of the entire shelf and rack storage system support structure, including posts, beams, decks, walkways, connections, and their supports such as concrete slabs, separate foundations or similar, shall be in accordance with Part 4 of the Ontario Building Code as amended or remade from time to time.

4. The design and general review of the rack and storage system shall be carried out by a Professional Engineer as defined in the Professional Engineers Act (Ontario). The Professional Engineer shall provide the Chief Building Official with a document certifying that the installation conforms with this Authorization. The construction drawings shall require the provision of an appropriate sign to indicate the maximum permissible design loads for each rack storage system and such sign shall be permanently fixed to the building interior and displayed in a prominent unobstructed viewing position.

5. An automatic sprinkler system shall be designed, constructed, installed and tested for the entire shelf and rack storage system in conformance with NFPA 13-1994, NFPA 231C-1995 and NFPA 231D-1994, as amended, or the appropriate NFPA Standard for the most severe hazard to which the storage facility is exposed.

6. Except where the deck is of open steel grating, any opening in a deck for egress, convenience stairs, ramps or chutes, shall be protected by smoke baffles and close spaced sprinklers as per Condition A.5 of this Authorization.

7. A sprinkler system located in a cold storage or freezer environment shall be designed to address any possibility of freeze-up resulting from condensation of water vapour internal to the system.

8. The automatic sprinkler system shall be electrically supervised to indicate a trouble signal on the building fire alarm system annunciator or where the building does not have a fire alarm system to notify the person controlling the operation of the building, for each of the following:

   (a) movement of a control valve handle;
   (b) loss of excess water pressure required to prevent false alarms in a wet pipe system;
   (c) loss of air pressure in a dry pipe system;
   (d) loss of air pressure in a pressure tank;
   (e) a significant change in water level in any water storage container used for fire fighting purposes;
   (f) loss of electrical power to any automatically starting electrical fire pump; and,
   (g) a temperature approaching the freezing point in any dry pipe valve enclosure or water storage container used for fire fighting purposes.

9. The automatic sprinkler system shall be designed to notify the fire department that a waterflow switch has been activated.

10. The notification to the person controlling the building and the fire department referred to in Conditions A.8 and A.9 of this Authorization shall be provided by way of:

   (a) an independent central station conforming to NFPA-71, "Standard for the Installation, Maintenance, and Use of Signaling Systems for Central Station Service", as amended;
   (b) a proprietary control centre conforming to Chapter 4 of NFPA-72, Standard for the Installation, Maintenance, and Use of Protective Signaling Systems", as amended;
   (c) a central station conforming to ULC/ORD-C693-1994, “Central Station Fire Protective Signalling Systems and Services”; or,
   (d) if the above mentioned facilities are not available in the municipality in which the shelf and rack storage system is to be built, an independent system is permitted to be used to transmit signals to the fire department.

11. The maximum height of the shelf and rack storage system, from the floor supporting the shelf and rack system to the topmost portion of the shelf and rack system shall not exceed 18 m.

12. Each deck, walkway or platform level shall be provided with not less than two exit stair shafts that conform to all requirements for exits as stated in the Ontario Building Code (i.e. fire separations having a fire resistance rating, etc.) as amended, except as follows:

   (a) access to exit may be provided from a platform level by means of open unenclosed stairs for shelf and rack storage facilities comprising not more than three platform levels, the highest of which may not be more than 9 m above the main floor; and,

12. cont'd...

(b) any single platform, deck or walkway may be served by a single unenclosed egress stair leading to the platform or walkway level immediately below provided the:

(i) platform, deck or walkway does not exceed 200 m² in area;
(ii) travel distance on the platform, deck or walkway to the level below, including the travel distance along the single unenclosed egress stair does not exceed 25 m; and,
(iii) the platform, deck or walkway below is provided with two separate egress stairs or exits.)

13. The maximum travel distance on an elevated platform to the ground floor level, including the travel distance along unenclosed stairs shall not exceed 45 m. The maximum travel distance from the bottom of an unenclosed stair to an exit on the main floor level shall not exceed 45 m. The maximum travel distance to an enclosed exit on an elevated platform shall not exceed 45 m.

14. Fire extinguishers shall be installed on every platform or walkway level of the shelf and rack storage system in accordance with the provisions of Part 6 of the Ontario Fire Code, as amended or remade from time to time.

15. Dead end travel distance to a point of choice of direction of horizontal travel to an egress facility from an elevated deck or walkway, shall not exceed 9 m where the deck or walkway is required to be provided with at least 2 egress facilities.

16. The clear aisle width shall not be less than 760 mm (30 in). This clearance is for access to exits and shall not be used for conveyors, trolleys, tracks or any other similar mode of product transportation within an aisle or walkway.

17. The shelf and rack storage system is not permitted in a High Hazard Industrial Occupancy (F1) as defined in Article 1.1.3.2. of the Ontario Building Code, as amended or remade from time to time.

18. The shelf and rack storage system may, except as otherwise specifically stated herein, be used for the storage of Class I, II, III, and IV commodities and Group A, B and C plastics, as defined in NFPA 231C-1995, and rubber tires, subject to the limitations of Condition A.17 of this Authorization, and shall;

(a) conform to the indoor storage requirements of Part 3 of the Ontario Fire Code or, in the absence of requirements in the Ontario Fire Code, to Part 3 of the National Fire Code, as amended and remade from time to time, and

(b) not be used for the manufacturing, production, wrapping or assembly of materials.

19. A plain legible sign or signs, with contrasting letters and titled "NOTICE", shall describe the above Class and the sprinkler design criteria used for each shelf and rack storage facility. This sign or signs shall be permanently mounted, at or near the sprinkler control valve.

20. The shelf and rack storage system shall be accessible to employees only and shall be designated, signed and posted as a "NO SMOKING" area conforming to the Ontario Fire Code O. Reg. 388/97 as amended or remade from time to time.

21. A standpipe and hose system shall be installed in accordance with the Ontario Building Code where the shelf and rack storage system height is more than 14 m (45 ft.) in height or where there are more than 3 elevated platforms of walkway level.

22. Where a standpipe and hose system is required, 63.5 mm (2 1/2 in.) diameter hose connections shall be provided, except that 38.1 mm (1 1/2 in.) hose connections are permitted in the shelf and rack storage systems which:

    (a) do not exceed 6 levels including the floor level; and,
    (b) do not exceed 3,716 m^2 (40,000 ft^2) in the sum total of all levels of the shelf and rack storage system.

23. Lighting levels of decks, walkways and platforms shall conform to the Ontario Building Code, as amended or remade from time to time.

24. Emergency lighting shall be provided on walkways, decks, platforms, unenclosed egress stairs and exits providing means of egress to not less than the average level of illumination prescribed in Sentence 3.2.7.3.(2) of the Ontario Building Code, as amended or remade from time to time.

25. Guards and toe boards shall be installed in accordance with the Ontario Building Code, as amended or remade from time to time.

B. GENERAL CONDITIONS

1. The use of the shelf and rack storage system must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

2. A copy of this Authorization shall be included with an application for a building permit and shall be posted and maintained on the site of the construction with the building permit.

3. The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

(i) the material, system or building design that is the subject matter of this Authorization;

(ii) the address of the applicant specified in Section 1 of this Authorization; or,

(iii) the ownership of the applicant specified in Section 1 of this Authorization.

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 25th day of March, 1999.

FORMADRAIN® INC.
FORMADRAIN® PROCESS

1. Applicant

FORMADRAIN® INC.
8600 Rue Jarry,
Anjou, Québec
H1J 1X7

Tel: (514) 352-2000
Fax: (514) 352-2747

2. Manufacturing Facilities

FORMADRAIN® INC.
8600 Rue Jarry,
Anjou, Québec
H1J 1X7

3. Description

The Formadrain® Process is intended for the rehabilitation of underground pipes other than potable water pipes. The Formadrain® Process repairs pipes of all sizes and shapes using existing access points, so no digging is required. The Formadrain® Process consists of impregnating (wetting) a bidirectional woven fibreglass tissue with a predetermined epoxy resin. The impregnating tissue is rolled on a pneumatic tube (a thermomandrel) corresponding in length with the length of pipe to be repaired. The thermomandrel is slipped inside the pipe needing repair (concrete, clay, brick, PVC, etc.) from a nearby access, generally a manhole.

4. Authorization requested

The applicant seeks a Building Materials Evaluation Commission (BMEC) authorization for the Formadrain® Process as an alternative to repairing existing pipes as required by Article 7.1.2.2. - Alteration or Repair, and Section 7.2. - Materials and Equipment.

5. Assessment

Reports and assessments provided by the applicant show that if the Formadrain® Process of underground conduit rehabilitation is designed, performance tested and installed in accordance with the manufacturer's instructions and limitations and the specific terms and conditions stated in this authorization, the level of performance required by the Ontario Building Code will be provided.

Reports submitted and reviewed:

1. Installation procedure, including the Material Safety Data Sheet

2. Typical specifications, including laboratory data

3. Usage and limitation of the Formadrain® Process

6. Authorization

Use of the Formadrain® Process of underground conduit rehabilitation in drainage systems is authorized as an alternative to traditional pipe repair and/or replacement, subject to the following:

A. Specific Terms & Conditions

1) The Formadrain® underground conduit rehabilitation process shall be performed in accordance with the manufacturer's installation instructions.

2) Only manufacturer trained and approved installation personnel shall conduct the work in accordance with the instructions on the proper and safe installation of the Formadrain® Process, having regard to the Material Safety Data Sheets which will be supplied. All work shall be undertaken only in well-ventilated areas where no smoking is permitted while manipulating the resin.

3) The manufacturer shall provide field training to all installers and such training will be delivered by an experienced technician approved by Formadrain® Inc.- Drainmar Group Division.

4) The Formadrain® Process shall only be used in accordance with the following limitations:

a) rehabilitation of underground drainage pipes excluding potable water systems,
b) maximum diameter of the drainage pipe that can be rehabilitated is 1525 mm (60 inches),
c) minimum diameter of the drainage pipe that can be rehabilitated is 75 mm (3 inches),
d) maximum angle that can be rehabilitated is 45^{o},
e) major leaks must be sealed before installing the Formadrain® liner,
f) flows have to be blocked and pumped.

5) All materials used in the Formadrain® Process, including the balanced bidirectionally woven fibreglass tissue, the two-component epoxy resin, polythene and thermomandrel, shall be supplied by Formadrain® Inc. and shall be handled in accordance with the manufacturer's specifications.

6) Before using the Formadrain® Process, the pipes shall be thoroughly cleaned by the removal of roots, protruding laterals and exposed armatures reamed to prevent perforating the insertion kit. Major infiltrations must be grouted.

7) CCTV video inspections by a qualified person, shall be performed before the rehabilitation process starts and after the work is completed.

8) Preparation of the thermomandrel shall be in complete compliance with the specification provided by the manufacturer, and the composite (fibreglass and resins) shall be prepared in a shop under total quality control.

9) The thickness of the impregnating tissue shall be established considering the data supplied for the pipe to be lined and the number of layers shall determine the mechanical capacity. The reduction in pipe diameter from the lining shall be considered minimal and not essential for the flows in the pipes.

10) The pot life (pre-curing time) of the mixed resin is 4 hours at 20^{o} C and it may vary widely depending on ambient temperatures. During the transportation the wetted composite material shall be protected from exposure to sun and/or rain.

11) Each insertion of the insertion kit shall be done in accordance with the manufacturer's recommendation and every insertion shall overlap the previous one by a minimum of 6 inches.

12) The curing process shall be supervised at all times by a technician that will maintain the suggested pressure differential at 1 psi. Curing shall be done using a high pressure steam boiler and air compressor to set the impregnated membrane against the conduit wall.

13) The curing time is predetermined by the manufacturer based on the diameter and length of pipe being rehabilitated. Actual times shall not exceed by 25%, nor be less than 25% of the predetermined times.

B. General Conditions

1. A copy of this Authorization shall be included with an application for a building permit and shall be maintained on the site of the construction, with the building permit.

2. The BMEC may amend or revoke this Authorization where it determines that:

   (a) any change has been made to:

      (i) the material, system or building design that is the subject matter of this Authorization;

      (ii) the address of the applicant specified in Section 1 of this Authorization; or,

      (iii) the ownership of the company specified in Section 1 of this Authorization.

   (b) the use of the material, system or building design authorized herein;

      (i) does not comply with the Building Code Act, 1992 or any relevant legislation as may be amended or re-enacted from time to time; or

      (ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

THE BILCO COMPANY
SCAPEWEL® WINDOW WELL SYSTEM

1. Applicant

The Bilco Company
P.O. Box 1203
New Haven, CT 06505
U.S.A.

Tel: (203) 934-6363
Fax: (203) 933-8478

2. Manufacturing Facilities

KSQ Manufacturing
Strotherfield
Winfield, Kansas
U.S.A. 67156

3. Description

The Scapewel® Window Well is a terraced window well egress system, manufactured in widths of 42" to 66" and heights of 48" for the two-tier model and 62" for the three-tier model. It is a component of a system permitting emergency escape from habitable below-grade building space. Modular structural panels snap together and are manufactured of high density polyethylene plastic and rigid polyurethane foam. Mounting flanges attach to the foundation wall or to metal window bucks. Clear, polycarbonate covers, attached with metal clips, are custom fitted for each size of well to prevent water, snow and leaves from filling the well. The clips release from the inside by lightly pushing up on the cover.

4. Authorization requested

The applicant sought to have the Scapewel® Window Well, when installed in conjunction with appropriately designed windows, authorized as permitting a means of emergency egress from habitable below-grade building space, at least equivalent to that required by Parts 9 and 11 of the Ontario Building Code.

5. Assessment

Reports and assessments provided by the applicant show that if the Scapewel® Window Well System is used in conjunction with appropriately designed windows; is manufactured and installed in accordance with the limitations of the manufacturer's instructions and the terms and conditions stated in this authorization, a level of performance for a means of emergency egress from habitable below-grade building space, will be provided that is at least equivalent to that required in Article 9.7.1.4. and Compliance Alternative C122 of the Ontario Building Code.

Reports submitted and reviewed:

1. Product Description, Usage, Limitations and Brochures

2. Installation Manual For The Scapewel® Window Well System, including:

   - Assembly and Installation Instructions, and

   - Installation Standards

3. Hauser Laboratories Report of the "horizontal load test" and "vertical load test" on the Scapewel® System - Test Report No. L5-0565.RP2

4. Report of the Phillips Chemical Company dated January 15, 1997, on the testing of the Scapewel® panels undergoing 22 days of freeze/thaw temperature cycles.

5. Reports on the compliance of the Scapewel® System with:
   - the 1994 Edition of the Uniform Building Code,
   - the 1997 revisions to the CABO One & Two Family Dwelling Code, and
   - Section 1013 First Draft edition of the International Building Code

6. Wisconsin Department of Commerce, Material Approval 970094-0 for the RM BASE CO. Scapewel® Window Well System.

7. Quality Control Standards Used In The Manufacturing Process for the Scapewel® Window Well System

6. Authorization

The use of the Scapewel® Window Well System is authorized as providing an equivalent means of window well egress from habitable below-grade building space as required in Article 9.7.1.4. and Compliance Alternative C122 of the Ontario Building Code:

- when used in conjunction with appropriately designed windows,
- when manufactured in accordance with the manufacturer's Quality Control Standards,
- when installed in accordance with the Applicant's instructions, and,
- subject to the following terms and conditions.

A. Specific Terms and Conditions

1. In Part 9 construction, the windows used in conjunction with the Scapewel® Window Well System must comply in all respects with the requirements of Articles 9.7.1.3 and 9.7.1.4.

2. In Part 11 buildings, the windows used in conjunction with the Scapewel® Window Well System must comply with the requirements of Compliance Alternative C122, except for the clearance requirement of not less than 1 000 mm (3 ft 3 in) in front of the window.

3. The Scapewel® Window Well System must be attached in accordance with the manufacturer's installation manual, to the building it serves and it is deemed to be part of the building when calculating required setbacks.

4. The Scapewel® Window Well System must be backfilled in accordance with the manufacturer's installation manual, to ensure that free-draining stone surrounds the well and connects to the subdrain system.

5. The Scapewel® Window Well System must be installed with an integral polycarbonate cover conforming to CAN/CGSB-63.14-M.

6. No part of the Scapewel® Window Well System shall be located closer than 1 500 mm (5 ft) to the edge of a driveway.

7. No exhaust or discharge outlet from the building shall be placed within 1 000 mm (3 ft 3 in) in any direction, of the Scapewel® Window Well System.

8. A copy of this authorization and the manufacturer's installation manual must accompany each application for a building permit.

B. General Conditions

1. The use of the Scapewel® Window Well System must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

2. A copy of this Authorization shall be included with an application for a building permit and shall be maintained on the site of the construction, with the building permit.

3. The BMEC may amend or revoke this Authorization where it determines that:

   (a) any change has been made to:

      (i) the material, system or building design that is the subject matter of this Authorization;

      (ii) the address of the applicant specified in Section 1 of this Authorization; or,

      (iii) the ownership of the company specified in Section 1 of this Authorization.

   (b) the use of the material, system or building design authorized herein;

      (i) does not comply with the Building Code Act, 1992 or any relevant legislation as may be amended or re-enacted from time to time; or

      (ii) provides an unsatisfactory level of performance, in situ; or

   (c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 25th day of February, 1999

AUTHORIZATION REPORT - Infiltrator Systems Inc. Equalizer 24 Chamber System

1. Applicant

Infiltrator Systems Inc.
4 Business Park Road
P.O.Box 768
Old Saybrook,
CT 06475 USA

Tel: (860) 388-6639
Fax: (860) 388-6810

2. Manufacturing Facilities

Infiltrator Systems Inc.
1315 Enterprise Dr.
Winchester, KY 40391 USA

Infiltrator Systems Inc.
1750 West 2450 South
Ogden, UT 84401 USA

3. Description

Infiltrator Equalizer 24 Chambers are intended for use in a sewage system in lieu of absorption trenches constructed of stone and distribution pipe. The Infiltrator Equalizer 24 Chambers are formed from injection molded polyolefin and connected end too end using a built-in latch. Chambers have a minimum bottom width of 380 mm and a minimum height of 280 mm. The louvered sidewalls have a minimum area of 0.61 m^2/m of length.

* The Equalizer 24 Chamber is available in two length sizes: 2.54 m (8.33 ft) and 1.22 m (4 ft) with the latter referred to as the Quick4 Equalizer 24 , and for the purposes of this authorization both chamber lengths are referred to a the “Infiltrator Equalizer 24 Chamber”. The Equalizer 24 Chambers are closed at the ends of a trench with snap-on end plates.

4. Authorization requested

The applicant sought authorization for use of the Equalizer 24 Chamber System as an alternative to the construction of absorption trenches as required by Section 8.7 of the Ontario Building Code. The applicant requested that the Equalizer 24 Chamber System be used to replace stone and distribution pipe in absorption trenches and filter beds that are:

i) gravity fed,
ii) "dosed" (non-pressurized distribution system), and,
iii) pressurized.

Note: For the purposes of this authorization, "dosed" means a system in which effluent is pumped to the leaching bed either by pump or siphon but the effluent is not pressurized within the leaching bed.

5. Assessment

Reports and assessments provided by the applicant show that if Infiltrator Equalizer 24 Chambers are designed, performance tested, installed and maintained in accordance with the limitations of the manufacturer's instructions and the conditions stated in this authorization, a level of performance will be provided as required by the Ontario Building Code 1997, for absorption trenches (in soil, leaching bed fill or a filter bed), whether gravity fed, pressurized or "dosed".

6. Authorization

The use of the Infiltrator Equalizer 24 Chamber System is authorized in sewage systems that are within the scope of Part 8 of the Ontario Building Code 1997, as an alternative to stone and distribution pipes in absorption trenches and in filter beds, when installed in accordance with the manufacturer's recommendations and the Specific Terms and Conditions of this Authorization.

A. Specific Terms and Conditions

1. When the Infiltrator Equalizer 24 Chamber System is installed in lieu of distribution piping and stone, the length of the chamber system must equal the required lengths of distribution pipe specified in Articles 8.7.3.1 and 8.7.5.3.

2. When the Infiltrator Equalizer 24 Chamber System is installed in lieu of distribution piping and stone, the leaching beds must meet the general construction requirements specified in Articles 8.7.2.1, 8.7.4.2 and 8.7.5.3.

3. The minimum clearance distances required by Article 8.2.1.6. for distribution piping, must be met by the Infiltrator Equalizer 24 Chamber System.

4. When installed in lieu of absorption trenches, the trenches for the Infiltrator Equalizer 24 Chamber System shall be:

a) approximately the same length and not more than 30 m in length,
b) approximately 500 mm in width,
c) at least 600 mm and not more than 900 mm in depth, to bottom of trench,
d) centred at least 1600 mm apart,
e) at least 900 mm at all points on the bottom of the trench, above the high ground water table, rock or soil with a percolation time greater than 50 minutes, and
f) backfilled, after installation of the Infiltrator Equalizer 24 Chamber System, with leaching bed fill, so as to ensure that after the leaching bed fill settles, the surface of the leaching bed will not form any depressions.

5. When installed in lieu of distribution piping and stone in filter beds, the lines of Infiltrator Equalizer 24 Chambers shall be evenly spaced over the surface of the filter medium to which the sewage effluent is applied, and the filter bed shall meet the following requirements:

   a) the filter medium shall have a minimum depth of 750 mm below the bottom of the Equalizer 24 Chambers and shall be clean sand comprised of particles ranging in size between the limits of:

      i) an effective size of .25 mm with a uniformity coefficient not less than 3.5,
      ii) an effective size of 2.5 mm with a uniformity coefficient not less than 1.5, and
      iii) having a uniformity coefficient not greater than 4.5.

   b) the surface of the filter bed shall be at least 900 mm above the high ground water table, rock or soil with a percolation time greater than 50 minutes.

   c) the other construction requirements of Sentences 8.7.5.3.(1) and (4) to (6).

6. When used in gravity fed conditions, the Infiltrator Equalizer 24 Chamber System must be installed in compliance with the above-stated Specific Terms and Conditions 1. through 5., and be:

   a) installed level over the length of the trench,
   b) securely connected, chamber to chamber, using the built-in latch,
   c) free of structural damage and used full length (not cut),
   d) equipped with end caps installed on both ends, and
   e) equipped with a built-in splash plate at the inlet end of each chamber line, to prevent soil scouring.

7. Where the sewage effluent is “dosed” to the leaching bed by pumps or a siphon, the Infiltrator Equalizer 24 Chambers must be installed to comply with the above-stated Specific Terms and Conditions 1. through 6., and:

a) the effluent is pumped to a header line or distribution box prior to entering the chambers, and,
b) a volume of effluent within the range of 3.5 - 8.0 litres per metre of Infiltrator Equalizer 24 Chamber, must be pumped within a time period not exceeding 15 minutes, to meet the requirements of Sentence 8.6.1.3.(4).

8. Where the sewage effluent is distributed through a pressurized system, the Infiltrator Equalizer 24 Chambers must be installed:

a) to comply with Specific Terms and Conditions numbers 1. through 5. above, and,
b) with a minimum 1½ inch diameter pipe extending over the entire length of each trench, and such pipe:

i) being specified by the manufacturer as acceptable for pressurized installations,
ii) having minimum 6 mm diameter orifices, spaced over its length to ensure even distribution of effluent,
iii) being supported in a manner so as to ensure self-draining and prevent freezing of its contents,
iii) having clean-outs installed at the downstream end of each chamber line, to allow the system to be serviced, and
iv) receiving effluent from a treatment unit equipped with an effluent filter on the outlet, such effluent filter to be installed and sized in accordance with the manufacturer's recommendations.

B. General Conditions

1. The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

(i) the material, system or building design that is the subject matter of this Authorization;
(ii) the address of the applicant specified in Section 1 of this Authorization; or,
(iii) the ownership of the company specified in Section 1 of this Authorization.

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 19th day of January, 1999

BUILDING MATERIALS EVALUATION COMMISSION

_____

per: Antonio Chow, Vice-Chair

BUILDING MATERIALS EVALUATION COMMISSION (BMEC)
AUTHORIZATION REPORT

DATE OF AUTHORIZATION	July 23, 1998
BMEC REFERENCE	BMEC # 98-05-228
BMEC APPLICATION #	BMEC #A1997-21

ROYAL CONCRETE ENCASED TECHNOLOGIES INC. (ROYCET)
Royal Building System

1. Applicant

Royal Concrete Encased Technologies Inc.
3901 Highway #7
Suite 400
Woodbridge, ON
L4L 8L5

Tel: (905) 851-3331
FAX: (905) 851-2001

2. Manufacturing Facilities

Royal Building Systems
(Canada) Ltd.
1 Royal Gate Boulevard
Woodbridge, ON
L4L 8Z7

Tel: (905) 264-0701
FAX: (905) 264-0702

3. Description

The Royal Building System ™ (RBS) uses a rigid polymer form consisting of a PVC-based compound filled with concrete and polyurethane insulation. The RBS is installed by connecting a series of forms and filling the forms with concrete and insulation. The original form remains as the finished surface of the wall assembly on the interior and exterior of the wall. This authorization pertains to the 200 mm RBS wall system only. The 200 mm wall system consists of a 150 mm concrete section with 50 mm of polyurethane insulation on the exterior side of the wall, contained within a PVC form.

4. Authorization Requested

The applicant requested an authorization for the use of the 200 mm RBS as an exterior combustible cladding system in non-loadbearing walls in industrial (Group F, Divisions 2 and 3) and mercantile (Group E) single storey sprinklered buildings of noncombustible construction.

5. Assessment

The Royal Building System is tested and evaluated as follows:

(a) CAN/ULC: S102-M88, Standard Method of Test for Characteristics of Building Materials and Assemblies
S127M, Standard Corner Wall Method of Test for Non-Melting Building Materials

(b) ASTM: D4329, G53, D1925, D2244, Light and Water Weathering

6. Authorization

The use of the Royal Building System™ is authorized in single-storey buildings of noncombustible construction and classified as Group E, Group F, Division 2 or Group F, Division 3, subject to the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1. The building is sprinklered in accordance with NFPA 13, NFPA 231 or NFPA 231C.

2. The sprinkler system is designed for potential storage conditions by a professional engineer.

3. The sprinkler system is electrically supervised.

4. The RBS is only used as a non-loadbearing assembly.

5. The flame spread rating of the foamed plastic insulation used in this building system has a flame spread rating of less than 500.

6. The limiting distance of the building shall be calculated in accordance with Table 3.2.3.1.A. for Group F, Division 3 occupancy or Table 3.2.3.1.B. for Group E occupancy and Group F, Division 2 occupancy, forming Part of Article 3.2.3.1 of the Ontario Building Code 1997, and based on:

   a) 25% unprotected openings in the exposing building face if the actual unprotected opening is between 0 and 25%; or

   b) the actual percentage of unprotected openings in the exposing building face if the percentage of unprotected openings is greater than 25%.

7. The area of an exposing building face shall be calculated as the total area of exterior wall facing in one direction on any side of a building measured from the finished ground level to the uppermost ceiling.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

   (a) any change has been made to:

      (I) the material, system or building design that is the subject matter of this Authorization;

      (ii) the address of the applicant specified in Section 1 of this Authorization; or,

      (iii) the ownership of the company specified in Section 1 of this Authorization.

   (b) the use of the material, system or building design authorized herein;

      (I) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

      (ii) provides an unsatisfactory level of performance, in situ; or

   (c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this August 4, 1998.

BUILDING MATERIALS EVALUATION COMMISSION

_____

BMEC APPLICATION #	**BMEC #A1998-01**

Leak-Bye Inc.
Leak-Bye Interior Foundation Drainage System

1. Applicant

Leak-Bye Inc.
RR3
Mount Forest, ON
N0G 2L0

Tel: 1-800-393-5325
FAX: 519-323-4793

2. Manufacturing Facilities

Gravenhurst Plastics Limited
225 Edward Street
Gravenhurst, ON
P1P 1K8

Tel: 705-687-3610
FAX:

3. Description

The Leak-Bye Interior Foundation Drainage System consists of a 14 inch wide corrugated polyethylene plastic strip complete with a "V" groove centrally cut along the length of the strip. It is used in conjunction with an approved sheathing breather membrane or house-wrap. The plastic strip is to be folded at the groove such that it can be placed on the inside of the foundation wall at the footing. The Leak-Bye strip is secured to the footing prior to the pouring of the basement wall.

The intent of the system is to redirect any water which may penetrate the foundation wall, down between the wall and the breather membrane, to the corrugated strip. The corrugations allow passage of the water past the floor to the gravel bed below and possibly a secondary weeping tile located under the floor slab.

4. Authorization Requested

The applicant requested an authorization for the use of the Leak-Bye Interior Foundation Drainage System as an equivalent or alternative to a drainage layer required under Article 9.14.2.1. of the Ontario Building Code.

2/...

5. Assessment

The Leak-Bye Interior Drainage System is tested and evaluated, as follows:

The "Side Water Inflow Drainage Test" conducted by ORTECH Corp. shows there is more than adequate flow characteristics.

A professional engineer's opinion from Rymell Building Sciences concludes that the Leak-Bye Interior Foundation Drainage System should perform as a drainage layer as required by the Ontario Building Code, if installed as per the manufacturer's direction for both the Leak-Bye strip and the breather membrane.

6. Authorization

The use of the Leak-Bye Interior Drainage System is authorized as a compliance alternative for retrofit applications subject to the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1. This Authorization covers only construction under Part 11 of the Ontario Building Code.

2. The Leak-Bye Interior Drainage System is not intended to act as a means of controlling soil gases under Article 9.13.1.3 of the OBC.

3. The Leak-Bye Interior Drainage System shall not be installed in areas where there is potential infiltration of soil gases. However, it may be used in conjunction with other means such as negative pressure systems.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

(I) the material, system or building design that is the subject matter of this Authorization;

(ii) the address of the applicant specified in Section 1 of this Authorization; or,

(iii) the ownership of the company specified in Section 1 of this Authorization.

(b) the use of the material, system or building design authorized herein;

(I) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

STUDOR Air Admittance Valve (Mini-Vent and Maxi-Vent)

1. Applicant

Studor Inc.
2030 Main Street
DUNEDIN, Florida
34698

2. Manufacturing Facilities

Mini-Vent D-Rep Plastics, Inc.
11345A 53rd Street North
CLEARWATER, Florida 34620

Maxi-Vent MPC-D G Plastics
Steenweg Op Mol 177
B2300 TURNHOUT, Belgium

Recess Box: Midtech, Inc. of America
924 West First Street
MCPHERSON, Kansas 67460

3. Description

Studor Air Admittance Valve (AAV) is intended for use as an alternative measure to a vent pipe that extends to the open air. These valves open under a negative pressure within the drainage system allowing air to enter the venting system to maintain trap seals. The valves close by gravity under no pressure differential (no flow) or under positive pressure to prevent the leakage of sewer gases through the valve. The Studor AAV comes in two models, the Mini-Vent which will accommodate 1 ¼" and 1½" pipe sizes, and the Maxi-Vent which will accommodate 2", 3" and 4" pipe sizes.

4. Authorization Requested

The applicant sought authorization for the use of their product as an alternative to extending a vent pipe to open air as presently required by the OBC.

5. Assessment

Reports and assessments provided by the applicant show that if the Studor AAV's are designed, performance tested and maintained in accordance with the limitations

the manufacturer's instructions and conditions stated in this authorization, the level of the performance required by the Ontario Building Code for individual venting, duel venting, wet venting or circuit venting for fixtures located on the same floor level will be provided.

Reports submitted and reviewed:

1. United States Testing Company Inc. Report # TS93-0515.1 dated 9/10/93
   Evaluation of Studor Air Admittance Valves for Compliance with ASSE 1050-91.

2. United States Testing Company Inc. Report #TS93-0515.2R revised date 2/13/95
   Testing of Studor Air Admittance Valves as type A and Type B in accordance with ANSI/ASSE 1051-1992.

3. SGS United States Testing Company Inc. Report #TS96-0247R dated 5/17/96
   Evaluation of Studor Air Admittance Valves to ANSI/ASSE 1051-1992.

4. Research Report #92-46, Boca
   Evaluation Services Inc. Studor Mini-Vents and Maxi-Vent Air Admittance Valve dated January 1993

5. Engineering Reports dated November 30/92, December 15, 1992 and June 1, 1994 prepared by J.B. Engineering and Code Consulting, P.C.

   Since these reports include figures (1 through 13) and illustrate piping arrangements in plumbing systems that could comply with different Plumbing Codes in the United States and not in compliance with venting requirements in the Ontario Building Code Part 7, Section 7.5 the figures shall not be used as an approved piping arrangement and articles 7.5.2.1; 7.5.2.2; 7.5.5.3; 7.5.7.1, 7.5.7.2 and this authorization must govern the location and the sizes of the Studor Air Admittance Valve

6. Authorization

* The use of Studor Mini-Vent AAV's sizes 1¼" and 1½", and Maxi-Vent AAV's sizes 2", 3" and 4" is authorized for use within a plumbing system as an alternative where there is no other reasonable means of connecting to the traditional venting system and where there is no danger of back pressure presenting a problem.

A. SPECIFIC TERMS AND CONDITIONS:

1) Vent system utilizing Studor AAV shall conform to performance standards for "Fixture and Branch Air Admittance Valves" ANSI/ASSE 1051/90 (rev. 1996).

* 2) All PVC and ABS materials used in the Studor AAV shall conform to ASTM D2665-96 and ASTM 2661, respectively.

3) The Studor AAV shall be installed in accordance with the manufacturer's installation instructions. In case of a conflict between the manufacturer's installation instructions and the Ontario Building Code requirements, the provisions of the Code shall govern.

4) The manufacturer shall supply instructions on the proper and safe installation of the AAV. Such instructions shall include detail drawings and must remain on site.

5) The documents submitted for permit approval shall contain the design and layout of the entire drainage and venting systems. This includes, but not limited to plan views, riser diagrams, all pipe sizes, fixture units and information on the locations and sizes of all Studor AAV's.

6) The AAV shall be installed after the drain waste and vents (DWV) have been tested as required by articles 7.3.6.4 and/or 7.3.6.5 and prior to the final test as required in article 7.3.6.6. so as to establish that an adequate seal under positive pressure is achieved.

7) Individual, dual, wet and circuit vents shall be permitted to terminate with a connection to a Studor AAV. When more than three fixtures connect to the horizontal branch a relief vent is required.

8) The AAV shall not be used on a vent stack or stack vent.

9) When the Studor AAV is used on a 4" vent the inner lip of the gasket must be cut off.

10) The AAV shall only vent fixtures that are located on the same floor level and connect to a horizontal branch line.

11) The horizontal branch drain shall connect to the building drain or the stack not more than 4 stories (as defined in Part 7) from the top of the stack.

12) The horizontal branch that is circuit vented shall be provided with a relief vent that shall connect to a vent stack, stack vent, header or extend outdoors to open air.

13) Studor AAV's cannot be used as relief vents.

14) The relief vent shall connect to the horizontal branch drain between the stack or building drain and the most downstream fixture drain connected to the horizontal branch drain. The relief vent shall be sized in accordance with section 7.5.2.2 of the O.B.C. The relief vent may be a wet vent if it is 2" size or greater and not more than one fixture having a maximum of 1½ fixture units is drained into it.

15) The AAV shall be located 6" (150 mm) above the flood level rim of the fixture being vented where possible, and in case of a single fixture, as high as possible but not less than 4" (100 mm) above the weir of the fixture trap.

16) The AAV shall be located within the maximum developed length permitted as per article 7.5.5.3 O.B.C.

17) The AAV shall be located in an area that is accessible for inspection, service, repair and/or replacement. For the purpose of this approval, concealment in walls and/or floor spaces without removable grills or access panels is not considered accessible.

18) The AAV shall not be located in an attic space.

19) The AAV shall be located within a ventilated space that allows air to enter the valve.

20) The AAV shall be rated for the size of the vent to which the valve is connected. The Mini-Vents sized 1¼" and 1½" shall be installed on vent pipes of 1¼" and 1½" nominal sizes. The Maxi-Vents sizes 2", 3" and 4" shall be installed on vent pipes of 2", 3" and 4" nominal pipe sizes.

21) Each plumbing system shall have a minimum of one 3" stack which shall be extended outdoors to the open air as per sentence 7.5.6.2.(2) O.B.C.

22) AAV shall not be used for corrosive or acid waste systems, grease and oil interceptors installations or any other special waste systems.

23) The AAV shall not be used for any closed system such as a sewage ejector, or a manhole located inside the building.

24) The AAV shall not be located in spaces utilized as supply or return air plenums.

25) When the AAV is located in an area where freezing conditions may occur protection of the AAV shall be done in accordance with the manufacturers installation instructions.

26) A label of 2" x 2" (50mm x 50mm) in size shall be placed on hydro panel, stating the following: "<u>These premises have an air admittance valve installed</u>

in the Plumbing System".

27) This authorization is based on O.B.C. Part 7 requirements. All matters relating to combustible construction requirements apply as per Part 3 of the O.B.C.

28) The AAV must be installed as close to true vertical as possible, but not more than 15° off the true vertical.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

(i) the material, system or building design that is the subject matter of this Authorization;

(ii) the address of the applicant specified in Section 1 of this Authorization; or,

(iii) the ownership of the company specified in Section 1 of this Authorization.

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

CertainTeed FORM-A-DRAIN™ permanent foundation footing form and foundation drain system

1. Applicant

CertainTeed Corporation
Pipe and Plastics Group
750 East Swedesford Road
P.O. Box 860
Valley Forge, Pennsylvania
U.S.A. 19482

2. Manufacturing Facilities

CertainTeed Corporation
Pipe and Plastics Group
McPherson, Kansas Plant
500 West, 1st Street
McPherson, Kansas
U.S.A. 67460

3. Description

CertainTeed FORM-A-DRAIN™ functions as both a permanent foundation footing form and foundation drain system.

The system components are manufactured from polyvinyl chloride (PVC) compound. The FORM-A-DRAIN™ system consists of 3.66 m (12') long extruded drainage channels, called "lineals", with sizes of 55 mm by 150 mm (2.25" by 6") and 55 mm by 205 mm (2.25" by 8"). The lineals may have factory applied geo-textile fabric applied on the side of the slots. They are manufactured as hollow rectangular tubes with a solid intermediate web which stiffens the section and creates upper and lower chambers of equal size.

The lineals have slots in the exterior vertical face to allow the entrance of ground water. The water passes through the system to outlet fittings which provide the connection of the FORM-A-DRAIN™ to an approved drainage disposal area.

The FORM-A-DRAIN™ system components includes couplings, corners, drain outlets, spacer straps and grade stakes.

4. Authorization Requested

The applicant sought authorization for the use of an innovative permanent foundation footing form and foundation drain system as an equivalent to the drainage provisions contained in Sentence 9.14.3.1.(1) and Article 9.14.3.2. of Regulation 61 of Revised Regulations of Ontario 1990 (the "Ontario Building Code").

5. Assessment

Test results and assessments provided by the Applicant show that if the CertainTeed FORM-A-DRAIN™ system is used in accordance with the limitations and conditions stated in this authorization, it will provide equivalent performance with the following:

* Ontario Building Code, Sentence 9.14.3.1.(1) and Article 9.14.3.2.

6. Authorization

The use of CertainTeed FORM-A-DRAIN™ permanent foundation footing form and foundation drain system is authorized in respect of the drainage material standards and minimum drain tile size contained in Sentence 9.14.3.1.(1) and Article 9.14.3.2. of the Ontario Building Code, as amended or remade from time to time, subject to the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1) The Applicant (i.e. CertainTeed Corporation) shall provide the user of this Authorization with complete instructions on the proper installation of the FORM-A-DRAIN™ system.

2) The FORM-A-DRAIN™ system shall be installed in accordance with this Authorization and the manufacturer's specifications (titled "Form-A-Drain Installation Guide", Code No. 40-95-04, dated 1994), which shall be available at the job site at all times. If a conflict arises between the manufacturer's installation instructions and this Authorization, the most restrictive provision shall apply.

3) The FORM-A-DRAIN™ system shall be installed in accordance with Sentences 9.14.3.3.(1) and 9.14.3.3.(4) of the Ontario Building Code, as amended or remade from time to time.

4) The slotted vertical face of the FORM-A-DRAIN™ system lineals shall be installed facing away from the footings. The lineals shall be inserted firmly into the accessory couplings to obtain a snug fit. Where the ends of lineals are cut to fit the layout, they shall be cut square and all burrs removed.

5) Drainage outlets shall be installed with the 100 mm (4 inch) diameter outlet located at the bottom. A 100 mm (4 inch) diameter PVC pipe shall be used to connect the outlets to each other or to the drainage pipe that discharges to an approved area.

6) The complete FORM-A-DRAIN™ system shall be levelled and reinforced with stakes spaced at a maximum distance of 1.5 m (5 ft.) on center, prior to the placing of concrete.

7) The maximum number of outlet fittings per side of any lineal shall be limited to one outlet per 0.9 m (3' 0") length of lineal.

8) The use of FORM-A-DRAIN™ as a permanent footing form is limited to applications

where the required footing depth is not less 150 mm (6 inch).

9) Any system components that are damaged during placement of backfill shall be removed and replaced with new components.

10) This Authorization is valid only for FORM-A-DRAIN™ manufactured by CertainTeed Corporation.

11) The use of FORM-A-DRAIN™ must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

(i) the material, system or building design that is the subject matter of this Authorization;

(ii) the address of the manufacturing facilities specified in Section 2 of this Authorization;

(iii) the ownership of the manufacturing facilities specified in Section 2 of this Authorization; or

(iv) the address of the Applicant specified in Section 1 of this Authorization;

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

C-Tec® Brand Tec-Cor II™ Access Floor Panels

1. Applicant

Interface Architectural Resources Inc.
3422 Lousma Drive
GRAND RAPIDS, MICHIGAN
49548, USA

2. Description

C-Tec® Brand Tec-Cor II™ access floor panels consist of 600 mm or 24 inches square panels constructed of 25.4 mm (1") thick high density particleboard core panels, structurally bonded to 0.61 mm (24 gauge) thick, electro-galvanized steel top sheets and 0.76 mm (22 gauge) thick electro-galvanized steel bottom sheets, permanently and structurally hemmed together and supported on an electro-galvanized steel framing system to create a raised floor.

3. Authorization Requested

The applicant sought authorization for the use of C-Tec® Brand Tec-Cor II™ access floor panels system, to create a raised floor, in buildings required to be of noncombustible construction.

4. Assessment

Reports and assessments provided by the applicant show that if C-Tec® Brand Tec-Cor II™ access floor panels systems are manufactured, installed and maintained in accordance with the manufacturer's "Installation and Maintenance Technical Manual" and the limitations and conditions stated in this authorization, they will provide the level of performance equivalent to that which would be achieved by conforming with Article 3.1.5.1. of the Ontario Building Code.

2/...

5. Authorization

C-Tec® Brand Tec-Cor II™ Access Floor Panels System, manufactured by Interface Architectural Resources Inc., are authorized for use as a raised floor system in a building required to be of noncombustible construction by Subsection 3.2.2. and as regulated by Article 3.1.5.1. of the Ontario Building Code, as amended or remade from time to time, subject to the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1) The use of C-Tec® Brand Tec-Cor II™ Access Floor Panels System must comply with the Building Code Act, 1992, as amended or re-enacted from time to time and, except as specifically authorized herein with the Ontario Building Code as amended or remade from time to time.

2) A copy of this Authorization and the manufacturer's "Installation and Maintenance Technical Manual" shall be kept and maintained on the site of the construction and made available to an inspector or chief building official appointed under the Building Code Act.

3) Each floor panel must be listed by the Underwriters' Laboratories of Canada (ULC) and be identified with a label as described in Guide 40 U8.6-¾ of List of Equipment and Materials, Volume II, Building Materials.

   The label to show that the panels are classified as to their surface burning characteristics in accordance with CAN/ULC-S102.2-M88, "Standard Method of Test for Surface Burning Characteristics of Flooring, Floor Covering and Miscellaneous Materials and Assemblies". The finished panels have a flame-spread rating and smoke developed classification of 0. The core material has a flame-spread rating of 95 and a smoke developed classification of 205.

4) Finished floor coverings shall comply with the Ontario Building Code.

5) The panels shall be installed without field fabrication. If field fabrication is proposed, the manufacturer shall submit, to the inspector or the chief building official, the method and documentation from ULC showing that surface burning characteristics, identified in paragraph 5.A.3), will not be adversely affected.

3/...

6) A C-Tec® Brand Tec-Cor II™ Access Floor Panels System may be installed without fire stopping within the raised floor cavity which may be of any height recommended by the Applicant identified in Section 1. of this Authorization.

7) A C-Tec® Brand Tec-Cor II™ Access Floor Panels System shall be supported by a noncombustible structural floor. The system's capacity to carry uniformly distributed loads and concentrated loads shall be identified on the shop drawings; a copy of which shall be filed with the chief building official.

8) Installation of the C-Tec® Brand Tec-Cor II™ Access Floor Panels System shall not be commenced until the sub-floor is clean and dry, the room has controlled temperature of 4.4º C (40º F) or above and is protected from the weather.

9) All construction debris shall be removed, from the space below the access panels, as work progresses. The space below the access panels shall be used as a service space only; it shall not be used for storage space or any other occupancy.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

   (a) any change has been made to:

      (i) the material, system or building design that is the subject matter of this Authorization;

      (ii) the address of the applicant specified in Section 1 of this Authorization; or,

      (iii) the ownership of the applicant specified in Section 1 of this Authorization.

4/...

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

ASPHALT SHINGLES MADE FROM GLASS FELT AND SURFACED WITH MINERAL GRANULES

1. Applicant

CertainTeed Corporation
1400 Union Meeting Road
P.O. Box 1100
BLUE BELL, PA
19422 USA

2. Description

Asphalt shingles, designated as CertainTeed 20, manufactured to the requirements of ASTM D 3462 - 97, “Standard Specification for Asphalt Shingles Made from Glass Felt and Surfaced with Mineral Granules” and CAN/ULC Standard S107-M87, "Standard Method of Fire Tests of Roof Coverings".

3. Authorization Requested

The applicant sought authorization for the use of CertainTeed 20 as a roofing material on roof slopes 1:6 to less than 1:3 and 1:3 and steeper.

4. Assessment

Reports and assessments provided by the applicant show that if CertainTeed 20 asphalt shingles made from glass felt and surfaced with mineral granules are manufactured in accordance with the limitations and conditions stated in this authorization, they will provide the level of performance equivalent to that which would be achieved by conformance with Article 9.26.2.1. of the Ontario Building Code.

2/...

5. Authorization

CertainTeed 20 asphalt shingles made from glass felt and surfaced with mineral granules, manufactured by CertainTeed Corporation, are authorized for use as a roofing material as required by the Ontario Building Code, as amended or remade from time to time, subject to the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1) The use of CertainTeed 20 asphalt shingles made from glass felt and surfaced with mineral granules must comply with the Building Code Act, 1992, as amended or re-enacted from time to time and, except as specifically authorized herein with the Ontario Building Code as amended or remade from time to time.

2) A copy of this Authorization shall be kept and maintained on the site of the construction with the building permit.

3) The application of CertainTeed 20 is permitted on roof slopes 1:6 to less than 1:3 and 1:3 and steeper provided the installation complies with one of the installation methods identified at Section 9.26 of the Ontario Building Code.

*4) CertainTeed 20 asphalt shingles made from glass felt and surfaced with mineral granules must be manufactured in accordance with the requirements of ASTM D 3462 - 97, “Standard Specification for Asphalt Shingles Made from Glass Felt and Surfaced with Mineral Granules" and CAN/ULC Standard S107-M87, "Standard Method of Fire Tests of Roof Coverings". In addition, they must comply with CAN/CSA Standard A123.5-M90, “Asphalt Shingles made from Glass Felt and Surfaced with Mineral Granules”, except for individual shingle minimum mass per unit area and net average mass per unit area of finished shingles; with composition as stated in the documentation supporting the application.

*5) The net average mass of finished shingles shall be not less than 4101 g/m^2.

3/...

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

   (a) any change has been made to:

      (i) the material, system or building design that is the subject matter of this Authorization;

      (ii) the address of the applicant specified in Section 1 of this Authorization; or,

      (iii) the ownership of the applicant specified in Section 1 of this Authorization.

   (b) the use of the material, system or building design authorized herein;

      (i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

      (ii) provides an unsatisfactory level of performance, in situ; or

   (c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

BUILDING MATERIALS EVALUATION COMMISSION (BMEC) AUTHORIZATION REPORT

DATE OF AUTHORIZATION July 31, 1997
BMEC REFERENCE BMEC 97-11-220

TUFF-N-DRI® Waterproofing System for Below Ground Exterior Foundation Walls of Solid Concrete or Unit Masonry

1. Applicant

Koch Materials Company
P.O. Box 2155
800 Irving Wick Drive
HEATH, OHIO
43056 USA

2. Description

Tuff-N-Dri® waterproofing membrane is a spray-applied foundation waterproofing material composed of polymer-modified asphalt in a water carrier that cures to a monolithic, elastomeric membrane. Tuff-N-Dri® is applied to a minimum thickness of 63 mils (40 mils when dry) on the exterior of below-ground portion of foundation walls of solid concrete or unit masonry .

3. Authorization Requested

The applicant sought authorization for the use of an innovative waterproofing system as an equivalent to waterproofing provisions for unit masonry and solid concrete foundation walls which are specified at Article 9.13.1.3. and Subsections 9.13.2. and 9.13.3. of the Ontario Building Code.

4. Assessment

Test results and assessments provided by the Applicant show that if Tuff-N-Dri® is handled, stored and applied in accordance with the manufacturer's instructions and the limitations and conditions stated in this authorization, it will provide a level of performance equivalent with the waterproofing requirements of Article 9.13.1.3. and Subsections 9.13.2. and 9.13.3. of the Ontario Building Code.

2/...

5. Authorization

The use of Tuff-N-Dri® Waterproofing System for below ground exterior foundation walls of solid concrete or unit masonry is authorized in respect of the waterproofing provisions contained in Article 9.13.1.3., and Subsections 9.13.2. and 9.13.3. of the Ontario Building Code, as amended or remade from time to time, subject to the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1) Application shall only be by Koch Materials selected contractors. The selected contractors' personnel shall carry qualification-identification-cards issued by the Applicant.

2) Application shall be as per Tuff-N-Dri® exterior foundation waterproofing system detailed application instructions dated 4/1/96.

3) Footings shall be clean and free of dirt, sand, soil or any other substance that would prevent full adhesion of the membrane. Footings must be dry and free of any visible water. Any water present must be removed and the footing dried.

4) Foundation wall surfaces to be waterproofed shall be clean, smooth, firm, free of dust, mud, loose mortar, wires, fins, metal projections or any other substances which might prevent placement and bonding of a continuous membrane.

5) On solid concrete foundation walls, form ties shall be removed at least flush with the concrete surface. Form tie holes and other patching shall be carried out as specified in CSA A438-M84, "Concrete Construction for Housing and Small Buildings" or Sentence 9.13.3.1.(2) of the Ontario Building Code. Tuff-N-Dri® may be applied, upon removal of the forms, on green concrete.

6) i) Unit masonry foundation walls may be parged, below ground level, with not less than 6 mm of mortar conforming to Subsection 9.20.3 of the Ontario Building Code. The parging need not be coved over the footing. The mortar must be dry <u>BEFORE</u> Tuff-N-Dri® is applied.

ii) When unit masonry foundation walls are not parged, mortar joints must be struck (made flush) and filled in order to ensure a void free surface. Patching and repairs may be done with mortar or a non-shrinking grout.

7) The Tuff-N-Dri® membrane shall be applied so that the wet film thickness is not less than 63 mil (1.6 mm) and cured film thickness is not less than 40 mils (1.0 mm). Tuff-N-Dri® <u>MUST NOT</u> be applied over standing water, a water film, ice or snow.

3/...

8) Tuff-N-Dri® shall only be applied when the ambient air temperature and foundation wall surface temperature are above minus 6.7°C (20° F) The temperature of the sprayed material must be between 43.3°C (110°F) and 71.1°C (160°F).

9) Following application, the membrane shall not be exposed to direct sunlight for more than 15 days.

10) Warm-N-Dri®, drainage and insulation board identified in Evaluation Report Nº 12737-L issued by the Canadian Materials Construction Centre may be applied as the membrane begins to cure. A signal that the membrane is beginning to cure is when it changes from brown to black in colour.

11) Backfill shall be placed in a manner which does not damage the foundation wall, the waterproofing membrane or the drainage and insulation board when provided.

12) When the backfill material contains angular stone or sharp objects, Warm-N-Dri® drainage and insulation board **shall** be provided over Tuff-N-Dri®, as a protection board. The crushed stone or other coarse clean granular material identified at Sentence 9.14.3.3.(4) of the Ontario Building Code does not require a protection board

13) Koch Materials shall provide the user of this authorization with complete instructions on the proper installation of Tuff-N-Dri® and Warm-N-Dri® The instructions shall include, but not be limited to the proper storage and handling of, the proper application of, and the health risks (i.e., the breathing of solvent vapours and the risks associated with eye and skin contact) and hazards associated with the use of Tuff-N-Dri® and Warm-N-Dri® and any other safety precautions needed for the proper installation of Tuff-N-Dri® and Warm-N-Dri®.

14) Tuff-N-Dri® shall be installed in accordance with this authorization and the manufacturer's installation instructions. If a conflict arises between the manufacturer's installation instructions and this authorization, the most restrictive provision shall apply.

15) A copy of this Authorization shall be maintained on the site of the construction.

16) This Authorization is valid only for Tuff-N-Dri® marketed by the Applicant specified in Section 1 herein.

17) The use of Tuff-N-Dri® must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

4/...

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

   a) any change has been made to:

      i) the material, system or building design that is the subject matter of this Authorization;

      ii) the address of the manufacturing facilities specified in Section 2 of this Authorization;

      iii) the ownership of the manufacturing facilities specified in Section 2 of this Authorization; or

      iv) the address of the Applicant specified in Section 1 of this Authorization;

   b) the use of the material, system or building design authorized herein;

      i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

      ii) provides an unsatisfactory level of performance, in situ; or

   c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

WINDOW SPRINKLER SYSTEM

1. Applicant

Paul & Douglas Sprinklers Ltd.
1576 Bonhill Road
SCARBOROUGH, ON
L5T 1C7

2. Description

A window sprinkler assembly system to provide a two-hour fire-resistance rated separation in a wall to consist of tempered or heat-strengthened glass fixed in a non-openable hollow metal steel frame or extruded aluminum frame and a special sidewall window sprinkler with quick-response action.

3. Authorization Requested

The applicant sought authorization for the use of an innovative window sprinkler system designed for new buildings where fire resistant ratings are required, but glazing is preferred. The window sprinkler is not for use in exits or firewalls.

4. Assessment

Reports and assessments provided by the applicant show that if the window sprinkler system is used in accordance with the limitations and conditions stated in this authorization, it will provide the level of performance that would be achieved by conformance with the Ontario Building Code.

5. Authorization

The window sprinkler system is authorized for use within new buildings where fire resistant ratings are required, but glazing is preferred, except in exits or firewalls, subject to the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1. This window sprinkler assembly system shall be designed, engineered, inspected and verified by a fire protection Professional Engineer licensed in Ontario under the Professional Engineers Act and a document of certification by the Professional Engineer with stamp shall be forwarded to the Chief Building Official and the Building Owner(s).

2. The sprinkler system shall be installed and tested in accordance with N.F.P.A. 13 as a wet pipe system and maintained in accordance with Section 6.5 (sprinkler) of the Ontario Fire Code.

3. The special designed sprinkler head shall be designated as a horizontal sidewall window nozzle, Grinnell Canada Fire Protection Company Limited Model FR-1/Q-60, 12.7 mm (1/2 in.) orifice, 74°C (165°F) activation temperature quick response link. The optimum position of the sprinkler head shall be as determined by the tests submitted by National Research Council Canada.

4. The interior glazing shall consist of one sheet of fixed non-operable tempered or heat strengthened glass installed in a hollow metal steel frame 1.35 mm (16 gauge) minimum thickness or extruded aluminum 1.8 mm (1/16 in.) minimum thickness. The maximum glazing shall be 2134 mm (7 ft. 0 in.) wide by 2844 mm (9 ft. 4 in.) high and minimum 6 mm (1/4 in.) thick.

5. This window sprinkler system may be used in either a sprinklered or unsprinklered building to protect non openable window openings to a maximum of 2 hour fire resistance rating provided,

   (a) in a exposing building face or exterior spatial separation the window sprinkler is installed on the interior side of the window, or

   (b) in an interior fire separation the window sprinkler is installed on both sides of the window in the fire separation.

6. Interior or exterior installations may be made in all types of occupancies except Group F, Division 1 and shall not be used in a firewall. Should the system be located in a loadbearing wall, all loadbearing components shall be protected independently of this window sprinkler assembly system.

7. This window sprinkler system shall not be used in exits nor firewalls as defined in the Ontario Building Code.

8. This horizontal sidewall window sprinkler system shall be served by either a separate riser or separate cross main independent of any regular sprinkler or standpipe system serving the floor area.

9. Separate flow switches or alarm check valves and supervised control valves and each fire compartment on each system shall be electrically supervised and indicated separately at the fire/sprinkler alarm annunciator panel.

10. Where the water supply is from a standpipe system conforming to the Code, the fire department connection shall be labelled as per the standard except for this dual purpose which shall read "STANDPIPE AND WINDOW SPRINKLERS".

11. A noncombustible sign legibly printed in not less than 12.7 mm (1/2 in.) block letters with contrasting white background and red letters shall be permanently mounted and maintained beside the main water supply source to this window sprinkler assembly system to indicate:

WARNING

SPECIAL SPRINKLER HEADS ON THIS SYSTEM ARE AN INTEGRAL PART OF WINDOW FIRE SEPARATION. THIS WATER SUPPLY MAY ONLY BE SHUT OFF AFTER ALL THE PROPER AUTHORITIES HAVE RECEIVED NOTICE IN WRITING.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

   a) any change has been made to:

      i) the material, system or building design that is the subject matter of this Authorization;

      ii) the address of the applicant specified in Section 1 of this Authorization; or,

      iii) the ownership of the applicant specified in Section 1 of this Authorization.

   b) the use of the material, system or building design authorized herein;

      i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

      ii) provides an unsatisfactory level of performance, in situ; or

   c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 29th day of May, 1997.

BATTERY- CENTRAL EMERGENCY POWER SUPPLY SYSTEMS FOR BUILDINGS

1. Applicant

Emergi-Lite Limited
a division of Kaufel Group Limited
24 Vulcan Street
REXDALE, ON
M9W 4M9

2. Manufacturing Facilities

Emergi-Lite Limited
a division of Kaufel Group Ltd.
1800 Hymus Boulevard
DORVAL, QC
H9P 2N6

3. Description

The central emergency power supply systems consist of a charger and storage battery in a cabinet providing D.C. output or when an integral inverter is included, A.C. output. A storage battery may be a group of individual batteries or cells operating as a unit.

4. Authorization Requested

The applicant sought authorization for the use of D.C. and A.C. output central emergency power supply systems to provide continuous and emergency power supply, separate from the electrical supply for the building, for emergency lighting systems not regulated by CSA Standard C22.2 No. 141-M1985, " Unit Equipment for Emergency Lighting", exit signs, fire alarm and detection systems and ancillary devices such as ventilation and pressure modification devices, voice communication systems and other Ontario Building Code regulated devices such as electromagnetic locking devices, all of which are not required by Article 3.2.7.9. of the Ontario Building Code, to be powered in emergency situations, by a generator set driven by an engine.

5. Assessment

Reports and assessments provided by the applicant show that if the central emergency power supply systems are designed, performance tested and maintained in accordance with the manufacturer's instructions, the limitations and conditions stated in this authorization, the level of performance required by the Ontario Building Code for a battery power source will be provided.

2/...

6. Authorization

The use of Emergi-Lite's 24, 32, 36, 48 and 120 volts CH Series D.C. output systems and CHIN Series A.C. (IPS or HID) Single Phase Inverter Systems are authorized for use within a building as a battery source central emergency power supply system, subject to the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1. The use of central emergency power supply systems must comply with the Building Code Act, 1992, as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

2. When a central emergency power supply system is proposed, a copy of this Authorization shall be included with the application for a building permit and shall be posted and maintained on the site of the construction, together with the building permit.

3. This Authorization is valid only for Emergi-Lite Limited a division of Kaufel Group Limited and only applies to central emergency power supply systems in which the rated output current exceeds 30 amperes or the nominal voltage at the output exceeds 30 volts; and, used for supplying emergency electrical power to emergency lighting systems not regulated by CSA Standard C22.2 No. 141-M1985, "Unit Equipment for Emergency Lighting", exit signs, fire alarm and detection systems and ancillary devices such as ventilation and pressure modification devices, voice communication systems and other Ontario Building Code regulated devices such as electromagnetic locking devices, all of which are not required by Article 3.2.7.9. of the Ontario Building Code, to be powered in emergency situations, by a generator set driven by an engine.

4. The cabinet for the central emergency power supply system shall:
   a) when a service room is required by the Ontario Building Code; be located in a service room separated from the remainder of the building by a fire separation having a fire-resistance rating conforming to the Ontario Building Code,
   b) be constructed so that it can be secured and installed without field fabrication;
   c) be located to provide adequate working space and access for maintaining and repairing the central emergency power system without encumbering other equipment in the service room or interference from other equipment in the service room; and,
   d) not contain automotive batteries.

5. The service room containing the cabinet shall be equipped with unit equipment for emergency lighting conforming CSA Standard C22.2 No. 141-M85.

3/...

6. The normal electrical supply for the central emergency power supply system shall be controlled by automatic transfer equipment which energize the emergency power supply upon failure of the normal current supply. The automatic transfer equipment shall only be accessible to authorized persons.

7. The design and review of each installation by Emergi-Lite Limited, for a central emergency power supply system identified in Section 6 of this Authorization, shall be carried out by a Professional Engineer as defined in the Professional Engineers Act of Ontario. The Professional Engineer shall provide the Chief Building Official with a document certifying that the central emergency power supply system:

   a) Complies with The Canadian Electrical Code, current at the time of building permit issuance; and, without limiting the generality of the foregoing shall include specific reference to Section 26, Lightning Protection, Rules 26-540 to 26-554, Storage Batteries 46-202, Battery Capacity, 46-204, Automatic Transfer Equipment; and, 46-210, Voltage Drop of Remote Lamps, of Part I.

   b) Is listed to CSA C22.2-No.107.1-M91, "Standard for Commercial and Industrial Power Supplies"

   c) Has been tested at the factory and demonstrated the capacity to supply and maintain, the emergency power supply required by the Ontario Building Code to an output voltage which will not be less than 91% of nominal for the time period of 30, 60 or 120 minutes.

   d) Has a charging means to maintain the battery in a charged condition automatically.

   e) Is located in a ventilated room where the ambient temperature will not exceed the system's design temperatures for reliable operation.

   f) Was performance tested after installation and found to be capable of operating at 100% of its stated kilowatt rating for 30, 60 or 120 minutes as required by the Ontario Building Code.

   g Will not be adversely affected by the operation of a suppression system.

   h) Is electrically supervised to indicate an audible and visible trouble signal at the fire alarm annunciator panel or where the building does not have one, at the device referenced at Sentence 3.2.4.8.(3) of the Ontario Building Code, for each of the following:

      i) movement of the output disconnect switch internal to the cabinet,
      ii) a temperature greater than 10° C above or below the safe operating temperature of the system has been reached,

4/...

iii) a battery supply less than 91% of nominal,
iv) a charger failure,
v) a low electrolyte level alarm for wet batteries,
vi) a problem identified by the supervisory system of the central emergency power supply; and,
vii) a ground leakage problem in the case of D.C. systems.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

a) any change has been made to:

i) the material, system or building design that is the subject matter of this Authorization;

ii) the address of the applicant specified in Section 1 of this Authorization; or,

iii) the ownership of the applicant specified in Section 1 of this Authorization.

b) the use of the material, system or building design authorized herein;

i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

ii) provides an unsatisfactory level of performance, in situ; or

c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

BATTERY- CENTRAL EMERGENCY POWER SUPPLY SYSTEMS FOR BUILDINGS

1. Applicant

Edwards/Dual-Lite
625 6th Street East
OWEN SOUND, ON
N4K 5P8

2. Description

The central emergency power supply systems consist of a cabinet enclosing a charger, battery system and an integral inverter, providing continuous AC output. A storage battery may be a group of individual batteries or cells operating as a unit.

3. Authorization Requested

The applicant sought authorization for the use of its Spectron ILS Integrated Life Safety System AC output central emergency power supply systems to provide continuous and emergency power supply, separate from the electrical supply for the building, for emergency lighting systems not regulated by CSA Standard C22.2 No. 141-M1985, " Unit Equipment for Emergency Lighting", exit signs, fire alarm and detection systems and ancillary devices such as ventilation and pressure modification devices, voice communication systems and other Ontario Building Code regulated devices such as electromagnetic locking devices, all of which are not required by Article 3.2.7.9. of the Ontario Building Code, to be powered in emergency situations, by a generator set driven by an engine.

4. Assessment

Reports and assessments provided by the applicant show that if the central emergency power supply systems are designed, performance tested and maintained in accordance with the manufacturer's instructions, the limitations and conditions stated in this authorization, the level of performance required by the Ontario Building Code for a battery power source will be provided.

2/...

5. Authorization

The use of Edwards/Dual-Lite Spectron ILS AC Inverter Systems in sizes from 1.25 to 15 KW are authorized for use within a building as a battery source central emergency power supply system, subject to the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1. The use of central emergency power supply systems must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

2. When a central emergency power supply system is proposed, a copy of this Authorization shall be included with the application for a building permit and shall be posted and maintained on the site of the construction, together with the building permit.

3. This Authorization is valid only for Edwards/Dual-Lite and only applies to central emergency power supply systems in which the rated output current exceeds 30 amperes or the nominal voltage at the output exceeds 30 volts; and, used for supplying emergency electrical power to emergency lighting systems not regulated by CSA Standard C22.2 No. 141-M1985, "Unit Equipment for Emergency Lighting", exit signs, fire alarm and detection systems and ancillary devices such as ventilation and pressure modification devices, voice communication systems and other Ontario Building Code regulated devices such as electromagnetic locking devices, all of which are not required by Article 3.2.7.9. of the Ontario Building Code, to be powered in emergency situations, by a generator set driven by an engine.

4. The cabinet for the central emergency power supply system shall:
   a) when a service room is required by the Ontario Building Code; be located in a service room, separated from the remainder of the building by a fire separation having a fire-resistance rating conforming to the Ontario Building Code,
   b) be constructed so that it can be secured and installed without field fabrication,
   c) be located to provide adequate working space and access for maintaining and repairing the central emergency power supply system without encumbering other equipment in the service room or interference from other equipment in the service room; and,
   d) not contain automotive batteries.

5. The room containing the cabinet shall be equipped with unit equipment for emergency lighting conforming CSA Standard C22.2 No. 141-M85.

6. The normal electrical supply for the central emergency power supply system shall be controlled by automatic transfer equipment which energizes the emergency system upon failure of the normal current supply. The automatic transfer equipment shall only be accessible to authorized persons.

3/...

7. The design and review of each installation of an Edwards/Dual-Lite central emergency power supply system identified in Section 5 of this authorization, shall be carried out by a Professional Engineer as defined in the Professional Engineers Act of Ontario. The Professional Engineer shall provide the Chief Building Official with a document certifying that the central emergency power supply system:

   a) Complies with the Canadian Electrical Code, current at the time of building permit issuance; and, without limiting the generality of the foregoing shall include specific reference to Section 26 Lightning Protection, Rules 26-540 to 26-554, Storage Batteries, 46-202, Battery Capacity 46-204 , Automatic Transfer Equipment and 46-210 Voltage Drop of Remote Lamps, of Part I.

   b) Is listed to CSA C22.2-No.107.1-M91, "Standard for Commercial and Industrial Power Supplies".

   c) Has been tested at the factory and demonstrated the capacity to supply and maintain, the emergency power supply required by the Ontario Building Code to an output voltage which will not be less than 91% of nominal for the time period of 30, 60 or 120 minutes.

   d) Has a charging means to maintain the batteries in a charged condition automatically.

   e) Is located in ventilated room where the ambient temperature will not exceed the system's design temperature range for reliable operation.

   f) Was performance tested after installation and found to be capable of operating at 100% of its stated kilowatt rating for 30, 60 or 120 minutes as required by the Ontario Building Code.

   g) Will not be adversely affected by the operation of a suppression system.

   h) Is electrically supervised to indicate an audible and visible trouble signal at the fire alarm annunciator panel or where the building does not have one, at the device referenced at Sentence 3.2.4.8.(3) of the Ontario Building Code, for each of the following:

      i) movement of the output disconnect switch internal to the cabinet,
      ii) a temperature greater than 10° C above or below the safe operating temperature of the system has been reached,
      iii) a battery supply less than 91% of nominal,
      iv) a charger failure,
      v) a low electrolyte alarm for wet batteries; and,
      vi) a problem identified by the supervisory system of the central emergency power supply.

4/...

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

    a) any change has been made to:

        i) the material, system or building design that is the subject matter of this Authorization;

        ii) the address of the applicant specified in Section 1 of this Authorization; or,

        iii) the ownership of the applicant specified in Section 1 of this Authorization.

    b) the use of the material, system or building design authorized herein;

        i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

        ii) provides an unsatisfactory level of performance, in situ; or

ENCLOSURE CONDITIONED HOUSING (ECHO™) DESIGN

1. Applicant

Indoor Air Technologies Inc.
2344 Haddington Crescent
P.O. Box 22038, Sub 32
OTTAWA, ON
K1V 0W2

2. Description

The Enclosure Conditioned Housing (ECHO™) DESIGN is comprised of ventilated, depressurized, drained and insulated foundation perimeter walls and may include a ventilated, depressurized and drained subfloor floor system above a concrete slab on ground. It is constructed in situ, the sealed wall/floor spaces are ventilated and depressurized by a low flow exhaust fan, regulated by the ECHO™ control panel.

The design provides interior foundation wall drainage and cavity dehumification ventilation.

3. Authorization Requested

The applicant sought authorization for the use of the ECHO ™ design as an innovative means to provide an alternative to the materials serving as a drainage layer and installed adjacent to the exterior surface of a foundation wall.

4. Assessment

Reports and assessments provided by the applicant show that if the ECHO™ design is installed, tested and commissioned in accordance with the limitations and conditions stated in this authorization, it will provide the level of performance that would be achieved by conformance with the Ontario Building Code as an alternative for exterior foundation drainage layer described at Sentence 9.14.2.1.(2.1).

5. Authorization

The ECHO™ design is authorized for use within a building as a basement finishing system comprising foundation wall drainage and insulation as required by the Ontario Building Code, as amended or remade from time to time, subject to the following terms and conditions:

2/...

A. SPECIFIC TERMS AND CONDITIONS:

1) The use of the ECHO™ design must comply with the Building Code Act, 1992, as amended or re-enacted from time to time and, except as specifically authorized herein with the Ontario Building Code as amended or remade from time to time.

2) A copy of this Authorization shall be included with an application for a permit and shall be kept and maintained on the site of the construction with the building permit. A copy of the Illustrated Construction Plans, which form the basis for the design will be furnished to the Chief Building Official.

3) Construction of an ECHO™ design shall be by Indoor Air Technologies Inc. or its licensed contractors only and shall be in accordance with the "Illustrated Construction Plans" supplied by the applicant.

4) On completion, Indoor Air Technologies Inc. or its licensed contractor shall test and balance the ECHO™ design, complete the commissionning certificate, provide a copy to the owner(s) and forward a copy to the Chief Building Official. The commissioning certificate to attest the design provides depressurisation throughout by at least 1Pa by a continuous duty blower exhausting to the outside at a rate of no more than 40 l/s (85 CFM).

5) Indoor Air Technologies Inc. or its licenced contractor shall provide written operating instructions and a demonstration on the operation of the ECHO™ design to the building owner(s).

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

   (a) any change has been made to:

      (i) the material, system or building design that is the subject matter of this Authorization;

      (ii) the address of the applicant specified in Section 1 of this Authorization; or,

      (iii) the ownership of the applicant specified in Section 1 of this Authorization.

   (b) the use of the material, system or building design authorized herein;

      (i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

      (ii) provides an unsatisfactory level of performance, in situ; or

3/...

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

BMEC REFERENCE BMEC 97-04-213

Systèmes Norbec Inc., NORBEC modified and NOREX Thermosetting Foam Composite Panels for Interior Walls and Ceilings in Noncombustible Construction

1. Applicant

Systèmes Norbec Inc.
97 de Vaudreuil
BOUCHERVILLE, QUÉBEC
J4B 1K7

2. Manufacturing Facilities

Systèmes Norbec Inc.
97 de Vaudreuil
BOUCHERVILLE, QUÉBEC
J4B 1K7

3. Description

The NORBEC modified and the NOREX panels manufactured by Systèmes Norbec Inc. consist of a thermosetting polyurethane foam core not greater than 127 mm thick (5 inch) faced with a minimum 0.61 mm thick (0.024 inch or 24 gauge) plain or painted galvanized steel or Galvalume facings. The facing sheets are bonded to the foam plastic core while it is foamed in place, without incorporating an air space. Adjoining finished panels are attached together by means of cam-locking devices incorporated into the foam core. For the NORBEC modified panels, the male and female joint edges are formed core material incorporating a 75 mm wide galvanized steel strip mechanical joint fastened by # 8 X 19 mm (3/4 inch) white tek screws at 200 mm (8 inches) interval in each panel face. The NOREX panels joints have a roll-formed inter-locking geometry, without the 75 mm wide galvanized steel strip. The thicknesses of the panels range from 76 mm (3 inches) to 127 mm (5 inches). All panels are a maximum 1194 mm (47 inches) wide.

4. Authorization Requested

The applicant sought authorization for the use of an innovative interior non loadbearing wall and ceiling system containing thermosetting foamed plastic insulation for cold rooms, walk-in freezers, atmospheric controlled rooms and clean rooms in buildings required to be of noncombustible construction provided the building is sprinklered and the wall assembly satisfies the performance criteria for exterior walls in Clause 3.1.5.11.(6)(a) of Regulation 61 of Revised Regulations of Ontario 1990 (the "Ontario Building Code").

2/...

5. Assessment

The NORBEC modified and NOREX panels are tested, evaluated and listed for thicknesses from 76 mm (3 inches) up to 127 mm (5 inches), as follows:

(a) Surface Burning Characteristics:

	CAN/ULC - S102	
	Flame Spread	Smoke Developed
Model		
NOREX Panel	20	460 - 5 30
NORBEC modified panel	20	460 - 5 30
Core Material Only	320/410	over 500

(b)

CAN/ULC-S101-M89 "Standard Methods of Fire Endurance Tests of Building Construction and Materials".

The Test results showed compliance with the performance criteria for exterior walls in Clause 3.1.5.11.(6)(a) of the Ontario Building Code.

(c) CAN/ULC-S126 "Standards Method of Test for Fire Spread under Roof-Deck Assemblies".

The assemblies are designated as roof deck construction No. C39 and is included in the series of roof deck construction using metallic decks contained in the listings published by Underwriters' Laboratories of Canada.

6. Authorization

The use of the NORBEC modified and NOREX thermosetting foamed plastic insulation panels for not more than 127 mm (5 inches) thick walls is authorized in respect of interior non loadbearing walls and ceilings in noncombustible construction described in Subsection 3.1.5. of the Ontario Building Code, as amended or remade from time to time, subject to the following terms and conditions:

A. Specific Terms and Conditions:

1) A **monitored** automatic sprinkler system shall be installed throughout the building, including individual cold storage units, in accordance with the most current edition of NFPA - 13 "Installation of Sprinkler Systems". Additionally, the sprinkler system located inside the storage unit shall be designed to operate in a cold storage or freezer environment. The design shall address any possibility of freeze-up resulting from condensation of water vapour internal to the system.

2) The flame spread rating of the wall panel, determined by subjecting a sample, including an assembled joint, to the appropriate test described in Subsection 3.1.12. of the Ontario Building Code, as amended or remade from time to time, shall be not more than the flame spread rating permitted for the room or space which it bounds.

3/...

3) The building shall contain only mercantile occupancy (E) or cold storage facilities of Medium Hazard Industrial Occupancy (F-2) or Low Hazard Industrial Occupancy (F-3) as defined in Article 1.1.3.2. of the Ontario Building Code, as amended or remade from time to time.

4) The building shall be not more than 18 m high, measured between grade and the floor level of the uppermost storey.

5) The ceiling panels shall be supported at not more than 3050 mm. (10 feet) o.c.

6) The panels shall be listed, as defined in the Ontario Building Code as amended or remade from time to time, to show that the wall panel will remain in place for not less than 10 min when the wall panel is tested in conformance with CAN4-S101-M, "Standard Methods of Fire Endurance Tests of Building Construction and Materials".

7) This Authorization is valid only for Systèmes Norbec Inc. for its NORBEC modified and NOREX thermosetting foamed insulation panels manufactured by the Applicant specified in Section 1 herein at the manufacturing facilities specified in Section 2 herein.

8) The panels shall be installed in accordance with the manufacturers specifications and the installation shall be approved by the manufacturer.

9) The use of Systèmes Norbec Inc. NORBEC modified and NOREX panels must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

   (a) any change has been made to:

      (i) the material, system or building design that is the subject matter of this Authorization;

      (ii) the address of the manufacturing facilities specified in Section 2 of this Authorization;

      (iii) the ownership of the manufacturing facilities specified in Section 2 of this Authorization; or

      (iv) the address of the Applicant specified in Section 1 of this Authorization;

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 26th day of June, 1997.

BUILDING MATERIALS EVALUATION COMMISSION

BUILDING MATERIALS EVALUATION COMMISSION (BMEC)
AUTHORIZATION REPORT

DATE OF AUTHORIZATION **May 29, 1997**
BMEC REFERENCE **BMEC 97-03-212**

SHELF AND RACK STORAGE SYSTEM

1. Applicant

Planiform (1983) Inc.
2333 Vimont Street
MONTRÉAL, QUÉBEC
H1V 3R1

2. Description

The shelf and rack storage system is a self contained structural facility within a building, having one or more solid intermediate platforms or walkway levels for personnel access. The walkways and platforms may also support conveyors and other distribution equipment.

3. Authorization Requested

The applicant sought authorization for the use of an innovative shelf and rack storage system designed for material handling, storage and distribution in warehouse facilities.

4. Assessment

Reports and assessments provided by the applicant show that if the shelf and rack system is used in accordance with the limitations and conditions stated in this authorization, it will provide the level of performance that would be achieved by conformance with the Ontario Building Code.

5. Authorization

The shelf and rack storage system is authorized for use within a building as a self contained structural facility for material handling, storage and distribution, subject to the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1. The use of the shelf and rack storage system must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

2. A copy of this Authorization shall be included with an application for a building permit and shall be posted and maintained on the site of the construction with the building permit.

...2/

3. This Authorization is valid only for Planiform (1983) Inc.

4. Deck and walkway levels shall be constructed of:

   (a) solid-closed surface steel planking;
   (b) steel roof decking with a top substrate that forms a serviceable floor area;
   (c) open steel grating; or,
   (d) open steel floor planking.

5. The structural design of the entire shelf and rack storage facility support system including posts, beams, decks, walkways, connections, and their supports such as concrete slabs, separate foundations or similar shall be in accordance with Part 4 of the Ontario Building Code as amended or remade from time to time.

6. The design and general review of the rack and storage system shall be carried out by a Professional Engineer as defined in the Professional Engineers Act (Ontario). The Professional Engineer shall provide the Chief Building Official with a document certifying that the installation conforms with this Authorization. The construction drawings shall require the provision of an appropriate sign to indicate the maximum permissible design loads for each rack storage system and such sign shall be permanently fixed to the building interior and displayed in a prominent unobstructed viewing position.

7. An automatic sprinkler system shall be designed, constructed, installed and tested for the entire shelf and rack storage facility including the top level and shall be in conformance with NFPA 13-1991 and NFPA 231C-1991 as amended or the appropriate NFPA Standard for the most severe hazard to which the storage facility is exposed. Additionally, sprinkler protection shall be provided under decks and walkways.

8. Except where the deck is of open steel grating, any opening in a deck for egress, convenience stairs, ramps or chutes, shall be protected by smoke baffles and close spaced sprinklers as per paragraph A.7. of this Authorization.

9. A sprinkler system located in a cold storage or freezer environment shall be designed to address any possibility of freeze-up resulting from condensation of water vapour internal to the system.

10. The automatic sprinkler system shall be electrically supervised to indicate a trouble signal on the building fire alarm system annunciator or where the building does not have a fire alarm system to notify the person controlling the operation of the building for each of the following:

    (a) movement of a control valve handle;
    (b) loss of excess water pressure required to prevent false alarms in a wet pipe system;
    (c) loss of air pressure in a dry pipe system;
    (d) loss of air pressure in a pressure tank;
    (e) a significant change in water level in any water storage container used for fire fighting purposes;
    (f) loss of electrical power to any automatically starting electrical fire pump; and,
    (g) a temperature approaching the freezing point in any dry pipe valve enclosure or water storage container used for fire fighting purposes.

11. The automatic sprinkler system shall be designed to notify the fire department that a waterflow switch has been activated.

...3/

12. The notification to the person controlling the building and the fire department referred to in paragraphs A.10 and A.11 of this Authorization shall be provided by way of:

    (a) an independent central station conforming to NFPA-71, "Standard for the Installation, Maintenance, and Use of Signaling Systems for Central Station Service", as amended;
    (b) a proprietary control centre conforming to Chapter 9 of NFPA-72, Standard for the Installation, Maintenance, and Use of Protective Signaling Systems", as amended; or,
    (c) if the above mentioned facilities are not available in the municipality in which the shelf and rack storage system is to be built, an independent system is permitted to be used to transmit signals to the fire department.

13. The maximum height of the shelf and rack storage facility from the floor supporting the shelf and rack system to the topmost portion of the shelf and rack system shall not exceed 18 m.

14. Each deck, walkway or platform level shall be provided with not less than two **exit** stair shafts that conform to all requirements for exits as stated in the Ontario Building Code (i.e. fire separations having a fire resistance rating, etc.) as amended, except as follows:

    (a) access to exit may be provided from a platform level by means of open unenclosed stairs for shelf and rack storage facilities comprising not more than three platform levels, the highest of which may not be more than 9 m above the main floor; and,
    (b) any single platform, deck or walkway may be served by a single unenclosed egress stair leading to the platform or walkway level immediately below provided the:

        (i) platform, deck or walkway does not exceed 200 m² in area;
        (ii) travel distance on the platform, deck or walkway to the level below, including the travel distance along the single unenclosed egress stair does not exceed 25 m; and,
        (iii) the platform, deck or walkway below is provided with two separate egress stairs or **exits**.

15. The maximum travel distance on an elevated platform to the ground floor level, including the travel distance along unenclosed stairs shall not exceed 45 m. The maximum travel distance from the bottom of an unenclosed stair to an exit on the main floor level shall not exceed 45 m. The maximum travel distance to an enclosed exit on an elevated platform shall not exceed 45 m.

16. Fire extinguishers shall be installed on every platform or walkway level of the shelf and rack storage system in accordance with the provisions of Part 6 of the Ontario Fire Code, as amended or remade from time to time. The maximum travel distance to a fire extinguisher shall not exceed 23 m.

17. Dead end travel distance to a point of choice of direction of horizontal travel to an egress facility from an elevated deck or walkway shall not exceed 9 m where the deck or walkway is required to be provided with at least 2 egress facilities.

18. The clear aisle width shall not be less than 760 mm (30 in). This clearance is for access to exits and shall not be used for conveyors, trolleys, tracks or any other similar mode of product transportation within an aisle or walkway.

19. The shelf and rack storage facility is not permitted in a High Hazard Industrial Occupancy (F1) as defined in Article 1.1.3.2. of the Ontario Building Code, as amended or remade from time to time.

...4/

20. The shelf and rack storage facilities shall be used only for storage of Class I, II, III, and IV commodities as defined in NFPA 231C-1991, as amended and not for manufacturing, production, wrapping or assembly.

21. A plain legible sign or signs, with contrasting letters and titled "NOTICE", shall describe the above Class and the sprinkler design criteria used for each shelf and rack storage facility. This sign or signs shall be permanently mounted, at or near the sprinkler control valve.

22. The shelf and rack storage facilities shall be accessible to employees only and shall be designated, signed and posted as a "NO SMOKING" area conforming to the Ontario Fire Code O. Reg. 454/90 as amended or remade from time to time.

23. A standpipe and hose system shall be installed in accordance with the Ontario Building Code where the shelf and rack storage facility height is more than 14 m (45 ft.) in height or where there are more than 3 elevated platforms of walkway level.

24. Where a standpipe and hose system is required, 63.5 mm (2 1/2 in.) diameter hose connections shall be provided, except that 38.1 mm (1 1/2 in.) hose connections are permitted in the shelf and rack storage facilities which:

    (a) do not exceed 6 levels including the floor level; and,
    (b) do not exceed 3,716 m^2 (40,000 ft^2) in the sum total of all levels of the shelf and rack storage facility.

25. Lighting levels of decks, walkways and platforms shall conform to the Ontario Building Code, as amended or remade from time to time.

26. Emergency lighting shall be provided on walkways, decks, platforms, unenclosed egress stairs and exits providing means of egress to not less than the average level of illumination prescribed in Sentence 3.2.7.3.(2) of the Ontario Building Code, as amended or remade from time to time.

27. Guards and toe boards shall be installed in accordance with the Ontario Building Code, as amended or remade from time to time.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

    (a) any change has been made to:

        (i) the material, system or building design that is the subject matter of this Authorization;

        (ii) the address of the applicant specified in Section 1 of this Authorization; or,

        (iii) the ownership of the applicant specified in Section 1 of this Authorization.

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 29th day of May, 1997.

BUILDING MATERIALS EVALUATION COMMISSION (BMEC)
CONSOLIDATED - AUTHORIZATION REPORT

DATE OF AUTHORIZATION	**April 4, 1997**
BMEC REFERENCE	**BMEC 97-02-211**
BMEC APPLICATION #	**BMEC #A1997-03**
BMEC AMENDMENT	**January 25, 2001**
BMEC APPLICATION	**BMEC #A2001-02**

*** Denotes a new or amended clause**

Schlüter®-DITRA
a polyethylene membrane bonded to substrates for the installation of ceramic tiles

1.* **Applicant**

Schlüter®-Systems (Canada) Inc.
5626 Thimens Blvd
St-Laurent, Québec
H4R 2K9

Tel: 1-800-667-8746
Fax: (514) 336-2410

2.* **Manufacturing Facilities**

Corsella-Dorken
4655 Delta Way
Beamsville, ON
L0R 1B4

Tel: (905) 563-3255
Fax: (905) 563-5582

3.* **Description**

Schlüter®-DITRA matting is a polyethylene membrane formed in a square cut-back grid design with an anchoring fleece laminated to its underside, providing a mechanical bond to the thin-set mortar and the tile.

4. ***Authorization Requested***

The applicant sought authorization for the use of Schlüter-DITRA as a moisture resistant backing, satisfying the requirements of Article 9.29.10.4 of the Ontario Building Code for the application of wall tile finish and as an equivalent to Subsection 9.30.6. for ceramic tile application to floors.

5. **Assessment**

a) Reports and assessments provided by the applicant show that if Schlüter-DITRA is installed in accordance with the manufacturer's instructions and the limitations and conditions stated in this authorization, it will provide a level of performance required by Article 9.29.10.4. and equivalent to the requirements of Subsection 9.30.6. of the Ontario Building Code.

b) Supporting letter from Picco Engineering.

6. **Authorization**

Schlüter®-DITRA is authorized for the application of ceramic tiles to concrete floors, gypsum based screeds, plywood or stranboard subfloors, masonry walls and interior wall finishes described in Section 9.29. of the Ontario Building Code, as amended or remade from time to time, subject to the following terms and conditions:

A. Specific Terms and Conditions:

1) Substrates must be levelled-straight, thoroughly sponge cleaned and free of moisture before Schlüter®-DITRA is applied. Contact-inhibiting surfaces have to be removed, scarified or treated to permit adhesion. For application over gypsum screeds, the residual moisture shall not exceed 2.0% by volume and the mortar screed must be hardened to the point that it can be walked upon prior to the installation of ceramic tiles.

2)* Schlüter®-DITRA matting must be installed with the fleece side bedded to concrete, 15.5 mm (5/8") thick plywood or stranboard, with edges supported and joist support at 400 mm (16") maximum and 18.5 mm (3/4") tongue and grooved plywood with joist support at 480 mm (19.2") maximum, with an ANSI A 118.4 thin-set mortar layer applied with a 4.5 mm (3/16") X 6 mm (1/4") V-notched trowel. For installations on joist supports at 600 mm (24") maximum, apply an additional underlay of 10 mm (3/8") plywood (CSA 121) over the required subfloor with off-setting joints. Individual strips, as well as adjacent sheets are butt jointed. The strips must be protected against heavy mechanical loads prior to installation of tile.

3) Schlüter®-DITRA is able to adequately bridge cracks of up to 3 mm (⅛") in the substrate.

4) Ceramic tiles are applied to Schlüter®-DITRA using the thin-set method.

5) Ceramic tiles must not be less than 10 cm x 10 cm (4" x 4") in size for floor installations.

6) This Authorization is valid only for Schlüter®-DITRA manufactured by the Applicant specified in Section 1 herein at the manufacturing facilities specified in Section 2 herein.

7) The use of Schlüter®-DITRA must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

B. GENERAL CONDITIONS

1.* A copy of this Authorization shall accompany each application for a building permit and shall be maintained on the site of the construction with the building permit.

2.* The Applicant named in Part 1 hereof shall promptly notify the BMEC of:

(a) the failure of the Applicant, or of the material, system or building design that is the subject matter of this Authorization, to comply with any of the terms and conditions set out in 6. A. above; or

(b) the occurrence of any of the events described in Conditions 6. B. 4. (a) and (b) (ii) below.

3.* The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

(i) the material, system or building design that is the subject matter of this Authorization;

(ii) the address of the applicant specified in Part 1 of this Authorization; or,

(iii) the ownership of the applicant specified in Part 1 of this Authorization.

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ.

(c) the Applicant, or the material, system or building design that is the subject matter of this Authorization, has failed to comply with any of the terms and conditions set out in this Authorization; or

(d) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Amended at Toronto this 25th day of January, 2001

SHELF AND RACK STORAGE SYSTEM

1. Applicant

Frazier Industrial Corporation Ltd.
1670 Bonhill Road
Mississauge, Ontario
L5T 1C8

2. Description

The shelf and rack storage system is a self contained structural facility within a building, having one or more solid intermediate platforms or walkway levels for personnel access. The walkways and platforms may also support conveyors and other distribution equipment.

3. Authorization Requested

The applicant sought authorization for the use of an innovative shelf and rack storage system designed for material handling, storage and distribution in warehouse facilities.

4. Assessment

Reports and assessments provided by the applicant show that if the shelf and rack system is used in accordance with the limitations and conditions stated in this authorization, it will provide the level of performance that would be achieved by conformance with the Ontario Building Code.

5. Authorization

The shelf and rack storage system is authorized for use within a building as a self contained structural facility for material handling, storage and distribution, subject to the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1. The use of the shelf and rack storage system must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

2. A copy of this Authorization shall be included with an application for a building permit and shall be posted and maintained on the site of the construction with the building permit.

...2/

3. This Authorization is valid only for the Sentinel Pallet Rack from Frazier Industrial Corporation Ltd.

4. Deck and walkway levels shall be constructed of:

   (a) solid-closed surface steel planking;
   (b) steel roof decking with minimum 16 mm (5/8 in) maximum 19 mm (3/4 in) thick tongue and groove solid wood or plywood; or,
   (c) open steel grating.

5. The structural design of the entire shelf and rack storage facility support system including posts, beams, decks, walkways, connections, and their supports such as concrete slabs, separate foundations or similar shall be in accordance with Part 4 of the Ontario Building Code as amended or remade from time to time.

6. The design and general review of the rack and storage system shall be carried out by a Professional Engineer as defined in the Professional Engineers Act (Ontario). The Professional Engineer shall provide the Chief Building Official with a document certifying that the installation conforms with this Authorization. The construction drawings shall require the provision of an appropriate sign to indicate the maximum permissible design loads for each rack storage system and such sign shall be permanently fixed to the building interior and displayed in a prominent unobstructed viewing position.

7. An automatic sprinkler system shall be designed, constructed, installed and tested for the entire shelf and rack storage facility including the top level and shall be in conformance with NFPA 13-1991 and NFPA 231C-1991 as amended or the appropriate NFPA Standard for the most severe hazard to which the storage facility is exposed. Additionally, sprinkler protection shall be provided under decks and walkways.

8. Except where the deck is of open steel grating, any opening in a deck for egress, convenience stairs, ramps or chutes, shall be protected by smoke baffles and close spaced sprinklers as per paragraph A.7. of this Authorization.

9. A sprinkler systems located in a cold storage or freezer environment shall be designed to address any possibility of freeze-up resulting from condensation of water vapour internal to the system.

10. The automatic sprinkler system shall be electrically supervised to indicate a trouble signal on the building fire alarm system annunciator or where the building does not have a fire alarm system to notify the person controlling the operation of the building for each of the following:

    (a) movement of a control valve handle;
    (b) loss of excess water pressure required to prevent false alarms in a wetpipe system;
    (c) loss of air pressure in a dry pipe system;
    (d) loss of air pressure in a pressure tank;
    (e) a significant change in water level in any water storage container used for fire fighting purposes;
    (f) loss of electrical power to any automatically starting electrical fire pump; and,
    (g) a temperature approaching the freezing point in any dry pipe valve enclosure or water storage container used for fire fighting purposes.

11. The automatic sprinkler system shall be designed to notify the fire department that a waterflow switch has been activated.

…3/

12. The notification to the person controlling the building and the fire department referred to in paragraphs A.10 and A.11 of this Authorization shall be provided by way of:

    (a) an independent central station conforming to NFPA-71, "Standard for the Installation, Maintenance, and Use of Signaling Systems for Central Station Service", as amended;
    (b) a proprietary control centre conforming to Chapter 9 of NFPA-72, Standard for the Installation, Maintenance, and Use of Protective Signaling Systems", as amended; or,
    (c) if the above mentioned facilities are not available in the municipality in which the self and rack storage system is to be built, an independent system is permitted to be used to transmit signals to the fire department.

13. The maximum height of the shelf and rack storage facility from the floor supporting the shelf and rack system to the topmost portion of the shelf and rack system shall not exceed 18 m.

14. Each deck, walkway or platform level shall be provided with not less than two **exit** stair shafts that conform to all requirements for exits as stated in the Ontario Building Code (i.e. fire separations having a fire resistance rating, etc.) as amended, except as follows:

    (a) access to exit may be provided from a platform level by means of open unenclosed stairs for shelf and rack storage facilities comprising not more than three platform levels, the highest of which may not be more than 9 m above the main floor; and,
    (b) any single platform, deck or walkway may be served by a single unenclosed egress stair leading to the platform or walkway level immediately below provided the:

        (i) platform, deck or walkway does not exceed 200 m² in area;
        (ii) travel distance on the platform, deck or walkway to the level below, including the travel distance along the single unenclosed egress stair does not exceed 25 m; and,
        (iii) the platform, deck or walkway below is provided with two separate egress stairs or **exits**.

15. The maximum travel distance on an elevated platform to the ground floor level, including the travel distance along unenclosed stairs shall not exceed 45 m. The maximum travel distance from the bottom of an unenclosed stair to an exit on the main floor level shall not exceed 45 m. The maximum travel distance to an enclosed exit on an elevated platform shall not exceed 45 m.

16. Fire extinguishers shall be installed on every platform or walkway level of the shelf and rack storage system in accordance with the provisions of Part 6 of the Ontario Fire Code, as amended or remade from time to time. The maximum travel distance to a fire extinguisher shall not exceed 23 m.

17. Dead end travel distance to a point of choice of direction of horizontal travel to an egress facility from an elevated deck or walkway shall not exceed 9 m where the deck or walkway is required to be provided with at least 2 egress facilities.

18. The clear aisle width shall not be less than 760 mm (30 in). This clearance is for access to exits and shall not be used for conveyors, trolleys, tracks or any other similar mode of product transportation within an aisle or walkway.

19. The shelf and rack storage facility is not permitted in a High Hazard Industrial Occupancy (F1) as defined in Article 1.1.3.2. of the Ontario Building Code, as amended or remade from time to time.

...4/

20. The shelf and rack storage facilities shall be used only for storage of Class I, II, III, and IV commodities as defined in NFPA 231C-1991, as amended and not for manufacturing, production, wrapping or assembly.

21. A plain legible sign or signs, with contrasting letters and titled "NOTICE", shall describe the above Class and the sprinkler design criteria used for each shelf and rack storage facility. This sign or signs shall be permanently mounted, at or near the sprinkler control valve.

22. The shelf and rack storage facilities shall be accessible to employees only and shall be designated, signed and posted as a "NO SMOKING" area conforming to the Ontario Fire Code O. Reg. 454/90 as amended or remade from time to time.

23. A standpipe and hose system shall be installed in accordance with the Ontario Building Code where the shelf and rack storage facility height is more than 14 m (45 ft.) in height or where there are more than 3 elevated platforms of walkway level.

24. Where a standpipe and hose system is required, 63.5 mm (2 1/2 in.) diameter hose connections shall be provided, except that 38.1 mm (1 1/2 in.) hose connections are permitted in the shelf and rack storage facilities which:

    (a) do not exceed 6 levels including the floor level; and,
    (b) do not exceed 3,716 m² (40,000 ft²) in the sum total of all levels of the shelf and rack storage facility.

25. Lighting levels of decks, walkways and platforms shall conform to the Ontario Building Code, as amended or remade from time to time.

26. Emergency lighting shall be provided on walkways, decks, platforms, unenclosed egress stairs and exits providing means of egress to not less than the average level of illumination prescribed in Sentence 3.2.7.3.(2) of the Ontario Building Code, as amended or remade from time to time.

27. Guards and toe boards shall be installed in accordance with the Ontario Building Code, as amended or remade from time to time.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

    (a) any change has been made to:

        (i) the material, system or building design that is the subject matter of this Authorization;

        (ii) the address of the applicant specified in Section 1 of this Authorization; or,

        (iii) the ownership of the applicant specified in Section 1 of this Authorization.

...5/

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 27th day of November, 1996.

BUILDING MATERIALS EVALUATION COMMISSION (BMEC) AUTHORIZATION REPORT

DATE OF AUTHORIZATION September 20, 1996
BMEC REFERENCE BMEC 96-09-208

Giles Enterprises Inc., Model FHS-5 Wall Hung or Ceiling Mounted Recirculating Ventless Hoods for Deep Fat Fryers, Griddles and Ovens

1. Applicant

Giles Enterprises Inc.
2750 Gunter Park Drive W.
Montgomery, Alabama
U.S.A., 36109

Tel: (334) 272-3528
FAX: (334) 272-3561

2. Manufacturing Facilities

Giles Enterprises Inc.
2750 Gunter Park Drive W.
Montgomery, Alabama
U.S.A., 36109

Tel: (334) 272-3528
FAX: (334) 272-3561

3. Description

Giles Enterprises Model FHS-5 is a wall hung or ceiling mounted recirculating ventless hood designed for use over deep fat fryers, griddles and ovens. The hood is designed to remove smoke and grease produced by those commercial-type cooking ovens. Filtered air is circulated into the room after passing through a three-part filtering system consisting of a baffle filter, an electrostatic precipitator and a charcoal filter.

Model FHS-5 is for use over electrical appliances only. The hoods are fabricated from 18 gauge (1.22 mm) stainless steel.

The units are designed with interlocks that shut off the power to the appliance being used with the hood if the filters are dirty, missing, damaged, or if the capture rate is less than designed.

Model FHS-5 is prepiped for site installation of an Ansul R102 fire suppression system. Installation must be preformed by an authorized Ansul distributor in accordance with the system listing.

4. Authorization Requested

The applicant sought authorization for the use of an innovative wall hung or ceiling mounted recirculating ventless hood for the removal of grease and smoke produced by deep fat fryers, griddles and ovens as an equivalent to the requirement that commercial cooking equipment be designed, constructed and installed to conform to NFPA 96-1991, "Installation of Equipment for the Removal of Smoke and Grease-Laden Vapours from Commercial Cooking Equipment" (i.e. exhaust to the outside) in Article 6.2.2.6. of Regulation 61 of Revised Regulations of Ontario 1990 (the "Ontario Building Code").

2/...

5. Assessment

Giles Enterprises Model FSH-5 is tested, evaluated and listed, as follows:

(a) **ULC:** C710, Ductless Hood for Commercial and Institutional Cooking Equipment

(b) **UL:** UL 710, Standard for Exhaust for Commercial Cooking Equipment
UL 197, Standard for Commercial Electric Cooking Appliances
UL 197A, Standard for Commercial Electric Cooking Appliances, Exhaust Hoods for Commercial Cooking Equipment, and Vending Machines, and Ventilating Equipment for Commercial Cooking Appliances.

(c) **NFS:** Standard 2 - Food Equipment

(d) **CSA:** Canadian Electrical Code, C22.2.1

6. Authorization

The use of Model FHS-5 is authorized in respect of the requirement that commercial cooking equipment be designed, constructed and installed to conform to NFPA 96-1991, "Installation of Equipment for the Removal of Smoke and Grease-Laden Vapours from Commercial Cooking Equipment" (i.e. exhaust to the outside) in Article 6.2.2.6. of the Ontario Building Code, as amended or remade from time to time, subject to the following terms and conditions:

A. Specific Terms and Conditions:

1) The installation shall comply with this Authorization, the manufacturer's published instructions, NFPA 96-1994, and except where specifically provided in this Authorization the Ontario Building Code. Where a conflict exists between this Authorization, the manufacturer's published instructions and NFPA 96-1994, the most restrictive requirement shall apply.

2) This Authorization covers the hood only. Recognition of the cooking equipment used in conjunction with the hood is beyond the scope of this report. Model FSH-5 shall only be used over deep fat fryers, griddles and ovens identified in the manufacture's installation manual.

3) Model FSH-5 shall be mounted with the bottom of the skirt 175.26 cm (69 inches) from the floor and requires a minimum ceiling height of 289.56 cm (114 inches). The appliances being used with the hood require a minimum side overhang of 15.24 cm (6 inches) and minimum front overhang of 38.1 cm (15 inches). The sides and back of the hood must be 60.96 cm (24 inches) from combustibles and the top of the hood 25.4 cm (10 inches) from combustibles. The appliances shall be centred under the sprinkler nozzles.

4) (a) Each unit shall be permanently labelled with the manufacturer's name or trademark, model number and current listing of Canadian Standard Association (CSA) and Underwriters Laboratories Canada (ULC); Underwriters Laboratories Inc. (UL) and, NSF International (NFS).

(b) Each unit shall be installed and maintained in compliance with those listing requirements of CSA, ULC, UL and NFS.

5) (a) Each unit shall be maintained on a minimum service contract of at least once every six months to include checking and testing all fail safe components and replacing as needed the filter unit.

(b) The fire extinguisher shall be inspected and recharged annually. Hydrostatic testing requirements for portable fire extinguishers shall apply, in accordance with NFPA 10.

(c) Evidence shall be recorded in a log book signed and dated by the owner (or agent) of the unit and service contractor, to witness the following requirements:

i) Satisfactory operation and maintenance as per this AUTHORIZATION of each such unit; and,

ii) Annual inspection and recharging of the fire extinguisher.

6) (a) This unit is limited to one installation within one space unless there is conformance to the NFPA 96-1991 Standard for exhaust to the outside and make-up air.

(b) This unit shall only be installed in areas where the surrounding walls, ceilings and floors are finished with durable materials suitable for cleaning by washing.

7) Each unit when operated shall be maintained in a clean working order used only by trained personnel. Cleaning of the unit shall be done daily.

8) (a) Adequate general exhaust and supply ventilation shall be provided to prevent a build-up of smoke, odours and all cooking fumes, and

b) A portable code conforming extinguisher of at least 40 BC, shall be installed adjacent to each unit.

4/...

9) This Authorization is valid only for Giles Enterprises Model FSH-5 manufactured by the Applicant specified in Section 1 herein at the manufacturing facilities specified in Section 2 herein.

10) The use of Giles Enterprises Model FSH-5 must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

(i) the material, system or building design that is the subject matter of this Authorization;

(ii) the address of the manufacturing facilities specified in Section 2 of this Authorization;

(iii) the ownership of the manufacturing facilities specified in Section 2 of this Authorization; or

(iv) the address of the Applicant specified in Section 1 of this Authorization;

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

(b) **UL:** UL 710, Standard for Exhaust for Commercial Cooking Equipment

(c) **NFS:** Standard 2 - Food Equipment

(d) **CSA:** Canadian Electrical Code, C22.2.1

6. Authorization

The use of Models PO-VH and OVH-10 are authorized in respect of the requirement that commercial cooking equipment be designed, constructed and installed to conform to NFPA 96-1991, "Installation of Equipment for the Removal of Smoke and Grease-Laden Vapours from Commercial Cooking Equipment" (i.e. exhaust to the outside) in Article 6.2.2.6. of the Ontario Building Code, as amended or remade from time to time, subject to the following terms and conditions:

A. Specific Terms and Conditions:

1) The installation shall comply with this Authorization, the manufacturer's published instructions, NFPA 96-1994, and except where specifically provided in this Authorization the Ontario Building Code. Where a conflict exists between this Authorization, the manufacturer's published instructions and NFPA 96-1994, the most restrictive requirement shall apply.

2) This Authorization covers the hood only. Recognition of the cooking equipment used in conjunction with the hood is beyond the scope of this report. Models PO-VH and OVH-10 shall only be used with those pizza, convection or rotisserie ovens listed in the manufacturer's installation manual.

3) Model PO-VH when used for pizza ovens and convection ovens: Skirt size shall be a maximum of 2.67 m^2 (28.7 ft^2); maximum of 50 KW, with a maximum clearance to cooking surface of 76.2 cm (30 inches).

4) Model OVH-10 when used for pizza ovens and convection ovens: Skirt size shall be a maximum of 0.93 m^2 (10 ft^2); maximum of 11.5 KW, with a maximum clearance to cooking surface of 76.2 cm (30 inches).

5) Model PO-VH and OVH-10 when used for rotisserie ovens: Maximum rotisserie dimensions of 86.36 cm (34 inches) wide, 63.5 cm (25 inches) deep and 93.9 cm (37 inches) high, maximum of 6 KW, with a maximum clearance to cooking surface of 15.24 cm (6 inches).

6) (a) Each unit shall be permanently labelled with the manufacturer's name or trademark, model number and current listing of Canadian Standard Association (CSA) and Underwriters Laboratories Canada (ULC); Underwriters Laboratories Inc. (UL) and, NSF International (NFS).

(b) Each unit shall be installed and maintained in compliance with those listing requirements of CSA, ULC, UL and NFS.

7) (a) Each unit shall be maintained on a minimum service contract of at least once every six months to include checking and testing all fail safe components and replacing as needed the filter unit.

(b) The fire extinguisher shall be inspected and recharged annually. Hydrostatic testing requirements for portable fire extinguishers shall apply, in accordance with NFPA 10.

(c) Evidence shall be recorded in a log book signed and dated by the owner (or agent) of the unit and service contractor, to witness the following requirements:

i) Satisfactory operation and maintenance as per this AUTHORIZATION of each such unit; and,

ii) Annual inspection and recharging of the fire extinguisher.

8) (a) This unit is limited to one installation within one space unless there is conformance to the NFPA 96-1991 Standard for exhaust to the outside and make-up air.

(b) This unit shall only be installed in areas where the surrounding walls, ceilings and floors are finished with durable materials suitable for cleaning by washing.

9) Each unit when operated shall be maintained in a clean working order used only by trained personnel. Cleaning of the unit shall be done daily.

10) (a) Adequate general exhaust and supply ventilation shall be provided to prevent a build-up of smoke, odours and all cooking fumes, and

b) A portable code conforming extinguisher of at least 40 BC, shall be installed adjacent to each unit.

4/...

11) This Authorization is valid only for Giles Enterprises Models OVH-10 and PO-VH manufactured by the Applicant specified in Section 1 herein at the manufacturing facilities specified in Section 2 herein.

12) The use of Giles Enterprises Models OVH-10 and PO-VH must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

B. GENERAL CONDITIONS

1) The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

(i) the material, system or building design that is the subject matter of this Authorization;

(ii) the address of the manufacturing facilities specified in Section 2 of this Authorization;

(iii) the ownership of the manufacturing facilities specified in Section 2 of this Authorization; or

(iv) the address of the Applicant specified in Section 1 of this Authorization;

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Montgomery, Alabama
U.S.A., 36109

Tel: (334) 272-3528
FAX: (334) 272-3561

3. Description

Giles Enterprises Models FSH-2 and FSH-2a are free standing recirculating ventless hoods designed for use with specific deep-fat fryers. The hoods are designed to remove smoke and grease produced by specified commercial-type cooking equipment. Filtered air is circulated into the room after passing through a three-part filtering system consisting of a baffle filter, an electrostatic precipitator and a charcoal filter.

Deep-fat fryers used with these hoods shall be electrically heated. The fryers shall be limited to a maximum input of 20 KW, maximum cooking surface of 2451.61 cm^2 (380 in^2), maximum fry tank capacity of 50 kg (110.2 lb) of shortening and maximum distance from the cooking surface to appliance nozzle of 1143 mm (45 inches).

The hoods are fabricated from 18 gauge (1.22 mm) stainless steel. They have two fire suppression systems, one dry chemical agent and one wet. The nozzle of the dry chemical is located over the cooking surface and the wet system is for the plenum area of the hood. The fire suppression system is activated automatically or manually using a remote pull station.

The units are designed with interlocks that shut off the power to the appliance being used with the hood if the filters are dirty, missing, damaged, or if the capture rate is less than designed or if the fire suppression system is activated or discharged.

2/...

4. Authorization Requested

The applicant sought authorization for the use of an innovative free standing recirculating ventless hood for the removal of grease and smoke produced by specified commercial cooking equipment as an equivalent to requirement that commercial cooking equipment be designed, constructed and installed to conform to NFPA 96-1991, "Installation of Equipment for the Removal of Smoke and Grease-Laden Vapours from Commercial Cooking Equipment" (i.e. exhaust to the outside) in Article 6.2.2.6. of Regulation 61 of Revised Regulations of Ontario 1990 (the "Ontario Building Code").

5. Assessment

Giles Enterprises Models FSH-2 and FSH-2a are tested, evaluated and listed, as follows:

(a) **ULC:** C710, Ductless Hood for Commercial and Institutional Cooking Equipment, ULC/ORD-C1254.6-1995, Testing of Restaurant Cooking Area Fire Extinguishing System Unit

(b) **UL:** UL 197, Standard for Commercial Electric Cooking Appliances

(c) **NFS:** Standard 2 - Food Equipment

6. Authorization

The use of Models FSH-2 and FSH-2a are authorized in respect of the requirement that commercial cooking equipment be designed, constructed and installed to conform to NFPA 96-1991, "Installation of Equipment for the Removal of Smoke and Grease-Laden Vapours from Commercial Cooking Equipment" (i.e. exhaust to the outside) in Article 6.2.2.6. of the Ontario Building Code, as amended or remade from time to time, subject to the following terms and conditions:

A. Specific Terms and Conditions:

1) The installation shall comply with this Authorization, the manufacturer's published instructions, NFPA 96-1994, and except where specifically provided in this Authorization the Ontario Building Code. Where a conflict exists between this Authorization, the manufacturer's published instructions and NFPA 96-1994, the most restrictive requirement shall apply.

2) This Authorization covers the hood only. Recognition of the cooking equipment used in conjunction with the hood is beyond the scope of this report. Models FHS-2 and FHS-2a shall only be used with those electric deep-fat fryers listed in the manufacturer's installation manual.

3/...

3) Every portion of the hood shall be installed with a clearance to combustible construction of 457 mm (18 inches) and the appliance is to be centred beneath the nozzle.

4) (a) Each unit shall be permanently labelled with the manufacturer's name or trademark, model number and current listing of Canadian Standard Association (CSA) and Underwriters Laboratories Canada (ULC); Underwriters Laboratories Inc. (UL) and, NSF International (NFS).

(b) Each unit shall be installed and maintained in compliance with those listing requirements of CSA, ULC, UL and NFS.

5) (a) Each unit shall be maintained on a minimum service contract of at least once every six months to include checking and testing all fail safe components and replacing as needed the filter unit.

(b) The fire extinguisher shall be inspected and recharged annually. Hydrostatic testing requirements for portable fire extinguishers shall apply, in accordance with NFPA 10.

(c) Evidence shall be recorded in a log book signed and dated by the owner (or agent) of the unit and service contractor, to witness the following requirements:

i) Satisfactory operation and maintenance as per this AUTHORIZATION of each such unit; and,

ii) Annual inspection and recharging of the fire extinguisher.

6) (a) This unit is limited to one installation within one space unless there is conformance to the NFPA 96-1991 Standard for exhaust to the outside and make-up air.

(b) This unit shall only be installed in areas where the surrounding walls, ceilings and floors are finished with durable materials suitable for cleaning by washing.

7) Each unit when operated shall be maintained in a clean working order used only by trained personnel. Cleaning of the unit shall be done daily.

8) (a) Adequate general exhaust and supply ventilation shall be provided to prevent a build-up of smoke, odours and all cooking fumes, and

b) A portable code conforming extinguisher of at least 40 BC, shall be installed adjacent to each unit.

4/...

9) This Authorization is valid only for Giles Enterprises Models FSH-2 and FHS-2a manufactured by the Applicant specified in Section 1 herein at the manufacturing facilities specified in Section 2 herein.

10) The use of Giles Enterprises Models FSH-2 and FSH-2a must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

B. GENERAL CONDITIONS

1) The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

(i) the material, system or building design that is the subject matter of this Authorization;

(ii) the address of the manufacturing facilities specified in Section 2 of this Authorization;

(iii) the ownership of the manufacturing facilities specified in Section 2 of this Authorization; or

(iv) the address of the Applicant specified in Section 1 of this Authorization;

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

FAX: (334) 272-3561

3. Description

Giles Enterprises Models MGF-20VH, MGF-40VH, MGF-50VH, WOG-VH-MP, WOG-D-VH and WOG-20MP-VH are electric deep fat fryers with an integral ventless hood. The hoods are designed to remove smoke and grease produced by specified commercial-type cooking equipment. Filtered air is circulated into the room after passing through a three-part filtering system consisting of a baffle filter, an electrostatic precipitator and a charcoal filter.

These models are movable and incorporate caster wheels. Fryers used with these hoods shall be electrically heated.

The hoods are fabricated from 18 gauge (1.22 mm) stainless steel. They have two fire suppression systems, one dry chemical agent and one wet. The nozzle of the dry chemical is located over the cooking surface and the wet system is for the plenum area of the hood. The fire suppression system is activated automatically or manually using a remote pull station.

The units are designed with interlocks that shut off the power to the appliance being used with the hood if the filters are dirty, missing, damaged, or if the capture rate is less than designed or if the fire suppression system is activated or discharged.

2/...

4. Authorization Requested

The applicant sought authorization for the use of an innovative recirculation hood for the removal of grease and smoke produced by specified commercial cooking equipment as an equivalent to requirement that commercial cooking equipment be designed, constructed and installed to conform to NFPA 96-1991, "Installation of Equipment for the Removal of Smoke and Grease-Laden Vapours from Commercial Cooking Equipment" (i.e. exhaust to the outside) in Article 6.2.2.6. of Regulation 61 of Revised Regulations of Ontario 1990 (the "Ontario Building Code").

5. Assessment

Giles Enterprises Models MGF-20VH, MGF-40VH, MGF-50VH, WOG-VH-MP, WOG-D-VH and WOG-20MP-VH are tested, evaluated and listed, as follows:

(a) **ULC:** C710, Ductless Hood for Commercial and Institutional Cooking Equipment, Cooking Equipment (Self Contained)

(b) **UL:** UL 197, Standard for Commercial Electric Cooking Appliances

(c) **CSA:** Canadian Electrical Code

(d) **NFS:** Standard 4 - Commercial Cooking, Rethermalization and Powered Hot Food Holding and Transport Equipment

6. Authorization

The use of Models MGF-20VH, MGF-40VH, MGF-50VH, WOG-VH-MP, WOG-D-VH and WOG-20MP-VH are authorized in respect of the requirement that commercial cooking equipment be designed, constructed and installed to conform to NFPA 96-1991, "Installation of Equipment for the Removal of Smoke and Grease-Laden Vapours from Commercial Cooking Equipment" (i.e. exhaust to the outside) in Article 6.2.2.6. of the Ontario Building Code, as amended or remade from time to time, subject to the following terms and conditions:

A. Specific Terms and Conditions:

1) The installation shall comply with this Authorization, the manufacturer's published instructions, NFPA 96-1994, and except where specifically provided in this Authorization the Ontario Building Code. Where a conflict exists between this Authorization, the manufacturer's published instructions and NFPA 96-1994, the most restrictive requirement shall apply.

2) This Authorization covers the hood only. Recognition of the cooking equipment used in conjunction with the hood is beyond the scope of this report.

3/...

3) Every portion of the hood shall be installed with a clearance to combustible construction of 457 mm (18 inches) and the sides of the fryer shall be 76 mm (3 inches) from combustibles.

4) The Giles ventless hoods shall be used only with electrical appliances.

5) The Giles ventless hoods shall be used only with it's integral deep fat fryer.

6) The unit roller casters shall be locked so the unit remains in a fixed position while in the operation mode.

7) (a) Each unit shall be permanently labelled with the manufacturer's name or trademark, model number and current listing of Canadian Standard Association (CSA) and Underwriters Laboratories Canada (ULC); Underwriters Laboratories Inc. (UL) and, NSF International (NFS).

(b) Each unit shall be installed and maintained in compliance with those listing requirements of CSA, ULC, UL and NFS.

8) (a) Each unit shall be maintained on a minimum service contract of at least once every six months to include checking and testing all fail safe components and replacing as needed the filter unit.

(b) The fire extinguisher shall be inspected and recharged annually. Hydrostatic testing requirements for portable fire extinguishers shall apply, in accordance with NFPA 10.

(c) Evidence shall be recorded in a log book signed and dated by the owner (or agent) of the unit and service contractor, to witness the following requirements:

i) Satisfactory operation and maintenance as per this AUTHORIZATION of each such unit; and,

ii) Annual inspection and recharging of the fire extinguisher.

9) (a) This unit is limited to one installation within one space unless there is conformance to the NFPA 96-1991 Standard for exhaust to the outside and make-up air.

(b) This unit shall only be installed in areas where the surrounding walls, ceilings and floors are finished with durable materials suitable for cleaning by washing.

10) Each unit when operated shall be maintained in a clean working order used only by trained personnel. Cleaning of the unit shall be done daily.

4/...

11) (a) Adequate general exhaust and supply ventilation shall be provided to prevent a build-up of smoke, odours and all cooking fumes, and

b) A portable code conforming fire extinguisher of at least 40 BC, shall be installed adjacent to each unit.

12) This Authorization is valid only for Giles Enterprises Models MGF-20VH, MGF-40VH, MGF-50VH, WOG-VH-MP, WOG-D-VH and WOG-20MP-VH manufactured by the Applicant specified in Section 1 herein at the manufacturing facilities specified in Section 2 herein.

13) The use of Giles Enterprises Models MGF-20VH, MGF-40VH, MGF-50VH, WOG-VH-MP, WOG-D-VH and WOG-20MP-VH must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

B. GENERAL CONDITIONS

1) The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

(i) the material, system or building design that is the subject matter of this Authorization;

(ii) the address of the manufacturing facilities specified in Section 2 of this Authorization;

(iii) the ownership of the manufacturing facilities specified in Section 2 of this Authorization; or

(iv) the address of the Applicant specified in Section 1 of this Authorization;

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 20th day of September, 1996.

NATURAL GAS EMERGENCY STANDBY POWER (ESP)

1. Applicant

Consumers Gas Company (CGC)
500 Consumers Road
North York, Ontario
M2J 1P8

2. Description

Natural Gas Emergency Standby Power (ESP) is provided by an automated interconnected system of a bank of Compressed Natural Gas (CNG) storage tanks which are fuelled by a Vehicle Refuelling Appliance (VRA). The purpose of the system is to provide an alternate fuel source to power a natural gas-fired generator used to supply Emergency Standby Power.

The emergency power generators are designed to operate exclusively on natural gas. The fuel supply is connected to both the building's natural gas supply line and the on-site compressed natural gas storage tanks. The storage tanks are sized to provide natural gas to operate the generators continuously under full load for two hours.

If the regular power supply is interrupted, the generators will automatically take over to supply power to the building. As long as the main gas supply to the building is available, the generators will draw fuel from this supply. The fuel switching system will automatically switch and supply fuel to the generators from the storage tanks when the main gas supply is cut off, for example, by fire department personnel, fire, explosions or earthquake. When the main gas supply is restored, the switching system will automatically switch the generators back to this main gas supply, and at the same time, the vehicle refuelling appliances may be manually operated to refill the storage tanks.

3. Authorization Requested

The applicant sought authorization for the use of an innovative system to provide an alternate fuel source to power a natural gas-fired generator used to supply Emergency Standby Power as an equivalent to the installation requirements for emergency power systems contained in CAN/CSA C282-M89, "Emergency Electrical Supply for Buildings" in accordance with Article 3.2.7.5. of the Ontario Building Code.

2/...

4. Assessment

Reports and assessments provided by the applicant show that if the Natural Gas Emergency Standby Power (ESP) system is used in accordance with the limitations and conditions stated in this authorization, it will provide the level of performance that would be achieved by conformance with CAN/CSA C282-M89, "Emergency Electrical Supply for Buildings" contained in Article 3.2.7.5. of the Ontario Building Code.

5. Authorization

The Natural Gas Emergency Standby Power (ESP) system is authorized in respect to the emergency power supply installation requirements contained in CAN/CSA C282-M89, "Emergency Electrical Supply for Buildings" forming part of Article 3.2.7.5. of the Ontario Building Code, as amended or remade from time to time, subject to the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1) The use of the Natural Gas Emergency Standby Power (ESP) system must comply with the Building Code Act, 1992, as amended or re-enacted from time to time and, except as specifically authorized herein with the Ontario Building Code as amended or remade from time to time.

2) A copy of this Authorization shall be included with an application for a permit and shall be kept and maintained on the site of the construction with the building permit.

3) The Natural Gas Emergency Standby Power (ESP) system shall not be used in hospitals.

4) Where located within a building, the emergency generators shall be located in service rooms separated in accordance with requirements of Sentence 3.5.2.1.(1) of the Ontario Building Code.

5) The Applicant (i.e. Consumers Gas Company) shall be responsible for ensuring that the installation, operation and maintenance of the Natural Gas Emergency Standby Power (ESP) system is in accordance with the "Manual of Installation and Operating Instructions for Emergency Standby Power" provided by Consumers Gas.

6) Piping and components from a customer's meter up to the Vehicle Refuelling Appliance (VRA) connection shall meet the Ontario Gas Utilization Code, Reg. 331. The installation of the VRA shall be in accordance with CAN/CGA B149.1-M95, Part 9 of the Natural Gas Code.

7) All components downstream of the Vehicle Refuelling Appliance (VRA) shall meet the Ontario Compressed Natural Gas Standard CNG#1, November 1990 or CAN/CGA B108-M95, considering that the installation is part of a refuelling station, up to the regulator that reduces the supply pressure to the engine to less than 413 kpa (60 psi).

8) The Vehicle Refuelling Appliance (VRA), the high pressure storage and any piping or tubing operating at a pressure over 413 kpa (60 psi) shall be installed outdoors.

3/...

9) Downstream of the pressure regulator reducing the pressure to less than 413 kpa (60 psi), and up to the stationary engine (appliance) piping and components shall meet the Ontario Gas Utilization Code, O.Reg.331.

10) The ESP system installation shall also conform to the Ontario NGV Code, CSA B51-95 and CGA 12-6-M94.

11) The system installation shall comply with the requirements of Section 5.6 of the Ontario Fire Code, O.Reg. 454/90.

12) Excessive flow valves shall be installed to ensure that piping within the building is of the low pressure type.

13) The Natural Gas Emergency Standby Power (ESP), emergency generator and fuel supply may be installed at grade or on the roof of a building.

14) Protection shall be provided to prevent over pressurization of the systems fuel storage tanks due to temperature rise.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

(i) the material, system or building design that is the subject matter of this Authorization;

(ii) the address of the applicant specified in Section 1 of this Authorization; or,

(iii) the ownership of the applicant specified in Section 1 of this Authorization.

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 20th day of June, 1996.

WINDOW SPRINKLER SYSTEM

1. Applicant

Robert B. Williams, P.Eng.
Fire Protection Engineering
227 Tower Drive
Scarborough, Ontario
M1R 3P8

2. Description

A window sprinkler assembly system to provide a two-hour fire-resistance rated separation in a wall to consist of tempered or heat-strengthened glass fixed in a non-openable hollow metal steel frame or extruded aluminum frame and a special sidewall window sprinkler with quick-response action.

3. Authorization Requested

The applicant sought authorization for the use of an innovative window sprinkler system designed for new buildings where fire resistant ratings are required, but glazing is preferred. The window sprinkler is not for use in exits or firewalls.

4. Assessment

Reports and assessments provided by the applicant show that if the window sprinkler system is used in accordance with the limitations and conditions stated in this authorization, it will provide the level of performance that would be achieved by conformance with the Ontario Building Code.

5. Authorization

The window sprinkler system is authorized for use within new buildings where fire resistant ratings are required, but glazing is preferred, except in exits or firewalls, subject to the following terms and conditions:

2/...

A. SPECIFIC TERMS AND CONDITIONS:

1. This window sprinkler assembly system shall be designed, engineered, inspected and verified by a fire protection Professional Engineer licensed in Ontario under the Professional Engineers Act and a document of certification by the Professional Engineer with stamp shall be forwarded to the Chief Building Official and the Building Owner(s).

2. The sprinkler system shall be installed and tested in accordance with N.F.P.A. 13 as a wet pipe system and maintained in accordance with Section 6.5 (sprinkler) of the Ontario Fire Code.

3. The special designed sprinkler head shall be designated as a horizontal sidewall window nozzle, Grinnell Canada Fire Protection Company Limited Model FR-1/Q-60, 12.7 mm (1/2 in.) orifice, 74° C (165° F) activation temperature quick response link. The optimum position of the sprinkler head shall be as determined by the tests submitted by National Research Council Canada.

4. The interior glazing shall consist of one sheet of fixed non-operable tempered or heat strengthened glass installed in a hollow metal steel frame 1.35 mm (16 gauge) minimum thickness maximum glazing shall be 2134 mm (7 ft. 0 in.) wide by 2844 mm (9 ft. 4 in.) high and minimum 6 mm (1/4 in.) thick.

5. This window sprinkler system may be used in either a sprinklered or unsprinklered building to protect non openable window openings to a maximum of 2 hour fire resistance rating provided,

   (a) in a exposing building face or exterior spatial separation the window sprinkler is installed on the interior side of the window, or

   (b) in an interior fire separation the window sprinkler is installed on both sides of the window in the fire separation.

6. Interior or exterior installations may be made in all types of occupancies except Group F, Division 1 and shall not be used in a firewall. Should the system be located in a loadbearing wall, all loadbearing components shall be protected independently of this window sprinkler assembly system.

7. This window sprinkler system shall not be used in exits nor firewalls as defined in the Ontario Building Code.

8. This horizontal sidewall window sprinkler system shall be served by either a separate riser or separate cross main independent of any regular sprinkler or standpipe system serving the floor area.

9. Separate flow switches or alarm check valves and supervised control valves and each fire compartment on each system shall be electrically supervised and indicated separately at the fire/sprinkler alarm annunciator panel.

10. Where the water supply is from a standpipe system conforming to the Code, the fire department connection shall be labelled as per the standard except for this dual purpose which shall read "STANDPIPE AND WINDOW SPRINKLERS".

3/...

11. A noncombustible sign legibly printed in not less than 12.7 mm (1/2 in.) block letters with contrasting white background and red letters shall be permanently mounted and maintained beside the main water supply source to this window sprinkler assembly system to indicate:

WARNING

SPECIAL SPRINKLER HEADS ON THIS SYSTEM ARE AN INTEGRAL PART OF WINDOW FIRE SEPARATION. THIS WATER SUPPLY MAY ONLY BE SHUT OFF AFTER ALL THE PROPER AUTHORITIES HAVE RECEIVED NOTICE IN WRITING.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

(i) the material, system or building design that is the subject matter of this Authorization;

(ii) the address of the applicant specified in Section 1 of this Authorization; or,

(iii) the ownership of the applicant specified in Section 1 of this Authorization.

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 20th day of June, 1996.

BUILDING MATERIALS EVALUATION COMMISSION

SHELF AND RACK STORAGE SYSTEM

1. Applicant

ALLTYPE Metal Stampings Ltd.
349 Arvin Avenue
Stoney Creek, Ontario
L8E 2M6

2. Description

The shelf and rack storage system is a self contained structural facility within a building, having one or more solid intermediate platforms or walkway levels for personnel access. The walkways and platforms may also support conveyors and other distribution equipment.

3. Authorization Requested

The applicant sought authorization for the use of an innovative shelf and rack storage system designed for material handling, storage and distribution in warehouse facilities.

4. Assessment

Reports and assessments provided by the applicant show that if the shelf and rack system is used in accordance with the limitations and conditions stated in this authorization, it will provide the level of performance that would be achieved by conformance with the Ontario Building Code.

5. Authorization

The shelf and rack storage system is authorized for use within a building as a self contained structural facility for material handling, storage and distribution, subject to the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1. The use of the shelf and rack storage system must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

2/...

2. A copy of this Authorization shall be included with an application for a building permit and shall be posted and maintained on the site of the construction with the building permit.

3. This Authorization is valid only for ALLTYPE Metal Stampings Ltd.

4. Deck and walkway levels shall be constructed of:

   (a) solid-closed surface steel planking;
   (b) steel roof decking with a top substrate that forms a serviceable floor area;
   (c) open steel grating; or,
   (d) open steel floor planking.

5. The structural design of the entire shelf and rack storage facility support system including posts, beams, decks, walkways, connections, and their supports such as concrete slabs, separate foundations or similar shall be in accordance with Part 4 of the Ontario Building Code as amended or remade from time to time.

6. The design and general review of the rack and storage system shall be carried out by a Professional Engineer as defined in the Professional Engineers Act (Ontario). The Professional Engineer shall provide the Chief Building Official with a document certifying that the installation conforms with this Authorization. The construction drawings shall require the provision of an appropriate sign to indicate the maximum permissible design loads for each rack storage system and such sign shall be permanently fixed to the building interior and displayed in a prominent unobstructed viewing position.

7. An automatic sprinkler system shall be designed, constructed, installed and tested for the entire shelf and rack storage facility including the top level and shall be in conformance with NFPA 13-1991 and NFPA 231C-1991 as amended or the appropriate NFPA Standard for the most severe hazard to which the storage facility is exposed. Additionally, sprinkler protection shall be provided under decks and walkways.

8. Except where the deck is of open steel grating, any opening in a deck for egress, convenience stairs, ramps or chutes, shall be protected by smoke baffles and close spaced sprinklers as per paragraph A.7. of this Authorization.

9. A sprinkler systems located in a cold storage or freezer environment shall be designed to address any possibility of freeze-up resulting from condensation of water vapour internal to the system.

10. The automatic sprinkler system shall be electrically supervised to indicate a trouble signal on the building fire alarm system annunciator or where the building does not have a fire alarm system to notify the person controlling the operation of the building for each of the following:

    (a) movement of a control valve handle;
    (b) loss of excess water pressure required to prevent false alarms in a wetpipe system;
    (c) loss of air pressure in a dry pipe system;
    (d) loss of air pressure in a pressure tank;
    (e) a significant change in water level in any water storage container used for fire fighting purposes;
    (f) loss of electrical power to any automatically starting electrical fire pump; and,
    (g) a temperature approaching the freezing point in any dry pipe valve enclosure or water storage container used for fire fighting purposes.

3/...

11. The automatic sprinkler system shall be designed to notify the fire department that a waterflow switch has been activated.

12. The notification to the person controlling the building and the fire department referred to in paragraphs A.10 and A.11 of this Authorization shall be provided by way of:

    (a) an independent central station conforming to NFPA-71, "Standard for the Installation, Maintenance, and Use of Signaling Systems for Central Station Service", as amended;
    (b) a proprietary control centre conforming to Chapter 9 of NFPA-72, Standard for the Installation, Maintenance, and Use of Protective Signaling Systems", as amended; or,
    (c) if the above mentioned facilities are not available in the municipality in which the self and rack storage system is to be built, an independent system is permitted to be used to transmit signals to the fire department.

13. The maximum height of the shelf and rack storage facility from the floor supporting the shelf and rack system to the topmost portion of the shelf and rack system shall not exceed 18 m.

14. Each deck, walkway or platform level shall be provided with not less than two **exit** stair shafts that conform to all requirements for exits as stated in the Ontario Building Code (i.e. fire separations having a fire resistance rating, etc.) as amended, except as follows:

    (a) access to exit may be provided from a platform level by means of open unenclosed stairs for shelf and rack storage facilities comprising not more than three platform levels, the highest of which may not be more than 9 m above the main floor; and,
    (b) any single platform, deck or walkway may be served by a single unenclosed egress stair leading to the platform or walkway level immediately below provided the:

        (i) platform, deck or walkway does not exceed 200 m² in area;
        (ii) travel distance on the platform, deck or walkway to the level below, including the travel distance along the single unenclosed egress stair does not exceed 25 m; and,
        (iii) the platform, deck or walkway below is provided with two separate egress stairs or **exits**.

15. The maximum travel distance on an elevated platform to the ground floor level, including the travel distance along unenclosed stairs shall not exceed 45 m. The maximum travel distance from the bottom of an unenclosed stair to an exit on the main floor level shall not exceed 45 m. The maximum travel distance to an enclosed exit on an elevated platform shall not exceed 45 m.

16. Fire extinguishers shall be installed on every platform or walkway level of the shelf and rack storage system in accordance with the provisions of Part 6 of the Ontario Fire Code, as amended or remade from time to time. The maximum travel distance to a fire extinguisher shall not exceed 23 m.

17. Dead end travel distance to a point of choice of direction of horizontal travel to an egress facility from an elevated deck or walkway shall not exceed 9 m where the deck or walkway is required to be provided with at least 2 egress facilities.

18. The clear aisle width shall not be less than 760 mm (30 in). This clearance is for access to exits and shall not be used for conveyors, trolleys, tracks or any other similar mode of product transportation within an aisle or walkway.

4/...

19. The shelf and rack storage facility is not permitted in a High Hazard Industrial Occupancy (F1) as defined in Article 1.1.3.2. of the Ontario Building Code, as amended or remade from time to time.

20. The shelf and rack storage facilities shall be used only for storage of Class I, II, III, and IV commodities as defined in NFPA 231C-1991, as amended and not for manufacturing, production, wrapping or assembly.

21. A plain legible sign or signs, with contrasting letters and titled "NOTICE", shall describe the above Class and the sprinkler design criteria used for each shelf and rack storage facility. This sign or signs shall be permanently mounted, at or near the sprinkler control valve.

22. The shelf and rack storage facilities shall be accessible to employees only and shall be designated, signed and posted as a "NO SMOKING" area conforming to the Ontario Fire Code O. Reg. 454/90 as amended or remade from time to time.

23. A standpipe and hose system shall be installed in accordance with the Ontario Building Code where the shelf and rack storage facility height is more than 14 m (45 ft.) in height or where there are more than 3 elevated platforms of walkway level.

24. Where a standpipe and hose system is required, 63.5 mm (2 1/2 in.) diameter hose connections shall be provided, except that 38.1 mm (1 1/2 in.) hose connections are permitted in the shelf and rack storage facilities which:

    (a) do not exceed 6 levels including the floor level; and,
    (b) do not exceed 3,716 m² (40,000 ft²) in the sum total of all levels of the shelf and rack storage facility.

25. Lighting levels of decks, walkways and platforms shall conform to the Ontario Building Code, as amended or remade from time to time.

26. Emergency lighting shall be provided on walkways, decks, platforms, unenclosed egress stairs and exits providing means of egress to not less than the average level of illumination prescribed in Sentence 3.2.7.3.(2) of the Ontario Building Code, as amended or remade from time to time.

27. Guards and toe boards shall be installed in accordance with the Ontario Building Code, as amended or remade from time to time.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

    (a) any change has been made to:

        (i) the material, system or building design that is the subject matter of this Authorization;

        (ii) the address of the applicant specified in Section 1 of this Authorization; or,

        (iii) the ownership of the applicant specified in Section 1 of this Authorization.

...5/

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 29th day of May, 1996.

WINDOW SPRINKLER SYSTEM

1. Applicant

MBECO Engineering Ltd.
1 Marsh Street
Richmond Hill, Ontario
L4C 7P5

2. Description

A window sprinkler assembly system to provide a two-hour fire-resistance rated separation in a wall to consist of tempered or heat-strengthened glass fixed in a non-openable hollow metal steel frame or extruded aluminum frame and a special sidewall window sprinkler with quick-response action.

3. Authorization Requested

The applicant sought authorization for the use of an innovative window sprinkler system designed for new buildings where fire resistant ratings are required, but glazing is preferred. The window sprinkler is not for use in exits or firewalls.

4. Assessment

Reports and assessments provided by the applicant show that if the window sprinkler system is used in accordance with the limitations and conditions stated in this authorization, it will provide the level of performance that would be achieved by conformance with the Ontario Building Code.

5. Authorization

The window sprinkler system is authorized for use within new buildings where fire resistant ratings are required, but glazing is preferred, except in exits or firewalls, subject to the following terms and conditions:

2/...

A. SPECIFIC TERMS AND CONDITIONS:

1. This window sprinkler assembly system shall be designed, engineered, inspected and verified by a fire protection Professional Engineer licensed in Ontario under the Professional Engineers Act and a document of certification by the Professional Engineer with stamp shall be forwarded to the Chief Building Official and the Building Owner(s).

2. The sprinkler system shall be installed and tested in accordance with N.F.P.A. 13 as a wet pipe system and maintained in accordance with Section 6.5 (sprinkler) of the Ontario Fire Code.

3. The special designed sprinkler head shall be designated as a horizontal sidewall window nozzle, Grinnell Canada Fire Protection Company Limited Model FR-1/Q-60, 12.7 mm (1/2 in.) orifice, 74° C (165° F) activation temperature quick response link. The optimum position of the sprinkler head shall be as determined by the tests submitted by National Research Council Canada.

4. The interior glazing shall consist of one sheet of fixed non-operable tempered or heat strengthened glass installed in a hollow metal steel frame 1.35 mm (16 gauge) minimum thickness maximum glazing shall be 2134 mm (7 ft. 0 in.) wide by 2844 mm (9 ft. 4 in.) high and minimum 6 mm (1/4 in.) thick.

5. This window sprinkler system may be used in either a sprinklered or unsprinklered building to protect non openable window openings to a maximum of 2 hour fire resistance rating provided,

   (a) in a exposing building face or exterior spatial separation the window sprinkler is installed on the interior side of the window, or

   (b) in an interior fire separation the window sprinkler is installed on both sides of the window in the fire separation.

6. Interior or exterior installations may be made in all types of occupancies except Group F, Division 1 and shall not be used in a firewall. Should the system be located in a loadbearing wall, all loadbearing components shall be protected independently of this window sprinkler assembly system.

7. This window sprinkler system shall not be used in exits nor firewalls as defined in the Ontario Building Code.

8. This horizontal sidewall window sprinkler system shall be served by either a separate riser or separate cross main independent of any regular sprinkler or standpipe system serving the floor area.

9. Separate flow switches or alarm check valves and supervised control valves and each fire compartment on each system shall be electrically supervised and indicated separately at the fire/sprinkler alarm annunciator panel.

10. Where the water supply is from a standpipe system conforming to the Code, the fire department connection shall be labelled as per the standard except for this dual purpose which shall read "STANDPIPE AND WINDOW SPRINKLERS".

3/...

11. A noncombustible sign legibly printed in not less than 12.7 mm (1/2 in.) block letters with contrasting white background and red letters shall be permanently mounted and maintained beside the main water supply source to this window sprinkler assembly system to indicate:

WARNING

SPECIAL SPRINKLER HEADS ON THIS SYSTEM ARE AN INTEGRAL PART OF WINDOW FIRE SEPARATION. THIS WATER SUPPLY MAY ONLY BE SHUT OFF AFTER ALL THE PROPER AUTHORITIES HAVE RECEIVED NOTICE IN WRITING.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

(i) the material, system or building design that is the subject matter of this Authorization;

(ii) the address of the applicant specified in Section 1 of this Authorization; or,

(iii) the ownership of the applicant specified in Section 1 of this Authorization.

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 29th day of May, 1996.

BUILDING MATERIALS EVALUATION COMMISSION

per: Scott Richardson, Chairman

BUILDING MATERIALS EVALUATION COMMISSION (BMEC) AUTHORIZATION REPORT

DATE OF AUTHORIZATION **November 30, 1995**

BMEC REFERENCE **BMEC 95-14-199**

SHELF AND RACK STORAGE SYSTEM

1. Applicant

E-Z-Rect Manufacturing Ltd.
7025 Tomken Road, Units 9-12
Mississauga, Ontario
L5S 1R6

2. Description

The shelf and rack storage system is a self contained structural facility within a building, having one or more solid intermediate platforms or walkway levels for personnel access. The walkways and platforms may also support conveyors and other distribution equipment.

3. Authorization Requested

The applicant sought authorization for the use of an innovative shelf and rack storage system designed for material handling, storage and distribution in warehouse facilities.

4. Assessment

Reports and assessments provided by the applicant show that if the shelf and rack system is used in accordance with the limitations and conditions stated in this authorization, it will provide the level of performance that would be achieved by conformance with the Ontario Building Code.

5. Authorization

The shelf and rack storage system is authorized for use within a building as a self contained structural facility for material handling, storage and distribution, subject to the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1. The use of the shelf and rack storage system must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

2. A copy of this Authorization shall be included with an application for a building permit and shall be posted and maintained on the site of the construction with the building permit.

...2/

3. This Authorization is valid only for E-Z-Rect Manufacturing Ltd.

4. Deck and walkway levels shall be constructed of:

   (a) solid-closed surface steel planking;
   (b) steel roof decking with a top substrate that forms a serviceable floor area;
   (c) open steel grating; or,
   (d) open steel floor planking.

5. The structural design of the entire shelf and rack storage facility support system including posts, beams, decks, walkways, connections, and their supports such as concrete slabs, separate foundations or similar shall be in accordance with Part 4 of the Ontario Building Code as amended or remade from time to time.

6. The design and general review of the rack and storage system shall be carried out by a Professional Engineer as defined in the Professional Engineers Act (Ontario). The Professional Engineer shall provide the Chief Building Official with a document certifying that the installation conforms with this Authorization. The construction drawings shall require the provision of an appropriate sign to indicate the maximum permissible design loads for each rack storage system and such sign shall be permanently fixed to the building interior and displayed in a prominent unobstructed viewing position.

7. An automatic sprinkler system shall be designed, constructed, installed and tested for the entire shelf and rack storage facility including the top level and shall be in conformance with NFPA 13-1991 and NFPA 231C-1991 as amended or the appropriate NFPA Standard for the most severe hazard to which the storage facility is exposed. Additionally, sprinkler protection shall be provided under decks and walkways.

8. Except where the deck is of open steel grating, any opening in a deck for egress, convenience stairs, ramps or chutes, shall be protected by smoke baffles and close spaced sprinklers as per paragraph A.7. of this Authorization.

9. A sprinkler systems located in a cold storage or freezer environment shall be designed to address any possibility of freeze-up resulting from condensation of water vapour internal to the system.

10. The automatic sprinkler system shall be electrically supervised to indicate a trouble signal on the building fire alarm system annunciator or where the building does not have a fire alarm system to notify the person controlling the operation of the building for each of the following:

    (a) movement of a control valve handle;
    (b) loss of excess water pressure required to prevent false alarms in a wetpipe system;
    (c) loss of air pressure in a dry pipe system;
    (d) loss of air pressure in a pressure tank;
    (e) a significant change in water level in any water storage container used for fire fighting purposes;
    (f) loss of electrical power to any automatically starting electrical fire pump; and,
    (g) a temperature approaching the freezing point in any dry pipe valve enclosure or water storage container used for fire fighting purposes.

11. The automatic sprinkler system shall be designed to notify the fire department that a waterflow switch has been activated.

...3/

12. The notification to the person controlling the building and the fire department referred to in paragraphs A.10 and A.11 of this Authorization shall be provided by way of:

    (a) an independent central station conforming to NFPA-71, "Standard for the Installation, Maintenance, and Use of Signaling Systems for Central Station Service", as amended;
    (b) a proprietary control centre conforming to Chapter 9 of NFPA-72, Standard for the Installation, Maintenance, and Use of Protective Signaling Systems", as amended; or,
    (c) if the above mentioned facilities are not available in the municipality in which the self and rack storage system is to be built, an independent system is permitted to be used to transmit signals to the fire department.

13. The maximum height of the shelf and rack storage facility from the floor supporting the shelf and rack system to the topmost portion of the shelf and rack system shall not exceed 18 m.

14. Each deck, walkway or platform level shall be provided with not less than two **exit** stair shafts that conform to all requirements for exits as stated in the Ontario Building Code (i.e. fire separations having a fire resistance rating, etc.) as amended, except as follows:

    (a) access to exit may be provided from a platform level by means of open unenclosed stairs for shelf and rack storage facilities comprising not more than three platform levels, the highest of which may not be more than 9 m above the main floor; and,
    (b) any single platform, deck or walkway may be served by a single unenclosed egress stair leading to the platform or walkway level immediately below provided the:

        (i) platform, deck or walkway does not exceed 200 m² in area;
        (ii) travel distance on the platform, deck or walkway to the level below, including the travel distance along the single unenclosed egress stair does not exceed 25 m; and,
        (iii) the platform, deck or walkway below is provided with two separate egress stairs or **exits**.

15. The maximum travel distance on an elevated platform to the ground floor level, including the travel distance along unenclosed stairs shall not exceed 45 m. The maximum travel distance from the bottom of an unenclosed stair to an exit on the main floor level shall not exceed 45 m. The maximum travel distance to an enclosed exit on an elevated platform shall not exceed 45 m.

16. Fire extinguishers shall be installed on every platform or walkway level of the shelf and rack storage system in accordance with the provisions of Part 6 of the Ontario Fire Code, as amended or remade from time to time. The maximum travel distance to a fire extinguisher shall not exceed 23 m.

17. Dead end travel distance to a point of choice of direction of horizontal travel to an egress facility from an elevated deck or walkway shall not exceed 9 m where the deck or walkway is required to be provided with at least 2 egress facilities.

18. The clear aisle width shall not be less than 760 mm (30 in). This clearance is for access to exits and shall not be used for conveyors, trolleys, tracks or any other similar mode of product transportation within an aisle or walkway.

19. The shelf and rack storage facility is not permitted in a High Hazard Industrial Occupancy (F1) as defined in Article 1.1.3.2. of the Ontario Building Code, as amended or remade from time to time.

...4/

20. The shelf and rack storage facilities shall be used only for storage of Class I, II, III, and IV commodities as defined in NFPA 231C-1991, as amended and not for manufacturing, production, wrapping or assembly.

21. A plain legible sign or signs, with contrasting letters and titled "NOTICE", shall describe the above Class and the sprinkler design criteria used for each shelf and rack storage facility. This sign or signs shall be permanently mounted, at or near the sprinkler control valve.

22. The shelf and rack storage facilities shall be accessible to employees only and shall be designated, signed and posted as a "NO SMOKING" area conforming to the Ontario Fire Code O. Reg. 454/90 as amended or remade from time to time.

23. A standpipe and hose system shall be installed in accordance with the Ontario Building Code where the shelf and rack storage facility height is more than 14 m (45 ft.) in height or where there are more than 3 elevated platforms of walkway level.

24. Where a standpipe and hose system is required, 63.5 mm (2 1/2 in.) diameter hose connections shall be provided, except that 38.1 mm (1 1/2 in.) hose connections are permitted in the shelf and rack storage facilities which:

    (a) do not exceed 6 levels including the floor level; and,
    (b) do not exceed 3,716 m² (40,000 ft²) in the sum total of all levels of the shelf and rack storage facility.

25. Lighting levels of decks, walkways and platforms shall conform to the Ontario Building Code, as amended or remade from time to time.

26. Emergency lighting shall be provided on walkways, decks, platforms, unenclosed egress stairs and exits providing means of egress to not less than the average level of illumination prescribed in Sentence 3.2.7.3.(2) of the Ontario Building Code, as amended or remade from time to time.

27. Guards and toe boards shall be installed in accordance with the Ontario Building Code, as amended or remade from time to time.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

    (a) any change has been made to:

        (i) the material, system or building design that is the subject matter of this Authorization;

        (ii) the address of the applicant specified in Section 1 of this Authorization; or,

        (iii) the ownership of the applicant specified in Section 1 of this Authorization.

...5/

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 30th day of November, 1995.

BUILDING MATERIALS EVALUATION COMMISSION (BMEC) AUTHORIZATION REPORT

DATE OF AUTHORIZATION **November 30, 1995**

BMEC REFERENCE **BMEC 95-13-198**

WINDOW SPRINKLER SYSTEM

1. Applicant

Life Safety Systems
Fire Protection Consultants
2490 Argentia Road
Mississauga, Ontario
L5N 2X6

2. Description

A window sprinkler assembly system to provide a two-hour fire-resistance rated separation in a wall to consist of tempered or heat-strengthened glass fixed in a non-openable hollow metal steel frame or extruded aluminum frame and a special sidewall window sprinkler with quick-response action.

3. Authorization Requested

The applicant sought authorization for the use of an innovative window sprinkler system designed for new buildings where fire resistant ratings are required, but glazing is preferred. The window sprinkler is not for use in exits or firewalls.

4. Assessment

Reports and assessments provided by the applicant show that if the window sprinkler system is used in accordance with the limitations and conditions stated in this authorization, it will provide the level of performance that would be achieved by conformance with the Ontario Building Code.

5. Authorization

The window sprinkler system is authorized for use within new buildings where fire resistant ratings are required, but glazing is preferred, except in exits or firewalls, subject to the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1. This window sprinkler assembly system shall be designed, engineered, inspected and verified by a fire protection Professional Engineer licensed in Ontario under the Professional Engineers Act and a document of certification by the Professional Engineer with stamp shall be forwarded to the Chief Building Official and the Building Owner(s).

2. The sprinkler system shall be installed and tested in accordance with N.F.P.A. 13 as a wet pipe system and maintained in accordance with Section 6.5 (sprinkler) of the Ontario Fire Code.

3. The special designed sprinkler head shall be designated as a horizontal sidewall window nozzle, Grinnell Canada Fire Protection Company Limited Model FR-1/Q-60, 12.7 mm (1/2 in.) orifice, 74°C (165°F) activation temperature quick response link. The optimum position of the sprinkler head shall be as determined by the tests submitted by National Research Council Canada.

4. The interior glazing shall consist of one sheet of fixed non-operable tempered or heat strengthened glass installed in a hollow metal steel frame 1.35 mm (16 gauge) minimum thickness maximum glazing shall be 2134 mm (7 ft. 0 in.) wide by 2844 mm (9 ft. 4 in.) high and minimum 6 mm (1/4 in.) thick.

5. This window sprinkler system may be used in either a sprinklered or unsprinklered building to protect non openable window openings to a maximum of 2 hour fire resistance rating provided,

   (a) in a exposing building face or exterior spatial separation the window sprinkler is installed on the interior side of the window, or

   (b) in an interior fire separation the window sprinkler is installed on both sides of the window in the fire separation.

6. Interior or exterior installations may be made in all types of occupancies except Group F, Division 1 and shall not be used in a firewall. Should the system be located in a loadbearing wall, all loadbearing components shall be protected independently of this window sprinkler assembly system.

7. This window sprinkler system shall not be used in exits nor firewalls as defined in the Ontario Building Code.

8. This horizontal sidewall window sprinkler system shall be served by either a separate riser or separate cross main independent of any regular sprinkler or standpipe system serving the floor area.

9. Separate flow switches or alarm check valves and supervised control valves and each fire compartment on each system shall be electrically supervised and indicated separately at the fire/sprinkler alarm annunciator panel.

10. Where the water supply is from a standpipe system conforming to the Code, the fire department connection shall be labelled as per the standard except for this dual purpose which shall read "STANDPIPE AND WINDOW SPRINKLERS".

11. A noncombustible sign legibly printed in not less than 12.7 mm (1/2 in.) block letters with contrasting white background and red letters shall be permanently mounted and maintained beside the main water supply source to this window sprinkler assembly system to indicate:

WARNING

SPECIAL SPRINKLER HEADS ON THIS SYSTEM ARE AN INTEGRAL PART OF WINDOW FIRE SEPARATION. THIS WATER SUPPLY MAY ONLY BE SHUT OFF AFTER ALL THE PROPER AUTHORITIES HAVE RECEIVED NOTICE IN WRITING.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

   (a) any change has been made to:

      (i) the material, system or building design that is the subject matter of this Authorization;

      (ii) the address of the applicant specified in Section 1 of this Authorization; or,

      (iii) the ownership of the applicant specified in Section 1 of this Authorization.

   (b) the use of the material, system or building design authorized herein;

      (i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

      (ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 30th day of November, 1995.

BUILDING MATERIALS EVALUATION COMMISSION

_____
per: Scott Richardson, Chairman

BUILDING MATERIALS EVALUATION COMMISSION (BMEC)
AUTHORIZATION REPORT

DATE OF AUTHORIZATION **November 30, 1995**
BMEC REFERENCE **BMEC 95-12-197**
● Amended January 25, 1996

Isowall Ltd. Thermosetting Foam Composite Panel for Interior Walls and Ceilings in Noncombustible Construction

1. Applicant

Isowall Ltd.
P.O. Box 433
Cobourg, Ontario
K9A 4L1

2. Manufacturing Facilities

Isowall Ltd.
Northham Industrial Park
Division Street
Cobourg, Ontario
K9A 4L1

3. Description

The Isowall panels consist of a thermosetting isocyanurate insulation core not greater than 100 mm thick (4 inch) faced with a minimum 0.38 mm thick (0.0179 inch or 26 gauge) galvanized or stainless steel facings. The facing sheets are bonded to both sides of the insulation core using a heat polymerizing, thermosetting adhesive. The edges of the steel panels are trimmed to accept a steel joiner during installation which is structurally independent of the foam core.

4. Authorization Requested

The applicant sought authorization for the use of an innovative interior non loadbearing wall and ceiling system containing thermosetting isocyanurate insulation in cold storage facilities, processing rooms and freezers required to be of noncombustible construction provided the building is sprinklered and the wall assembly satisfies the performance criteria for exterior walls in Clause 3.1.5.11.(6)(a) of Regulation 61 of Revised Regulations of Ontario 1990 (the "Ontario Building Code").

5. Assessment

The Isowall panels are tested, evaluated and listed for thicknesses up to 100 mm (4 inches), as follows:

2/...

(a) Surface Burning Characteristics:

The flame spread rating for the thermosetting foam panel was a maximum of 25

(b) CAN/ULC - S101 - M "Standard Methods of Fire Endurance Tests of Building Construction and Materials".

The Test results showed compliance with the performance criteria for exterior walls in Clause 3.1.5.11.(6)(a) of the Ontario Building Code.

(c) CAN/ULC - S126 "Standards Method of Test for Fire Spread under Roof-Deck Assemblies".

The test results showed that the thermosetting foam panel passed this test.

6. Authorization

The use of the Isowall thermosetting isocyanurate insulation panels for not more than 100 mm (4 inches) thick walls is authorized in respect of interior non loadbearing walls and ceiling in noncombustible construction described in Subsection 3.1.5. of the Ontario Building Code, as amended or remade from time to time, subject to the following terms and conditions:

A. Specific Terms and Conditions:

1) A **monitored** automatic sprinkler system shall be installed throughout the building, including individual cold storage units, in accordance with the most current edition of NFPA - 13 "Installation of Sprinkler Systems". Additionally, the sprinkler system located inside the storage unit shall be designed to operate in a cold storage or freezer environment. The design shall address any possibility of freeze-up resulting from condensation of water vapour internal to the system.

2) The flame spread rating of the wall panel, determined by subjecting a sample, including an assembled joint, to the appropriate test described in Subsection 3.1.12. of the Ontario Building Code, as amended or remade from time to time, shall be not more than the flame spread rating permitted for the room or space which it bounds.

3) The building shall contain only mercantile occupancy (E) or cold storage facilities of Medium Hazard Industrial Occupancy (F-2) or Low Hazard Industrial Occupancy (F-3) as defined in Article 1.1.3.2. of the Ontario Building Code, as amended or remade from time to time.

4) The building shall be not more than 18 m high, measured between grade and the floor level of the uppermost storey.

5) The ceiling panels shall be supported not more than 3050 mm. (10 feet) o.c.

3/...

6) The panels shall be listed, as defined in the Ontario Building Code as amended or remade from time to time, to show that the wall panel will remain in place for not less than 10 min when the wall panel is tested in conformance with CAN4-S101-M, "Standard Methods of Fire Endurance Tests of Building Construction and Materials".

7) This Authorization is valid only for Isowall Ltd. thermosetting foamed insulation panels manufactured by the Applicant specified in Section 1 herein at the manufacturing facilities specified in Section 2 herein.

8) The panels shall be installed in accordance with the manufacturers specifications and the installation shall be approved by the manufacturer.

9) The use of Isowall panels must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

   (a) any change has been made to:

      (i) the material, system or building design that is the subject matter of this Authorization;

      (ii) the address of the manufacturing facilities specified in Section 2 of this Authorization;

      (iii) the ownership of the manufacturing facilities specified in Section 2 of this Authorization; or

      (iv) the address of the Applicant specified in Section 1 of this Authorization;

   (b) the use of the material, system or building design authorized herein;

      (i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

      (ii) provides an unsatisfactory level of performance, in situ; or

   (c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 30th day of November, 1995.

SHELF AND RACK STORAGE SYSTEM

1. Applicant

Tripla-A Manufacturing Co. Ltd.
44 Milner Avenue
Scarborough, Ontario
M1S 3P8

2. Description

The shelf and rack storage system is a self contained structural facility within a building, having one or more solid intermediate platforms or walkway levels for personnel access. The walkways and platforms may also support conveyors and other distribution equipment.

3. Authorization Requested

The applicant sought authorization for the use of an innovative shelf and rack storage system designed for material handling, storage and distribution in warehouse facilities.

4. Assessment

Reports and assessments provided by the applicant show that if the shelf and rack system is used in accordance with the limitations and conditions stated in this authorization, it will provide the level of performance that would be achieved by conformance with the Ontario Building Code.

5. Authorization

The shelf and rack storage system is authorized for use within a building as a self contained structural facility for material handling, storage and distribution, subject to the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1. The use of the shelf and rack storage system must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

2. A copy of this Authorization shall be included with an application for a building permit and shall be posted and maintained on the site of the construction with the building permit.

...2/

3. This Authorization is valid only for E-Z-Rect Manufacturing Ltd.

4. Deck and walkway levels shall be constructed of:

   (a) solid-closed surface steel planking;
   (b) steel roof decking with a top substrate that forms a serviceable floor area;
   (c) open steel grating; or,
   (d) open steel floor planking.

5. The structural design of the entire shelf and rack storage facility support system including posts, beams, decks, walkways, connections, and their supports such as concrete slabs, separate foundations or similar shall be in accordance with Part 4 of the Ontario Building Code as amended or remade from time to time.

6. The design and general review of the rack and storage system shall be carried out by a Professional Engineer as defined in the Professional Engineers Act (Ontario). The Professional Engineer shall provide the Chief Building Official with a document certifying that the installation conforms with this Authorization. The construction drawings shall require the provision of an appropriate sign to indicate the maximum permissible design loads for each rack storage system and such sign shall be permanently fixed to the building interior and displayed in a prominent unobstructed viewing position.

7. An automatic sprinkler system shall be designed, constructed, installed and tested for the entire shelf and rack storage facility including the top level and shall be in conformance with NFPA 13-1991 and NFPA 231C-1991 as amended or the appropriate NFPA Standard for the most severe hazard to which the storage facility is exposed. Additionally, sprinkler protection shall be provided under decks and walkways.

8. Except where the deck is of open steel grating, any opening in a deck for egress, convenience stairs, ramps or chutes, shall be protected by smoke baffles and close spaced sprinklers as per paragraph A.7. of this Authorization.

9. A sprinkler systems located in a cold storage or freezer environment shall be designed to address any possibility of freeze-up resulting from condensation of water vapour internal to the system.

10. The automatic sprinkler system shall be electrically supervised to indicate a trouble signal on the building fire alarm system annunciator or where the building does not have a fire alarm system to notify the person controlling the operation of the building for each of the following:

    (a) movement of a control valve handle;
    (b) loss of excess water pressure required to prevent false alarms in a wetpipe system;
    (c) loss of air pressure in a dry pipe system;
    (d) loss of air pressure in a pressure tank;
    (e) a significant change in water level in any water storage container used for fire fighting purposes;
    (f) loss of electrical power to any automatically starting electrical fire pump; and,
    (g) a temperature approaching the freezing point in any dry pipe valve enclosure or water storage container used for fire fighting purposes.

11. The automatic sprinkler system shall be designed to notify the fire department that a waterflow switch has been activated.

...3/

12. The notification to the person controlling the building and the fire department referred to in paragraphs A.10 and A.11 of this Authorization shall be provided by way of:

    (a) an independent central station conforming to NFPA-71, "Standard for the Installation, Maintenance, and Use of Signaling Systems for Central Station Service", as amended;
    (b) a proprietary control centre conforming to Chapter 9 of NFPA-72, Standard for the Installation, Maintenance, and Use of Protective Signaling Systems", as amended; or,
    (c) if the above mentioned facilities are not available in the municipality in which the self and rack storage system is to be built, an independent system is permitted to be used to transmit signals to the fire department.

13. The maximum height of the shelf and rack storage facility from the floor supporting the shelf and rack system to the topmost portion of the shelf and rack system shall not exceed 18 m.

14. Each deck, walkway or platform level shall be provided with not less than two **exit** stair shafts that conform to all requirements for exits as stated in the Ontario Building Code (i.e. fire separations having a fire resistance rating, etc.) as amended, except as follows:

    (a) access to exit may be provided from a platform level by means of open unenclosed stairs for shelf and rack storage facilities comprising not more than three platform levels, the highest of which may not be more than 9 m above the main floor; and,
    (b) any single platform, deck or walkway may be served by a single unenclosed egress stair leading to the platform or walkway level immediately below provided the:

        (i) platform, deck or walkway does not exceed 200 m² in area;
        (ii) travel distance on the platform, deck or walkway to the level below, including the travel distance along the single unenclosed egress stair does not exceed 25 m; and,
        (iii) the platform, deck or walkway below is provided with two separate egress stairs or **exits**.

15. The maximum travel distance on an elevated platform to the ground floor level, including the travel distance along unenclosed stairs shall not exceed 45 m. The maximum travel distance from the bottom of an unenclosed stair to an exit on the main floor level shall not exceed 45 m. The maximum travel distance to an enclosed exit on an elevated platform shall not exceed 45 m.

16. Fire extinguishers shall be installed on every platform or walkway level of the shelf and rack storage system in accordance with the provisions of Part 6 of the Ontario Fire Code, as amended or remade from time to time. The maximum travel distance to a fire extinguisher shall not exceed 23 m.

17. Dead end travel distance to a point of choice of direction of horizontal travel to an egress facility from an elevated deck or walkway shall not exceed 9 m where the deck or walkway is required to be provided with at least 2 egress facilities.

18. The clear aisle width shall not be less than 760 mm (30 in). This clearance is for access to exits and shall not be used for conveyors, trolleys, tracks or any other similar mode of product transportation within an aisle or walkway.

19. The shelf and rack storage facility is not permitted in a High Hazard Industrial Occupancy (F1) as defined in Article 1.1.3.2. of the Ontario Building Code, as amended or remade from time to time.

...4/

20. The shelf and rack storage facilities shall be used only for storage of Class I, II, III, and IV commodities as defined in NFPA 231C-1991, as amended and not for manufacturing, production, wrapping or assembly.

21. A plain legible sign or signs, with contrasting letters and titled "NOTICE", shall describe the above Class and the sprinkler design criteria used for each shelf and rack storage facility. This sign or signs shall be permanently mounted, at or near the sprinkler control valve.

22. The shelf and rack storage facilities shall be accessible to employees only and shall be designated, signed and posted as a "NO SMOKING" area conforming to the Ontario Fire Code O. Reg. 454/90 as amended or remade from time to time.

23. A standpipe and hose system shall be installed in accordance with the Ontario Building Code where the shelf and rack storage facility height is more than 14 m (45 ft.) in height or where there are more than 3 elevated platforms of walkway level.

24. Where a standpipe and hose system is required, 63.5 mm (2 1/2 in.) diameter hose connections shall be provided, except that 38.1 mm (1 1/2 in.) hose connections are permitted in the shelf and rack storage facilities which:

    (a) do not exceed 6 levels including the floor level; and,
    (b) do not exceed 3,716 m² (40,000 ft²) in the sum total of all levels of the shelf and rack storage facility.

25. Lighting levels of decks, walkways and platforms shall conform to the Ontario Building Code, as amended or remade from time to time.

26. Emergency lighting shall be provided on walkways, decks, platforms, unenclosed egress stairs and exits providing means of egress to not less than the average level of illumination prescribed in Sentence 3.2.7.3.(2) of the Ontario Building Code, as amended or remade from time to time.

27. Guards and toe boards shall be installed in accordance with the Ontario Building Code, as amended or remade from time to time.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

    (a) any change has been made to:

        (i) the material, system or building design that is the subject matter of this Authorization;

        (ii) the address of the applicant specified in Section 1 of this Authorization; or,

        (iii) the ownership of the applicant specified in Section 1 of this Authorization.

...5/

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 30th day of November, 1995.

BUILDING MATERIALS EVALUATION COMMISSION

per: Scott Richardson, Chairman

BUILDING MATERIALS EVALUATION COMMISSION (BMEC)
AUTHORIZATION REPORT

DATE OF AUTHORIZATION **August 24, 1995**
BMEC REFERENCE **BMEC 95-09-194**

SHELF AND RACK STORAGE SYSTEM

1. Applicant

Beaver Materials Handling Company Ltd.
507 Oakville Road
Downsview, Ontario
M3N 1W7

2. Description

The shelf and rack storage system is a self contained structural facility within a building, having one or more solid intermediate platforms or walkway levels for personnel access. The walkways and platforms may also support conveyors and other distribution equipment.

3. Authorization Requested

The applicant sought authorization for the use of an innovative shelf and rack storage system designed for material handling, storage and distribution in warehouse facilities.

4. Assessment

Reports and assessments provided by the applicant show that if the shelf and rack system is used in accordance with the limitations and conditions stated in this authorization, it will provide the level of performance that would be achieved by conformance with the Ontario Building Code.

5. Authorization

The shelf and rack storage system is authorized for use within a building as a self contained structural facility for material handling, storage and distribution, subject to the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1. The use of the shelf and rack storage system must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

2. A copy of this Authorization shall be included with an application for a building permit and shall be posted and maintained on the site of the construction with the building permit.

...2/

3. This Authorization is valid only for Beaver Materials Handling Company Ltd.

4. Deck and walkway levels shall be constructed of:

   (a) solid-closed surface steel planking;
   (b) steel roof decking with minimum 16 mm (5/8 in) maximum 19 mm (3/4 in) thick tongue and groove solid wood or plywood; or,
   (c) open steel grating.

5. The structural design of the entire shelf and rack storage facility support system including posts, beams, decks, walkways, connections, and their supports such as concrete slabs, separate foundations or similar shall be in accordance with Part 4 of the Ontario Building Code as amended or remade from time to time.

6. The design and general review of the rack and storage system shall be carried out by a Professional Engineer as defined in the Professional Engineers Act (Ontario). The Professional Engineer shall provide the Chief Building Official with a document certifying that the installation conforms with this Authorization. The construction drawings shall require the provision of an appropriate sign to indicate the maximum permissible design loads for each rack storage system and such sign shall be permanently fixed to the building interior and displayed in a prominent unobstructed viewing position.

7. An automatic sprinkler system shall be designed, constructed, installed and tested for the entire shelf and rack storage facility including the top level and shall be in conformance with NFPA 13-1991 and NFPA 231C-1991 as amended or the appropriate NFPA Standard for the most severe hazard to which the storage facility is exposed. Additionally, sprinkler protection shall be provided under decks and walkways.

8. Except where the deck is of open steel grating, any opening in a deck for egress, convenience stairs, ramps or chutes, shall be protected by smoke baffles and close spaced sprinklers as per paragraph A.7. of this Authorization.

9. A sprinkler systems located in a cold storage or freezer environment shall be designed to address any possibility of freeze-up resulting from condensation of water vapour internal to the system.

10. The automatic sprinkler system shall be electrically supervised to indicate a trouble signal on the building fire alarm system annunciator or where the building does not have a fire alarm system to notify the person controlling the operation of the building for each of the following:

    (a) movement of a control valve handle;
    (b) loss of excess water pressure required to prevent false alarms in a wetpipe system;
    (c) loss of air pressure in a dry pipe system;
    (d) loss of air pressure in a pressure tank;
    (e) a significant change in water level in any water storage container used for fire fighting purposes;
    (f) loss of electrical power to any automatically starting electrical fire pump; and,
    (g) a temperature approaching the freezing point in any dry pipe valve enclosure or water storage container used for fire fighting purposes.

11. The automatic sprinkler system shall be designed to notify the fire department that a waterflow switch has been activated.

...3/

12. The notification to the person controlling the building and the fire department referred to in paragraphs A.10 and A.11 of this Authorization shall be provided by way of:

    (a) an independent central station conforming to NFPA-71, "Standard for the Installation, Maintenance, and Use of Signaling Systems for Central Station Service", as amended;
    (b) a proprietary control centre conforming to Chapter 9 of NFPA-72, Standard for the Installation, Maintenance, and Use of Protective Signaling Systems", as amended; or,
    (c) if the above mentioned facilities are not available in the municipality in which the self and rack storage system is to be built, an independent system is permitted to be used to transmit signals to the fire department.

13. The maximum height of the shelf and rack storage facility from the floor supporting the shelf and rack system to the topmost portion of the shelf and rack system shall not exceed 18 m.

14. Each deck, walkway or platform level shall be provided with not less than two **exit** stair shafts that conform to all requirements for exits as stated in the Ontario Building Code (i.e. fire separations having a fire resistance rating, etc.) as amended, except as follows:

    (a) access to exit may be provided from a platform level by means of open unenclosed stairs for shelf and rack storage facilities comprising not more than three platform levels, the highest of which may not be more than 9 m above the main floor; and,
    (b) any single platform, deck or walkway may be served by a single unenclosed egress stair leading to the platform or walkway level immediately below provided the:

        (i) platform, deck or walkway does not exceed 200 m² in area;
        (ii) travel distance on the platform, deck or walkway to the level below, including the travel distance along the single unenclosed egress stair does not exceed 25 m; and,
        (iii) the platform, deck or walkway below is provided with two separate egress stairs or **exits**.

15. The maximum travel distance on an elevated platform to the ground floor level, including the travel distance along unenclosed stairs shall not exceed 45 m. The maximum travel distance from the bottom of an unenclosed stair to an exit on the main floor level shall not exceed 45 m. The maximum travel distance to an enclosed exit on an elevated platform shall not exceed 45 m.

16. Fire extinguishers shall be installed on every platform or walkway level of the shelf and rack storage system in accordance with the provisions of Part 6 of the Ontario Fire Code, as amended or remade from time to time. The maximum travel distance to a fire extinguisher shall not exceed 23 m.

17. Dead end travel distance to a point of choice of direction of horizontal travel to an egress facility from an elevated deck or walkway shall not exceed 9 m where the deck or walkway is required to be provided with at least 2 egress facilities.

18. The clear aisle width shall not be less than 760 mm (30 in). This clearance is for access to exits and shall not be used for conveyors, trolleys, tracks or any other similar mode of product transportation within an aisle or walkway.

19. The shelf and rack storage facility is not permitted in a High Hazard Industrial Occupancy (F1) as defined in Article 1.1.3.2. of the Ontario Building Code, as amended or remade from time to time.

...4/

20. The shelf and rack storage facilities shall be used only for storage of Class I, II, III, and IV commodities as defined in NFPA 231C-1991, as amended and not for manufacturing, production, wrapping or assembly.

21. A plain legible sign or signs, with contrasting letters and titled "NOTICE", shall describe the above Class and the sprinkler design criteria used for each shelf and rack storage facility. This sign or signs shall be permanently mounted, at or near the sprinkler control valve.

22. The shelf and rack storage facilities shall be accessible to employees only and shall be designated, signed and posted as a "NO SMOKING" area conforming to the Ontario Fire Code O. Reg. 454/90 as amended or remade from time to time.

23. A standpipe and hose system shall be installed in accordance with the Ontario Building Code where the shelf and rack storage facility height is more than 14 m (45 ft.) in height or where there are more than 3 elevated platforms of walkway level.

24. Where a standpipe and hose system is required, 63.5 mm (2 1/2 in.) diameter hose connections shall be provided, except that 38.1 mm (1 1/2 in.) hose connections are permitted in the shelf and rack storage facilities which:

    (a) do not exceed 6 levels including the floor level; and,
    (b) do not exceed 3,716 m² (40,000 ft²) in the sum total of all levels of the shelf and rack storage facility.

25. Lighting levels of decks, walkways and platforms shall conform to the Ontario Building Code, as amended or remade from time to time.

26. Emergency lighting shall be provided on walkways, decks, platforms, unenclosed egress stairs and exits providing means of egress to not less than the average level of illumination prescribed in Sentence 3.2.7.3.(2) of the Ontario Building Code, as amended or remade from time to time.

27. Guards and toe boards shall be installed in accordance with the Ontario Building Code, as amended or remade from time to time.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

    (a) any change has been made to:

        (i) the material, system or building design that is the subject matter of this Authorization;

        (ii) the address of the applicant specified in Section 1 of this Authorization; or,

        (iii) the ownership of the applicant specified in Section 1 of this Authorization.

...5/

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 24th day of August, 1995.

BUILDING MATERIALS EVALUATION COMMISSION (BMEC)
AUTHORIZATION REPORT

DATE OF AUTHORIZATION **August 24, 1995**
BMEC REFERENCE **BMEC 95-08-193**

SHELF AND RACK STORAGE SYSTEM

1. Applicant

Pacific Westeel
Material Handling and Racking Systems
3191 Mainway
Burlington, Ontario
L7M 1A6

2. Description

The shelf and rack storage system is a self contained structural facility within a building, having one or more solid intermediate platforms or walkway levels for personnel access. The walkways and platforms may also support conveyors and other distribution equipment.

3. Authorization Requested

The applicant sought authorization for the use of an innovative shelf and rack storage system designed for material handling, storage and distribution in warehouse facilities.

4. Assessment

Reports and assessments provided by the applicant show that if the shelf and rack system is used in accordance with the limitations and conditions stated in this authorization, it will provide the level of performance that would be achieved by conformance with the Ontario Building Code.

5. Authorization

The shelf and rack storage system is authorized for use within a building as a self contained structural facility for material handling, storage and distribution, subject to the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1. The use of the shelf and rack storage system must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

2. A copy of this Authorization shall be included with an application for a building permit and shall be posted and maintained on the site of the construction with the building permit.

3. This Authorization is valid only for Pacific Westeel Racking.

4. Deck and walkway levels shall be constructed of:

   (a) solid-closed surface steel planking;
   (b) steel roof decking with minimum 16 mm (5/8 in) maximum 19 mm (3/4 in) thick tongue and groove solid wood or plywood; or,
   (c) open steel grating.

5. The structural design of the entire shelf and rack storage facility support system including posts, beams, decks, walkways, connections, and their supports such as concrete slabs, separate foundations or similar shall be in accordance with Part 4 of the Ontario Building Code as amended or remade from time to time.

6. The design and general review of the rack and storage system shall be carried out by a Professional Engineer as defined in the Professional Engineers Act (Ontario). The Professional Engineer shall provide the Chief Building Official with a document certifying that the installation conforms with this Authorization. The construction drawings shall require the provision of an appropriate sign to indicate the maximum permissible design loads for each rack storage system and such sign shall be permanently fixed to the building interior and displayed in a prominent unobstructed viewing position.

7. An automatic sprinkler system shall be designed, constructed, installed and tested for the entire shelf and rack storage facility including the top level and shall be in conformance with NFPA 13-1991 and NFPA 231C-1991 as amended or the appropriate NFPA Standard for the most severe hazard to which the storage facility is exposed. Additionally, sprinkler protection shall be provided under decks and walkways.

8. Except where the deck is of open steel grating, any opening in a deck for egress, convenience stairs, ramps or chutes, shall be protected by smoke baffles and close spaced sprinklers as per paragraph A.7. of this Authorization.

9. A sprinkler systems located in a cold storage or freezer environment shall be designed to address any possibility of freeze-up resulting from condensation of water vapour internal to the system.

10. The automatic sprinkler system shall be electrically supervised to indicate a trouble signal on the building fire alarm system annunciator or where the building does not have a fire alarm system to notify the person controlling the operation of the building for each of the following:

    (a) movement of a control valve handle;
    (b) loss of excess water pressure required to prevent false alarms in a wetpipe system;
    (c) loss of air pressure in a dry pipe system;
    (d) loss of air pressure in a pressure tank;
    (e) a significant change in water level in any water storage container used for fire fighting purposes;
    (f) loss of electrical power to any automatically starting electrical fire pump; and,
    (g) a temperature approaching the freezing point in any dry pipe valve enclosure or water storage container used for fire fighting purposes.

11. The automatic sprinkler system shall be designed to notify the fire department that a waterflow switch has been activated.

12. The notification to the person controlling the building and the fire department referred to in paragraphs A.10 and A.11 of this Authorization shall be provided by way of:

    (a) an independent central station conforming to NFPA-71, "Standard for the Installation, Maintenance, and Use of Signaling Systems for Central Station Service", as amended;
    (b) a proprietary control centre conforming to Chapter 9 of NFPA-72, Standard for the Installation, Maintenance, and Use of Protective Signaling Systems", as amended; or,
    (c) if the above mentioned facilities are not available in the municipality in which the self and rack storage system is to be built, an independent system is permitted to be used to transmit signals to the fire department.

13. The maximum height of the shelf and rack storage facility from the floor supporting the shelf and rack system to the topmost portion of the shelf and rack system shall not exceed 18 m.

14. Each deck, walkway or platform level shall be provided with not less than two **exit** stair shafts that conform to all requirements for exits as stated in the Ontario Building Code (i.e. fire separations having a fire resistance rating, etc.) as amended, except as follows:

    (a) access to exit may be provided from a platform level by means of open unenclosed stairs for shelf and rack storage facilities comprising not more than three platform levels, the highest of which may not be more than 9 m above the main floor; and,
    (b) any single platform, deck or walkway may be served by a single unenclosed egress

stair leading to the platform or walkway level immediately below provided the:

(i) platform, deck or walkway does not exceed 200 m² in area;
(ii) travel distance on the platform, deck or walkway to the level below, including the travel distance along the single unenclosed egress stair does not exceed 25 m; and,
(iii) the platform, deck or walkway below is provided with two separate egress stairs or **exits**.

15. The maximum travel distance on an elevated platform to the ground floor level, including the travel distance along unenclosed stairs shall not exceed 45 m. The maximum travel distance from the bottom of an unenclosed stair to an exit on the main floor level shall not exceed 45 m. The maximum travel distance to an enclosed exit on an elevated platform shall not exceed 45 m.

16. Fire extinguishers shall be installed on every platform or walkway level of the shelf and rack storage system in accordance with the provisions of Part 6 of the Ontario Fire Code, as amended or remade from time to time. The maximum travel distance to a fire extinguisher shall not exceed 23 m.

17. Dead end travel distance to a point of choice of direction of horizontal travel to an egress facility from an elevated deck or walkway shall not exceed 9 m where the deck or walkway is required to be provided with at least 2 egress facilities.

18. The clear aisle width shall not be less than 760 mm (30 in). This clearance is for access to exits and shall not be used for conveyors, trolleys, tracks or any other similar mode of product transportation within an aisle or walkway.

19. The shelf and rack storage facility is not permitted in a High Hazard Industrial Occupancy (F1) as defined in Article 1.1.3.2. of the Ontario Building Code, as amended or remade from time to time.

20. The shelf and rack storage facilities shall be used only for storage of Class I, II, III, and IV commodities as defined in NFPA 231C-1991, as amended and not for manufacturing, production, wrapping or assembly.

21. A plain legible sign or signs, with contrasting letters and titled "NOTICE", shall describe the above Class and the sprinkler design criteria used for each shelf and rack storage facility. This sign or signs shall be permanently mounted, at or near the sprinkler control valve.

22. The shelf and rack storage facilities shall be accessible to employees only and shall be designated, signed and posted as a "NO SMOKING" area conforming to the Ontario Fire Code O. Reg. 454/90 as amended or remade from time to time.

23. A standpipe and hose system shall be installed in accordance with the Ontario Building Code where the shelf and rack storage facility height is more than 14 m (45 ft.) in height or where there are more than 3 elevated platforms of walkway level.

24. Where a standpipe and hose system is required, 63.5 mm (2 1/2 in.) diameter hose connections shall be provided, except that 38.1 mm (1 1/2 in.) hose connections are permitted in the shelf and rack storage facilities which:

(a) do not exceed 6 levels including the floor level; and,
(b) do not exceed 3,716 m² (40,000 ft²) in the sum total of all levels of the shelf and rack storage facility.

25. Lighting levels of decks, walkways and platforms shall conform to the Ontario Building Code, as amended or remade from time to time.

26. Emergency lighting shall be provided on walkways, decks, platforms, unenclosed egress stairs and exits providing means of egress to not less than the average level of illumination prescribed in Sentence 3.2.7.3.(2) of the Ontario Building Code, as amended or remade from time to time.

27. Guards and toe boards shall be installed in accordance with the Ontario Building Code, as amended or remade from time to time.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

   (a) any change has been made to:

      (i) the material, system or building design that is the subject matter of this Authorization;

      (ii) the address of the applicant specified in Section 1 of this Authorization; or,

      (iii) the ownership of the applicant specified in Section 1 of this Authorization.

   (b) the use of the material, system or building design authorized herein;

      (i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

      (ii) provides an unsatisfactory level of performance, in situ; or

   (c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

ZER-O-LOC THERMOPLASTIC FOAM COMPOSITE WALL PANELS FOR NON-LOAD BEARING FACTORY-ASSEMBLED EXTERIOR WALLS, AS WELL AS A NON-LOAD BEARING INTERIOR WALL AND CEILING SYSTEM

1. Applicant

Zer-O-Loc Enterprises Ltd.
4740 Vanguard Road
Richmond, B.C.
V6X 2P8

2. Manufacturing Facilities

Zer-O-Loc Enterprises Ltd.
28 Plant Farm Blvd.
Brantford, Ontario
N3T 6H2

3. Description

Zer-O-Loc manufactures an insulated panel system to be used as non-load bearing, factory-assembled exterior walls, as well as a non-load bearing interior wall and ceiling system. Zer-O-Loc Panels are manufactured from an EXPANDED Polystyrene (EPS) core with metal skins. The core, meets or exceeds CAN/CGSB 51.20-M87 for Type 1 OR Type 2 Expanded Polystyrene Insulation. The metal skins are formed from a minimum of 0.38 mm (0.0179 in or 26 gauge) galvanized, galvalume or stainless steel either prepainted or plain and are roll formed to provide a fully aligned sleeve joint and then pressure heat-bonded to the EPS using a high quality adhesive. The thickness of the panels vary from 50 mm (2 in) to 250 mm (10 in) with a standard panel width of 1168 mm (46 inches). The ceiling panels shall not be less than 100 mm (4 inches) and not more than 200 mm (8 inches).

4. Authorization Requested

The applicant sought authorization for the use of an innovative exterior factory-assembled non-load bearing wall system and interior non-load bearing wall and ceiling system containing thermoplastic foam insulation for use in buildings required to be of non-combustible construction, provided the building, spaces or portions of the building are sprinklered and the foam panel system meets the performance requirements specified in ULC/ORD C376-1995 "Fire Growth of Foamed Plastic Insulated Building Panels in a Full Scale Room Configuration".

5. Assessment

The Zer-O-Loc panels are tested, evaluated and listed for thicknesses up to 250 mm as follows:

2\...

(a) Test results showed that the wall and ceiling panels meet the performance requirements of ULC/ORD C376-1995 "Fire Growth of Foamed Plastic Insulated Building Panels in a Full Scale Room Configuration".

(b) Documentation showed that the Polystyrene Core material (styropor bead type BF 326) used in the wall and ceiling panels has a flame spread rating of 140 when tested in conformance with CAN/ULC-S102.2 "Standard Method of Test for Surface Burning Characteristics of Flooring, Floor Covering, and Miscellaneous Materials and Assemblies".

6. Authorization

The use of the ZER-O-LOC building thermoplastic foamed insulation composite panels for walls not greater than 250 mm (10 inches) thick and ceilings not greater than 200 mm (8 inches) thick is authorized in respect of exterior or interior non-loadbearing walls and ceilings in non-combustible construction described in Subsection 3.1.5. of the Ontario Building Code, as amended or remade from time to time, subject to the following terms and conditions:

A. Specific Terms and Conditions:

1) (A) An automatic sprinkler system shall be installed throughout the building, including all individual cold storage units, in accordance with the current edition of NFPA - 13 "Installation of Sprinkler Systems". Additionally, the sprinkler system located inside each storage unit shall be designed to operate in a cold storage or freezer environment. The design shall address any possibility of freeze-up resulting from condensation of water vapour internal to the system.

(B) For wall panels used in a factory-assembled non-load bearing wall application, an automatic sprinkler shall be installed throughout the building in accordance with item (A).

(C) The automatic sprinkler system shall be electrically supervised to indicate a trouble signal on the building fire alarm system annunciator or where the building does not have a fire alarm system to notify the person controlling the operation of the building for each of the following:

a) movement of a control valve handle;
b) loss of excess water pressure required to prevent false alarms in a wetpipe system;
c) loss of air pressure in a dry pipe system;
d) loss of air pressure in a pressure tank;
e) a significant change in water level in any water storage container used for fire fighting purposes;
f) loss of electrical power to any automatically starting electrical fire pump; and,
g) a temperature approaching the freezing point in any dry pipe valve enclosure or water storage container used for fire fighting purposes.

3\...

(D) The design and general review of the sprinkler system shall be carried out by a Professional Engineer as defined in the Professional Engineers Act (Ontario).

2) The flame spread rating of the wall and ceiling panel, determined by subjecting a sample, including an assembled joint, to the appropriate test described in Subsection 3.1.12. of the Ontario Building Code, as amended or remade from time to time, shall be not more than the flame spread rating permitted for the room or space which it bounds.

3) The building shall contain only mercantile occupancy (E) or cold storage facilities of Medium Hazard Industrial Occupancy (F-2) or Low Hazard Industrial Occupancy (F-3) as defined in Article 1.1.3.2. of the Ontario Building Code, as amended or remade from time to time.

4) The building shall be not more than 18 m high, measured between grade and the floor level of the uppermost storey.

5) The ceiling panels shall be supported not more than 3050 mm. (10 feet) o.c.

6) This Authorization is valid only for Zer-O-Loc foam plastic composite panels using an expanded polystyrene (EPS) core with metal skins which meets or exceeds CAN/CGSB 51.20-M87 for Type 1 or Type 2 Expanded Polystyrene Insulation, manufactured by the Applicant specified in Section 1 herein at the manufacturing facilities specified in Section 2 herein.

7) The panels shall be installed in accordance with the manufacturers specifications and the installation shall be approved by the manufacturer.

8) The use of Zer-O-Loc foam plastic composite panels must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

9) The panels shall be listed, as defined in the Ontario Building Code as amended or remade from time to time, to show that the wall and ceiling panels meet or exceed the performance requirements of ULC/ORD C376-1995 "Fire Growth of Foamed Plastic Insulated Building Panels in a Full Scale Room Configuration" and that the flame-spread classification of the foam core insulation is not more than 500, as per Subsection 3.1.12. of the Ontario Building Code, as amended or remade from time to time.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

4/...

(i) the material, system or building design that is the subject matter of this Authorization;

(ii) the address of the manufacturing facilities specified in Section 2 of this Authorization;

(iii) the ownership of the manufacturing facilities specified in Section 2 of this Authorization; or

(iv) the address of the Applicant specified in Section 1 of this Authorization;

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 24th day of August, 1995.

BUILDING MATERIALS EVALUATION COMMISSION

per: Scott Richardson, Chairman

BUILDING MATERIALS EVALUATION COMMISSION (BMEC) AUTHORIZATION REPORT

DATE OF AUTHORIZATION **July 27, 1995**
BMEC REFERENCE **BMEC 95-06-191**

U-Haul Self-Storage Facility

1. Applicant

U-Haul International
2727 N. Central Avenue
Phoneix, Arizona
U.S.A., 85001-1026

2. Description

The U-Haul self-storage facility comprises self contained structural modules within a building. The modules contain storage lockers that are accessible by corridors provided on the ground floor and elevated level. The storage lockers are designed for storing personal items. They are locked and secured when not in use.

The storage lockers are made of non-combustible sheet metal veneers over a metal framing system. The locker units are served by metal swing or roll-up type doors.

3. Authorization Requested

The applicant sought authorization for the use of an innovative self-storage system to be contained in a building as an equivalent to the self service storage building provisions contained in Section 3.10 of Regulation 61 of Revised Regulations of Ontario 1990 (the "Ontario Building Code").

4. Assessment

Reports and assessments provided by the applicant show that if the self-storage system is used in accordance with the limitations and conditions stated in this authorization, it will provide equivalent performance with the following:

- Ontario Building Code; Articles 3.10.2.1., 3.10.2.3., 3.10.2.5., Sentences 3.10.2.4.(2) to (8) inclusive, and Subsections 3.10.3. and 3.10.4.

5. Authorization

The U-Haul self-storage facility, designed for use within a building as a self contained structural assembly of lockers designed for storing personal items is authorized in respect to the self service storage requirements contained in Articles 3.10.2.1., 3.10.2.3., 3.10.2.5., Sentences 3.10.2.4.(2) to (8), and Subsection 3.10.3. and 3.10.4. of the Ontario Building Code, subject to the following terms and conditions:

...\2

A. SPECIFIC TERMS AND CONDITIONS:

1. The use of the self-storage facility must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

2. A copy of this Authorization shall be included with an application for a building permit and shall be posted and maintained on the site of the construction with the building permit.

3. This Authorization is valid only for self-storage systems marketed by U-Haul International.

4. Elevated corridor and storage lockers shall be a continuous horizontal construction membrane through the entire self-storage unit.

5. The structural design of the entire self-storage facility support system including posts, beams, corridors, lockers, connections, and their supports shall be in accordance with Part 4 of the Ontario Building Code.

6. The design and general review of the self-storage system shall be carried out by a Professional Engineer as defined in the Professional Engineers Act (Ontario). The Professional Engineer shall provide the Chief Building Official with a document certifying that the installation conforms with this Authorization.

7. The building shall contain an automatic sprinkler system designed and installed in conformance with NFPA 13-1991 for Ordinary Hazard, as amended. Additionally, sprinkler protection shall be provided within each of storage lockers.

8. The automatic sprinkler system shall be electrically supervised to indicate a trouble signal on the building fire alarm system annunciator or where the building does not have a fire alarm system to notify the person controlling the operation of the building for each of the following:

   (a) movement of a control valve handle;
   (b) loss of excess water pressure required to prevent false alarms in a wetpipe system;
   (c) loss of air pressure in a dry pipe system;
   (d) loss of air pressure in a pressure tank;
   (e) a significant change in water level in any water storage container used for fire fighting purposes;
   (f) loss of electrical power to any automatically starting electrical fire pump; and,
   (g) a temperature approaching the freezing point in any dry pipe valve enclosure or water storage container used for fire fighting purposes.

9. The automatic sprinkler system shall be designed to notify the fire department that a waterflow switch has been activated.

10. The notification to the person controlling the building and the fire department referred to in paragraphs A.8 and A.9 of this Authorization shall be provided by way of:

    (a) an independent central station conforming to NFPA-71, "Standard for the Installation, Maintenance, and Use of Signaling Systems for Central Station Service", as amended;
    (b) a proprietary control centre conforming to Chapter 9 of NFPA-72, Standard for the Installation, Maintenance, and Use of Protective Signaling Systems", as amended; or,
    (c) if the above mentioned facilities are not available in the municipality in which the self storage facility is to be built, an independent system is permitted to be used to transmit signals to the fire department.

...3/

11. The maximum height of the self-storage facility from the floor supporting the self-storage system to the topmost portion of the self-storage system shall not exceed 5 m.

12. Exits shall conform to Section 3.4 of the Ontario Building Code, as amended or remade from time to time, except that

    (a) egress from the second level may be provided by not less than two open unenclosed stairs;
    (b) the clear width of an egress stair shall be not less than 1100 mm (3 ft 11 in); and,
    (c) Exit or egress doors from rental spaces are not required to swing on a vertical axis provided,

        i) the area of the rental space is not more than 50 m² (538 ft²); and,
        ii) the travel distance within the rental space is not more than 10 m (32 ft 10 in).

13. The maximum travel distance measured from inside the rental space to the nearest exit shall not exceed 45 m.

14. Fire extinguishers shall be installed on every corridor in the self-storage facility in accordance with the provisions of Part 6 of the Ontario Fire Code, as amended or remade from time to time. The maximum travel distance to a fire extinguisher shall not exceed 23 m.

15. Dead end travel distance to a point of choice of direction of horizontal travel to an egress facility from an elevated corridor shall not exceed 3 m.

16. The corridor width shall not be less than 2.1 m (7 ft.) for the ground floor level and not less than 1.5 m (5 ft.) for the elevated corridors, and the locker doors shall be not more than 1.02 m (3ft 4 in).

17. The self-storage facility shall comply with the requirements for a Medium Hazard Industrial Occupancy (F2) and shall not be located in a building containing a High Hazard Industrial Occupancy (F1) as defined in Article 1.1.3.2. of the Ontario Building Code, as amended or remade from time to time. The following items shall not to be stored in the self-storage facility:

    - gasoline, oil, fuel, grease, paint, flammables, explosives, fireworks, or ammunition;
    - corrosive, toxic, or hazardous materials or waste;
    - tires, motor oil, or batteries; and,
    - controlled substances or alcoholic beverages.

18. The self-storage facility shall be used only for the storage of personal items and not for manufacturing, production, or fabricating.

19. The self-storage facility shall be accessible only to employees and customers. The building shall be designated, signed and posted as a "NO SMOKING" area conforming to the Ontario Fire Code O. Reg. 454/90 as amended or remade from time to time.

20. Lighting levels of corridors, stairs and platforms shall conform to the Ontario Building Code, as amended or remade from time to time.

...3/

21. Emergency lighting shall be provided on corridors, unenclosed egress stairs and exits providing means of egress to not less than the average level of illumination prescribed in Sentence 3.2.7.3.(2) of the Ontario Building Code, as amended or remade from time to time.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

(i) the material, system or building design that is the subject matter of this Authorization;

(ii) the address of the applicant specified in Section 1 of this Authorization; or,

(iii) the ownership of the company specified in Section 1 of this Authorization.

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 27th day of July, 1995.

Authorization Report - XPA PlumbBetter® System

1. Applicant

IPEX Inc.
2441 Royal Windsor Drive
Mississauga, Ontario
L5J 4C7

Tel: 905 403-0264
Fax: 905 403-1124
Web: www.ipexinc.com

2. Manufacturing Facilities

IPEX Inc.
4225 - 92nd
Edmonton, Alberta
T6B 3M7

3. Description

The PlumbBetter® XPA System consists of a composite polyethylene raised temperature / aluminium / polyethylene raised temperature (PE-RT/AL/PE-RT) pipes, and fittings (the "XPA PlumbBetter System"). The XPA pipes consist of layers of welded aluminium, melt adhesives, and layers of raised temperature polyethylene bonded together. The PlumbBetter® XPA System conforms to CAN/CSA B137.9-M "Polyethylene / Aluminium / Polyethylene Composite Pressure Pipe System", dated March 2004.

The XPA PlumbBetter® System is available in diameters of 13 mm (1/2"), 19 mm (3/4") and 25 mm (1"), nominal.

The XPA PlumbBetter® fitting and connectors shall conform and be certified to CAN/CSA B137.10-M "Cross-linked Polyethylene / Aluminium / Cross-linked Polyethylene Composite Pressure Pipe System", dated March 2004.

4. Authorization requested

The applicant sought a Building Materials Evaluation Commission (BMEC) authorization for use of the XPA PlumbBetter® System as innovative composite pressure piping system for the distribution of hot water, as restricted in Sentence 7.2.5.12.(2) “Polyethylene/Aluminium/Polyethylene Pipe and Fittings” of the Building Code.

5. Assessment

Reports and assessments provided by the applicant show that if the XPA PlumbBetter® System is designed, performance tested and installed in accordance with the manufacturer's instructions and limitations and the specific terms and conditions stated in this authorization, the level of performance required by the Building Code will be provided.

The following is a list of the documents submitted and reviewed, but not limited to:

1. NSF International, Approval NSF Project 69395, dated October 10, 2003.
2. Manufacturer’s Literature “XPA: Hot and Cold Water System”
3. IPEX: PlumbBetter® “Installation Guide - PlumbBetter® XPA Composite Pipe and Fitting”.
4. Variance, Alberta Municipal Affairs, File VAR-P05.01, dated June 14, 2005.
5. Approval Saskatchewan Environmental Health, File 70.98.2, February 24, 2005.
6. Approval, Quebec, Plumbing Sector, File Number 5556-2631 (RMD 8456), December 22, 2004.
7. Approval Correspondence, Province of Nova Scotia, February 1, 2005.
8. Approval, Chief Plumbing Inspector, New Brunswick, January 6, 2005 “Certification of PE-AL-PE Product”.
9. KITEC Quality Control Manual, issued November 156, 2004.
10. NSF Product and Service Listing, NSF/ANSI Standard 14 “Plastics Piping Systems Components and Related Materials”, dated February 23, 2006.

6. Authorization

The XPA PlumbBetter® System is authorized for use as a composite pressure piping system for the distribution of hot water as restricted in Sentence 7.2.5.12.(2) of the Building Code; all other requirements pertaining to the design, installation, and construction are subject to the regulations of the Building Code, and to the following terms and conditions:

Note: Although this authorization is specific to the use of the XPAPlumbBetter® System use in hot water systems, it does not preclude the use of the XPA PlumbBetter® System in cold water where an alternative approval is obtained, or where regulated by the Building Code.

A. Specific Terms & Conditions

1. This authorization is valid only for IPEX, Inc.

2. This authorization is valid only for the XPA PlumbBetter® System.

3. The XPA PlumbBetter® System shall bear the manufacturer's mark.

4. The XPA PlumbBetter® System shall be installed and conform to:

   (a) manufacturer's installation instructions, and
   (b) CAN/CSA B137.9-M "Polyethylene / Aluminium / Polyethylene Composite Pressure Pipe System" dated March 2004.

   Note: If a conflict arises between the provisions of the two documents listed above, the most restrictive provision shall apply.

5. Except as provided in Specific Term and Condition 6., the XPA PlumbBetter® System shall not be used in hot water systems.

6. XPA PlumbBetter® System having a pressure rating less than 690 kPa (100 psi) at 82^0C (180^0F), shall not be used in a hot water system.

7. The XPA PlumbBetter® System is permitted for use underground as a potable water service pipe, or above ground as a hot potable water distribution system.

8. When the XPA PlumbBetter® System is used underground for water service, the end of the pipe inside the building shall be brought above the ground for a distance not less than 300 mm (11-3\4") and not greater than 450 mm (17-3/4"), as required by Sentence 7.6.1.3.(6) of the Building Code.

9. The XPA PlumbBetter® System shall comply with the Building Code requirements for combustible pipe.

10. The XPA PlumbBetter® fittings and connectors shall conform and be certified to CAN/CSA B137.10-M “Cross-linked Polyethylene / Aluminium / Cross-linked Polyethylene Composite Pressure Pipe System”, dated March 2004.

B. General Conditions

1. The use of the XPA Plumbbetter® System as described in 6. A. Specific Terms and Conditions No. 1. shall comply with the *Building Code Act, 1992* as amended or re-enacted from time to time and except as specifically authorized herein, with the Building Code as amended or remade from time to time.

2. A copy of this Authorization shall accompany each application for a building permit and shall be maintained on the site of the construction with the building permit.

3. The Applicant named in Part 1 hereof shall promptly notify the BMEC of:

   a. the failure of the Applicant, or of the material, system or building design that is the subject matter of this Authorization, to comply with any of the terms and conditions set out in 6. A. above; or

   b. the occurrence of any of the events described in Conditions 6. B. 4. (a) and (b) (ii) below.

4. The BMEC may amend or revoke this Authorization where it determines that:

   a. any change has been made to:

      i. the material, system or building design that is the subject matter of this Authorization;

      ii. the address of the applicant specified in Part 1 of this Authorization; or,

      iii. the ownership of the applicant specified in Part 1 of this Authorization.

   b. the use of the material, system or building design authorized herein;

      i. does not comply with the *Building Code Act, 1992* or any relevant legislation as they may be amended or re-enacted from time to time; or

      ii. provides an unsatisfactory level of performance, in situ.

c. the Applicant, or the material, system or building design that is the subject matter of this Authorization, has failed to comply with any of the terms and conditions set out in this Authorization; or

d. any Building Code provision relevant to this Authorization has been amended or remade.

5. Where the BMEC receives additional information concerning the material, system or building design authorized herein, the BMEC may review this Authorization and the BMEC may after the review amend or revoke this Authorization as in the opinion of the BMEC may be necessary.

Dated at Toronto this 27 day of April 2006.

BUILDING MATERIALS EVALUATION COMMISSION

CertainTeed FORM-A-DRAIN™ permanent foundation footing form and foundation drain system

1. Applicant

Unique Building Systems
2617908 Ontario Ltd.
7024 Smith Industrial Drive
McGregor, Ontario
N0R 1J0

2. Manufacturing Facilities

CertainTeed Corporation
Pipe and Plastic Group
750 East Swedesford Road
P.O. Box 860
Valley Forge, Pennsylvania
19482, U.S.A.

3. Description

CertainTeed FORM-A-DRAIN™ functions as both a permanent foundation footing form and foundation drain system.

The system components are manufactured from polyvinyl chloride (PVC) compound. The FORM-A-DRAIN™ system consists of 12' (3.66 m) long extruded drainage channels, called "lineals", with sizes of 2.25" by 6" (55 mm by 150 mm) and 2.25" by 8" (55 mm by 205 mm). They are manufactured as hollow rectangular tubes with a solid intermediate web which stiffens the section and creates upper and lower chambers of equal size.

The lineals have slots in the exterior vertical face to allow the entrance of ground water. The water passes through the system to outlet fittings which provide the connection of the FORM-A-DRAIN™ to an approved drainage disposal area.

The FORM-A-DRAIN™ system components includes couplings, corners, drain outlets, spacer straps and grade stakes.

4. Authorization Requested

The applicant sought authorization for the use of an innovative permanent foundation footing form and foundation drain system as an equivalent to the drainage provisions contained in Sentence 9.14.3.1.(1) and Article 9.14.3.2. of Regulation 61 of Revised Regulations of Ontario 1990 (the "Ontario Building Code").

2/...

5. Assessment

Test results and assessments provided by the Applicant show that if the CertainTeed FORM-A-DRAIN™ system is used in accordance with the limitations and conditions stated in this authorization, it will provide equivalent performance with the following:

* Ontario Building Code, Sentence 9.14.3.1.(1) and Article 9.14.3.2.

6. Authorization

The use of CertainTeed FORM-A-DRAIN™ permanent foundation footing form and foundation drain system is authorized in respect of the drainage material standards and minimum drain tile size contained in Sentence 9.14.3.1.(1) and Article 9.14.3.2. of the Ontario Building Code, as amended or remade from time to time, subject to the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1) The Applicant (i.e. Unique Building Systems) shall provide the user of this Authorization with complete instructions on the proper installation of the FORM-A-DRAIN™ system.

2) The FORM-A-DRAIN™ system shall be installed in accordance with this Authorization and the manufacturer's specifications (titled "Form-A-Drain Installation Guide", Code No. 40-95-04, dated 1994), which shall be available at the job site at all times. If a conflict arises between the manufacturer's installation instructions and this Authorization, the most restrictive provision shall apply.

3) A copy of this Authorization and the manufacturer's installation instructions shall be attached to an application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.

4) The following information shall be provided on the drawings submitted with an application for a building permit:

   (a) a dimensioned plan of the foundation footings, indicating the position of the FORM-A-DRAIN™;

   (b) the location and size of all crossover piping and drainage outlet piping;

   (c) the maximum spacing of grade stakes; and,

   (d) a footing section indicating the size of footing, position of FORM-A-DRAIN™, and the size of stone cover. When a filter membrane is used the location of the filter membrane shall be indicated.

5) The FORM-A-DRAIN™ system shall be installed in accordance with Sentences 9.14.3.3.(1) and 9.14.3.3.(4) of the Ontario Building Code, as amended or remade from time to time.

6) The slotted vertical face of the FORM-A-DRAIN™ system lineals shall be installed facing away from the footings. The lineals shall be inserted firmly into the accessory couplings to obtain a snug fit. Where the ends of lineals are cut to fit the layout, they shall be cut square and all burrs removed.

3/...

7) Drainage outlets shall be installed with the 4 inch (100 mm) diameter outlet located at the bottom. A 4 inch (100 mm) diameter PVC pipe shall be used to connect the outlets to each other or to the drainage pipe that discharges to an approved area.

8) The complete FORM-A-DRAIN™ system shall be levelled and reinforced with stakes spaced at a maximum distance of 5 ft.(1.5 m) on center, prior to the placing of concrete.

9) The maximum number of outlet fittings per side of any lineal shall be limited to one outlet per 3' 0" (0.9 m) length of lineal.

10) Filter membranes used in conjunction with the system shall not be installed in direct contact with FORM-A-DRAIN™.

11) The use of FORM-A-DRAIN™ as a permanent footing form is limited to applications where the required footing depth is not more than 6 or 8 inches (150 or 205 mm).

12) Any system components that are damaged during placement of backfill shall be removed and replaced with new components.

13) This Authorization is valid only for FORM-A-DRAIN™ marketed by the Applicant specified in Section 1 herein at the manufacturing facilities specified in Section 2 herein.

14) The use of FORM-A-DRAIN™ must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

(i) the material, system or building design that is the subject matter of this Authorization;

(ii) the address of the manufacturing facilities specified in Section 2 of this Authorization;

(iii) the ownership of the manufacturing facilities specified in Section 2 of this Authorization; or

(iv) the address of the Applicant specified in Section 1 of this Authorization;

4/...

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

BUILDING MATERIALS EVALUATION COMMISSION (BMEC) AUTHORIZATION REPORT

DATE OF AUTHORIZATION **June 29, 1995**
BMEC REFERENCE **BMEC 95-03-188**

ProSet Stack Stub-in Coupling Combination Firestop and Support for Vertical Pipe

1. Applicant

ProSet Systems Incorporated
1355 Capital Circle
Lawrenceville, Georgia
U.S.A., 30243

2. Manufacturing Facilities

ProSet Systems Incorporated
1355 Capital Circle
Lawrenceville, Georgia
U.S.A., 30243

3. Description

The ProSet Stack Stub-in Coupling is an integral fire-rated pipe sleeve and vertical support for cast iron pipe.

The ProSet combination firestop and support penetrator consists of a cast-in-place PVC stack stub-in which features ribs around the perimeter to prevent loosening once the concrete has set. Into this part is solvent welded a PVC pipe section such that it rests on a stop built into the stack stub-in. On the other side of the assembly, a PVC E-Z Flex coupling is solvent welded into the stub-in, and a stainless steel band is used to compress the coupling and hence fasten the cast iron pipe that fits into it. As an alternative to the E-Z Flex coupling, a PVC pipe length may be solvent welded into the stub-in, and a mechanical joint (MJ) coupling used to connect the cast iron pipe. On the top side of the assembly a cast iron insert is placed into the stub-in such that it rests on the PVC insert. A thin wall PVC pipe length is then solvent welded into the stub-in such that it surrounds the iron insert and holds it in place, and fits flush with the insert on the top. The cast iron pipe is fastened to the top of the assembly using a mechanical (MJ) coupling.

4. Authorization Requested

The applicant sought authorization for the use of an innovative combination firestop and vertical system as an equivalent to the support for vertical piping provision contained in Article 7.3.4.4., and the firestopping and piping penetration provisions in Articles 3.1.9.1., 3.1.9.2. and 3.1.9.4. of Regulation 61 of the Revised Regulations of Ontario 1990 (the "Ontario Building Code").

5. Assessment

Reports and assessments provided by the applicant show that if the ProSet Stack Stub-in Coupling is used in accordance with the limitations and conditions stated in this authorization, it will provide equivalent performance with the following:

- Ontario Building Code; Articles 7.3.4.4., 3.1.9.1., 3.1.9.2. and 3.1.9.4.

...\2

6. Authorization

The use of ProSet Stack Stub-in Coupling as a combination firestop and support for vertical cast iron pipe is authorized in respect of the provisions contained in Articles 7.3.4.4., 3.1.9.1., 3.1.9.2. and 3.1.9.4. of the Ontario Building Code, as amended or remade from time to time, subject to the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1) The use of the ProSet Stack Stub-in Coupling must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

2) A copy of this Authorization shall be included with an application for a building permit and shall be posted and maintained on the site of the construction with the building permit.

3) This Authorization is valid only for ProSet Stack Stub-in Coupling marketed and manufactured by ProSet Systems Incorporated.

4) The ProSet Stack Stub-in Coupling shall be installed in accordance with this authorization and the manufacturer's installation instructions. If a conflict arises between the manufacturer's installation instructions and this authorization, the most restrictive provision shall apply.

5) The ProSet Stack Stub-in Coupling shall be listed, as defined in the Ontario Building Code as amended or remade form time to time, to show that the firestop system has an F rating that may be used in horizontal fire separations requiring not more than a two hour fire resistance rating when the firestop system is tested in conformance with CAN4-S115-M "Standard Method of Fire Tests of Firestop Systems".

6) The use of the ProSet Stack Stub-in Coupling as a combination firestop and support for vertical pipe is limited to concrete floor slabs not less than 150 mm (6 inches) thick.

7) The use of the ProSet Stack Stub-in Coupling only as support for vertical cast iron pipe is limited to concrete floor slabs not less than 115 mm (4.5 inches) thick.

8) The maximum spacing of the ProSet Stack Stub-in Coupling shall be 7.5 m (24 ft 7 in). In addition, the vertical piping shall be supported at the floor level of alternate storeys by the ProSet Stack Stub-in Coupling.

9) The size of the cast iron pipe to be supported by the ProSet Stack Stub-in Coupling shall not exceed 150 mm (6 inches) in diameter.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

   (a) any change has been made to:

      (i) the material, system or building design that is the subject matter of this Authorization;

...\3

(ii) the address of the applicant specified in Section 1 of this Authorization; or,

(iii) the ownership of the company specified in Section 1 of this Authorization.

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

AUTHORIZATION REPORT

DATE OF AUTHORIZATION **June 29, 1995**
BMEC REFERENCE **BMEC 95-02-187**

SHELF AND RACK STORAGE SYSTEM

1. Applicant

enRack Systems Inc.
606 Aberdeen Avenue
Hamilton, Ontario
L8P 2T1

International Storage
Systems Inc.
6720 Columbus Road
Mississauga, Ontario
L5T 2G1

Econo-Rack Storage
Equipment Limited
1250 Midway Boulevard
Mississauga, Ontario
L5T 2G8

2. Description

The shelf and rack storage system is a self contained structural facility within a building, having one or more solid intermediate platforms or walkway levels for personnel access. The walkways and platforms may also support conveyors and other distribution equipment.

3. Authorization Requested

The applicant sought authorization for the use of an innovative shelf and rack storage system designed for material handling, storage and distribution in warehouse facilities.

4. Assessment

Reports and assessments provided by the applicant show that if the shelf and rack system is used in accordance with the limitations and conditions stated in this authorization, it will provide the level of performance that would be achieved by conformance with the Ontario Building Code.

5. Authorization

The shelf and rack storage system is authorized for use within a building as a self contained structural facility for material handling, storage and distribution, subject to the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1. The use of the shelf and rack storage system must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

2. A copy of this Authorization shall be included with an application for a building permit and shall be posted and maintained on the site of the construction with the building permit.

...2/

3. This Authorization is valid only for shelf and rack storage systems marketed by Enrack Systems Inc., Econo-rack Storage Equipment Limited or International Storage Systems Inc.

4. Deck and walkway levels shall be constructed of:

   (a) solid-closed surface steel planking;
   (b) steel roof decking with minimum 16 mm (5/8 in) maximum 19 mm (3/4 in) thick tongue

and groove solid wood or plywood; or,

(c) open steel grating.

5. The structural design of the entire shelf and rack storage facility support system including posts, beams, decks, walkways, connections, and their supports such as concrete slabs, separate foundations or similar shall be in accordance with Part 4 of the Ontario Building Code as amended or remade from time to time.

6. The design and general review of the rack and storage system shall be carried out by a Professional Engineer as defined in the Professional Engineers Act (Ontario). The Professional Engineer shall provide the Chief Building Official with a document certifying that the installation conforms with this Authorization. The construction drawings shall require the provision of an appropriate sign to indicate the maximum permissible design loads for each rack storage system and such sign shall be permanently fixed to the building interior and displayed in a prominent unobstructed viewing position.

7. An automatic sprinkler system shall be designed, constructed, installed and tested for the entire shelf and rack storage facility including the top level and shall be in conformance with NFPA 13-1991 and NFPA 231C-1991 as amended or the appropriate NFPA Standard for the most severe hazard to which the storage facility is exposed. Additionally, sprinkler protection shall be provided under decks and walkways.

8. Except where the deck is of open steel grating, any opening in a deck for egress, convenience stairs, ramps or chutes, shall be protected by smoke baffles and close spaced sprinklers as per paragraph A.7. of this Authorization.

9. A sprinkler systems located in a cold storage or freezer environment shall be designed to address any possibility of freeze-up resulting from condensation of water vapour internal to the system.

10. The automatic sprinkler system shall be electrically supervised to indicate a trouble signal on the building fire alarm system annunciator or where the building does not have a fire alarm system to notify the person controlling the operation of the building for each of the following:

(a) movement of a control valve handle;
(b) loss of excess water pressure required to prevent false alarms in a wetpipe system;
(c) loss of air pressure in a dry pipe system;
(d) loss of air pressure in a pressure tank;
(e) a significant change in water level in any water storage container used for fire fighting purposes;
(f) loss of electrical power to any automatically starting electrical fire pump; and,
(g) a temperature approaching the freezing point in any dry pipe valve enclosure or water storage container used for fire fighting purposes.

11. The automatic sprinkler system shall be designed to notify the fire department that a waterflow switch has been activated.

12. The notification to the person controlling the building and the fire department referred to in paragraphs A.10 and A.11 of this Authorization shall be provided by way of:

(a) an independent central station conforming to NFPA-71, "Standard for the Installation, Maintenance, and Use of Signaling Systems for Central Station Service", as amended;
(b) a proprietary control centre conforming to Chapter 9 of NFPA-72, Standard for the Installation, Maintenance, and Use of Protective Signaling Systems", as amended; or,
(c) if the above mentioned facilities are not available in the municipality in which the self and rack storage system is to be built, an independent system is permitted to be used to transmit signals to the fire department.

13. The maximum height of the shelf and rack storage facility from the floor supporting the shelf and rack system to the topmost portion of the shelf and rack system shall not exceed 18 m.

14. Each deck, walkway or platform level shall be provided with not less than two **exit** stair shafts that conform to all requirements for exits as stated in the Ontario Building Code (i.e. fire separations having a fire resistance rating, etc.) as amended, except as follows:

(a) access to exit may be provided from a platform level by means of open unenclosed

stairs for shelf and rack storage facilities comprising not more than three platform levels, the highest of which may not be more than 9 m above the main floor; and,

(b) any single platform, deck or walkway may be served by a single unenclosed egress stair leading to the platform or walkway level immediately below provided the:

(i) platform, deck or walkway does not exceed 200 m² in area;
(ii) travel distance on the platform, deck or walkway to the level below, including the travel distance along the single unenclosed egress stair does not exceed 25 m; and,
(iii) the platform, deck or walkway below is provided with two separate egress stairs or **exits**.

15. The maximum travel distance on an elevated platform to the ground floor level, including the travel distance along unenclosed stairs shall not exceed 45 m. The maximum travel distance from the bottom of an unenclosed stair to an exit on the main floor level shall not exceed 45 m. The maximum travel distance to an enclosed exit on an elevated platform shall not exceed 45 m.

16. Fire extinguishers shall be installed on every platform or walkway level of the shelf and rack storage system in accordance with the provisions of Part 6 of the Ontario Fire Code, as amended or remade from time to time. The maximum travel distance to a fire extinguisher shall not exceed 23 m.

17. Dead end travel distance to a point of choice of direction of horizontal travel to an egress facility from an elevated deck or walkway shall not exceed 9 m where the deck or walkway is required to be provided with at least 2 egress facilities.

18. The clear aisle width shall not be less than 760 mm (30 in). This clearance is for access to exits and shall not be used for conveyors, trolleys, tracks or any other similar mode of product transportation within an aisle or walkway.

19. The self and rack storage facility is not permitted in a High Hazard Industrial Occupancy (F1) as defined in Article 1.1.3.2. of the Ontario Building Code, as amended or remade from time to time.

20. The shelf and rack storage facilities shall be used only for storage of Class I, II, III, and IV commodities as defined in NFPA 231C-1991, as amended and not for manufacturing, production, wrapping or assembly.

21. A plain legible sign or signs, with contrasting letters and titled "NOTICE", shall describe the above Class and the sprinkler design criteria used for each shelf and rack storage facility. This sign or signs shall be permanently mounted, at or near the sprinkler control valve.

22. The shelf and rack storage facilities shall be accessible to employees only and shall be designated, signed and posted as a "NO SMOKING" area conforming to the Ontario Fire Code O. Reg. 454/90 as amended or remade from time to time.

23. A standpipe and hose system shall be installed in accordance with the Ontario Building Code where the shelf and rack storage facility height is more than 14 m (45 ft.) in height or where there are more than 3 elevated platforms of walkway level.

24. Where a standpipe and hose system is required, 63.5 mm (2 1/2 in.) diameter hose connections shall be provided, except that 38.1 mm (1 1/2 in.) hose connections are permitted in the shelf and rack storage facilities which:

(a) do not exceed 6 levels including the floor level; and,
(b) do not exceed 3,716 m² (40,000 ft²) in the sum total of all levels of the shelf and rack storage facility.

25. Lighting levels of decks, walkways and platforms shall conform to the Ontario Building Code, as amended or remade from time to time.

26. Emergency lighting shall be provided on walkways, decks, platforms, unenclosed egress stairs and exits providing means of egress to not less than the average level of illumination prescribed in Sentence 3.2.7.3.(2) of the Ontario Building Code, as amended or remade from time to time.

27. Guards and toe boards shall be installed in accordance with the Ontario Building Code, as amended or remade from time to time.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

(i) the material, system or building design that is the subject matter of this Authorization;

(ii) the address of the applicant specified in Section 1 of this Authorization; or,

(iii) the ownership of the applicant specified in Section 1 of this Authorization.

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

BUILDING MATERIALS EVALUATION COMMISSION

BUILDING MATERIALS EVALUATION COMMISSION (BMEC)
AUTHORIZATION REPORT

DATE OF AUTHORIZATION **February 23, 1995**
BMEC REFERENCE **BMEC 95-01-186**

A window sprinkler assembly system to provide a two-hour fire separation in a wall to consist of tempered or heat strengthened glass fixed in a non openable hollow metal steel frame or extruded aluminium frame and a special sidewall window sprinkler with quick response action.

1. Applicant

Vipond Automatic Sprinkler
Company Limited
6380 Vipond Drive
Mississauga, Ontario
L5T 1A1

2. Description

A window sprinkler assembly system to provide a two-hour fire resistance rated separation in a wall to consist of tempered or heat strengthened glass fixed in a non openable hollow metal steel frame or extruded aluminum frame and a special sidewall window sprinkler with quick response action.

4. Authorization Requested

The applicant sought authorization for the use of an innovative two hour fire resistance rated fire separation for walls as an equivalent to the performance criteria in Articles 3.1.7.1. and 9.10.3.1. of Regulation 61 of Revised Regulations of Ontario 1990 (the "Ontario Building Code").

5. Assessment

Test results and assessments show that if the window sprinkler system is used in accordance with the limitations and conditions stated in this authorization, it will provide equivalent performance with the following:

- Ontario Building Code, Articles 3.1.7.1. and 9.10.3.1.

6. Authorization

The use of the window sprinkler assembly for providing a two hour fire resistance rating in a fire separation in a wall is authorized in respect of the determination of fire resistance ratings contained in Articles 3.1.7.1. and 9.10.3.1. of the Ontario Building Code, as amended or remade from time to time, subject to the following terms and conditions:

A. Specific Terms and Conditions:

1) The window sprinkler assembly system shall be designed, engineered, inspected and verified by a fire protection Professional Engineer as defined in the Professional Engineers Act (Ontario) and stamped document of certification by the Professional Engineer shall be forwarded to the Chief Building Official and the Building Owner.

2) The sprinkler system shall be installed and tested in accordance with the most current edition of NFPA-13 "Installation of Sprinkler Systems" as a wet pipe system and shall maintained in accordance with Section 6.5 (sprinkler) of the Ontario Fire Code, as amended or remade from time to time.

3) The special designed sprinkler head shall be designated as a horizontal sidewall window nozzle, Grinnell Canada Fire Protection Company Limited Model FR-1/Q-60, 12.7 mm (1/2 inch) orifice, 74°C (165°F) activation temperature quick response link. The optimum position of the sprinkler head shall be as determined by the tests submitted by National Research Council Canada.

4) The interior glazing shall consist of one sheet of fixed non-operable tempered or heat strengthened glass installed in a hollow metal steel frame 1.35 mm (16 gauge) minimum thickness. The maximum size of the glazing shall be 2134 mm (7 ft. 0 in.) wide by 2844 mm (9 ft. 4 in.) high and minimum 6 mm (1/4 in.) thick.

5) The window sprinkler system may be used in either a sprinklered or unsprinklered building to protect non openable window openings to maximum of 2 hour fire resistance rating provided,

   (a) in an exposing building face or exterior spatial separation the window sprinkler is installed on the interior side of the window, or

   (b) in an interior fire separation the window sprinkler is installed on both sides of the window in the fire separation.

6) Interior or exterior installations may be made in all types of occupancies except Group F, Division 1 and shall not be used in a firewall. Should the system be located in a loadbearing wall, all loadbearing components shall be protected independently of the window sprinkler assembly system.

7) The window sprinkler system shall not be used in exits as defined in the Ontario Building Code.

8) The horizontal sidewall window sprinkler system shall be served by either a separate riser or separate cross main independent of any regular sprinkler or standpipe system serving the floor area.

9) Separate flow switches or alarm check valves and supervised control valves and each fire compartment on each system shall be electrically supervised and indicated separately at the fire/sprinkler alarm annunciator panel.

10) Where the water supply is from a standpipe system conforming to the Ontario Building Code, the siamese connection shall be labelled as per the standard except for this dual purpose which shall read "STANDPIPE AND WINDOW SPRINKLERS".

11) A noncombustible sign legibly printed in not less than 12.7 mm (1/2 in.) block letters with contrasting white background and red letters shall be permanently mounted and maintained beside the main water supply source to this window sprinkler assembly system to indicate:

WARNING

SPECIAL SPRINKLER HEADS ON THIS SYSTEM ARE AN INTEGRAL PART OF WINDOW FIRE SEPARATION. THIS WATER SUPPLY MAY ONLY BE SHUT OFF AFTER ALL THE PROPER AUTHORITIES HAVE RECEIVED NOTICE IN WRITING.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

(i) the material, system or building design that is the subject matter of this Authorization;

(ii) the address of the applicant specified in Section 1 of this Authorization;

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 23rd day of February, 1995.

BUILDING MATERIALS EVALUATION COMMISSION

BUILDING MATERIALS EVALUATION COMMISSION (BMEC)
AUTHORIZATION REPORT

DATE OF AUTHORIZATION **December 16, 1994**
BMEC REFERENCE **BMEC 94-06-185**

Coldmatic Building Systems Thermosetting Foam Composite Panel for Interior Walls and Ceilings in Noncombustible Construction

1. Applicant

Coldmatic Building Systems
8500 Keele Street
Concord, Ontario
L4K 2A6

2. Manufacturing Facilities

Coldmatic Building Systems
8500 Keele Street
Concord, Ontario
L4K 2A6

3. Description

The Coldmatic Building Systems HJF, LP and HP panels consist of a polyurethane foam core not greater than 152 mm thick (6 inch) faced with a minimum 0.38 mm thick (0.0179 inch or 26 gauge) galvanized, galvalume or stainless steel facings. The facing sheets are adhesively bonded to the foam plastic core. The panel edges have a roll-formed inter-locking geometry that allows either vertical or horizontal joints. Panel thicknesses range from 38 mm (1½ inches) to 152 mm (6 inches). Standard panel widths are 1067 mm (42 inches) or 1140 mm (44 7/8 inches).

4. Authorization Requested

The applicant sought authorization for the use of an innovative interior non loadbearing wall and ceiling system containing thermosetting foamed plastic insulation in Cold Storage Buildings required to be of noncombustible construction provided the building is sprinklered and the wall assembly satisfies the performance criteria for exterior walls in Clause 3.1.5.11.(6)(a) of Regulation 61 of Revised Regulations of Ontario 1990 (the "Ontario Building Code").

5. Assessment

The Coldmatic HJF, LP and HP panels are tested, evaluated and listed for thicknesses up to 152 mm, as follows:

2/...

(a) Surface Burning Characteristics:

Model	CAN/ULC - S102/127 Flame Spread	Smoke Developed
HJF Panel	20	95
LP or HP Panels	25	95
Core Material Only	450	350

(b) CAN/ULC - S101 - M "Standard Methods of Fire Endurance Tests of Building Construction and Materials".

The Test results showed compliance with the performance criteria for exterior walls in Clause 3.1.5.11.(6)(a) of the Ontario Building Code.

(c) CAN/ULC - S126 "Standards Method of Test for Fire Spread under Roof-Deck Assemblies".

The assemblies are designated as roof deck construction No. C26 and is included in the series of roof deck construction using metallic decks contained in the listings published by Underwriters' Laboratories of Canada.

6. Authorization

The use of the Coldmatic Building Systems HJF, LP and HP thermosetting foamed plastic insulation panels for not more than 152 mm (6 inches) thick walls is authorized in respect of interior non loadbearing walls and ceiling in noncombustible construction described in Subsection 3.1.5. of the Ontario Building Code, as amended or remade from time to time, subject to the following terms and conditions:

A. Specific Terms and Conditions:

1) An automatic sprinkler system shall be installed throughout the building, including individual cold storage units, in accordance with the most current edition of NFPA - 13 "Installation of Sprinkler Systems". Additionally, the sprinkler system located inside the storage unit shall be designed to operate in a cold storage or freezer environment. The design shall address any possibility of freeze-up resulting from condensation of water vapour internal to the system.

2) The flame spread rating of the wall panel, determined by subjecting a sample, including an assembled joint, to the appropriate test described in Subsection 3.1.12. of the Ontario Building Code, as amended or remade from time to time, shall be not more than the flame spread rating permitted for the room or space which it bounds.

3) The building shall contain only cold storage facilities of Medium Hazard Industrial Occupancy (F-2) or Low Hazard Industrial Occupancy (F-3) as defined in Article 1.1.3.2. of the Ontario Building Code, as amended or remade from time to time.

4) The building shall be not more than 18 m high, measured between grade and the floor level of the uppermost storey.

5) The ceiling panels shall be supported not more than 3050 mm. (10 feet) o.c.

6) The panels shall be listed, as defined in the Ontario Building Code as amended or remade from time to time, to show that the wall panel will remain in place for not less than 10 min when the wall panel is tested in conformance with CAN4-S101-M, "Standard Methods of Fire Endurance Tests of Building Construction and Materials".

7) This Authorization is valid only for Coldmatic Building Systems HJF, LP and HP thermosetting foamed insulation panels manufactured by the Applicant specified in Section 1 herein at the manufacturing facilities specified in Section 2 herein.

8) The panels shall be installed in accordance with the manufacturers specifications and the installation shall be approved by the manufacturer.

9) The use of Coldmatic Building Systems HJF, LP and HP panels must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

(i) the material, system or building design that is the subject matter of this Authorization;

(ii) the address of the manufacturing facilities specified in Section 2 of this Authorization;

(iii) the ownership of the manufacturing facilities specified in Section 2 of this Authorization; or

(iv) the address of the Applicant specified in Section 1 of this Authorization;

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 16th day of December, 1994.

BUILDING MATERIALS EVALUATION COMMISSION

BUILDING MATERIALS EVALUATION COMMISSION (BMEC) AUTHORIZATION REPORT

DATE OF AUTHORIZATION **December 16, 1994**
BMEC REFERENCE **BMEC 94-05-184**

CASTONE System, Composite Panel Cladding for Residential Occupancies under Part 9 of the Ontario Building Code

1. Applicant

Castone Industries Inc.
P.O. Box 10
Carleton Place, Ontario
K7C 3P3

2. Manufacturing Facilities

Castone Industries Inc.
38 Bruce Cres.
Carleton Place, Ontario
K7C 3V6

3. Description

CASTONE is a composite panel cladding system comprising a cementitious outer shell bonded to a high density polyurethane backing mounted on an aluminum tracking system attached to the structural elements of a wall.

4. Authorization Requested

The applicant sought authorization for the use of an innovative combustible cladding system as an equivalent to the Above-Grade Masonry, Siding and Stucco requirements contained in Sections 9.20, 9.27 and 9.28 respectively of Regulation 61 of Revised Regulations of Ontario 1990 (the "Ontario Building Code").

5. Assessment

Test results and assessments provided by the Applicant show that if the CASTONE System is used in accordance with the limitations and conditions stated in this authorization, it will provide equivalent performance with the following:

* Ontario Building Code Sections 9.20., 9.27 and 9.28.

6. Authorization

The use of CASTONE is authorized as a combustible cladding system for interior or exterior applications on residential buildings in respect of the Above-Grade Masonry, Siding and Stucco requirements contained in Sections 9.20, 9.27 and 9.28 respectively of the Ontario Building Code, as amended or remade from time to time, subject to the following terms and conditions:

2/...

A. SPECIFIC TERMS AND CONDITIONS:

1) CASTONE Industries Inc. shall provide the user of this authorization with complete instructions on the proper installation of the CASTONE system.

2) The CASTONE System shall be installed in accordance with this authorization and the manufacturer's installation instructions. If a conflict arises between the manufacturer's installation instructions and this authorization, the most restrictive provision shall apply.

3) The aluminium tracking system shall be:

   a) fastened to the structural elements of the wall (i.e. wood studs, concrete, etc.) by fasteners spaced not more than 400 mm (16 inches) o.c. The fasteners shall provide protection against galvanic action between the fastener material and the aluminium tracking system. The fastener size, penetration depth and strength shall conform to manufacturer's specifications; or,

   b) the design and general review of the fastener system shall be carried out by a Professional Engineer as defined in the Professional Engineers Act (Ontario). The Professional Engineer shall also certify the structural capacity of the wall to support the CASTONE System. The fasteners shall provide protection against galvanic action between the fastener material and the aluminium tracking system.

4) The exterior application of CASTONE System shall be installed over wall sheathing conforming to Subsection 9.23.16. of the Ontario Building Code, as amended or remade from time to time.

5) Not less than one layer of sheathing paper shall be applied beneath exterior application of the CASTONE System in accordance with the material standard and installation requirements in Subsection 9.23.17. of the Ontario Building Code, as amended or remade from time to time.

6) Flashing shall be provided for exterior application of the CASTONE System in accordance with Subsection 9.27.3. of the Ontario Building Code, as amended or remade from time to time. Where another siding material is used in conjunction with CASTONE, the joint shall be flashed to prevent the entry of water.

7) Caulking shall be provided for exterior application of the CASTONE System in accordance with Subsection 9.27.4. of the Ontario Building Code, as amended or remade from time to time. Caulking shall be used between CASTONE and adjacent doors, windows, trim and sills.

8) Installation of the Castone System shall be carried out by trained personnel certified and identified on a dated photo identification card issued by the Applicant.

3/...

9) A copy of this Authorization and the manufacturers installation instructions shall be attached to an application for a building permit.

10) This Authorization is valid only for CASTONE System marketed by the Applicant specified in Section 1 herein at the manufacturing facilities specified in Section 2 herein.

11) The use of CASTONE System must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

(i) the material, system or building design that is the subject matter of this Authorization;

(ii) the address of the manufacturing facilities specified in Section 2 of this Authorization;

(iii) the ownership of the manufacturing facilities specified in Section 2 of this Authorization; or

(iv) the address of the Applicant specified in Section 1 of this Authorization;

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 16th day of December, 1994.

** RUB-R-WALL™/CODE BLUE™ Waterproofing membrane for below grade exterior foundation walls of solid concrete or unit masonry

1. Applicant

*** RUB-R-WALL Canada Ltd.
15288 Hwy 12
PO Box 670
Midland, Ontario
L4R 4P4

Tel: (800) 787-8059
Fax: (705) 534-4125

2. Manufacturing Facilities

Rubber Polymer Corporation
1135 W. Portage Trail Ext.
Akron, OH
USA, 44313

3. Description

** RUB-R-WALL™/CODE BLUE™ Waterproofing membrane is a single component, liquid applied, solvent based rubber polymer membrane used to waterproof below grade exterior foundation walls of solid concrete or unit masonry. The membrane is applied to the foundation walls through the use of an airless spray pump.

4. Authorization Requested

The applicant sought authorization for the use of an innovative waterproofing system as an equivalent to waterproofing provisions contained in Article 9.13.1.3., and Subsections 9.13.2. and 9.13.3. of Regulation 61 of Revised Regulations of Ontario 1990 (the "Ontario Building Code").

5. Assessment

Test results and assessments provided by the Applicant show that if RUB-R-WALL™/CODE BLUE™ Waterproofing membrane is used in accordance with the limitations and conditions stated in this authorization, it will provide equivalent performance with the following:

* Ontario Building Code Article 9.13.1.3., and Subsections 9.13.2. and 9.13.3.

6. Authorization

** The use of RUB-R-WALL™/CODE BLUE™ Waterproofing membrane for below grade exterior foundation walls of solid concrete or unit masonry is authorized in respect of the waterproofing provisions contained in Article 9.13.1.3., and Subsections 9.13.2. and 9.13.3. of the Ontario Building Code, as amended or remade from time to time, subject to the following terms and conditions:

A. SPECIFIC TERMS AND CONDITIONS:

1) Footings shall be clean and free of dirt, sand, soil or any other deleterious materials that would prevent full adhesion of the rubber membrane. Footings must be dry and free of any visible water. Any water present must be removed and the substrate dried.

2) Concrete walls shall be free of honeycombed areas, voids in mortar joints, cracks and tie holes. Any such area, if present, shall be repaired by using a non-shrinking grout before applying RUB-R-WALL™/CODE BLUE™.

* 3) Type $L_2$20 S concrete masonry unit walls shall be parged with not less than ¼ inch (6 mm) of portland cement mortar to prevent excessive absorption of RUB-R-WALL™/CODE BLUE™ coating. Types N or S concrete masonry units do not require parging. Cast-in-place concrete walls, masonry block cores filled with concrete and parged surfaces shall be cured for not less than 3 days before applying RUB-R-WALL™/CODE BLUE™.

4) RUB-R-WALL™/CODE BLUE™ shall not be applied over asphalt or tar based products. The surface of concrete walls shall be clean, sound, dry and free of frost, ice, or any contaminants which may affect the membrane during or after curing.

5) The temperature of the RUB-R-WALL™/CODE BLUE™ liquid shall be between 49-66 degrees Celsius (120-150 degrees Fahrenheit) when the liquid is applied to the area being waterproofed.

6) RUB-R-WALL™/CODE BLUE™ shall be applied so that wet film thickness is not less than 60 mil (1.53 mm) and cured film thickness is not less than 30 mil (0.77 mm).

7) RUB-R-WALL™/CODE BLUE™ shall not be applied when the ambient air temperature is below -9.5 degrees Celsius (15ºF) or the surface temperature of foundation walls that are not fully cured is below 1 degree Celsius (34ºF).

* 8) The installation of overlays (i.e. foamboard, insulation, drainage membranes, protection course, etc.) may be applied when RUB-R-WALL™/CODE BLUE™ has become firm (i.e. 5 - 20 minutes after application depending on air temperature and humidity). Backfilling shall not commence less than twenty-four hours after applying RUB-R-WALL™/CODE BLUE™.

9) Backfill shall be placed in lifts and in a manner which does not damage the foundation or the waterproofing material.

10) Installation of RUB-R-WALL™/CODE BLUE™ shall be carried out by trained personnel certified and identified on a dated photo identification card issued by the Applicant.

11) RUB-R-WALL Canada Ltd. shall provide the user of this authorization with complete instructions on the proper installation of RUB-R-WALL™/CODE BLUE™. These instructions shall include, but not be limited to the proper storage and handling of, the proper application of, and the health risks (i.e., the breathing of solvent vapours and the risks associated with eye and skin contact) and hazards associated with the use of RUB-R-WALL™/CODE BLUE™ and any other safety precautions needed for the proper installation of RUB-R-WALL™/CODE BLUE™.

12) RUB-R-WALL™/CODE BLUE™ shall be installed in accordance with this authorization and the manufacturer's installation instructions. If a conflict arises between the manufacturer's installation instructions and this authorization, the most restrictive provision shall apply.

13) A copy of this Authorization shall be attached to an application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.

14) This Authorization is valid only for RUB-R-WALL™/CODE BLUE™ marketed by the Applicant specified in Section 1 herein at the manufacturing facilities specified in Section 2 herein.

15) The use of RUB-R-WALL™/CODE BLUE™ must comply with the *Building Code Act, 1992* as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

(a) any change has been made to:

(i) the material, system or building design that is the subject matter of this Authorization;

(ii) the address of the manufacturing facilities specified in Section 2 of this Authorization;

(iii) the ownership of the manufacturing facilities specified in Section 2 of this Authorization; or

(iv) the address of the Applicant specified in Section 1 of this Authorization;

(b) the use of the material, system or building design authorized herein;

(i) does not comply with the *Building Code Act, 1992* or any relevant legislation as they may be amended or re-enacted from time to time; or

(ii) provides an unsatisfactory level of performance, in situ; or

(c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Dated at Toronto this 16th day of December, 1994.

AUTHORIZATION REPORT

DATE OF AUTHORIZATION November 16, 1994
BMEC REFERENCE BMEC 94-03-182

Murad Communications Inc.
Exterior Commercial Sign and Frame System

1. Applicant

Murad Communications Inc.
49 Wellington Street East
Suite 303
Toronto, Ontario
M5E 1C9

2. Description

Murad exterior commercial sign and frame system comprised of Forbo Stamoid F4452, a flexible material attached to an aluminum frame for use on the exterior wall of a building.

3. Authorization Requested

The applicant sought authorization for the use of an innovative sign and frame system as an equivalent to the Plastic Sign Facing Materials provisions contained in Subsection 3.8.4. of Regulation 61 of Revised Regulations of Ontario 1990 (the "Ontario Building Code").

4. Assessment

Test results and assessments provided by the Applicant show that if Murad exterior commercial sign and frame system is used in accordance with the limitations and conditions stated in this authorization, it will provide equivalent performance with the following:

* Ontario Building Code Subsection 3.8.4.

5. Authorization

The use of Murad exterior commercial sign and frame system is authorized for use on the exterior wall of buildings in respect of the requirements contained in Subsection 3.8.4. of the Ontario Building Code, as amended or remade from time to time, subject to the following terms and conditions:

2/...

A. SPECIFIC TERMS AND CONDITIONS:

1) The design and general review of the sign frame and anchoring system shall be carried out by a Professional Engineer as defined in the Professional Engineers Act (Ontario). The Professional Engineer shall also certify the structural capacity of the buildings substrate to support the sign material and frame system.

2) The maximum size of a sign on the exterior face of a building shall not exceed 92.9 square metres (1000 square feet).

3) The requirements of Sentence 3.8.4.1.(3) of the Ontario Building Code need not apply provided the sign is mounted on a noncombustible exterior wall where:

   (a) the building is sprinklered; or,

   (b) the building is not sprinklered; and,

      (i) the exterior face of the building where the sign is to be mounted does not contain any window or door openings; or,

      (ii) when located above a window or door opening is separated by a horizontal noncombustible canopy, extending the full width of, and projecting at least 900 mm (2 ft 11 in) beyond the exterior sign face.

4) A copy of this Authorization shall be attached to an application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.

5) This Authorization is valid only for Murad exterior commercial sign and frame system marketed by the Applicant specified in Section 1 herein.

6) The use of Murad exterior commercial sign and frame system must comply with the Building Code Act, 1992 as amended or re-enacted from time to time and, except as specifically authorized herein, with the Ontario Building Code as amended or remade from time to time.

3/...

B. GENERAL CONDITIONS

1. The BMEC may amend or revoke this Authorization where it determines that:

   (a) any change has been made to:

      (i) the material, system or building design that is the subject matter of this Authorization;

      (ii) the address of the Applicant specified in Section 1 of this Authorization;

   (b) the use of the material, system or building design authorized herein;

      (i) does not comply with the Building Code Act, 1992 or any relevant legislation as they may be amended or re-enacted from time to time; or

      (ii) provides an unsatisfactory level of performance, in situ; or

   (c) any Ontario Building Code provision relevant to this Authorization has been amended or remade.

Canadian Cedar Log pre-fabricated houses with not less than nominal 100 mm (4 inch) thick solid cedar walls.

1. Applicant

Canadian Cedar Log Ltd.
3801 19th St. N.E.
Calgary, Alberta
T2E 6S8

Manufacturing Facilities

Canadian Cedar Log Ltd.
3801 19th St. N.E.
Calgary, Alberta
T2E 6S8

2. Description

Canadian Cedar Log pre-fabricated houses with not less than nominal 100 mm (4 inch) thick solid cedar walls which contain a combination of some or all of a heat recovery ventilator, energy rated windows and increased insulation levels to achieve an acceptable level of energy requirements and heat loss.

3. Authorization Requested

The applicant sought authorization for the use of an innovative system of thermal design in respect to the minimum thermal insulation requirements for log wall construction contained in Article 9.25.2.8. of the Ontario Building Code.

4. Assessment

Reports and assessments provided by the applicant establish that Canadian Cedar Log pre-fabricated houses with not less than nominal 100 mm (4 inch) thick solid cedar wall which are designed in accordance with the terms and conditions stated in this authorization will provide a performance level whereby the energy requirements and heat loss for the proposed house will be equivalent to those that would result in construction with the minimum thermal resistance values specified in Article 9.25.2.8. of the Ontario Building Code.

2/...

5. Authorization

The use of the thermal design of Canadian Cedar Log pre-fabricated houses with not less than nominal 100 mm (4 inch) thick solid cedar walls is authorized in respect of the minimum thermal insulation requirements for log wall construction contained in Article 9.25.2.8. of the Ontario Building Code, as amended or remade from time to time, subject to the following terms and conditions:

A. Specific Terms and Conditions:

1) An application for a building permit under s.8 of Building Code Act, 1992 in respect of the construction shall include:

(a) a HOT 2000 analysis and comparison that:

(i) is undertaken in respect of the house that is the subject of the permit application, in order to account for the effects of relevant factors particular to the proposed house, such as its location, orientation and exposure which may have a direct effect on the results of the HOT 2000 analysis;

(ii) takes into account all pertinent information as necessary to achieve the projected energy consumption, including without limiting the generality of the foregoing, air tightness and heat loss data in respect of the proposed house;

(iii) provides a comparison of the heat loss and energy consumption projected for the proposed house with the heat loss and energy consumption that would be achieved in construction with the minimum thermal resistance values specified in Article 9.25.2.8. of the Ontario Building Code, as amended or remade from time to time; and,

(iv) is undertaken by a professional engineer as defined in the Professional Engineers Act (Ontario) or an architect as defined in the Architects Act (Ontario) experienced in using this program; and

(b) a certification by the Professional Engineer or Architect that undertook the HOT 2000 analysis and comparison that the energy requirements and heatloss for the proposed house will be equivalent to those that would result in construction with the minimum thermal resistance values specified in Article 9.25.2.8. of the Ontario Building Code, as amended or remade from time to time.

Note: HOT 2000 is a computer program developed by CANMET division of National Resources Canada. It may be used to calculate heat loss and energy consumption for residential houses. This authorization applies to the most current version of the HOT 2000 program.

2) A copy of this Authorization shall be attached to the application for a building permit and shall be posted and maintained on the site of the construction with the building permit.

3/...

B. General Terms and Conditions:

1) Where in the opinion of the BMEC negative experience indicates that this Authorization should be amended and/or terminated, the BMEC may withdraw the Authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2) The BMEC does not assume or undertake to discharge any responsibility of the Applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3) This Authorization may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any material, system or building design which is described herein.

4) This Authorization is not transferable to any other party. If the Applicant makes any revision or change to the address or the material, system or building design of the same shall be cause for termination, unless prior approval is granted for such revision or change by the BMEC.

5) This Application may be terminated or modified in the event that a change is made to the Building Code Act, 1992, the Building Code or any other applicable law that may conflict with this Authorization or any part thereof.

6) Except as authorized herein, all applicable requirements of the Building Code Act, 1992, and the Ontario Building Code as amended or reenacted shall be met. Construction and installation shall be in conformance to all applicable governing legislation.

Dated at Toronto this 26th day of September, 1994.

BUILDING MATERIALS EVALUATION COMMISSION

_____
per: Scott Richardson, Chairman

AUTHORIZATION #93-13-178
BY THE 1 DEC. 1993
BUILDING MATERIALS EVALUATION COMMISSION

IN THE MATTER OF Section 28(4) (b) of the Building Code Act, S.O., 1992, Chapter 23

AND IN THE MATTER OF the Applicant:

Arencon Inc.
Architects and Engineers
Consultants in Fire Safety and Codes
1401 Captain Court
Mississauga, Onatrio
LSJ 1A9

ON THE SUBJECT OF:

A window sprinkler assembly system to provide a two-hour fire resistance rated separation in a wall to consist of tempered or heat strengthened glass fixed in a non openable hollow metal steel frame or extruded aluminum frame and a special sidewall window sprinkler with quick response action.

THE COMMISSION HEREBY AUTHORIZES to the Applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this Authorization should be amended and/or terminated, the COMMISSION may by written notice to the Applicant or the Agent, at the above address, withdraw the Authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2. The COMMISSION does not assume or undertake to discharge any responsibility of the Applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3. This Authorization may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

4. This Authorization is not transferable to any other party. If the Applicant makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

2/...

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Ontario Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. This window sprinkler assembly system shall be designed, engineered, inspected and verified by a fire protection Professional Engineer (authorized in Ontario) and a document of certification by the Professional Engineer with stamp shall be forwarded to the Chief Building Official and the Building Owner(s).

7. The sprinkler system shall be installed and tested in accordance with N.F.P.A. 13 as a wet pipe system and maintained in accordance with Section 6.5 (sprinkler) of the Ontario Fire Code.

8. The special designed sprinkler head shall be designated as a horizontal sidewall window nozzle, Grinnell Canada Fire Protection Company Limited Model FR-1/Q-60, 12.7 mm (1/2 in.) orifice, 74°C (165°F) activation temperature quick response link. The optimum position of the sprinkler head shall be as determined by the tests submitted by National Research Council Canada.

9. The interior glazing shall consist of one sheet of fixed non-operable tempered or heat strengthened glass installed in a hollow metal steel frame 1.35 mm (16 gauge) minimum thickness maximum glazing shall be 2134 mm (7 ft. 0 in.) wide by 2844 mm (9 ft. 4 in.) high and minimum 6 mm (1/4 in.) thick.

10. This window sprinkler system may be used in either a sprinklered or unsprinklered building to protect non openable window openings to a maximum of 2 hr. fire resistance rating provided,

    (a) in a exposing building face or exterior spatial separation the window sprinkler is installed on the interior side of the window, or

    (b) in an interior fire separation the window sprinkler is installed on both sides of the window in the fire separation.

3/...

11. Interior or exterior installations may be made in all types of occupancies except Group F, Division 1 and shall not be used in a firewall. Should the system be located in a loadbearing wall, all loadbearing components shall be protected independently of this window sprinkler assembly system.

12. This window sprinkler system shall not be used in exits as defined in the Ontario Building Code.

13. This horizontal sidewall window sprinkler system shall be served by either a separate riser or separate cross main independent of any regular sprinkler or standpipe system serving the floor area.

14. Separate flow switches or alarm check valves and supervised control valves and each fire compartment on each system shall be electrically supervised and indicated separately at the fire/sprinkler alarm annunciator panel.

15. Where the water supply is from a standpipe system conforming to the Code, the siamese connection shall be labelled as per the standard except for this dual purpose which shall read "STANDPIPE AND WINDOW SPRINKLERS".

16. A noncombustible sign legibly printed in not less than 12.7 mm (1/2 in.) block letters with contrasting white background and red letters shall be permanently mounted and maintained beside the main water supply source to this window sprinkler assembly system to indicate:

WARNING

SPECIAL SPRINKLER HEADS ON THIS SYSTEM ARE AN INTEGRAL PART OF WINDOW FIRE SEPARATION. THIS WATER SUPPLY MAY ONLY BE SHUT OFF AFTER ALL THE PROPER AUTHORITIES HAVE RECEIVED NOTICE IN WRITING.

Honeywell Energy Recovery Ventilators, Models ER90 and ER100

1. Applicant

Honeywell Limited
740 Ellesmere Road
Scarborough, Ontario
M1P 2V9

Manufacturing Facilities

Airxchange, Inc.
401 V.F.W. Drive
Rockland, Ma
USA, 02370

2. Description

Honeywell Energy Recovery Ventilators, Models ER90 and ER100.

3. Authorization Requested

The applicant sought authorization for Energy Recovery Ventilators, Models ER90 and ER100 to substitute Total Energy Efficiency for Sensible Heat Efficiency described in Sentence 9.32.3.11.(2) of the Ontario Building Code.

4. Assessment

Test results and assessments provided by the applicant show that if Honeywell Energy Recovery Ventilators, Models ER90 and ER100 are used in accordance with the limitations and conditions stated in this authorization, it is deemed to comply with the following:

* Ontario Building Code, Sentence 9.32.3.11.(2)

5. Authorization

The applicant is authorized to use Honeywell Energy Recovery Ventilators, Models ER90 and ER100 subject to the following conditions and terms:

A. Specific Terms and Conditions:

1) Honeywell Energy Recovery Ventilators, Model ER90 and ER100 are authorized for use in locations of the Province where the January 2.5 percent design temperature, as identified in Section 2.5 of the Ontario Building Code, is not below minus 20 degrees celsius.

2/...

2) A copy of this authorization shall be attached to the application for a building permit and shall be posted and maintained on the site of the construction with the building permit.

B. General Terms and Conditions:

1) Where in the opinion of the BMEC negative experience indicates that this Authorization should be amended and/or terminated, the BMEC may withdraw the Authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2) The BMEC does not assume or undertake to discharge any responsibility of the Applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3) This Authorization may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any material, system or building design which is described herein.

4) This Authorization is not transferable to any other party. If the Applicant makes any revision or change to the address or the material, system or building design of the same shall be cause for termination, unless prior approval is granted for such revision or change by the BMEC.

5) This application may be terminated or modified in the event that a change is made to the Building Code Act, 1992, the Building Code or any other applicable law that may conflict with this authorization or any part thereof.

6) Except as authorized herein, all applicable requirements of the Building Code Act, 1992, and the Ontario Building Code as amended or reenacted shall be met. Construction and installation shall be in conformance to all applicable governing legislation.

Dated at Toronto this 8th day of February, 1994.

Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, S.O. 1992, Chapter 23 and Ontario Building Code R.R.O., 1992, Reg. 61 as amended or reenacted shall be met. A valid copy of this authorization shall be attached the application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.
7. The applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization.
8.
    a. BLUE STUFF may be trowelled or sprayed on foundation walls of unit masonry and poured concrete as a waterproofing membrane. Parging and bituminous material are not required when using this system on foundation walls; and,
    b. BLUE STUFF may be used to waterproof basement floors. The membrane shall be applied between two layers of concrete, each of which shall be not less than 75 mm (3 inches) thick. This membrane may be in sheet form under the foundation wall and shall be integral to the wall and floor membrane to form a complete seal of the floor and wall system.
9. Concrete and or unit masonry walls to be waterproofed shall be free of all holes and recesses resulting from concrete pouring or casting of unit masonry and or removal of forms, ties and honeycombing. All unit masonry joints shall be trowelled smooth with all excess mortar to be brushed clean of all debris. There shall be no ledging or corbelling of unit masonry or concrete walls.
10. BLUE STUFF shall only be applied to clean, sound and dry surfaces that are free of any contaminants which may affect the membrane during or after curing.
11. BLUE STUFF shall not be applied when the air temperature is below 5 degrees celsius or the surface temperature of the foundation wall or floor is below 1 degree celsius. It shall be protected from freezing or heavy rain for at least twenty-four hours after installation. BLUE STUFF shall not be applied when rain of severe drop in temperature (below 0 degrees celsius) is imminent."
12. BLUE STUFF shall be applied so that wet film thickness is not less than 60 mil (1.53 mm) and cured film thickness is not less than 30 mil (0.77 mm).
13. Backfilling or the installation of overlays against a foundation wall shall not commence less than twenty-four hours after applying BLUE STUFF.
14. Installation shall only be done by trained personnel certified and dated on a photo identification card issued by the applicant.

15. PENNKOTE LTD. shall produce a manufacturer's installation and health safety instruction booklet appropriately titled and dated for future reference. It shall also contain a copy of the warranty, B.M.E.C. authorization, Material Safety Data Sheet, inspection techniques, and cautionary instructions pertaining to possible membrane damage if backfilling occurs during the first seven days after application.

Dated at Toronto this 1st day in the month of December in the year 1993 for Authorization #93-07-172 on the behalf of:

BUILDING MATERIALS EVALUATION COMMISSION

AUTHORIZATION
BY THE

BUILDING MATERIALS EVALUATION COMMISSION

DATE OF AUTHORIZATION 11 May 1993
BMEC REFERENCE #93-5-170

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1990, Chapter B.13

AND IN THE MATTER OF the Applicant:

Therm-O-Comfort Co. Ltd.
85 Forest Street
Aylmer, Ontario
N5H 1A5

ON THE SUBJECT OF:

Therm-O-Comfort Wall Insulation System
This is a cellulose-fibre thermal insulation tradename "Therm-O-Mat", which is made from clean paper treated with borax, boric acid and aluminium sulphate chemicals.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

.../2

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter B.13, R.S.O. 1990, Ontario Regulation 413/90 as amended or re-enacted shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.

7. The applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization.

8. This system may be used to insulate above grade conventional exterior vertical walls of new buildings which employ wood studs with plywood, waferboard or fibreboard sheathing on the exterior side and polyethylene vapour barrier on the interior wall surface side.

9. This system shall comprise of the following listed components:

   (a) THERM-O-MAT uses a porous polyester spunbonded membrane stapled to wood frame members to contain the;

   (b) THERM-O-LIGHT loose fill cellulose insulation material injected into each wall cavity; and

   (c) THERM-O-PAN a cardboard stop fastened to wood frame members to stop the flow of the loose fill cellulose insulation to other cavities.

10. a. Installers shall be trained and certified by the Applicant and they shall carry at all times a photo identification card and log book for each installation.

    b. A "Wall Insulation - House Card" for each installation, shall be securely fastened to a roof structural member beside the attic hatch or attic entrance or the wood panel of the main electrical service.

11. This system shall have a valid current listing and reports such as, but not limited to the following:

    a. Canadian General Standards Board (CGSB) No. 51-GP-60 and certified license agreement.

.../3

b. Canadian Construction Materials Centre (CCMC) No. 12307-R.

c. Each installation shall conform to the manufacturer's published materials and installation instructions as submitted to the BMEC, and

d. This BMEC AUTHORIZATION is subject to the terms and conditions of the above listings and reports. Any conflict between this authorization or the above listings and reports, the most restrictive matter as determined by the Chief Building Official shall reply.

12. This system shall be protected from but not limited to the following;

. Any and all heat producing apparatus or light fixtures, pot or recessed types, exhaust fans, gas vents or flues and chimneys.

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

WINDOW SPRINKLER ASSEMBLY

Date of Authorization: May 11, 1993

BMEC REFERENCE: BMEC-93-04-169

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1990, Chapter B.13

AND IN THE MATTER OF an application by:

Morrison Hershfield Limited
Consulting Engineers
4 Lansing Square
North York, Ontario
M2J 1T1

ON THE SUBJECT OF:

A window sprinkler assembly system to provide a two hour fire-resistance rated separation in a wall to consist of tempered or heat strengthened glass fixed in a non-openable hollow metal steel frame or extruded aluminum frame and a special sidewall window sprinkler with quick response action.

THE COMMISSION HEREBY AUTHORIZES to the Applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this Authorization should be amended and/or terminated, the COMMISSION may by written notice to the Applicant or the Agent, at the above address, withdraw the Authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the Applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This Authorization may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

4. This Authorization is not transferable to any other party. If the Applicant makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Ontario Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. This window sprinkler assembly system shall be designed, engineered, inspected and verified by a fire protection Professional Engineer (authorized in Ontario) and a document of certification by the Professional Engineer with stamp shall be forwarded to the Chief Building Official and the Building Owner(s).
7. The sprinkler system shall be installed and tested in accordance with N.F.P.A. 13 as a wet pipe system and maintained in accordance with Section 6.5 (sprinkler) of the Ontario Fire Code.
8. The special designed sprinkler head shall be designated as a horizontal sidewall window nozzle, Grinnell Canada Fire Protection Company Limited Model FR-1/Q-60, 12.7 mm (1/2 in) orifice, 74C (165F) activation temperature quick response link. The optimum position of the sprinkler head shall be as determined by the tests submitted by National Research Council Canada.
9. The interior glazing shall consist of one sheet of fixed non-operable tempered or heat strengthened glass installed in a hollow metal steel frame 1.35 mm (16 gauge) minimum thickness maximum glazing shall be 2134 mm (7 ft) wide by 2844 mm (9 ft 4 in) high and minimum 6 mm (1/4 in) thick.
10. This window sprinkler system may be used in either a sprinklered or unsprinklered building to protect non openable window openings to a maximum of 2 hr. fire-resistance rating provided,

    (a) in a exposing building face or exterior spatial separation the window sprinkler is installed on the interior side of the window, or

    (b) in an interior fire separation the window sprinkler is installed on both sides of the window in the fire separation.

11. Interior or exterior installations may be made in all types of occupancies except Group F, Division 1 and shall not be used in a firewall. Should the system be located in a loadbearing wall, all loadbearing components shall be protected independently of this window sprinkler assembly system.
12. This window sprinkler system shall not be used in exits as defined in the Ontario Building Code.

13. This horizontal sidewall window sprinkler system shall be served by either a separate riser or separate cross main independent of any regular sprinkler or standpipe system serving the floor area.
14. Separate flow switches or alarm check valves and supervised control valves and each fire compartment on each system shall be electrically supervised and indicated separately at the fire/sprinkler alarm annunciator panel.
15. Where the water supply is from a standpipe system conforming to the Code, the siamese connection shall be labelled as per the standard except for this dual purpose which shall read "STANDPIPE AND WINDOW SPRINKLERS".
16. A noncombustible sign legibly printed in not less than 12.7 mm (1/2 in) block letters with contrasting white background and red letters shall be permanently mounted and maintained beside the main water supply source to this window sprinkler assembly system to indicate:

    W A R N I N G

    SPECIAL SPRINKLER HEADS ON THIS SYSTEM ARE AN INTEGRAL PART OF WINDOW FIRE SEPARATION. THIS WATER SUPPLY MAY ONLY BE SHUT OFF AFTER ALL THE PROPER AUTHORITIES HAVE RECEIVED NOTICE IN WRITING.

DATED at Toronto this 11th day in the month of May in the year 1993 for Authorization #93-04-169 on behalf of:

BUILDING MATERIALS EVALUATION COMMISSION

AUTHORIZATION BY THE BUILDING MATERIALS EVALUATION COMMISSION

BMEC #93-1-166
Date: 11 May 1993

* Denotes a new or amended clause May 30, 2002

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1990, Chapter B.13

AND IN THE MATTER OF the Applicant:

* BENOLEC LTEE
1451, Nobel
Sainte-Julie, Quebec
J3E 1Z4

Tel: (450) 922-2000
Fax: (450) 922-4333

ON THE SUBJECT OF:

Benolec Wall Insulation System . This is a cellulose-fibre thermal insulation tradename "Ben-O-Mat", which is made from clean paper treated with borax, boric acid and aluminium sulphate chemicals.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter B.13, R.S.O. 1990, Ontario Regulation 413/90 as amended or re-enacted shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.

7. The applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization.

8. This system may be used to insulate above grade conventional exterior vertical walls of new buildings which employ wood studs with plywood, waferboard or fibreboard sheathing on the exterior side and polyethylene vapour barrier on the interior wall surface side.

9. This system shall comprise of the following listed components:

   (a) BENO-MAT uses a porous polyester spunloaded membrane stapled to wood frame members to contain the;

   (b) BENO-THERM Leger loose fill cellulose insulation material injected into each wall cavity; and

   (c) BENO-PAN a cardboard stop fastened to wood frame members to stop the flow of the loose fill cellulose insulation to other cavities.

10. (a) Installers shall be trained and certified by the Applicant and they shall carry at all times a photo identification card and log book for each installation.

    (b) A "Wall Insulation - House Card" for each installation, shall be securely fastened to a roof structural member beside the attic hatch or attic entrance or the wood panel of the main electrical service.

11. This system shall have a valid current listing and reports such as, but not limited to the following:

    (a) Canadian General Standards Board (CGSB) No. 51-GP-60M and certified license agreement.

    (b) Canadian Construction Materials Centre (CCMC) No. 12307-R, and

    (c) Each installation shall conform to the manufacturer's published materials and installation instructions as submitted to the BMEC, and

(d) This BMEC AUTHORIZATION is subject to the terms and conditions of the above listings and reports. Any conflict between this authorization or the above listings and reports, the most restrictive matter as determined by the Chief Building Official shall reply.

12. This system shall be protected from but not limited to the following:

(a) Any and all heat producing apparatus or light fixtures, pot or recessed types, exhaust fans, gas vents or flues and chimneys.

AUTHORIZATION
BY THE
BUILDING MATERIALS EVALUATION COMMISSION

#92-9-165
29 March 1993
*Amended October 30, 1997

IN THE MATTER OF Section 18(4) (b) of the Building Code Act, Revised Statutes of Ontario, 1990, Chapter B.13

AND IN THE MATTER OF the Applicant:

L. P. Engineering Inc.
11 Katerina Ave.
Thornhill, Ontario
L4J 8H5

ON THE SUBJECT OF:

A window sprinkler assembly system to provide a two hour fire-resistance rated separation in a wall to consist of tempered or heat strengthened glass fixed in a non openable hollow metal steel frame or extruded aluminum frame and a special sidewall window sprinkler with quick response action.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this Authorization should be amended and/or terminated, the COMMISSION may by written notice to the Applicant or the Agent, at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2. The COMMISSION does not assume or undertake to discharge any responsibility of the Applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Ontario Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. This window sprinkler assembly system shall be designed, engineered, inspected and verified by a fire protection Professional Engineer (authorized in Ontario) and a document of certification by the Professional Engineer with stamp shall be forwarded to the Chief Building Official and the Building Owner(s).

7. The sprinkler system shall be installed and tested in accordance with N.F.P.A. 13 as a wet pipe system and maintained in accordance with Section 6.5 (sprinkler) of the Ontario Fire Code.

8. a) The special designed sprinkler head shall be designated as a horizontal sidewall window nozzle, Grinnell Canada Fire Protection Company Limited Model FR-1/Q-60, 12.7 mm (1/2 in.) orifice, 74°C (165°F) activation temperature quick response link. The optimum position of the sprinkler head shall be as determined by the tests submitted by National Research Council Canada.

* b) Central Model WS™ Window Sprinkler, horizonal sidewall & pendent vertical sidewall, 12.7 mm (1\2 in.) orifice with a 68º(155ºF) or 200º(93º) temperature rating. Installation of Model WS™ shall be in accordance with the data sheet provided by Central Sprinkler Company for Window Sprinkler™ applications.

9. The interior glazing shall consist of one sheet of fixed non-operable tempered or heat strengthened glass installed in a hollow metal steel frame 1.35 mm (16 gauge) minimum thickness or extruded aluminum 1.8 mm (1/16 in.) minimum thickness. The maximum glazing shall be 2134 mm (7 ft) wide by 2844 mm (9 ft 4 in) high and minimum 6 mm (1/4 in) thick.

10. This window sprinkler system may be used in either a sprinklered or unsprinklered building to protect non openable window openings to a maximum of 2 hr. fire-resistance rating provided,

    (a) in a exposing building face or exterior spatial separation the window sprinkler is installed on the interior side of the window, or

(b) in an interior fire separation the window sprinkler is installed on both sides of the window in the fire separation.

11. Interior or exterior installations may be made in all types of occupancies except Group F, Division 1 and shall not be used in a firewall. Should the system be located in a loadbearing wall, all loadbearing components shall be protected independently of this window sprinkler assembly system.

12. This window sprinkler system shall not be used in exits as defined in the Ontario Building Code.

13. This horizontal sidewall window sprinkler system shall be served by either a separate riser or separate cross main independent of any regular sprinkler or standpipe system serving the floor area.

14. Separate flow switches or alarm check valves and supervised control valves and each fire compartment on each system shall be electrically supervised and indicated separately at the fire/sprinkler alarm annunciator panel.

15. Where the water supply is from a standpipe system conforming to the Code, the siamese connection shall be labelled as per the standard except for this dual purpose which shall read "STANDPIPE AND WINDOW SPRINKLERS".

16. A noncombustible sign legibly printed in not less than 12.7 mm (1/2 in) block letters with contrasting white background and red letters shall be permanently mounted and maintained beside the main water supply source to this window sprinkler assembly system to indicate:

WARNING

SPECIAL SPRINKLER HEADS ON THIS SYSTEM ARE AN INTEGRAL PART OF WINDOW FIRE SEPARATION. THIS WATER SUPPLY MAY ONLY BE SHUT OFF AFTER ALL THE PROPER AUTHORITIES HAVE RECEIVED NOTICE IN WRITING.

Dated at Toronto this 30th day in the month of October in the year 1997 for authorization **#92-9-165** on the behalf of the BUILDING MATERIALS EVALUATION COMMISSION

(BMEC)
AUTHORIZATION REPORT

HOUSETITE FOAMED PLASTIC THERMAL INSULATION

Date of Authorization: March 29, 1993

BMEC REFERENCE: BMEC-92-08-164

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1990, Chapter B.13

AND IN THE MATTER OF an application by:

BASF Canada Inc.
345 Carlingview Drive
Toronto, Ontario
M9W 6N9

ON THE SUBJECT OF:

HousetiteTM, a two-component combustible spray in place semi-flexible, BASF EX-R2802 and ISO 17 isocyanurate, open and closed cellular, foamed plastic thermal insulation which may be applied on site or in a manufacturing facility.

THE COMMISSION HEREBY AUTHORIZES to the APPLICANT the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this AUTHORIZATION should be amended and/or terminated, the COMMISSION may by written notice to the APPLICANT at the above address, withdraw the AUTHORIZATION and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the APPLICANT to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for

termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Ontario Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. This AUTHORIZATION is further limited to the continuance of a current valid C.C.M.C. Report #12376-R which shall be adhered to.
7. Since at the present time there are no available "Standards"; this AUTHORIZATION determined that the subject matter did satisfy appropriate requirements. However, when the appropriate "Standards"are published, the APPLICANT shall retest to those "Standards", at which time this AUTHORIZATION shall be required to be amended.
8. Follow-up inspection services shall be maintained at all times by the APPLICANT or by an Accredited Testing Organization.
9. Each installation shall conform to the manufacturer's published installation instructions and shall be reviewed in detail, stamped, dated and signed for construction as specified by the manufacturer's listed trained personnel. Identification cards for installers shall be issued only to qualified trained personnel listed by the manufacturer.
10. Only fixed ratio equipment and the employment of positive displacement pumps for metering shall be used by the trained applicator/installer.
11. Precautions shall be taken around recessed electrical fixtures and or any other heat sources to relieve any heat build up.
12. This sprayed-in-place foamed insulation as described in this subject AUTHORIZATION, shall be for the application only in open cavities where visual control and sampling are relatively easy for the trained applicator/installer.

DATED at Toronto this 29th day in the month of March in the year 1993 for Authorization #92-08-164 on behalf of:

BUILDING MATERIALS EVALUATION COMMISSION

#92-7-163
20 July 1993

AUTHORIZATION
BY THE
BUILDING MATERIALS EVALUATION COMMISSION

IN THE MATTER OF Section 28(4) (b) of the Building Code Act, Revised Statutes of Ontario, 1992, Chapter 23

AND IN THE MATTER OF the Applicant:

Henny Penny Corporation
1219 US 35 West
Eaton, Ohio
USA 45320

ON THE SUBJECT OF:

Henny Penny^{R}, Models 500P and 500CP, these are self-contained electric deep fat pressure fryers with integral hood, air cleaning and automatic fixed fire suppression systems. Made of stainless steel, these units have lockable roller casters and a single electrical junction box for the entire unit. Used only in commercial cooking kitchens and does not require a direct exhaust duct or plumbing drain connections.

THE COMMISSION HEREBY AUTHORIZES to the Applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the APPLICANT or the Agent, at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2. The COMMISSION does not assume or undertake to discharge any responsibility of the APPLICANT to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

.../2

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Ontario Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter B.13, R.S.O. 1990, Ontario Regulation 413/90 as amended shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.

7. The APPLICANT shall be wholly responsible for the complete discharge of each paragraph of this authorization.

8.(a) Each installation shall conform to this AUTHORIZATION and to the manufacturer's published installation instructions and shall be reviewed in detail, stamped, dated and signed for construction as specified by the manufacturer's listed trained personnel.

(b) The design drawings and specifications of this unit shall be stamped and sealed by a professional engineer registered in Ontario.

.../3

9.(a) The manufacturer's installation and maintenance literature shipped with each unit shall include copies of this AUTHORIZATION; and

(i) Installation and operation manual "Henny Penny Portable Venting System Model 500CP and product number C2333", and

(ii) Fire Butler maintenance and recharge service manual no. 32660, model no. 500W, and shall be a listed wet chemical extinguishing system installed to the listing and manufacturer's instructions.

(b) In case of conflicting requirements in any documents pertaining to this subject matter the most restrictive shall apply.

10.(a) Each unit shall be permanently labelled with the manufacturer's name or trademark, model number and current listing of Canadian Standard Association (CSA); Underwriters Laboratories Inc. (ULI); and Underwriters Laboratories Canada (ULC), and

(b) Each unit shall be installed and maintained in compliance with those listing requirements of CSA, ULI, and ULC.

11.(a) Each unit shall be maintained on a minimum service contract of at least once per month to include, check and test all the fail safe components, replacing the charcoal filter and as needed replacing the grease filter and fire extinguisher.

(b) Evidence shall be recorded in a log book signed and dated by the owner (or agent) of the unit, service contractor and the accredited testing agency, to witness the following;

(c) The satisfactory operation and maintenance as per this AUTHORIZATION of each such unit, and

(d) An annual follow-up inspection of each installation shall be made by an accredited testing agency.

.../4

12.(a) This unit is limited to one unit installation within one space unless there is conformance to the NFPA-96 Standard for exhaust and make-up air to more than one unit.

(b) This unit shall only be installed in commercial kitchen areas where the surrounding walls, ceilings and floors are finished with durable materials suitable for cleaning by washing.

13. The unit roller casters shall be locked so the unit remains in a fixed position while in the operation mode.

14.(a) Each unit when operated shall be maintained in a clean working order used only by trained personnel. Cleaning of the unit shall be done daily, the baffle and mesh grease filter shall be done at least once a week, and

(b) The scrubber tank and drain pan waste liquid shall be cleaned and emptied daily into an approved grease separated drain.

15.(a) Adequate general exhaust and supply ventilation is provided to prevent a build-up of smoke, odours and all cooking fumes, and

(b) A portable code conforming extinguisher of at least 40 BC is installed adjacent to each unit not less than 2m (6 ft.) and not more than 9m (30 ft.) travel distance in the direction of exiting from each unit.

AUTHORIZATION #91-6-154
BY THE 13 November 1991
BUILDING MATERIALS EVALUATION COMMISSION

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act,
Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF the Applicant:

Isola AS, Platon Division
N-3670 Notodden, Norway
P.O. Box 68

AND AGENT:

Platon North America Inc. and
Drycelle Products Limited
461 North Service Road West, Unit 341
Oakville, Ontario
L6M 2V5

ON THE SUBJECT OF:

Platon Dampproofing Membrane System, this is a carbon compounded high density polyethylene sheet, "dimpled" design provides an air space that allows drainage or moisture, water seepage and/or soil gases through walls and/or floors to drain away to weeping tile, floor drain, sump and/or to ventilate to atmosphere where required.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

/2...

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter 51, R.S.O. 1980, Ontario Regulation 413/90 as amended or reenacted shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.

7. The applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization.

8. This Platon system may be used in lieu of the Ontario Building Code requirements for dampproofing and/or waterproofing of walls and/or floors.

9. This Authorization is subject the C.C.M.C. #12266-R evaluation report dated 91-07-26, any conflict between the Ontario Regulation, C.C.M.C. Report or this Authorization the most restricted matter shall apply.

10. Each installation shall also conform to the manufacturer's published installation instructions. Particular attention shall be addressed to the fastening of this system and the use of the integral tab, termination bar and/or moulding and sealing to cover the top edge and/or seams of the membrane.

11. When this system is used in conjunction with a floor drain, a backwater valve shall be installed with access for maintenance.

3/...

12.(1) An Architect or Professional Egnineer registered in Ontario shall design, review, inspect, seal and sign drawings and a document of certification and forward these to the Chief Building Official and the building owner(s) when these systems are used for;

(2) waterproofing and/or

(3) for those areas where soil gases such as radon may be present, these systems shall be equipped with fail safe venting to the exterior atmosphere.

Authorization Amended	July 28, 2005

* Denotes July 28, 2005 Amendments

AUTHORIZATION REPORT- Horizontal Cavity Shaft wall System

IN THE SUBJECT MATTER OF Clause 18 (4) (b) of the *Building Code Act*, Revised Statutes of Ontario, 1980, Chapter 51, (currently the *Building Code Act,* 1992, S.O. 1992, Ch 23, Section 28, as amended).

AND IN THE MATTER OF an application by :

* BPB North American Services Inc.
2424 Lakeshore Road West
Mississauga, Ontario
L5J 1K4

Tel: (905) 823-9881
Fax: (905) 823-4860
Web: www.bpb-na.com

* **ON THE SUBJECT OF** BPB Canada Inc. Gypsum Shaftwall Assembly for horizontal service space, this is a gypsum board with steel studs, channels and runners forming a two hour fire-resistance assembly for metal duct enclosures or ceiling membrane.

* **WHERE AS** the applicant BPB North American Services Inc. has requested a revision to the existing Building Materials Evaluation Commission Authorization 92-06-162, to change the name of the applicant from Westroc Industries Limited to BPB North American Services Inc.

THE COMMISSION HEREBY AUTHORIZES to the Applicant use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experiences indicate that this authorization should be amended and /or terminated, the COMMISSION may by written notice to the Applicant or Agent, at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and /or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and / or advertising material, however, it is not to be used expressly or implied as an endorsement of any product, material technique or design which is described herein.

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to address or the materials, technique, design, system and / or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be in contravention of the Ontario Building Code. Where application any change in the Act, Regulation or Code provision shall be grounds for re-evaluation by the Commission.

AND SPECIFIC REQUIREMENTS

* 6. Except as authorized herein all applicable requirements of the *Ontario Building Code Act*, Chapter 51 R.S.O. 1980, Ontario Regulation 419/86 as amended, (currently the *Building Code Act*, S.O. 1992, Ch 23, Ontario Regulation 403/97 as amended), shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.

7. The Applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization.

8. This system shall be constructed as non-load bearing only and the supporting assembly shall be of at least the required fire-resistance rating.

* 9. The maximum span for this system shall be 2.18 m (7 ft 2 in) and a maximum of two hour fire-resistance rating from either side as determined on the basis of test results with ASTM E1119 and ULC/CAN-S101 by Warnock Hersey, File no. WH1-495-PSH-0189 and 0190, Job No., 50611-CF-041390, date tested 14 & 15 February 1992.

* 10. This assembly consists of at least 19 mm (3/4 in) thick BPB Canada Inc. ProRoc Shaftliner and three layers of 12.7 mm (½ in) BPB Canada Inc. ProRoc Type C. The liner and panels shall be fitted and fastened with metal studs, channels, runners, screws, anchors, trim and sealant as per the manufacturer's recommendations.

* 11. The Manufacturer's detail is contained in a publication by BPB Canada Inc., titled "Gypsum Board Systems Manual: Fire Resistence and Sound Control Design Manual".

12 . Any and all of the above data, details and tests shall be made available to any and all parties responsible for the design, detail, construction, installation and inspection of each installation

Amended at Toronto this 28th Day of July 2005.

BUILDING MATERIALS EVALUATION COMMISSION

_____

Edward Link, Vice-Chair

BMEC-92-05-161

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

ENVIRO-SHIELD WALL INSULATION SYSTEM

Date of Authorization: October 22, 1992

BMEC REFERENCE: BMEC-92-05-161

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1990, Chapter B.13

AND IN THE MATTER OF an application by:

Thermo-cell Insulation (1983) Ltd.
2015 Lanthier Drive
RR #2
Orleans, Ontario
K4B 1M1

ON THE SUBJECT OF:

Enviro-Shield Wall Insulation System. This is a cellulose-fibre thermal insulation tradename "Weathershield Insulation", which is made from clean paper treated with borax, boric acid and aluminum sulphate chemicals.

THE COMMISSION HEREBY AUTHORIZES to the Applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials,

technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Ontario Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter B.13, R.S.O. 1990, Ontario Regulation 413/90 as amended or re-enacted shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.
7. The applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization.
8. This system may be used to insulate above grade conventional exterior vertical walls of new buildings which employ wood studs with plywood, waferboard or fibreboard sheathing on the exterior side and polyethylene vapour barrier on the interior wall surface side.
9. This system shall comprise of the following listed components:

   (a) Weathershield Insulation;

   (b) Enviro-Shield, UV treated 6 mil vapour barrier and

   (c) Enviro-Shield self adhesive polyethylene patches to be installed where the vapour barrier is pierced, cut or torn.

10. (a) Installers shall be trained and certified by the Applicant and they shall carry at all times a photo identification card and log book for each installation.

    (b) A "Wall Insulation - House Card" for each installation, shall be securely fastened to a roof structural member beside the attic hatch or attic entrance or the wood panel of the main electrical service.

11. This system shall have a valid current listing and reports such as, but not limited to the following:

    (a) Canadian General Standards Board (CGSB) No. 51.60-90 and certified license agreement No. 83007 and 83055;

    (b) Canadian Construction Materials Centre (CCMC) No. 08251-L and 12418-L;

(c) Each installation shall conform to the manufacturer's published materials and installation instructions as submitted to the BMEC, and

(d) This BMEC AUTHORIZATION is subject to the terms and conditions of the above listings and reports. Any conflict between this authorization or the above listings and reports, the most restrictive matter as determined by the Chief Building Official shall apply.

12. This system shall be protected from but not limited to the following;

    Any and all heat producing apparatus or light fixtures, pot or recessed types, exhaust fans, gas vents or flues and chimneys.

DATED at Toronto this 22nd day in the month of October in the year 1992 for Authorization #92-05-161 on behalf of:

BUILDING MATERIALS EVALUATION COMMISSION

AUTHORIZATION
BY THE

#92-4-160

BUILDING MATERIALS EVALUATION COMMISSION

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act,
Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF the Applicant:

M.P. Sprinkler Systems Engineering Inc.
139 Charlton Avenue
Thornhill, Ontario
L4J 6C6

ON THE SUBJECT OF:

A window sprinkler assembly system to provide a two-hour fire resistance rated separation in a wall to consist of tempered or heat strengthened glass fixed in a non openable hollow metal steel frame or extruded aluminum frame and a special sidewall window sprinkler with quick response action.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

/2...

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. This window sprinkler assembly system shall be designed, engineered, inspected and verified by a fire protection Professional Engineer (authorized in Ontario) and a document of certification by the Professional Engineer with stamp shall be forwarded to the Chief Building Official and the Building Owner(s).

7. The sprinkler system shall be installed and tested in accordance with N.F.P.A. 13 as a wet pipe system and maintained in accordance with Section 6.5 (sprinkler) of the Ontario Fire Code.

8. The special designed sprinkler head shall be designated as a horizontal sidewall window nozzle, Grinnell Canada Fire Protection Company Limited model FR-1/Q-60, 12.7 mm (1/2 in.) orifice, 74°C (165°F) activation temperature quick response link. The optimum position of the sprinkler head shall be as determined by the tests submitted by National Research Council Canada.

9. The interior glazing shall consist of one sheet of fixed non-operable tempered or heat strengthened glass installed in a hollow metal steel frame 1.35 mm (16 gauge) minimum thickness or extruded aluminum 1.8 mm (1/16 in.) minimum thickness. The maximum glazing shall be 2134 mm (7 ft. 0 in.) wide by 2844 mm (9 ft. 4 in.) high and minimum 6 mm (1/4 in.) thick.

10. 1. This window sprinkler system may be used in either a sprinklered or unsprinklered building to protect non openable window openings to a maximum of 2 hr. fire resistance rating provided,

(a) in a exposing building face or exterior spatial separation the window sprinkler is installed on the interior side of the window, or

(b) in an interior fire separation the window sprinkler is installed on both sides of the window in the fire separation.

11. Interior or exterior installations may be made in all types of occupancies except Group F, Division 1 and shall not be used in a firewall. Should the system be located in a loadbearing wall, all loadbearing components shall be protected independently of this window sprinkler assembly system.

12. This window sprinkler system shall not be used in exits as defined in the Ontario Building Code.

13. This horizontal sidewall window sprinkler system shall be served by either a separate riser or separate cross main independent of any regular sprinkler or standpipe system serving the floor area.

14. Separate flow switches or alarm check valves and supervised control valves and each fire compartment on each system shall be electrically supervised and indicated separately at the fire/sprinkler alarm annunciator panel.

15. Where the water supply is from a standpipe system conforming to the Code, the siamese connection shall be labelled as per the standard except for this dual purpose which shall read "STANDPIPE AND WINDOW SPRINKLERS".

16. A noncombustible sign legibly printed in not less than 12.7 mm (1/2 in.) block letters with contrasting white background and red letters shall be permanently mounted and maintained beside the main water supply source to this window sprinkler assembly system to indicate:

WARNING

SPECIAL SPRINKLER HEADS ON THIS SYSTEM ARE AN INTEGRAL PART OF WINDOW FIRE SEPARATION. THIS WATER SUPPLY MAY ONLY BE SHUT OFF AFTER ALL THE PROPER AUTHORITIES HAVE RECEIVED NOTICE IN WRITING.

AUTHORIZATION
BY THE
BUILDING MATERIALS EVALUATION COMMISSION

#92-1-157

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act,
Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF the Applicant:

Civelec Consultants Inc.
5033 Belanger East
Montreal, Quebec
H1T 1C7

ON THE SUBJECT OF:

A window sprinkler assembly system to provide a two-hour fire resistance rated separation in a wall to consist of tempered or heat strengthened glass fixed in a non openable hollow metal steel frame or extruded aluminum frame and a special sidewall window sprinkler with quick response action.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

/2...

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. This window sprinkler assembly system shall be designed, engineered, inspected and verified by a fire protection Professional Engineer (authorized in Ontario) and a document of certification by the Professional Engineer with stamp shall be forwarded to the Chief Building Official and the Building Owner(s).

7. The sprinkler system shall be installed and tested in accordance with N.F.P.A. 13 as a wet pipe system and maintained in accordance with Section 6.5 (sprinkler) of the Ontario Fire Code.

8. The special designed sprinkler head shall be designated as a horizontal sidewall window nozzle, Grinnell Canada Fire Protection Company Limited model FR-1/Q-60, 12.7 mm (1/2 in.) orifice, 74°C (165°F) activation temperature quick response link. The optimum position of the sprinkler head shall be as determined by the tests submitted by National Research Council Canada.

9. The interior glazing shall consist of one sheet of fixed non-operable tempered or heat strengthened glass installed in a hollow metal steel frame 1.35 mm (16 gauge) minimum thickness or extruded aluminum 1.8 mm (1/16 in.) minimum thickness. The maximum glazing shall be 2134 mm (7 ft. 0 in.) wide by 2844 mm (9 ft. 4 in.) high and minimum 6 mm (1/4 in.) thick.

10. 1. This window sprinkler system may be used in either a sprinklered or unsprinklered building to protect non openable window openings to a maximum of 2 hr. fire resistance rating provided,

3/...

(a) in a exposing building face or exterior spatial separation the window sprinkler is installed on the interior side of the window, or

(b) in an interior fire separation the window sprinkler is installed on both sides of the window in the fire separation.

11. Interior or exterior installations may be made in all types of occupancies except Group F, Division 1 and shall not be used in a firewall. Should the system be located in a loadbearing wall, all loadbearing components shall be protected independently of this window sprinkler assembly system.

12. This window sprinkler system shall not be used in exits as defined in the Ontario Building Code.

13. This horizontal sidewall window sprinkler system shall be served by either a separate riser or separate cross main independent of any regular sprinkler or standpipe system serving the floor area.

14. Separate flow switches or alarm check valves and supervised control valves and each fire compartment on each system shall be electrically supervised and indicated separately at the fire/sprinkler alarm annunciator panel.

15. Where the water supply is from a standpipe system conforming to the Code, the siamese connection shall be labelled as per the standard except for this dual purpose which shall read "STANDPIPE AND WINDOW SPRINKLERS".

16. A noncombustible sign legibly printed in not less than 12.7 mm (1/2 in.) block letters with contrasting white background and red letters shall be permanently mounted and maintained beside the main water supply source to this window sprinkler assembly system to indicate:

WARNING

SPECIAL SPRINKLER HEADS ON THIS SYSTEM ARE AN INTEGRAL PART OF WINDOW FIRE SEPARATION. THIS WATER SUPPLY MAY ONLY BE SHUT OFF AFTER ALL THE PROPER AUTHORITIES HAVE RECEIVED NOTICE IN WRITING.

SHELF AND STORAGE RACK **B.M.E.C. #91-8-156**
22 October 1992

M & P Tool Products Inc.
43 Regan Road
Brampton, Ontario
L7A 1B3

ON THE SUBJECT OF:

A self-contained structural shelf and rack storage facility within a building, having one or more solid intermediate deck or walkway levels for personnel access.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter B.13, R.S.O. 1990, Ontario Regulation 413/90 as amended or reenacted shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.

/2...

7. The applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization.

8. (1)(a) Deck level shall be a continuous horizontal construction membrane through the entire shelf rack facility, and

(b) Walkway level shall be the horizontal construction membrane between the solid shelving installed on the same plane, and

(c) Level area means the greatest horizontal area of the shelf and rack storage facility.

(2)(a) Deck or walkway levels shall be constructed of solid closed surface steel planking or,

(b) Steel roof decking with minimum 16 mm (5/8 in) maximum 19 mm (3/4 in) thick tongue and groove solid wood or plywood.

(3) The structural design of the entire shelf and rack storage facility support system including posts, beams, decks, walkways, connections, and their supports such as concrete slabs, separate foundations or similar shall be in accordance with Ontario Building Code Part 4 requirements.

(4) Detailed drawings for each installation shall be stamped by a member of the Association of Professional Engineers of Ontario Certifying conformity with this authorization. These drawings shall also detail an appropriate sign to indicate the maximum permissible design loads for each rack storage system and such sign shall be permanently fixed to the building interior and displayed in a prominent unobstructed viewing position. These drawings shall be submitted for a building permit in the usual way.

9. An approved wet pipe sprinkler system shall be designed and installed for the entire shelf and rack storage facility including the top level and shall be in conformance with the current N.F.P.A. 13-1983 and N.F.P.A. 231C-1987 as amended or the appropriate N.F.P.A. Standard for the most severe hazard that it is exposed to. Sprinklers are not required where only Class I commodities as defined in the following paragraph 10.(2) are stored.

10. (1)(a) The entire shelf and rack storage dimension shall be limited to Table 10.A. based on the type of commodity stored as defined in paragraph 10.(2), (3), (4) and (5). Excerpts of N.F.P.A. 231C-1987 as amended are outlined in the attached Appendix "A" and these shall apply to this authorization.

(b) A firewall as defined in the Ontario Building Code may divide the confining building into two or more separate buildings, wherein, one of the following classes may be assigned to each of the separate buildings.

(2) Class I commodities are non-combustible products, as defined in the current N.F.P.A. 231C-1987; or

(3) Class II, III and IV commodities are combustible products, as defined in the current N.F.P.A. 231C-1987; or

3/...

(4) Class SS commodities are special hazard products not covered in paragraph 10.(2), (3) or (5);

(5) Aerosol products composed of greater than 55% non-water miscible flammable products including lubricants; paints; oil-based anti-perspirants, furniture polish, insecticides and automotive products, are to be stored only:

(a) On the ground floor of the racking system, and

(b) In a designed area separated by,

(i) a vertical 1 hr. fire separation, or

(ii) a vertical chain link fencing not lighter than 9 ga. steel wire made into a 50 mm (2 in) diamond mesh, located not less than 2.5 m (8 ft) from all other storage where the adjacent storage is more hazardous than Class IV commodity, or

(iii) a method acceptable to the Chief Fire Official, and

(c) In the designed area protected by an in-rack sprinkler system. The sprinkler demand shall be a minimum of 1.9 L/s (30 g.p.m. (U.S.)) discharge per head with 74°C (165°F) heads or less and shall be 2.5 m (8 ft) apart maximum. This design shall be further based on the operation of the hydraulically most remote;

(i) 8 sprinklers if one level, or

(ii) 6 sprinklers on each level if only two levels, or

(iii) 6 sprinklers on each of the top three levels if three or more levels.

(d) Single row racks shall require only the in-rack sprinklers, whereas, double row racks shall require sprinklers in longitudinal flue as well as on face sprinklers which shall be staggered on opposite sides of racks.

TABLE 10.A.
Forming Part of Paragraph 10

Shelf and Rack Storage Facility

Commodity Classes	Maximum Height(1)		Maximum Area(2)	
	m	ft	m²	ft²
Class I	6	20	unlimited	unlimited
	12	40	20,070	216,000
	18	60	13,380	144,000
Class II, III and IV	6	20	8,920	96,000
	12	40	4,460	48,000
	18	60	2,230	24,000
Class SS	6	20	3,340	36,000
	12	40	1,670	18,000
	18	60	1,110	12,000
Column 1	2	3	4	5

NOTES: (1) The maximum height shall be from the floor supporting the shelf and rack system to the topmost portion of the racking system.

(2) The maximum area is the sum total of all levels of the shelf and rack system as well as the floor.

11. A plain legible sign or signs, with contrasting letters and titled "NOTICE", shall describe the above Class and requirements for each shelf and rack storage facility. This sign or signs shall be permanently mounted, at or near the main water supply for the sprinkler system and shall be maintained at all times. For Class I commodities this "NOTICE" shall be permanently mounted, at or near the main entrance to this shelf and rack storage facility.

12. (1) Exits shall be separated from the rack storage facilities with fire separations, having a fire-resistance rating conforming to the Ontario Building Code; and

(2) the exit stairs shafts shall conform to all requirements for exits as stated in the Ontario Building Code; and

(3) no fewer than 2 exits are required from each deck or walkway level, except where there are not more than two levels above the building floor, and the level area does not exceed 139 m² (1500 ft²), two means of egress shall be required without the requirements of fire separation for exit, and

(4) any opening in a deck for egress, convenience stairs, ramps or chutes, shall be protected by smoke baffles and close spaced sprinklers as per paragraph 9 of this authorization.

13. The maximum travel distance to exits shall not exceed 46 m (150 ft) and to a fire extinguisher shall not exceed 23 m (75 ft).

5/...

14. (1) Where a shelf and rack storage facility contains two or more deck or walkway levels and where each level is greater than 239 m² (2,500 ft²), a smoke detection system shall be installed on the underside of each deck level on which a walkway or aisle is located, and

    (2) the number of system smoke detectors installed shall be in accordance to CAN4-S524-M1986.

15. The clear aisle width shall not be less than 760 mm (30 in). This clearance is for access to exits and shall not be used for conveyors, trolleys, tracks or any other similar mode of product transportation within an aisle or walkway.

16. This shelf and rack storage facility is not permitted in F1 occupancy as defined in the Ontario Building Code.

17. The shelf and rack storage facilities shall be used only for storage and not for manufacturing, production, wrapping or assembly.

18. The shelf and rack storage facilities shall be accessible to employees only and shall be designated, signed and posted as a "NO SMOKING" area conforming to the Ontario Fire Code O. Reg. 67/87 as amended.

19. (1) In building areas containing shelf and rack storage facilities exceeding 4,645 m² (50,000 ft²) and except for storage of Class I commodities as defined in paragraph 10 of this document, manually operated smoke vents shall be installed in accordance with the current N.F.P.A. 204, Section 230, and

    (2) The smoke vent opening shall be not less than 1.2 m by 1.8 m (4 ft by 6 ft) and the openings shall be located not more than 23 m (75 ft) from an exterior wall and not more than 46 m (150 ft) from each other.

20. (1) A standpipe and hose system shall be installed in accordance with the Ontario Building Code where the shelf and rack storage facility height is more than 3 levels including floor level or 14 m (45 ft) in height.

    (2) Where a standpipe and hose system is required, 63.5 mm (2-1/2 in) diameter hose connections shall be provided, except that 38.1 mm (1-1/2 in) hose connections are permitted in the shelf and rack storage facilities which:

        (a) neither exceed 6 levels including the floor level, and

        (b) do not exceed 3,716 m² (40,000 ft²) in the sum total of all levels of the shelf and rack storage facility.

APPENDIX "A"
Forming Part of Paragraph 10. of this Authorization

Commodity Classifications:

The following guide for commodity classification applies specifically to rack storage and is not related to any other method of classifications of materials.

Class I commodity is defined as essentially non-combustible product on wood pallets, or in ordinary corrugated cartons with or without single thickness dividers or in ordinary paper wrappings, all on wood pallets. Such products may have a negligible amount of plastic trim, such as knobs or handles.

Examples or Class I products are:

Metal Products. Metal desks with plastic tops and trim, electrical coils, electrical devices in their metal enclosures, pots and pans, electrical motors, dry cell batteries, metal parts, empty cans, stoves, washers, dryers and metal cabinets.

Glass Products. Glass bottles, empty or filled with non-combustible liquids, mirrors.

Foods. Foods in non-combustible containers; frozen foods; meat, fresh fruits and vegetables in non-plastic trays or containers; dairy products in nonwax-coated paper containers, beer or wine up to 20 percent alcohol, in metal, ceramic or glass containers.

Others. Oil-filled and other types of distribution transformers, cement in bags, electrical insulators, gypsum board, inert pigments, dry insecticides.

Class II commodity is defined as Class I products in slatted wooden crates, solid wood boxed, multiple thickness paperboard cartons, or equivalent combustible packaging material on wood pallets.

Examples of Class II products are: thinly coated fine wire such as radio coil wire on reels or in cartons; incandescent or fluorescent light bulbs; beer or wine up to 20 percent alcohol in wood containers; and Class I products, if any small cartons or small packages placed in ordinary corrugated cartons.

Class III commodity is defined as wood, paper, natural fiber cloth, or products thereof, on wood pallets. Products may contain a limited amount of plastics. Wood dressers with plastic drawer guides, handles, and trim are examples of a commodity with limited amount of plastic.

Examples of Class III products are:

Paper Products. Books, magazines, newspapers, stationery, plastic coated paper food containers, paper or cardboard games, tissue products, rolled paper on side or steel banded on end, and regenerated cellulosics (cellophane).

Leather Products. Shoes, jackets, gloves, and luggage.

Wood Products. Doors, windows, door and window frames, combustible fiberboard, wood cabinets, furniture and other wood products.

/7...

Textiles. Natural fiber upholstered non-plastic furniture, wood or metal furniture with plastic padded and covered arm rests, mattresses without expanded plastic or rubber, absorbent cotton in cartons, natural fiber and viscose yarn thread, and products, and natural fiber clothing or textile products.

Others. Tobacco products in paperboard cartons, non-flammable liquids such as soaps, detergent and bleaches, and non-flammable pharmaceuticals in plastic containers; combustible foods or cereal products, and non-negative producing film packs in sealed metal foil wrappers in paperboard packages.

Class IV commodity is defined in Class I, II and/or III products contained an appreciable amount of plastics in a paperboard carton or Class I, II and/or III products with plastic packaging in paperboard cartons on wood pallets.

Examples of Class IV products are small appliances, typewriters and cameras with plastic parts, plastic backed tapes and synthetic fabrics or clothing. An example of packing material is a metal product in a foamed plastic cocoon in a corrugated carton.

Class IV commodity also includes:

Textiles. Synthetic thread and yarn except viscose, and non-viscose synthetic fabrics or clothing.

Others. Telephone, vinyl floor tile, wood or metal frame upholstered furniture or mattresses with plastic covering and/or padding, and plastic padded metal dashboards or metal bumpers.

DATED at Toronto this 22nd day in the month of October in the year 1992 for authorization #91-8-156 on behalf of:

BUILDING MATERIALS EVALUATION COMMISSION

AUTHORIZATION #91-7-155
BY THE 22 October 1992
BUILDING MATERIALS EVALUATION COMMISSION

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1990, Chapter B.13

AND IN THE MATTER OF the Applicant:

Von Duprin, Inc.
2720 Tobey Drive
Indianapolis, IN
46219

AND AGENT:

Ingersoll Rand Door Hardware Canada Inc.
1076 Lakeshore Road East
Mississauga, Ontario
L5E 1E4

ON THE SUBJECT OF:

CHEXIT all series of CX98 and CX99, these are "controlled exit panic hardware devices" whose operation may be inhibited for a pre-set delay period by a self contained microprocessor based control module while monitoring the use of the door. These are not conventional electromagnetic locking devices however, the use of limitations have some similarities and as a "controlled exit panic hardware device" they have a special electronic locking device with fail safe life safety features.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

.../2

2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter B.13, R.S.O. 1990, Ontario Regulation 413/90 as amended or reenacted shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.

7. The applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization.

8. CHEXIT shall be as reported by Underwriters Laboratories of Canada, File CMS 148, Application No. 7431, 30 September 1991. CHEXIT is similar to panic devices currently listed by Underwriters Laboratories of Canada, and are identical to controlled exit panic devices previously listed by Underwriters Laboratories Inc.

.../3

9. CHEXIT is permitted to be installed on any exit or access to exit door, other than a Group F, Division 1 occupancy or a hotel or exits and access to exits which have combined use of a hotel and any other occupancies where;

   (a) the building is equipped with a fire alarm system conforming to the Code Subsection 3.2.4., and

   (b) the locking device(s) are installed as an ancillary device to the fire alarm system and releases immediately;

      (i) upon activation of the fire alarm signal, or
      (ii) upon activation of a manually operated switch accessible only to authorized personnel, and
      (iii) controls for remote immediate release of door locking devices are located in an area readily available only to authorized personnel, and
      (iv) a legible sign permanently mounted on the door and having the words;

      "EMERGENCY EXIT UNLOCKED BY FIRE ALARM OR BY SECURITY PERSONNEL. PUSH CONTROL BAR UNTIL ALARM SOUNDS. DOOR CAN BE OPENED IN 15 SECONDS", and this lettering shall be at least 25 mm (1 in.) high with a 5 mm (3/16 in.) stroke.

10. CHEXIT is permitted to be installed when also released by a card identifier subject to the time delay of not more than 15 seconds.

11. CHEXIT is also permitted to be installed on doors required for emergency access to floor areas (cross over floors) from exit stair shafts provided there is conformance to all paragraphs of this authorization, and

   (a) in addition there shall be mechanical active trim installed on the exit stair side of the door(s) and be further identified by a permanently mounted legible sign on the stairway side of the door(s) to indicate that the door(s) are openable from the stair side, and

   (b) it shall be possible for a person(s) entering such floor area to have access through unlocked doors within the floor area to at least one other exit.

.../4

12. CHEXIT is permitted to have power supplies from regular and or emergency sources with or without any interruption of those power sources. However, should the power source(s) be removed for whatever reason; these locking devices shall be capable of operating as panic hardware devices with mechanical active trim as/and where required by the Code.

13. Where CHEXIT is used the evacuation of any or part of a building shall be as set out in a posted written policy and procedure in the fire safety plan and shall be compatible to the occupancy of the building.

AUTHORIZATION #91-4-152
BY THE 13 November 1991
BUILDING MATERIALS EVALUATION COMMISSION

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act,
Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Produits Sparbeton Ltee
Case Postale 89 N.D.G.
Montreal, Quebec
H4A 3P4

ON THE SUBJECT OF:

Sparlock, a dry-stacking concrete block system with positive interlocking shear keys in both horizontal and vertical directions. Surface bonding and/or grouting may be used for walls requiring barriers from rain, air and moisture flow penetration and further stabilization and strength. Reinforcement may be added to grouted walls requiring higher or lateral load carrying capacities.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

/2...

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. (a) The applicant of this authorization shall be wholly responsible for the complete discharge of each paragraph of this authorization, also at any time upon a request by any person, show proof with a signed receipt, that a copy of this authorization has been received by the architect or professional engineer responsible for the masonry design and the Chief Building Official and those persons in charge at the site of construction.

   (b) Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter 51, R.S.O. 1980, and the Ontario Regulation 413/90 as amended shall be met. A valid copy of this Authorization shall be attached to the application for building permit and a similar copy shall be posted and maintained on the site of construction with the building permit.

7. Construction under the provisions of Part 9 of the Ontario Building Code may be permitted subject to this authorization and in particular to Paragraphs 9.(a), (b), and (c) but not 9.(d) and (e) of this authorization.

8. Except for construction in the above paragraph 7 which is under Part 9 of the Ontario Building Code, an architect or professional engineer shall be responsible for the masonry design, details and general review during construction of the Sparlock wall system and all construction documents shall be duly sealed, for each use of the system.

3/...

9. The construction, design, details and general review where required shall also be subject to:

   (a) the current evaluation report by CCMC 12268-R, issued 91-07-02, revised 91-07-05, and

   (b) "Design and Construction Guide for Sparlock Concrete Block Masonry Walls", dated January 1991, prepared by Drysdale Engineering and Associates Limited, and

   (c) "Builders Guide to Construction of Sparlock Concrete Block Walls", dated February 1991, prepared by Drysdale Engineering and Associates Limited, and

   (d) Inspection of masonry construction shall be carried out to ensure that construction is consistent with design details and specifications and in compliance with this Authorization, and

   (e) Such inspection shall be carried out by the architect or professional engineer responsible for the masonry wall design or by another person qualified in the inspection of masonry construction and who is responsible to the masonry wall design architect or professional engineer.

10. Site control procedures for protection of climate conditions and installations shall be carefully followed as per manufacturer's recommendations and good construction practice.

RESOLUTION

AMENDMENT TO AUTHORIZATION **B.M.E.C. # 91-03-151**
June 28, 1991

AS AMENDED **July 31, 1997**

WHEREAS pursuant to s.18(4)(b) of the Building Code Act, 1980, the Building Materials Evaluation Commission (the "Commission) issued Authorization # 91-03-151 on June 28, 1991 and amended same on July 31, 1997 (the "Authorization");

AND WHEREAS the Authorization provided that the applicant Hubbert Novus Engineering Inc. be authorized to use a window sprinkler assembly system subject to specific terms and conditions;

AND WHEREAS the holder of the Authorization has requested that the company name and address be changed effective April 12, 2000:

NOW THEREFORE the Commission resolves as follows:

1. Authorization # 91-03-151 be amended by deleting the Applicant name and address and substituting the following:

   "Novus Fire Protection Consulting Ltd.
   60 Baywood Road,
   Rexdale, Ontario
   M9V 3Z3 "

2. Authorization # 91-03-151 as amended hereby, shall continue in full force and effect.

Dated at Toronto this 26th day of October, 2000.

BUILDING MATERIALS EVALUATION COMMISSION

_____
per: Rashmi Nathwani, Chairman

AUTHORIZATION #91-2-150
BY THE 7 May 1991
BUILDING MATERIALS EVALUATION COMMISSION

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act,
Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF the Applicant:

CGC Interiors, Division of CGC Inc.
735 Fourth Line Road
Oakville, Ontario
L6L 5B7

ON THE SUBJECT OF:

DONN Woodloc and/or Woodcor WL-1000 and/or WC-1000 access floor panels; this is a system of modular steel encased particleboard core raised floor panels. To be used in any buildings, generally but not limited to computer rooms and offices where noncombustible construction is required.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

/2...

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter 51, R.S.O. 1980, Ontario Regulation 413/90 as amended or reenacted shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.

7. The applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization and the subject matter shall conform to the manufacturer's published installation instructions.

8. These access floor panels shall be currently U.L.C. listed as class A with a flame spread (GWL) of 5 or less and a smoke development of 15 or less, when tested to CAN4-S102.2M and ASTM-E84, floor coverings if any is not included.

9. These access floor panels shall be constructed of 25.4 mm (1 inch) thick premium grade solid core particleboard only and completely encased in not more than 24 gauge sheet steel on all sides, ends and/or cut edges of any kind. These may be used as a combustible finished flooring element in buildings required by the Code to be noncombustible construction.

10. The basic access floor panel is with the encased steel as a finished top whereupon the top is typically covered with carpet tile in the final application or a plastic laminate where static electricity needs to be minimized. Finished floor coverings shall comply to the Code.

/3...

11. These access floor panels may be installed without firestopping and at any height recommended by the manufacturer. However the support shall be on a noncombustible structural floor and grid system of metal understructure with stringers and adjustable pedestals designed to meet or exceed the structural capacity for floor loading as per Code requirements.

12. The space below these access panels shall be used for the sole purpose of services and shall not be used for storage space or any kind of occupancy.

13. Where any access floor panel is cut during field installation the exposed edge(s) shall be installed only when the particleboard core is completely encapsulated by;

    (a) the metal which forms the bottom of the access floor panel is bent up at a right angle, or

    (b) an overlapping "U" shaped channel of the same gauge as the access floor panel is fitted and nailed over the exposed edge(s).

AUTHORIZATION # 91-1-149
BY THE 24 April 1991
BUILDING MATERIALS EVALUATION COMMISSION

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF the Applicant:

Superack
Cresswell Roll Forming Inc.
2575 Le Corbusier
Laval, Quebec
H7S 2E8

ON THE SUBJECT OF:

A self contained structural shelf and rack storage facility within a building, having one or more solid intermediate deck or walkway levels for personnel access.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

/2...

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter 51, R.S.O. 1980, Ontario Regulation 413/90 as amended or reenacted shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.

7. The applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization.

8. (1)(a) Deck level shall be a continuous horizontal construction membrane through the entire shelf rack facility, and

   (b) Walkway level shall be the horizontal construction membrane between the solid shelving installed on the same plane, and

   (c) Level area means the greatest horizontal area of the shelf and rack storage facility.

   (2)(a) Deck or walkway levels shall be constructed of solid closed surface steel planking or,

   (b) Steel roof decking with minimum 16 mm (5/8 in.) maximum 19 mm (3/4 in.) thick tongue and groove solid wood or plywood.

3/...

(3) The structural design of the entire shelf and rack storage facility support system including posts, beams, decks, walkways, connections, and their supports such as concrete slabs, separate foundations or similar shall be in accordance with Ontario Building Code Part 4 requirements.

(4) Detailed drawings for each installation shall be stamped by a member of the Association of Professional Engineers of Ontario Certifying conformity with this authorization. These drawings shall also detail an appropriate sign to indicate the maximum permissible design loads for each rack storage system and such sign shall be permanently fixed to the building interior and displayed in a prominent unobstructed viewing position. These drawings shall be submitted for a building permit in the usual way.

9. An approved wet pipe sprinkler system shall be designed and installed for the entire shelf and rack storage facility including the top level and shall be in conformance with the current N.F.P.A. 13-1989 and N.F.P.A. 231C-1987 as amended or the appropriate N.F.P.A. Standard for the most severe hazard that it is exposed too. Sprinklers are not required where only Class I commodities as defined in the following paragraph 10.(2) are stored.

10. (1)(a) The entire shelf and rack storage dimension shall be limited to Table 10.A. based on the type of commodity stored as defined in paragraph 10.(2), (3), (4) and (5). Excerpts of N.F.P.A.231C-1987 as amended are outlined in the attached appendix -"A" and these shall apply to this authorization.

(b) A firewall as defined in the Ontario Building Code may divide the confining building into two or more separate buildings, wherein, one of the following classes may be assigned to each of the separate buildings.

(2) Class I commodities are non-combustible products, as defined in the current N.F.P.A. 231C-1987 as amended; or

(3) Class II, III and IV commodities are combustible products, as defined in the current N.F.P.A. 231C-1987 as amended; or

4/...

(4) Class SS commodities are special hazard products not covered in paragraph 10.(2), (3) or (5);

(5) Aerosol products composed of greater than 55% non-water miscible flammable products including lubricants; paints; oil-based anti-perspirants, furniture polish, insecticides and automotive products, are to be stored only:

(a) On the ground floor of the racking system, and

(b) In a designed area separated by,

(i) a vertical 1 hr. fire separation, or

(ii) a vertical chain link fencing not lighter than 9 ga. steel wire made into a 50 mm (2 in.) diamond mesh, located not less than 2.5 m (8 ft.) from all other storage where the adjacent storage is more hazardous than Class IV commodity, or

(iii) a method acceptable to the chief Fire Official, and

(c) In the designed area protected by an in-rack sprinkler system. The sprinkler demand shall be a minimum of 1.9 L/s (30 g.p.m. (U.S.) discharge per head with 74° (165°F) heads or less and shall be 2.5 m (8 ft.) apart maximum. This design shall be further based on the operation of the hydraulically most remote;

(i) 8 sprinklers if one level, or

(ii) 6 sprinklers on each level if only two levels, or

(iii) 6 sprinklers on each of the top three levels if three or more levels.

(d) Single row racks shall require only the inrack sprinklers, whereas, double row racks shall require sprinklers in longitudinal flue as well as on face sprinklers which shall be staggered on opposite sides of racks.

5/...

11. A plain legible sign or signs, with contrasting letters and titled "NOTICE", shall describe the above Class and requirements for each shelf and rack storage facility. This sign or signs shall be permanently mounted, at or near the main water supply for the sprinkler system and shall be maintained at all times. For Class I commodities this "NOTICE" shall be permanently mounted, at or near the main entrance to this shelf and rack storage facility.

12. (1) Exits shall be separated from the rack storage facilities with fire separations, having a fire resistance rating conforming to the current Subsection of the Ontario Building Code; and

    (2) the exit stairs shafts shall conform to all requirements for exits as stated in the current Section of the Ontario Building Code; and

    (3) no fewer than 2 exits are required from each deck or walkway level, except where there are not more than two levels above the building floor, and the level area does not exceed 139 m^2 (1500 sq. ft.), two means of egress shall be required without the requirements of fire separation for exit, and

    (4) any opening in a deck for egress, convenience stairs, ramps or chutes, shall be protected by smoke baffles and close spaced sprinklers as per paragraph 9 of this authorization.

13. The maximum travel distance to exits shall not exceed 46 m (150 ft.) and to a fire extinguisher shall not exceed 23 m (75 ft.).

14. (1) Where a shelf and rack storage facility contains two or more deck or walkway levels and where each level is greater than 239 m^2 (2,500 sq. ft.), a smoke detection system shall be installed on the underside of each deck level on which a walkway or aisle is located, and

    (2) the number of system smoke detectors installed shall be in accordance to CAN4-S524-M1986 as amended.

15. The clear aisle width shall not be less than 760 mm (30 inches). This clearance is for access to exits and shall not be used for conveyors, trolleys, tracks or any other similar mode of product transportation within an aisle or walkway.

6/...

16. This shelf and rack storage facility is not permitted in F-1 occupancy as defined in the Ontario Building Code.

17. The shelf and rack storage facilities shall be used only for storage and not for manufacturing, production, wrapping or assembly.

18. The shelf and rack storage facilities shall be accessible to employees only and shall be designated, signed and posted as a "NO SMOKING" area conforming to the current Subsection of the Ontario Fire Code.

19. (1) In building areas containing shelf and rack storage facilities exceeding 4,645 m^2 (50,000 sq. ft.) and except for storage of Class I commodities as defined in paragraph 10 of this document, manually operated smoke vents shall be installed in accordance with the current N.F.P.A. 204, and

(2) The smoke vent opening shall be not less than 1.2 m by 1.8 m (4 ft. by 6 ft.) and the openings shall be located not more than 23 m (75 ft.) from an exterior wall and not more than 46 m (150 ft.) from each other.

20. (1) A standpipe and hose system shall be installed in accordance with the Ontario Building Code where the shelf and rack storage facility height is more than 3 levels including floor level or 14 m (45 ft.) in height.

(2) Where a standpipe and hose system is required, 63.5 mm (2 1/2 in.) diameter hose connections shall be provided, except that 38.1 mm (1 1/2 in.) hose connections are permitted in the shelf and rack storage facilities which:

(a) neither exceed 6 levels including the floor level, and

(b) do not exceed 3,716 m^2 (40,000 sq. ft.) in the sum total of all levels of the shelf and rack storage facility.

7/...

APPENDIX - "A"
Forming Part of Paragraph 10. of this Authorization

Commodity Classifications:

The following guide for commodity classification applies specifically to rack storage and is not related to any other method of classifications of materials.

Class I commodity is defined as essentially non-combustible product on wood pallets, or in ordinary corrugated cartons with or without single thickness dividers or in ordinary paper wrappings, all on wood pallets. Such products may have a negligible amount of plastic trim, such as knobs or handles.

Examples or Class I products are:

Metal Products. Metal desks with plastic tops and trim, electrical coils, electrical devices in their metal enclosures, pots and pans, electrical motors, dry cell batteries, metal parts, empty cans, stoves, washers, dryers and metal cabinets.

Glass Products. Glass bottles, empty or filled with non-combustible liquids, mirrors.

Foods. Foods in non-combustible containers; frozen foods; meat, fresh fruits and vegetables in non-plastic trays or containers; dairy products in nonwax-coated paper containers, beer or wine up to 20 percent alcohol, in metal, ceramic or glass containers.

Others. Oil-filled and other types of distribution transformers, cement in bags, electrical insulators, gypsum board, inert pigments, dry insecticides.

Class II commodity is defined as Class I products in slatted wooden crates, solid wood boxed, multiple thickness paperboard cartons, or equivalent combustible packaging material on wood pallets.

Examples of Class II products are: thinly coated fine wire such as radio coil wire on reels or in cartons; incandescent or fluorescent light bulbs; beer or wine up to 20 percent alcohol in wood containers; and class I products, if any small cartons or small packages placed in ordinary corrugated cartons.

Class III commodity is defined as wood, paper, natural fiber cloth, or products thereof, on wood pallets. Products may contain a limited amount of plastics. Wood dressers with plastic drawer guides, handles, and trim are examples of a commodity with limited amount of plastic.

8/...

APPENDIX - "A" Continued

Examples of Class III products are:

Paper Products. Books, magazines, newspapers, stationery, plastic coated paper food containers, paper or cardboard games, tissue products, rolled paper on side or steel banded on end, and regenerated cellulosics (cellophane).

Leather Products. Shoes, jackets, gloves, and luggage.

Wood Products. Doors, windows, door and window frames, combustible fiberboard, wood cabinets, furniture and other wood products.

Textiles. Natural fiber upholstered non-plastic furniture, wood or metal furniture with plastic padded and covered arm rests, mattresses without expanded plastic or rubber, absorbent cotton in cartons, natural fiber and viscose yarn thread, and products, and natural fiber clothing or textile products.

Others. Tobacco products in paperboard cartons, non-flammable liquids such as soaps, detergent and bleaches, and non-flammable pharmaceuticals in plastic containers; combustible foods or cereal products, and non-negative producing film packs in sealed metal foil wrappers in paperboard packages.

Class IV commodity is defined in Class I, II and/or III products contained an appreciable amount of plastics in a paperboard carton or Class I, II and/or III products with plastic packaging in paperboard cartons on wood pallets.

Examples of Class IV products are small appliances, typewriters and cameras with plastic parts, plastic backed tapes and synthetic fabrics or clothing. An example of packing material is a metal product in a foamed plastic cocoon in a corrugated carton.

Class IV commodity also includes:

Textiles. Synthetic thread and yarn except viscose, and non-viscose synthetic fabrics or clothing.

Others. Telephone, vinyl floor tile, wood or metal frame upholstered furniture or mattresses with plastic covering and/or padding, and plastic padded metal dashboards or metal bumpers.

BUILDING MATERIALS EVALUATION COMMISSION

_____

AUTHORIZATION #90-20-148
BY THE 20 February 1991
BUILDING MATERIALS EVALUATION COMMISSION

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act,
Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF the Applicant:

Tate Access Floors Inc.
960 Kamato Road
Mississauga, Ontario
L4W 2R6

ON THE SUBJECT OF:

Series 600 access floor panels; this is a system of modular steel encased particleboard core raised floor panels. To be used in any buildings, generally but not limited to computer rooms and offices where noncombustible construction is required.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

/2...

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter 51, R.S.O. 1980, Ontario Regulation 413/90 as amended or reenacted shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.

7. The applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization and the subject matter shall conform to the manufacturer's published installation instructions.

8. These access floor panels shall be currently U.L.C. listed as class A with a flame spread (GWL) of 5 or less and a smoke development of 15 or less, when tested to CAN4-S102.2M and ASTM-E84, floor coverings if any is not included.

9. These access floor panels shall be constructed of 25.4 mm (1 inch) thick premium grade solid core particleboard only and completely encased in not more than 24 gauge sheet steel on all sides, ends and/or cut edges of any kind. These may be used as a combustible finished flooring element in buildings required by the Code to be noncombustible construction.

10. The basic access floor panel is with the encased steel as a finished top whereupon the top is typically covered with carpet tile in the final application or a plastic laminate where static electricity needs to be minimized. Finished floor coverings shall comply to the Code.

/3...

11. These access floor panels may be installed without firestopping and at any height recommended by the manufacturer. However the support shall be on a noncombustible structural floor and grid system of metal understructure with stringers and adjustable pedestals designed to meet or exceed the structural capacity for floor loading as per Code requirements.

12. The space below these access panels shall be used for the sole purpose of services and shall not be used for storage space or any kind of occupancy.

13. Where any access floor panel is cut during field installation the exposed edge(s) shall be installed only when the particleboard core is completely encapsulated by;

    (a) the metal which forms the bottom of the access floor panel is bent up at a right angle, or

    (b) an overlapping "U" shaped channel of the same gauge as the access floor panel is fitted and nailed over the exposed edge(s).

AUTHORIZATION #90-19-147
BY THE 20 February 1991
BUILDING MATERIALS EVALUATION COMMISSION

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF the Applicant:

Pabco, A Division of Fibreboard Corp.
1110 - 16 Road
Fruita, Colorado, U.S.A.
81521

ON THE SUBJECT OF:

Pabco grease duct enclosures for insulation and fireproofing system; for commercial/institutional kitchen exhaust metal duct systems, to protect adjacent combustibles from ignition in the event of a grease fire within the duct.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

/2...

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter 51, R.S.O. 1980, Ontario Regulation 413/90 as amended or reenacted shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.

7. The applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization.

8. Pabco Super Firetemp "L" and/or "M" is an asbestos free inorganic mineral fiber press molded xonotlite calcium silicate insulation board and is noncombustible when tested in accordance with Standard CAN 4-S114. Each board or bundle of boards shall be labelled as listed by Underwriters Laboratories of Canada (ULC).

9. The maximum dimensions of the kitchen exhaust metal duct shall be 1220 mm x 1220 mm (48 in. x 48 in.) and the Firetemp board shall be the minimum thickness of 57 mm (2¼ in.) as per the ULC label/listing.

10. Where the Firetemp enclosure is constructed/installed and passes through combustible or noncombustible floors, walls or partitions the clearance may be;

    (a) zero between the kitchen exhaust duct and the inner face of the Firetemp, and

    (b) zero between the outer face of the Firetemp and the combustible or noncombustible construction, and

3/...

(c) installed in conformance with this authorization, the manufacturer's recommended installation instructions, and where applicable the NFPA 96-1987 or latest amended version.

11. Where a building assembly is required to have a fire resistance rating the following may be used for grease duct enclosures;

(a) Firetemp "L" 57 mm (2¼ in.) thick for 1 hour rated assemblies and/or

(b) Firetemp "M" 76 mm (3 in.) thick for 2 hour rated assemblies.

12. (a) Horizontal duct Firetemp enclosures shall be continuous and adequately supported from a conventional trapeze hanger arrangement at a maximum of 1.22 m (4 ft.) centre to centre apart and anchored to the building structure, and

(b) vertical duct Firetemp enclosures shall be continuous and adequately supported at the bottom base of such runs and at each story with metal collars attached to each side of the duct, and

(c) provided that the building structure, hangers, anchors and collars are capable of supporting the weight of such a load and compliance is made to the manufacturer's recommended installation instructions.

13. All joints between the Firetemp board(s) shall be cemented by buttering both mating surfaces with a minimum of 3.15 mm (1/8 in.) thick Pabco Super Calstick adhesive immediately before joining the boards attached one to the other. In addition where Firetemp boards meet at right angles; fastening shall be provided with minimum of 127 mm (5 in.) type S dry wall screws at a maximum of 203 mm (8 in.) on centres. The adhesive shall be kept from freezing until after it dries.

14. Firetemp shall be in accordance with manufacturer's recommended installation instructions for;

(a) protection from high humidy areas and freeze\thaw conditions, and

(b) duct cleanout access covers, and

(c) clearance between the Firetemp and the metal duct and at the end of all straight runs to allow for expansion of the metal duct within the enclosure, and

4/...

(d) protection of the enclosures when used in an exposed area that may be subject to impact to avoid incidental damage to the enclosure system.

15. Applicators shall be instructed by Pabco and/or their agent on the manufacturer's recommended installation instructions and Pabco shall issue identification cards to only those applicators who have been instructed.

BMEC-90-16-144

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

CONCRETE ROOF TYLE SYSTEM

Date of Authorization: February 20, 1991

AMENDED: October 22, 1992

BMEC REFERENCE: BMEC-90-16-144

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Vande Hey-Raleigh Manufacturing, Inc.
1565 Bohn Drive
PO BOX 263
Little Chute, Wisconsin
USA 54140

ON THE SUBJECT OF:

Concrete Roof Tile System, in styles namely: Riviera, Spanish, Cotswold, Shalke and Slate to be used on pitched roofs of building structures.

THE COMMISSION HEREBY AUTHORIZES to the Applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the Applicant or the Agent, at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Ontario Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter 51, R.S.O. 1980, Ontario Regulation 413/90 as amended shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.
7. The applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization.
8. (1) All aspects of the Ontario Building Code, as applicable, shall be complied with for; new and existing roof support framing, rafters, trusses, sheathing, 43 lb. felt or Typar 30 underlayment, flashings, and to the recommendations of the manufacturer and his agent. Should there be a conflict the most rigid requirement shall be met.

   (2) For Part 9 buildings where Ontario Building Code design tables are used, the roof design load shall be increased to allow for the weight of the various types of roof tiles.

9. For existing roofs the structural adequacy of the roof framing and the supporting walls shall be certified by a Professional Engineer registered in the Province of Ontario.

DATED at Toronto this 22nd day in the month of October in the year 1992 for amended Authorization #90-16-144 on behalf of:

BUILDING MATERIALS EVALUATION COMMISSION

BMEC-90-15-143

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

SHELF AND STORAGE RACK

Date of Authorization: February 20, 1991

BMEC REFERENCE: BMEC-90-15-143

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Metalware Corporation
5735 Place Turcot
Montreal, Quebec
H4C 1V9

ON THE SUBJECT OF:

A self-contained structural shelf and rack storage facility within a building, having one or more solid intermediate deck or walkway levels for personnel access.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for

termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter 51, R.S.O. 1980, Ontario Regulation 413/90 as amended or re-enacted shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.
7. The applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization.
8. (1)(a) Deck level shall be a continuous horizontal construction membrane through the entire shelf rack facility, and

   (b) Walkway level shall be the horizontal construction membrane between the solid shelving installed on the same plane, and

   (c) Level area means the greatest horizontal area of the shelf and rack storage facility.

   (2)(a) Deck or walkway levels shall be constructed of solid closed surface steel planking or,

   (b) Steel roof decking with minimum 16 mm (5/8 in) maximum 19 mm (3/4 in) thick tongue and groove solid wood or plywood.

   (3) The structural design of the entire shelf and rack storage facility support system including posts, beams, decks, walkways, connections, and their supports such as concrete slabs, separate foundations or similar shall be in accordance with Ontario Building Code Part 4 requirements.

   (4) Detailed drawings for each installation shall be stamped by a member of the Association of Professional Engineers of Ontario certifying conformity with this authorization. These drawings shall also detail an appropriate sign to indicate the maximum permissible design loads for each rack storage system and such sign shall be permanently fixed to the building interior and displayed in a prominent unobstructed viewing position. These drawings shall be submitted for a building permit in the usual way.

9. An approved wet pipe sprinkler system shall be designed and installed for the entire shelf and rack storage facility including the top level and shall be in conformance with the current N.F.P.A. 13-1989 and N.F.P.A. 231C-1980 as amended or the appropriate N.F.P.A. Standard for the most severe hazard that it is exposed to. Sprinklers are not required where only Class I commodities as defined in the following paragraph 10.(2) are stored.
10. (1)(a) The entire shelf and rack storage dimension shall be limited to Table 10.A. based on the type of commodity stored as defined in paragraph 10.(2), (3), (4) and (5). Excerpts of N.F.P.A. 231C-1980 as amended are outlined in the attached Appendix "A" and these shall apply to this authorization.

    (b) A firewall as defined in the Ontario Building Code may divide the confining building into two or more separate buildings, wherein, one of the following classes may be assigned to each of the separate buildings.

    (2) Class I commodities are non-combustible products, as defined in the current N.F.P.A. 231C-1980 as amended; or

    (3) Class II, III and IV commodities are combustible products, as defined in the current N.F.P.A. 231C-1980 as amended; or

    (4) Class SS commodities are special hazard products not covered in paragraph 10.(2), (3) or (5);

    (5) Aerosol products composed of greater than 55% non-water miscible flammable products including lubricants; paints; oil-based anti-perspirants, furniture polish, insecticides and automotive products, are to be stored only:

    (a) On the ground floor of the racking system, and

    (b) In a designed area separated by,

    (i) a vertical 1 hr. fire separation, or

    (ii) a vertical chain link fencing not lighter than 9 ga. steel wire made into a 50 mm (2 in) diamond mesh, located not less than 2.5 m (8 ft) from all other storage where the adjacent storage is more hazardous than Class IV commodity, or

    (iii) a method acceptable to the chief Fire Official, and

    (c) In the designed area protected by an in-rack sprinkler system. The sprinkler demand shall be a minimum of 1.9 L/s (30 g.p.m. (U.S.)) discharge per head with 74C (165F) heads or less and shall be 2.5 m (8 ft) apart maximum. This design shall be further based on the operation of the hydraulically most remote;

    (i) 8 sprinklers if one level, or

(ii) 6 sprinklers on each level if only two levels, or

(iii) 6 sprinklers on each of the top three levels if three or more levels.

(d) Single row racks shall require only the in-rack sprinklers, whereas, double row racks shall require sprinklers in longitudinal flue as well as on face sprinklers which shall be staggered on opposite sides of racks.

TABLE 10.A.

Forming Part of Paragraph 10

Shelf and Rack Storage Facility				
Commodity Classes	**Maximum Height (1)**		**Maximum Area (2)**	
	m	ft	m^2	ft^2
Class I	6 12 18	20 40 60	unlimited 20,070 13,380	unlimited 216,000 144,000
Class II, III, AND IV	6 12 18	20 40 60	8,920 4,460 2,230	96,000 48,000 24,000
Class SS	6 12 18	20 40 60	3,340 1,670 1,110	36,000 18,000 12,000
COLUMN 1	2	3	4	5

NOTES:

(1) The maximum height shall be from the floor supporting the shelf and rack system to the topmost portion of the racking system.

(2) The maximum area is the sum total of all levels of the shelf and rack system as well as the floor.

11. A plain legible sign or signs, with contrasting letters and titled "NOTICE", shall describe the above Class and requirements for each shelf and rack storage facility. This sign or signs shall be permanently mounted, at or near the main water supply for the sprinkler system and shall be maintained at all times. For Class I commodities this "NOTICE" shall be permanently mounted, at or near the main entrance to this shelf and rack storage facility.
12. (1) Exits shall be separated from the rack storage facilities with fire separations, having a fire-resistance rating conforming to the current Subsection of the Ontario Building Code; and

(2) the exit stairs shafts shall conform to all requirements for exits as stated in the current Section of the Ontario Building Code; and

(3) no fewer than 2 exits are required from each deck or walkway level, except where there are not more than two levels above the building floor, and the level area does not exceed 139 m (1500 ft), two means of egress shall be required without the requirements of fire separation for exit, and

(4) any opening in a deck for egress, convenience stairs, ramps or chutes, shall be protected by smoke baffles and close spaced sprinklers as per paragraph 9 of this authorization.

13. The maximum travel distance to exits shall not exceed 46 m (150 ft) and to a fire extinguisher shall not exceed 23 m (75 ft).
14. (1) Where a shelf and rack storage facility contains two or more deck or walkway levels and where each level is greater than 239 m (2,500 ft), a smoke detection system shall be installed on the underside of each deck level on which a walkway or aisle is located, and

    (2) the number of system smoke detectors installed shall be in accordance to CAN4-S524-M1982 as amended.

15. The clear aisle width shall not be less than 760 mm (30 inches). This clearance is for access to exits and shall not be used for conveyors, trolleys, tracks or any other similar mode of product transportation within an aisle or walkway.
16. This shelf and rack storage facility is not permitted in F-1 occupancy as defined in the Ontario Building Code.
17. The shelf and rack storage facilities shall be used only for storage and not for manufacturing, production, wrapping or assembly.
18. The shelf and rack storage facilities shall be accessible to employees only and shall be designated, signed and posted as a "NO SMOKING" area conforming to the current Subsection of the Ontario Fire Code.
19. (1) In building areas containing shelf and rack storage facilities exceeding 4,645 m (50,000 ft) and except for storage of Class I commodities as defined in paragraph 10 of this document, manually operated smoke vents shall be installed in accordance with the current N.F.P.A. 204, and

    (2) The smoke vent opening shall be not less than 1.2 m by 1.8 m (4 ft by 6 ft) and the openings shall be located not more than 23 m (75 ft) from an exterior wall and not more than 46 m (150 ft) from each other.

20. (1) A standpipe and hose system shall be installed in accordance with the Ontario Building Code where the shelf and rack storage facility height is more than 3 levels including floor level or 14 m (45 ft) in height.

(2) Where a standpipe and hose system is required, 63.5 mm (2-1/2 in) diameter hose connections shall be provided, except that 38.1 mm (1-1/2 in) hose connections are permitted in the shelf and rack storage facilities which:

(a) neither exceed 6 levels including the floor level, and

(b) do not exceed 3,716 m (40,000 ft) in the sum total of all levels of the shelf and rack storage facility.

APPENDIX "A"
Forming Part of Paragraph 10 of this Authorization

Commodity Classifications:

The following guide for commodity classification applies specifically to rack storage and is not related to any other method of classifications of materials.

Class I commodity is defined as essentially non-combustible product on wood pallets, or in ordinary corrugated cartons with or without single thickness dividers or in ordinary paper wrappings, all on wood pallets. Such products may have a negligible amount of plastic trim, such as knobs or handles.

Examples or Class I products are:

Metal Products. Metal desks with plastic tops and trim, electrical coils, electrical devices in their metal enclosures, pots and pans, electrical motors, dry cell batteries, metal parts, empty cans, stoves, washers, dryers and metal cabinets.

Glass Products. Glass bottles, empty or filled with non-combustible liquids, mirrors.

Foods. Foods in non-combustible containers; frozen foods; meat, fresh fruits and vegetables in non-plastic trays or containers; dairy products in nonwax-coated paper containers, beer or wine up to 20 percent alcohol, in metal, ceramic or glass containers.

Others. Oil-filled and other types of distribution transformers, cement in bags, electrical insulators, gypsum board, inert pigments, dry insecticides.

Class II commodity is defined as Class I products in slatted wooden crates, solid wood boxed, multiple thickness paperboard cartons, or equivalent combustible packaging material on wood pallets.

Examples of Class II products are: thinly coated fine wire such as radio coil wire on reels or in cartons; incandescent or fluorescent light bulbs; beer or wine up to 20 percent alcohol in wood containers; and Class I products, if any small cartons or small packages placed in ordinary corrugated cartons.

Class III commodity is defined as wood, paper, natural fiber cloth, or products thereof, on wood pallets. Products may contain a limited amount of plastics. Wood dressers with plastic drawer guides, handles, and trim are examples of a commodity with limited amount of plastic.

Examples of Class III products are:

Paper Products. Books, magazines, newspapers, stationery, plastic coated paper food containers, paper or cardboard games, tissue products, rolled paper on side or steel banded on end, and regenerated cellulosics (cellophane).

Leather Products. Shoes, jackets, gloves, and luggage.

Wood Products. Doors, windows, door and window frames, combustible fiberboard, wood cabinets, furniture and other wood products.

Textiles. Natural fiber upholstered non-plastic furniture, wood or metal furniture with plastic padded and covered arm rests, mattresses without expanded plastic or rubber, absorbent cotton in cartons, natural fiber and viscose yarn thread, and products, and natural fiber clothing or textile products.

Others. Tobacco products in paperboard cartons, non-flammable liquids such as soaps, detergent and bleaches, and non-flammable pharmaceuticals in plastic containers; combustible foods or cereal products, and non-negative producing film packs in sealed metal foil wrappers in paperboard packages.

Class IV commodity is defined in Class I, II and/or III products contained an appreciable amount of plastics in a paperboard carton or Class I, II and/or III products with plastic packaging in paperboard cartons on wood pallets.

Examples of Class IV products are small appliances, typewriters and cameras with plastic parts, plastic backed tapes and synthetic fabrics or clothing. An example of packing material is a metal product in a foamed plastic cocoon in a corrugated carton.

Class IV commodity also includes:

Textiles. Synthetic thread and yarn except viscose, and non-viscose synthetic fabrics or clothing.

Others. Telephone, vinyl floor tile, wood or metal frame upholstered furniture or mattresses with plastic covering and/or padding, and plastic padded metal dashboards or metal bumpers.

DATED at Toronto this 20th day in the month of FEBRUARY in the year 1991 for Authorization #90-15-143 on behalf of:

BUILDING MATERIALS EVALUATION COMMISSION

AUTHORIZATION #90-14-142
BY THE 20 February 1991
BUILDING MATERIALS EVALUATION COMMISSION

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF the Applicant:

A.S.P. Access Floors Inc.
1081 South Service Road
Oakville, Ontario
L6L 6K3

ON THE SUBJECT OF:

A.S.P. #250 access floor panels; this is a system of modular steel encased particleboard core raised floor panels. To be used in any buildings, generally but not limited to computer rooms and offices where noncombustible construction is required.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

/2...

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter 51, R.S.O. 1980, Ontario Regulation 413/90 as amended or reenacted shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.

7. The applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization and the subject matter shall conform to the manufacturer's published installation instructions.

8. These access floor panels shall be currently U.L.C. listed as class A with a flame spread (GWL) of 5 or less and a smoke development of 15 or less, when tested to CAN4-S102.2M and ASTM-E84, floor coverings if any is not included.

9. These access floor panels shall be constructed of 25.4 mm (1 inch) thick premium grade solid core particleboard only and completely encased in not more than 24 gauge sheet steel on all sides, ends and/or cut edges of any kind. These may be used as a combustible finished flooring element in buildings required by the Code to be noncombustible construction.

10. The basic access floor panel is with the encased steel as a finished top whereupon the top is typically covered with carpet tile in the final application or a plastic laminate where static electricity needs to be minimized. Finished floor coverings shall comply to the Code.

/3...

11. These access floor panels may be installed without firestopping and at any height recommended by the manufacturer. However the support shall be on a noncombustible structural floor and grid system of metal understructure with stringers and adjustable pedestals designed to meet or exceed the structural capacity for floor loading as per Code requirements.

12. The space below these access panels shall be used for the sole purpose of services and shall not be used for storage space or any kind of occupancy.

13. Where any access floor panel is cut during field installation the exposed edge(s) shall be installed only when the particleboard core is completely encapsulated by;

    (a) the metal which forms the bottom of the access floor panel is bent up at a right angle, or

    (b) an overlapping "U" shaped channel of the same gauge as the access floor panel is fitted and nailed over the exposed edge(s).

BMEC-90-13-141

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

WINDOW SPRINKLER ASSEMBLY

Date of Authorization: October 29, 1990

BMEC REFERENCE: BMEC-90-13-141

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

H.H. Angus & Associates Ltd.
1127 Leslie Street
Don Mills, Ontario
M3C 2J6

ON THE SUBJECT OF:

A window sprinkler assembly system to provide a two hour fire-resistance rated separation in a wall to consist of tempered or heat strengthened glass fixed in a non-openable hollow metal steel frame or extruded aluminum frame and a special sidewall window sprinkler with quick response action.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials,

technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. This window sprinkler assembly system shall be designed, engineered, inspected and verified by a fire protection Professional Engineer (authorized in Ontario) and a document of certification by the Professional Engineer with stamp shall be forwarded to the Chief Building Official and the Building Owner(s).
7. The sprinkler system shall be installed and tested in accordance with N.F.P.A. 13 as a wet pipe system and maintained in accordance with Section 6.5 (sprinkler) of the Ontario Fire Code.
8. The special designed sprinkler head shall be designated as a horizontal sidewall window nozzle, Grinnell Canada Fire Protection Company Limited model FR-1/Q-60, 12.7 mm (1/2 in) orifice, 74C (165F) activation temperature quick response link. The optimum position of the sprinkler head shall be as determined by the tests submitted by National Research Council Canada.
9. The interior glazing shall consist of one sheet of fixed non-operable tempered or heat strengthened glass installed in a hollow metal steel frame 1.35 mm (16 gauge) minimum thickness or extruded aluminum 1.8 mm (1/16 in) minimum thickness. The maximum glazing shall be 2134 mm (7 ft) wide by 2844 mm (9 ft 4 in) high and minimum 6 mm (1/4 in) thick.
10. (1) This window sprinkler system may be used in either a sprinklered or unsprinklered building to protect non-openable window openings to a maximum of 2 hr. fire-resistance rating provided,

    (a) in a exposing building face or exterior spatial separation the window sprinkler is installed on the interior side of the window, or

    (b) in an interior fire separation the window sprinkler is installed on both sides of the window in the fire separation.

11. Interior or exterior installations may be made in all types of occupancies except Group F, Division 1 and shall not be used in a firewall. Should the system be located in a loadbearing wall, all loadbearing components shall be protected independently of this window sprinkler assembly system.
12. This window sprinkler system shall not be used in exits as defined in the Ontario Building Code.

13. This horizontal sidewall window sprinkler system shall be served by either a separate riser or separate cross main independent of any regular sprinkler or standpipe system serving the floor area.
14. Separate flow switches or alarm check valves and supervised control valves and each fire compartment on each system shall be electrically supervised and indicated separately at the fire/sprinkler alarm annunciator panel.
15. Where the water supply is from a standpipe system conforming to the Code, the siamese connection shall be labelled as per the standard except for this dual purpose which shall read "STANDPIPE AND WINDOW SPRINKLERS".
16. A noncombustible sign legibly printed in not less than 12.7 mm (1/2 in) block letters with contrasting white background and red letters shall be permanently mounted and maintained beside the main water supply source to this window sprinkler assembly system to indicate:

W A R N I N G

SPECIAL SPRINKLER HEADS ON THIS SYSTEM ARE AN INTEGRAL PART OF WINDOW FIRE SEPARATION. THIS WATER SUPPLY MAY ONLY BE SHUT OFF AFTER ALL THE PROPER AUTHORITIES HAVE RECEIVED NOTICE IN WRITING.

DATED at Toronto this 29th day in the month of OCTOBER in the year 1990 for Authorization #90-13-141 amended on behalf of:

BUILDING MATERIALS EVALUATION COMMISSION

BMEC-90-12-140

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

SHELF AND RACK STORAGE

Date of Authorization: September 19, 1990

AMENDED:

BMEC REFERENCE: BMEC-90-12-140

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Store-Rite Systems Inc.
6908 Invader Crescent
Mississauga, Ontario
L5T 2B5

ON THE SUBJECT OF:

A self-contained structural shelf and rack storage facility within a building, having one or more solid intermediate deck or walkway levels for personnel access.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials,

technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. (1)(a) Deck level shall be a continuous horizontal construction membrane through the entire shelf rack facility, and

   (b) Walkway level shall be the horizontal construction membrane between the solid shelving installed on the same plane, and

   (c) Level area means the greatest horizontal area of the shelf and rack storage facility.

   (2)(a) Deck or walkway levels shall be constructed of solid closed surface steel planking or,

   (b) Steel roof decking with minimum 16 mm (5/8 in) maximum 19 mm (3/4 in) thick tongue and groove solid wood or plywood.

   (3) The structural design of the entire shelf and rack storage facility support system including posts, beams, decks, walkways, connections, and their supports such as concrete slabs, separate foundations or similar shall be in accordance with Ontario Building Code Part 4 requirements.

   (4) Detailed drawings for each installation shall be stamped by a member of the Association of Professional Engineers of Ontario certifying conformity with this authorization. These drawings shall also detail an appropriate sign to indicate the maximum permissible design loads for each rack storage system and such sign shall be permanently fixed to the building interior and displayed in a prominent unobstructed viewing position. These drawings shall be submitted for a building permit in the usual way.

7. An approved wet pipe sprinkler system shall be designed and installed for the entire shelf and rack storage facility including the top level and shall be in conformance with N.F.P.A. 13-1983, and N.F.P.A. 231C-1980 or the appropriate N.F.P.A. Standard for the most severe hazard that it is exposed to. Sprinklers are not required where only Class I commodities as defined in the following paragraph 8.(2) are stored.

8. (1)(a) The entire shelf and rack storage dimension shall be limited to Table 8.A. based on the type of commodity stored as defined in paragraph 8.(2), (3), (4) and (5). Excerpts of N.F.P.A. 231C-1980 are outlined in the attached appendix and these shall apply to this authorization.

   (b) A firewall as defined in the Ontario Building Code Regulation 419/86, may divide the confining building into two or more separate buildings, wherein, one of the following classes may be assigned to each of the separate buildings.

   (2) Class I commodities are non-combustible products, as defined in N.F.P.A. 231C-1980; or

   (3) Class II, III and IV commodities are combustible products, as defined in N.F.P.A. 231C-1980; or

   (4) Class SS commodities are special hazard products not covered in paragraph 8.(2), (3) or (5);

   (5) Aerosol products composed of greater than 55% non-water miscible flammable products including lubricants; paints; oil-based anti-perspirants, furniture polish, insecticides and automotive products, are to be stored only:

   (a) On the ground floor of the racking system, and

   (b) In a designed area separated by,

   (i) a vertical 1 hr. fire separation, or

   (ii) a vertical chain link fencing not lighter than 9 ga. steel wire made into a 50 mm (2 in) diamond mesh, located not less than 2.5 m (8 ft) from all other storage where the adjacent storage is more hazardous than Class IV commodity, or

   (iii) a method acceptable to the chief Fire Official, and

   (c) In the designed area protected by an in-rack sprinkler system. The sprinkler demand shall be a minimum of 1.9 L/s (30 g.p.m. (U.S.)) discharge per head with 74C (165F) heads or less and shall be 2.5 m (8 ft) apart maximum. This design shall be further based on the operation of the hydraulically most remote;

   (i) 8 sprinklers if one level, or

   (ii) 6 sprinklers on each level if only two levels, or

   (iii) 6 sprinklers on each of the top three levels if three or more levels.

(d) Single row racks shall require only the in-rack sprinklers, whereas, double row racks shall require sprinklers in longitudinal flue as well as on face sprinklers which shall be staggered on opposite sides of racks.

TABLE 8.A.

Forming Part of Paragraph 8

Shelf and Rack Storage Facility				
Commodity Classes	**Maximum Height (1)**		**Maximum Area (2)**	
	m	ft	m^2	ft^2
Class I	6 12 18	20 40 60	unlimited 20,070 13,380	unlimited 216,000 144,000
Class II, III, AND IV	6 12 18	20 40 60	8,920 4,460 2,230	96,000 48,000 24,000
Class SS	6 12 18	20 40 60	3,340 1,670 1,110	36,000 18,000 12,000
COLUMN 1	2	3	4	5

NOTES:

(1) The maximum height shall be from the floor supporting the shelf and rack system to the topmost portion of the racking system.

(2) The maximum area is the sum total of all levels of the shelf and rack system as well as the floor.

9. A plain legible sign or signs, with contrasting letters and titled "NOTICE", shall describe the above Class and requirements for each shelf and rack storage facility. This sign or signs shall be permanently mounted, at or near the main water supply for the sprinkler system and shall be maintained at all times. For Class I commodities this "NOTICE" shall be permanently mounted, at or near the main entrance to this shelf and rack storage facility.
10. (1) Exits shall be separated from the rack storage facilities with fire separations, having a fire-resistance rating conforming to Subsection 3.4.4. of the Ontario Building Code; and

    (2) the exit stairs shafts shall conform to all requirements for exits as stated in Section 3.4 of the Ontario Building Code; and

(3) no fewer than 2 exits are required from each deck or walkway level, except where there are not more than two levels above the building floor, and the level area does not exceed 139 m (1500 ft), two means of egress shall be required without the requirements of fire separation for exit, and

(4) any opening in a deck for egress, convenience stairs, ramps or chutes, shall be protected by smoke baffles and close spaced sprinklers as per paragraph 7 of this authorization.

11. The maximum travel distance to exits shall not exceed 46 m (150 ft) and to a fire extinguisher shall not exceed 23 m (75 ft).
12. (1) Where a shelf and rack storage facility contains two or more deck or walkway levels and where each level is greater than 239 m (2,500 ft), a smoke detection system shall be installed on the underside of each deck level on which a walkway or aisle is located, and

    (2) the number of system smoke detectors installed shall be in accordance to CAN4-S524-M1982.

13. The clear aisle width shall not be less than 760 mm (30 inches). This clearance is for access to exits and shall not be used for conveyors, trolleys, tracks or any other similar mode of product transportation within an aisle or walkway.
14. This shelf and rack storage facility is not permitted in F-1 occupancy as defined in the Ontario Building Code.
15. The shelf and rack storage facilities shall be used only for storage and not for manufacturing, production, wrapping or assembly.
16. The shelf and rack storage facilities shall be accessible to employees only and shall be designated, signed and posted as a "NO SMOKING" area conforming to Subsection 2.4.3. of the Ontario Fire Code.
17. (1) In building areas containing shelf and rack storage facilities exceeding 4,645 m (50,000 ft) and except for storage of Class I commodities as defined in paragraph 8 of this document, manually operated smoke vents shall be installed in accordance with N.F.P.A. 204, Section 230, and

    (2) The smoke vent opening shall be not less than 1.2 m by 1.8 m (4 ft by 6 ft) and the openings shall be located not more than 23 m (75 ft) from an exterior wall and not more than 46 m (150 ft) from each other.

18. (1) A standpipe and hose system shall be installed in accordance with Article 3.2.5.4. of the Ontario Building Code where the shelf and rack storage facility height is more than 3 levels including floor level or 14 m (45 ft) in height.

    (2) Where a standpipe and hose system is required, 63.5 mm (2-1/2 in) diameter hose connections shall be provided, except that 38.1 mm (1-1/2 in) hose connections are permitted in the shelf and rack storage facilities which:

(a) neither exceed 6 levels including the floor level, and

(b) do not exceed 3,716 m (40,000 ft) in the sum total of all levels of the shelf and rack storage facility.

APPENDIX

Commodity Classifications:

The following guide for commodity classification applies specifically to rack storage and is not related to any other method of classifications of materials.

Class I commodity is defined as essentially non-combustible product on wood pallets, or in ordinary corrugated cartons with or without single thickness dividers or in ordinary paper wrappings, all on wood pallets. Such products may have a negligible amount of plastic trim, such as knobs or handles.

Examples or Class I products are:

Metal Products. Metal desks with plastic tops and trim, electrical coils, electrical devices in their metal enclosures, pots and pans, electrical motors, dry cell batteries, metal parts, empty cans, stoves, washers, dryers and metal cabinets.

Glass Products. Glass bottles, empty or filled with non-combustible liquids, mirrors.

Foods. Foods in non-combustible containers; frozen foods; meat, fresh fruits and vegetables in non-plastic trays or containers; dairy products in nonwax-coated paper containers, beer or wine up to 20 percent alcohol, in metal, ceramic or glass containers.

Others. Oil-filled and other types of distribution transformers, cement in bags, electrical insulators, gypsum board, inert pigments, dry insecticides.

Class II commodity is defined as Class I products in slatted wooden crates, solid wood boxed, multiple thickness paperboard cartons, or equivalent combustible packaging material on wood pallets.

Examples of Class II products are: thinly coated fine wire such as radio coil wire on reels or in cartons; incandescent or fluorescent light bulbs; beer or wine up to 20 percent alcohol in wood containers; and Class I products, if any small cartons or small packages placed in ordinary corrugated cartons.

Class III commodity is defined as wood, paper, natural fiber cloth, or products thereof, on wood pallets. Products may contain a limited amount of plastics. Wood dressers with plastic drawer guides, handles, and trim are examples of a commodity with limited amount of plastic.

Examples of Class III products are:

Paper Products. Books, magazines, newspapers, stationery, plastic coated paper food containers, paper or cardboard games, tissue products, rolled paper on side or steel banded on end, and regenerated cellulosics (cellophane).

Leather Products. Shoes, jackets, gloves, and luggage.

Wood Products. Doors, windows, door and window frames, combustible fiberboard, wood cabinets, furniture and other wood products.

Textiles. Natural fiber upholstered non-plastic furniture, wood or metal furniture with plastic padded and covered arm rests, mattresses without expanded plastic or rubber, absorbent cotton in cartons, natural fiber and viscose yarn thread, and products, and natural fiber clothing or textile products.

Others. Tobacco products in paperboard cartons, non-flammable liquids such as soaps, detergent and bleaches, and non-flammable pharmaceuticals in plastic containers; combustible foods or cereal products, and non-negative producing film packs in sealed metal foil wrappers in paperboard packages.

Class IV commodity is defined in Class I, II and/or III products contained an appreciable amount of plastics in a paperboard carton or Class I, II and/or III products with plastic packaging in paperboard cartons on wood pallets.

Examples of Class IV products are small appliances, typewriters and cameras with plastic parts, plastic backed tapes and synthetic fabrics or clothing. An example of packing material is a metal product in a foamed plastic cocoon in a corrugated carton.

Class IV commodity also includes:

Textiles. Synthetic thread and yarn except viscose, and non-viscose synthetic fabrics or clothing.

Others. Telephone, vinyl floor tile, wood or metal frame upholstered furniture or mattresses with plastic covering and/or padding, and plastic padded metal dashboards or metal bumpers.

DATED at Toronto this 19th day in the month of SEPTEMBER in the year 1990 for Authorization #90-12-140 amended on behalf of:

BUILDING MATERIALS EVALUATION COMMISSION

BMEC-90-11-139

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

SHELF AND RACK STORAGE

Date of Authorization: September 19, 1990

BMEC REFERENCE: BMEC-90-11-139

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

enRack Systems Inc.
606 Aberdeen Avenue
Hamilton, Ontario
L8P 2T1

ON THE SUBJECT OF:

A self-contained structural shelf and rack storage facility within a building, having one or more solid intermediate deck or walkway levels for personnel access.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for

termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. (1)(a) Deck level shall be a continuous horizontal construction membrane through the entire shelf rack facility, and

   (b) Walkway level shall be the horizontal construction membrane between the solid shelving installed on the same plane, and

   (c) Level area means the greatest horizontal area of the shelf and rack storage facility.

   (2)(a) Deck or walkway levels shall be constructed of solid closed surface steel planking or,

   (b) Steel roof decking with minimum 16 mm (5/8 in) maximum 19 mm (3/4 in) thick tongue and groove solid wood or plywood.

   (3) The structural design of the entire shelf and rack storage facility support system including posts, beams, decks, walkways, connections, and their supports such as concrete slabs, separate foundations or similar shall be in accordance with Ontario Building Code Part 4 requirements.

   (4) Detailed drawings for each installation shall be stamped by a member of the Association of Professional Engineers of Ontario Certifying conformity with this authorization. These drawings shall also detail an appropriate sign to indicate the maximum permissible design loads for each rack storage system and such sign shall be permanently fixed to the building interior and displayed in a prominent unobstructed viewing position. These drawings shall be submitted for a building permit in the usual way.

7. An approved wet pipe sprinkler system shall be designed and installed for the entire shelf and rack storage facility including the top level and shall be in conformance with N.F.P.A. 13-1983, and N.F.P.A. 231C-1980 or the appropriate N.F.P.A. Standard for the most severe hazard that it is exposed to. Sprinklers are not required where only Class I commodities as defined in the following paragraph 8.(2) are stored.
8. (1)(a) The entire shelf and rack storage dimension shall be limited to Table 8.A. based on the type of commodity stored as defined in paragraph 8.(2), (3), (4) and

(5). Excerpts of N.F.P.A. 231C-1980 are outlined in the attached appendix and these shall apply to this authorization.

(b) A firewall as defined in the Ontario Building Code Regulation 419/86, may divide the confining building into two or more separate buildings, wherein, one of the following classes may be assigned to each of the separate buildings.

(2) Class I commodities are non-combustible products, as defined in N.F.P.A. 231C-1980; or

(3) Class II, III and IV commodities are combustible products, as defined in N.F.P.A. 231C-1980; or

(4) Class SS commodities are special hazard products not covered in paragraph 8.(2), (3) or (5);

(5) Aerosol products composed of greater than 55% non-water miscible flammable products including lubricants; paints; oil-based anti-perspirants, furniture polish, insecticides and automotive products, are to be stored only:

(a) On the ground floor of the racking system, and

(b) In a designed area separated by,

(i) a vertical 1 hr. fire separation, or

(ii) a vertical chain link fencing not lighter than 9 ga. steel wire made into a 50 mm (2 in) diamond mesh, located not less than 2.5 m (8 ft) from all other storage where the adjacent storage is more hazardous than Class IV commodity, or

(iii) a method acceptable to the chief Fire Official, and

(c) In the designed area protected by an in-rack sprinkler system. The sprinkler demand shall be a minimum of 1.9 L/s (30 g.p.m. (U.S.)) discharge per head with 74C (165F) heads or less and shall be 2.5 m (8 ft) apart maximum. This design shall be further based on the operation of the hydraulically most remote;

(i) 8 sprinklers if one level, or

(ii) 6 sprinklers on each level if only two levels, or

(iii) 6 sprinklers on each of the top three levels if three or more levels.

(d) Single row racks shall require only the in-rack sprinklers, whereas, double row racks shall require sprinklers in longitudinal flue as well as on face sprinklers which shall be staggered on opposite sides of racks.

TABLE 8.A.

Forming Part of Paragraph 8

Shelf and Rack Storage Facility				
Commodity Classes	**Maximum Height (1)**		**Maximum Area (2)**	
	m	ft	m^2	ft^2
Class I	6 12 18	20 40 60	unlimited 20,070 13,380	unlimited 216,000 144,000
Class II, III, AND IV	6 12 18	20 40 60	8,920 4,460 2,230	96,000 48,000 24,000
Class SS	6 12 18	20 40 60	3,340 1,670 1,110	36,000 18,000 12,000
COLUMN 1	2	3	4	5

NOTES:

(1) The maximum height shall be from the floor supporting the shelf and rack system to the topmost portion of the racking system.

(2) The maximum area is the sum total of all levels of the shelf and rack system as well as the floor.

9. A plain legible sign or signs, with contrasting letters and titled "NOTICE", shall describe the above Class and requirements for each shelf and rack storage facility. This sign or signs shall be permanently mounted, at or near the main water supply for the sprinkler system and shall be maintained at all times. For Class I commodities this "NOTICE" shall be permanently mounted, at or near the main entrance to this shelf and rack storage facility.
10. (1) Exits shall be separated from the rack storage facilities with fire separations, having a fire resistance rating conforming to Subsection 3.4.4. of the Ontario Building Code; and

    (2) the exit stairs shafts shall conform to all requirements for exits as stated in Section 3.4 of the Ontario Building Code; and

    (3) no fewer than 2 exits are required from each deck or walkway level, except where there are not more than two levels above the building floor, and the level area does not exceed 139 m (1500 ft), two means of egress shall be required without the requirements of fire separation for exit, and

(4) any opening in a deck for egress, convenience stairs, ramps or chutes, shall be protected by smoke baffles and close spaced sprinklers as per paragraph 7 of this authorization.

11. The maximum travel distance to exits shall not exceed 46 m (150 ft) and to a fire extinguisher shall not exceed 23 m (75 ft).
12. (1) Where a shelf and rack storage facility contains two or more deck or walkway levels and where each level is greater than 239 m (2,500 ft), a smoke detection system shall be installed on the underside of each deck level on which a walkway or aisle is located, and

    (2) the number of system smoke detectors installed shall be in accordance to CAN4-S524-M1982.

13. The clear aisle width shall not be less than 760 mm (30 inches). This clearance is for access to exits and shall not be used for conveyors, trolleys, tracks or any other similar mode of product transportation within an aisle or walkway.
14. This shelf and rack storage facility is not permitted in F-1 occupancy as defined in the Ontario Building Code.
15. The shelf and rack storage facilities shall be used only for storage and not for manufacturing, production, wrapping or assembly.
16. The shelf and rack storage facilities shall be accessible to employees only and shall be designated, signed and posted as a "NO SMOKING" area conforming to Subsection 2.4.3. of the Ontario Fire Code.
17. (1) In building areas containing shelf and rack storage facilities exceeding 4,645 m (50,000 ft) and except for storage of Class I commodities as defined in paragraph 8 of this document, manually operated smoke vents shall be installed in accordance with N.F.P.A. 204, Section 230, and

    (2) The smoke vent opening shall be not less than 1.2 m by 1.8 m (4 ft by 6 ft) and the openings shall be located not more than 23 m (75 ft) from an exterior wall and not more than 46 m (150 ft) from each other.

18. (1) A standpipe and hose system shall be installed in accordance with Article 3.2.5.4. of the Ontario Building Code where the shelf and rack storage facility height is more than 3 levels including floor level or 14 m (45 ft) in height.

    (2) Where a standpipe and hose system is required, 63.5 mm (2-1/2 in) diameter hose connections shall be provided, except that 38.1 mm (1-1/2 in) hose connections are permitted in the shelf and rack storage facilities which:

    (a) neither exceed 6 levels including the floor level, and

    (b) do not exceed 3,716 m (40,000 ft) in the sum total of all levels of the shelf and rack storage facility.

APPENDIX

Commodity Classifications:

The following guide for commodity classification applies specifically to rack storage and is not related to any other method of classifications of materials.

Class I commodity is defined as essentially non-combustible product on wood pallets, or in ordinary corrugated cartons with or without single thickness dividers or in ordinary paper wrappings, all on wood pallets. Such products may have a negligible amount of plastic trim, such as knobs or handles.

Examples or Class I products are:

Metal Products. Metal desks with plastic tops and trim, electrical coils, electrical devices in their metal enclosures, pots and pans, electrical motors, dry cell batteries, metal parts, empty cans, stoves, washers, dryers and metal cabinets.

Glass Products. Glass bottles, empty or filled with non-combustible liquids, mirrors.

Foods. Foods in non-combustible containers; frozen foods; meat, fresh fruits and vegetables in non-plastic trays or containers; dairy products in nonwax-coated paper containers, beer or wine up to 20 percent alcohol, in metal, ceramic or glass containers.

Others. Oil-filled and other types of distribution transformers, cement in bags, electrical insulators, gypsum board, inert pigments, dry insecticides.

Class II commodity is defined as Class I products in slatted wooden crates, solid wood boxed, multiple thickness paperboard cartons, or equivalent combustible packaging material on wood pallets.

Examples of Class II products are: thinly coated fine wire such as radio coil wire on reels or in cartons; incandescent or fluorescent light bulbs; beer or wine up to 20 percent alcohol in wood containers; and Class I products, if any small cartons or small packages placed in ordinary corrugated cartons.

Class III commodity is defined as wood, paper, natural fiber cloth, or products thereof, on wood pallets. Products may contain a limited amount of plastics. Wood dressers with plastic drawer guides, handles, and trim are examples of a commodity with limited amount of plastic.

Examples of Class III products are:

Paper Products. Books, magazines, newspapers, stationery, plastic coated paper food containers, paper or cardboard games, tissue products, rolled paper on side or steel banded on end, and regenerated cellulosics (cellophane).

Leather Products. Shoes, jackets, gloves, and luggage.

Wood Products. Doors, windows, door and window frames, combustible fiberboard, wood cabinets, furniture and other wood products.

Textiles. Natural fiber upholstered non-plastic furniture, wood or metal furniture with plastic padded and covered arm rests, mattresses without expanded plastic or rubber, absorbent cotton in cartons, natural fiber and viscose yarn thread, and products, and natural fiber clothing or textile products.

Others. Tobacco products in paperboard cartons, non-flammable liquids such as soaps, detergent and bleaches, and non-flammable pharmaceuticals in plastic containers; combustible foods or cereal products, and non-negative producing film packs in sealed metal foil wrappers in paperboard packages.

Class IV commodity is defined in Class I, II and/or III products contained an appreciable amount of plastics in a paperboard carton or Class I, II and/or III products with plastic packaging in paperboard cartons on wood pallets.

Examples of Class IV products are small appliances, typewriters and cameras with plastic parts, plastic backed tapes and synthetic fabrics or clothing. An example of packing material is a metal product in a foamed plastic cocoon in a corrugated carton.

Class IV commodity also includes:

Textiles. Synthetic thread and yarn except viscose, and non-viscose synthetic fabrics or clothing.

Others. Telephone, vinyl floor tile, wood or metal frame upholstered furniture or mattresses with plastic covering and/or padding, and plastic padded metal dashboards or metal bumpers.

DATED at Toronto this 19th day in the month of SEPTEMBER in the year 1990 for Authorization #90-11-139 amended on behalf of:

BUILDING MATERIALS EVALUATION COMMISSION

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

RADIANT HEATING PANELS

Date of Authorization: September 19, 1990

BMEC REFERENCE: BMEC-90-10-138

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Flexwatt Corporation
2380 Cranberry Highway
West Wareham, MA
02576 U.S.A.

AND AGENT:

Thermofilm Corporation
8241 Keele Street, Unit #7
Concord, Ontario
L4K 1Z5

ON THE SUBJECT OF:

FLEXWATT, a supplemental radiant heat warming system, these ceiling or floor radiant heating panels are comprised of conductive ink, imbedded between thin flexible mylar sheets and stored on a roll. These panels are installed within the ceiling structure above the finished ceiling, exact location depends on whether the end use is to radiate from the ceiling or to radiate to the floor above.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may be written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement or any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter 51, R.S.O. 1980, Ontario Regulation 419/86 as amended shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.
7. The applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization.
8. The installation of this system shall conform to Flexwatt "Radiant Heating System Installation Manual C2.30" or latest version. This system shall not be used as the primary source of heating, this system is a supplementary warming system only.
9. Except for plenum spaces in noncombustible buildings, this system may be used in noncombustible or combustible construction as minor elements of such buildings.
10. Strict conformance shall be maintained to the "Warning and Cautions" section of "Flexwatt Installation Manual" in respect to thermal insulations, ceiling coverings and the warning label which shall be firmly attached to the main electrical panel box.
11. Each Flexwatt panel shall contain labels and be listed by Underwriters' Laboratories and Canadian Standards Association for either radiant ceiling heating or floorwarming panels.
12. This system shall only be installed by qualified applicators who shall carry an identification card with a statement by Flexwatt Corporation or Thermofilm Corporation that the installer has been trained and is qualified in the installation of this system.

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

TABLETOP COOKING APPLIANCE

Date of Authorization: September 17, 1990

BMEC REFERENCE: BMEC-90-09-137

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Horace Chiu
Asian Dining Corner Inc.
4810 Sheppard Avenue East, Unit 215-8
Scarborough, Ontario
M1S 4N6

ON THE SUBJECT OF:

A recessed tabletop cooking gas-fired appliance with an integral fixed exhaust collection device. The patrons may cook their own food on the recessed cast iron grille plate that is mounted over the gas burner. A stainless steel air ring with openings in the perimeter above the drip tray is connected to the exhaust outlets and collection device.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may be written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement or any product, material, technique or design which is described herein.

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter 51, R.S.O. 1980, Ontario Regulation 419/86 as amended shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.
7. The applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization.
8. The building or that portion of the building where these appliances are located shall be;

   (a) sprinklered as per N.F.P.A. 13-1989 or the latest amended version and

   (b) portable fire extinguishers shall be as required by the Ontario Building Code latest amended version.

9. Except as authorized herein all applicable requirements of the N.F.P.A. 96-1987 or the latest amended version shall apply to this installation.
10. This appliance shall bear the label of;

    (a) Canadian Gas Association and

    (b) be acceptable by the Fuel Safety Branch before any installation of this appliance takes place.

11. The gas burner and valve train assembly shall be modified to comply to the standards of the Canadian Gas Association.
12. In lieu of a hood over this appliance there shall be;

    (a) a collection device box to collect the smoke and grease-laden vapours from the cooking surface. This collection device shall be integrally fixed to the exhaust outlet of the cooking appliance, and

(b) shall be located below the tabletop but within the appliance outer metal casing and be exempt of any dampers, and

(c) shall contain a listed U.L.C. filter, grease drain valve, access door, automatic fire extinguishing system that upon activation shall shut off the source of fuel to this cooking appliance, and

(d) all construction of the collection device box and exhaust system shall be to the standards of N.F.P.A. 96-1987 or the latest version.

13. The cast iron grille plate which is the cooking surface shall be a minimum of 31.7 mm (1-1/4 in) from the top of the grille plate to the tabletop. The grille plate is mounted in a stainless steel air ring casing which forms the exhaust outlet of the cooking appliance.
14. The "Procedures for the Use and Maintenance of Equipment" as copied from the N.F.P.A. 96-1987 or the latest version, shall be framed under glass and posted in on appropriate full view of the staff who shall be instructed by the applicant and directed to so use and maintain such equipment and appliances.

ON THE SUBJECT OF:

A self-contained structural shelf and rack shortage facility within a building, having one or more solid intermediate deck or walkway levels for personnel access.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for

termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. (1)(a) Deck level shall be a continuous horizontal construction membrane through the entire shelf rack facility, and

   (b) Walkway level shall be the horizontal construction membrane between the solid shelving installed on the same plane, and

   (c) Level area means the greatest horizontal area of the shelf and rack storage facility.

   (2)(a) Deck or walkway levels shall be constructed of solid closed surface steel planking or,

   (b) Steel roof decking with minimum 16 mm (5/8 in) maximum 19 mm (3/4 in) thick tongue and groove solid wood or plywood.

   (3) The structural design of the entire shelf and rack storage facility support system including posts, beams, decks, walkways, connections, and their supports such as concrete slabs, separate foundations or similar shall be in accordance with Ontario Building Code Part 4 requirements.

   (4) Detailed drawings for each installation shall be stamped by a member of the Association of Professional Engineers of Ontario Certifying conformity with this authorization. These drawings shall also detail an appropriate sign to indicate the maximum permissible design loads for each rack storage system and such sign shall be permanently fixed to the building interior and displayed in a prominent unobstructed viewing position. These drawings shall be submitted for a building permit in the usual way.

7. An approved wet pipe sprinkler system shall be designed and installed for the entire shelf and rack storage facility including the top level and shall be in conformance with N.F.P.A. 13-1983, and N.F.P.A. 231C-1980 or the appropriate N.F.P.A. Standard for the most severe hazard that it is exposed to. Sprinklers are not required where only Class I commodities as defined in the following paragraph 8.(2) are stored.
8. (1)(a) The entire shelf and rack storage dimension shall be limited to Table 8.A. based on the type of commodity stored as defined in paragraph 8.(2), (3), (4) and

(5). Excerpts of N.F.P.A. 231C-1980 are outlined in the attached appendix and these shall apply to this authorization.

(b) A firewall as defined in the Ontario Building Code Regulation 419/86, may divide the confining building into two or more separate buildings, wherein, one of the following classes may be assigned to each of the separate buildings.

(2) Class I commodities are non-combustible products, as defined in N.F.P.A. 231C-1980; or

(3) Class II, III and IV commodities are combustible products, as defined in N.F.P.A. 231C-1980; or

(4) Class SS commodities are special hazard products not covered in paragraph 8.(2), (3) or (5);

(5) Aerosol products composed of greater than 55% non-water miscible flammable products including lubricants; paints; oil-based anti-perspirants, furniture polish, insecticides and automotive products, are to be stored only:

(a) On the ground floor of the racking system, and

(b) In a designed area separated by,

(i) a vertical 1 hr. fire separation, or

(ii) a vertical chain link fencing not lighter than 9 ga. steel wire made into a 50 mm (2 in) diamond mesh, located not less than 2.5 m (8 ft) from all other storage where the adjacent storage is more hazardous than Class IV commodity, or

(iii) a method acceptable to the chief Fire Official, and

(c) In the designed area protected by an in-rack sprinkler system. The sprinkler demand shall be a minimum of 1.9 L/s (30 g.p.m. (U.S.)) discharge per head with 74C (165F) heads or less and shall be 2.5 m (8 ft) apart maximum. This design shall be further based on the operation of the hydraulically most remote;

(i) 8 sprinklers if one level, or

(ii) 6 sprinklers on each level if only two levels, or

(iii) 6 sprinklers on each of the top three levels if three or more levels.

(d) Single row racks shall require only the in-rack sprinklers, whereas, double row racks shall require sprinklers in longitudinal flue as well as on face sprinklers which shall be staggered on opposite sides of racks.

TABLE 8.A.

Forming Part of Paragraph 8

Shelf and Rack Storage Facility				
Commodity Classes	**Maximum Height (1)**		**Maximum Area (2)**	
	m	ft	m2	ft2
Class I	6 12 18	20 40 60	unlimited 20,070 13,380	unlimited 216,000 144,000
Class II, III, AND IV	6 12 18	20 40 60	8,920 4,460 2,230	96,000 48,000 24,000
Class SS	6 12 18	20 40 60	3,340 1,670 1,110	36,000 18,000 12,000
COLUMN 1	2	3	4	5

NOTES:

(1) The maximum height shall be from the floor supporting the shelf and rack system to the topmost portion of the racking system.

(2) The maximum area is the sum total of all levels of the shelf and rack system as well as the floor.

9. A plain legible sign or signs, with contrasting letters and titled "NOTICE", shall describe the above Class and requirements for each shelf and rack storage facility. This sign or signs shall be permanently mounted, at or near the main water supply for the sprinkler system and shall be maintained at all times. For Class I commodities this "NOTICE" shall be permanently mounted, at or near the main entrance to this shelf and rack storage facility.
10. (1) Exits shall be separated from the rack storage facilities with fire separations, having a fire resistance rating conforming to Subsection 3.4.4. of the Ontario Building Code; and

    (2) the exit stairs shafts shall conform to all requirements for exits as stated in Section 3.4 of the Ontario Building Code; and

    (3) no fewer than 2 exits are required from each deck or walkway level, except where there are not more than two levels above the building floor, and the level area does not exceed 139 m (1500 ft), two means of egress shall be required without the requirements of fire separation for exit, and

(4) any opening in a deck for egress, convenience stairs, ramps or chutes, shall be protected by smoke baffles and close spaced sprinklers as per paragraph 7 of this authorization.

11. The maximum travel distance to exits shall not exceed 46 m (150 ft) and to a fire extinguisher shall not exceed 23 m (75 ft).
12. (1) Where a shelf and rack storage facility contains two or more deck or walkway levels and where each level is greater than 239 m (2,500 ft), a smoke detection system shall be installed on the underside of each deck level on which a walkway or aisle is located, and

    (2) the number of system smoke detectors installed shall be in accordance to CAN4-S524-M1982.

13. The clear aisle width shall not be less than 760 mm (30 inches). This clearance is for access to exits and shall not be used for conveyors, trolleys, tracks or any other similar mode of product transportation within an aisle or walkway.
14. This shelf and rack storage facility is not permitted in F-1 occupancy as defined in the Ontario Building Code.
15. The shelf and rack storage facilities shall be used only for storage and not for manufacturing, production, wrapping or assembly.
16. The shelf and rack storage facilities shall be accessible to employees only and shall be designated, signed and posted as a "NO SMOKING" area conforming to Subsection 2.4.3. of the Ontario Fire Code.
17. (1) In building areas containing shelf and rack storage facilities exceeding 4,645 m (50,000 ft) and except for storage of Class I commodities as defined in paragraph 8 of this document, manually operated smoke vents shall be installed in accordance with N.F.P.A. 204, Section 230, and

    (2) The smoke vent opening shall be not less than 1.2 m by 1.8 m (4 ft by 6 ft) and the openings shall be located not more than 23 m (75 ft) from an exterior wall and not more than 46 m (150 ft) from each other.

18. (1) A standpipe and hose system shall be installed in accordance with Article 3.2.5.4. of the Ontario Building Code where the shelf and rack storage facility height is more than 3 levels including floor level or 14 m (45 ft) in height.

    (2) Where a standpipe and hose system is required, 63.5 mm (2-1/2 in) diameter hose connections shall be provided, except that 38.1 mm (1-1/2 in) hose connections are permitted in the shelf and rack storage facilities which:

    (a) neither exceed 6 levels including the floor level, and

    (b) do not exceed 3,716 m (40,000 ft) in the sum total of all levels of the shelf and rack storage facility.

APPENDIX

Commodity Classifications:

The following guide for commodity classification applies specifically to rack storage and is not related to any other method of classifications of materials.

Class I commodity is defined as essentially non-combustible product on wood pallets, or in ordinary corrugated cartons with or without single thickness dividers or in ordinary paper wrappings, all on wood pallets. Such products may have a negligible amount of plastic trim, such as knobs or handles.

Examples or Class I products are:

Metal Products. Metal desks with plastic tops and trim, electrical coils, electrical devices in their metal enclosures, pots and pans, electrical motors, dry cell batteries, metal parts, empty cans, stoves, washers, dryers and metal cabinets.

Glass Products. Glass bottles, empty or filled with non-combustible liquids, mirrors.

Foods. Foods in non-combustible containers; frozen foods; meat, fresh fruits and vegetables in non-plastic trays or containers; dairy products in nonwax-coated paper containers, beer or wine up to 20 percent alcohol, in metal, ceramic or glass containers.

Others. Oil-filled and other types of distribution transformers, cement in bags, electrical insulators, gypsum board, inert pigments, dry insecticides.

Class II commodity is defined as Class I products in slatted wooden crates, solid wood boxed, multiple thickness paperboard cartons, or equivalent combustible packaging material on wood pallets.

Examples of Class II products are: thinly coated fine wire such as radio coil wire on reels or in cartons; incandescent or fluorescent light bulbs; beer or wine up to 20 percent alcohol in wood containers; and Class I products, if any small cartons or small packages placed in ordinary corrugated cartons.

Class III commodity is defined as wood, paper, natural fiber cloth, or products thereof, on wood pallets. Products may contain a limited amount of plastics. Wood dressers with plastic drawer guides, handles, and trim are examples of a commodity with limited amount of plastic.

Examples of Class III products are:

Paper Products. Books, magazines, newspapers, stationery, plastic coated paper food containers, paper or cardboard games, tissue products, rolled paper on side or steel banded on end, and regenerated cellulosics (cellophane).

Leather Products. Shoes, jackets, gloves, and luggage.

Wood Products. Doors, windows, door and window frames, combustible fiberboard, wood cabinets, furniture and other wood products.

Textiles. Natural fiber upholstered non-plastic furniture, wood or metal furniture with plastic padded and covered arm rests, mattresses without expanded plastic or rubber, absorbent cotton in cartons, natural fiber and viscose yarn thread, and products, and natural fiber clothing or textile products.

Others. Tobacco products in paperboard cartons, non-flammable liquids such as soaps, detergent and bleaches, and non-flammable pharmaceuticals in plastic containers; combustible foods or cereal products, and non-negative producing film packs in sealed metal foil wrappers in paperboard packages.

Class IV commodity is defined in Class I, II and/or III products contained an appreciable amount of plastics in a paperboard carton or Class I, II and/or III products with plastic packaging in paperboard cartons on wood pallets.

Examples of Class IV products are small appliances, typewriters and cameras with plastic parts, plastic backed tapes and synthetic fabrics or clothing.

An example of packing material is a metal product in a foamed plastic cocoon in a corrugated carton.

Class IV commodity also includes:

Textiles. Synthetic thread and yarn except viscose, and non-viscose synthetic fabrics or clothing.

Others. Telephone, vinyl floor tile, wood or metal frame upholstered furniture or mattresses with plastic covering and/or padding, and plastic padded metal dashboards or metal bumpers.

DATED at Toronto this 17th day in the month of AUGUST in the year 1990 for Authorization #90-08-136 amended on behalf of:

BUILDING MATERIALS EVALUATION COMMISSION

AMENDED
AUTHORIZATION #90-7-135
BY THE 13 November 1991
BUILDING MATERIALS EVALUATION COMMISSION

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act,
Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF the Applicant:

Tectum Inc.
105 S. Sixth Street
Newark, OH
43055

ON THE SUBJECT OF:

TECTUM I, II and/or III; these are structural roof deck panels, factory formed by a continuous process under heat and pressure; using a cementitious aspen wood fibre impregnated with magnesium oxysulphide hydraulic cement and inorganic binder. Tectum may be used alone or in combination with factory applied polyurethane and Manniglas matting, styrofoam SM or TG polystyrene foam adhesively bonded together for insulation and/or to waferboard sheathing for exterior nailing surface.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may be written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement or any product, material, technique or design which is described herein.

2/...

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter 51, R.S.O. 1980, Ontario Regulation 413/90 as amended shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.

7. The applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization.

8. The subject matter shall conform to the manufacturer's published installation instructions and shall be designed, engineered, inspected and verified for each project by the architect or engineer (authorized in Ontario). All related documents and drawings shall bear the professional seal and signature of the architect or engineer.

9. Engineering inspection of the subject construction shall be carried out; to ensure that construction is consistent with the design, by the person responsible for its design details and general review during construction; or by another person qualified in the inspection of this construction and who is responsible to the design architect or engineer and all construction documents shall be duly sealed.

3/...

10. Tectum is combustible and shall be fire separated where that portion of roof supports an occupancy.

The Code requirements for noncombustible construction and/or 45 minute fire resistance rating are permitted to be waived provided;

(a) Tectum is constructed as a roof assembly for a roof deck, thermal roof barrier or roof insulation, and

(b) Tectum is installed at a minimum height of 4.57 m (15 ft.) above the finished floor, and

(1) Tectum roofed area shall be separated by a firewall or be a separate building as per Code requirements, or

(2) Tectum roofed area shall be separated by 2 hr. fire separation of concrete or masonry walls with parapets extending 150 mm (5.91 in.) above the roof, and

(a) located on the first storey, and

(b) the roof area shall not exceed;
(i) 1600 m^2 (17,223 sq. ft.) when the building is facing one street or
(ii) 2000 m^2 (21,529 sq. ft.) when the building is facing two streets or
(iii) 2400 m^2 (25,834 sq. ft.) when the building is facing three streets, or

(3) Tectum roofed area shall be sprinklered in conformance with the Code Sentence 3.2.5.13.(1), and

(a) the sprinkler system is electrically supervised in conformance with the Code Sentence 3.2.4.16.(5), and

(b) the operation of the sprinkler system will cause a signal to be transmitted to the fire department in conformance with the Code Sentence 3.2.4.7.(3), and

(c) the building is not regulated by the provisions of the Code Subsection 3.2.6. (See Appendix A of the Code).

BMEC-90-06-134

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

WINDOW SPRINKLER ASSEMBLY

Date of Authorization: July 25, 1990

BMEC REFERENCE: BMEC-90-06-134

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Applied Fire Technology Inc.
133 Applewood Crescent
Unit 4
Concord, Ontario
L4K 4E4

ON THE SUBJECT OF:

A window sprinkler assembly system to provide a two hour fire-resistance rated separation in a wall to consist of tempered or heat strengthened glass fixed in a non-openable hollow metal steel frame or extruded aluminum frame and a special sidewall window sprinkler with quick response action.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. This window sprinkler assembly system shall be designed, engineered, inspected and verified by a fire protection Professional Engineer (authorized in Ontario) and a document of certification by the Professional Engineer with stamp shall be forwarded to the Chief Building Official and the Building Owner(s).
7. The sprinkler system shall be installed and tested in accordance with N.F.P.A. 13 as a wet pipe system and maintained in accordance with Section 6.5 (sprinkler) of the Ontario Fire Code.
8. The special designed sprinkler head shall be designated as a horizontal sidewall window nozzle, Grinnell Canada Fire Protection Company Limited model FR-1/Q-60, 12.7 mm (1/2 in) orifice, 74C (165F) activation temperature quick response link. The optimum position of the sprinkler head shall be as determined by the tests submitted by National Research Council Canada.
9. The interior glazing shall consist of one sheet of fixed non-operable tempered or heat strengthened glass installed in a hollow metal steel frame 1.35 mm (16 gauge) minimum thickness or extruded aluminum 1.8 mm (1/16 in) minimum thickness. The maximum glazing shall be 2134 mm (7 ft) wide by 2844 mm (9 ft 4 in) high and minimum 6 mm (1/4 in) thick.
10. (1) This window sprinkler system may be used in either a sprinklered or unsprinklered building to protect non-openable window openings to a maximum of 2 hr. fire-resistance rating provided,

    (a) in a exposing building face or exterior spatial separation the window sprinkler is installed on the interior side of the window, or

    (b) in an interior fire separation the window sprinkler is installed on both sides of the window in the fire separation.

11. Interior or exterior installations may be made in all types of occupancies except Group F, Division 1 and shall not be used in a firewall. Should the system be located in a loadbearing wall, all loadbearing components shall be protected independently of this window sprinkler assembly system.
12. This window sprinkler system shall not be used in exits as defined in the Ontario Building Code.

13. This horizontal sidewall window sprinkler system shall be served by either a separate riser or separate cross main independent of any regular sprinkler or standpipe system serving the floor area.
14. Separate flow switches or alarm check valves and supervised control valves and each fire compartment on each system shall be electrically supervised and indicated separately at the fire/sprinkler alarm annunciator panel.
15. Where the water supply is from a standpipe system conforming to the Code, the siamese connection shall be labelled as per the standard except for this dual purpose which shall read "STANDPIPE AND WINDOW SPRINKLERS".
16. A noncombustible sign legibly printed in not less than 12.7 mm (1/2 in) block letters with contrasting white background and red letters shall be permanently mounted and maintained beside the main water supply source to this window sprinkler assembly system to indicate:

W A R N I N G

SPECIAL SPRINKLER HEADS ON THIS SYSTEM ARE AN INTEGRAL PART OF WINDOW FIRE SEPARATION. THIS WATER SUPPLY MAY ONLY BE SHUT OFF AFTER ALL THE PROPER AUTHORITIES HAVE RECEIVED NOTICE IN WRITING.

DATED at Toronto this 25th day in the month of JULY in the year 1990 for Authorization #90-06-134 amended on behalf of:

BUILDING MATERIALS EVALUATION COMMISSION

BMEC-90-05-133

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

SILL PLATE ANCHORS

Date of Authorization: July 25, 1990

BMEC REFERENCE: BMEC-90-05-133

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

TECO Canada
48 Dalkeith Drive
Brantford, Ontario
N3P 1N1

ON THE SUBJECT OF:

TECO Sill-Ty Sill Plate Anchors, ST1 and ST2 are hot-dipped galvanized steel anchor straps to be used for securing wood sill plates to concrete slab/wall or concrete block foundations in lieu of anchor bolts.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for

termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS:

6. Installation of the anchor straps shall conform to the manufacturer's installation instructions and recommendations. An instruction sheet with illustrations for placement of anchors in concrete or block core fill and fastening of the sill plate shall be packed with each anchor or package of anchors. These shall be available at all times on the jobsite to completion of the construction.
7. The anchor straps shall be constructed of a minimum of 32 mm (1-1/4 in) wide by 375 mm (14-3/4 in) or 578 mm (22-3/4 in) in length.
8. The exposed two arms of the anchor strap shall be of sufficient length to overlap the topside of the sill plate or a minimum of 101 mm (4 in) vertically on both sides of the sill plate and/or the stud.
9. The anchor strap shall be installed at 914 mm (3 ft) on centre with one anchor located within 305 mm (12 in) of each end, or a minimum of two anchor straps per sill plate length when less than 914 mm (3 ft) in overall length. Location of the anchor strap to be approximately the centre of the area where the sill plate is located.
10. A minimum of four galvanized nails with minimum gauge as 63 mm (2-1/2 in) common nails and with a minimum length of 38 mm (1-1/2 in) shall be used in the holes provided in the arms of the anchor straps.
11. Each anchor strap on the exposed end shall be stamped with the manufacturer's "TECO" and length of the anchor strap either 375 mm (14-3/4 in) or 578 mm (22-3/4 in).
12. The building official with reasonable cause may take away samples of the galvanized steel anchor strap at any time to be tested as specified in the above paragraphs of this authorization. This testing shall be done by an independent test agency at the expense of the applicant.
13. Each application for a building permit using these anchor straps shall be accompanied with a copy of the manufacturer's published installation instructions and structural calculations stamped by a professional engineer or architect registered in Ontario and who is experienced in the field of structural analysis.

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

CONCRETE ROOF TILE SYSTEM

Date of Authorization: July 25, 1990

BMEC REFERENCE: BMEC-90-04-132

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Monier Roof Tile
750 The City Drive
Suite 200
Orange, California
92668 U.S.A.

ON THE SUBJECT OF:

Concrete Roof Tile System, in styles namely: Mission "S", Villa, Classic "100" Shake and Slate to be used on pitched roofs of building structures.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for

termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter 51, R.S.O. 1980, Ontario Regulation 419/86 as amended shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.
7. The applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization.
8. (1)All aspects of the Ontario Building Code, as applicable, shall be complied with for; new and existing roof support framing, rafters, trusses, sheathing, underlay and flashings, and to the recommendations of the manufacturer and his agent. Should there be a conflict the most rigid requirement shall be met.

   (2) For Part 9 buildings where Ontario Building Code design tables are used, the roof design load shall be increased to allow for the weight of the various types of roof tiles.

9. For existing roofs the structural adequacy of the roof framing and the supporting walls shall be certified by a Professional Engineer registered in the Province of Ontario.

M5J 2M4

ON THE SUBJECT OF:

A window sprinkler assembly system to provide a two hour fire-resistance rated separation in a wall to consist of tempered or heat strengthened glass fixed in a non-openable hollow metal steel frame or extruded aluminum frame and a special sidewall window sprinkler with quick response action.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. This window sprinkler assembly system shall be designed, engineered, inspected and verified by a fire protection Professional Engineer (authorized in Ontario) and a document of certification by the Professional Engineer with stamp shall be forwarded to the Chief Building Official and the Building Owner(s).
7. The sprinkler system shall be installed and tested in accordance with N.F.P.A. 13 as a wet pipe system and maintained in accordance with Section 6.5 (sprinkler) of the Ontario Fire Code.
8. The special designed sprinkler head shall be designated as a horizontal sidewall window nozzle, Grinnell Canada Fire Protection Company Limited model FR-1/Q-60, 12.7 mm (1/2 in) orifice, 74C (165F) activation temperature quick response link. The optimum position of the sprinkler head shall be as determined by the tests submitted by National Research Council Canada.
9. The interior glazing shall consist of one sheet of fixed non-operable tempered or heat strengthened glass installed in a hollow metal steel frame 1.35 mm (16 gauge) minimum thickness or extruded aluminum 1.8 mm (1/16 in) minimum thickness. The maximum glazing shall be 2134 mm (7 ft) wide by 2844 mm (9 ft 4 in) high and minimum 6 mm (1/4 in) thick.
10. (1) This window sprinkler system may be used in either a sprinklered or unsprinklered building to protect non-openable window openings to a maximum of 2 hr. fire-resistance rating provided,

    (a) in a exposing building face or exterior spatial separation the window sprinkler is installed on the interior side of the window, or

    (b) in an interior fire separation the window sprinkler is installed on both sides of the window in the fire separation.

11. Interior or exterior installations may be made in all types of occupancies except Group F, Division 1 and shall not be used in a firewall. Should the system be located in a loadbearing wall, all loadbearing components shall be protected independently of this window sprinkler assembly system.
12. This window sprinkler system shall not be used in exits as defined in the Ontario Building Code.

13. This horizontal sidewall window sprinkler system shall be served by either a separate riser or separate cross main independent of any regular sprinkler or standpipe system serving the floor area.
14. Separate flow switches or alarm check valves and supervised control valves and each fire compartment on each system shall be electrically supervised and indicated separately at the fire/sprinkler alarm annunciator panel.
15. Where the water supply is from a standpipe system conforming to the Code, the siamese connection shall be labelled as per the standard except for this dual purpose which shall read "STANDPIPE AND WINDOW SPRINKLERS".
16. A noncombustible sign legibly printed in not less than 12.7 mm (1/2 in) block letters with contrasting white background and red letters shall be permanently mounted and maintained beside the main water supply source to this window sprinkler assembly system to indicate:

W A R N I N G

SPECIAL SPRINKLER HEADS ON THIS SYSTEM ARE AN INTEGRAL PART OF WINDOW FIRE SEPARATION. THIS WATER SUPPLY MAY ONLY BE SHUT OFF AFTER ALL THE PROPER AUTHORITIES HAVE RECEIVED NOTICE IN WRITING.

DATED at Toronto this 10th day in the month of MAY in the year 1990 for Authorization #90-03-131 amended on behalf of:

BUILDING MATERIALS EVALUATION COMMISSION

BMEC-90-02-130

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

SHELF AND RACK STORAGE

Date of Authorization: May 10, 1990

AMENDED: September 19, 1990

BMEC REFERENCE: BMEC-90-02-130

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Alltype Metal Stampings Limited
349 Arvin Avenue
Stoney Creek, Ontario
L8E 2M6

ON THE SUBJECT OF:

A self-contained structural shelf and rack storage facility within a building, having one or more solid intermediate deck or walkway levels for personnel access.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials,

technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. (1) (a) Deck level shall be a continuous horizontal construction membrane through the entire shelf rack facility, and

   (b) Walkway level shall be the horizontal construction membrane between the solid shelving installed on the same plane, and

   (c) Level area means the greatest horizontal area of the shelf and rack storage facility.

   (2) (a) Deck or walkway levels shall be constructed of solid closed surface steel planking or,

   (b) Steel roof decking with minimum 16 mm (5/8 in) maximum 19 mm (3/4 in) thick tongue and groove solid wood or plywood.

7. The structural design of the entire shelf and rack storage facility support system including posts, beams, decks, walkways, connections,and their supports such as concrete slabs, separate foundations or similar shall be in accordance with Ontario Building Code Part 4 requirements.
8. Detailed drawings for each installation shall be stamped by a member of the Association of Professional Engineers of Ontario certifying conformity with this authorization. These drawings shall also detail an appropriate sign to indicate the maximum permissible design loads for each rack storage system and such sign shall be permanently fixed to the building interior and displayed in a prominent unobstructed viewing position. These drawings shall be submitted for a building permit in the usual way.
9. An approved wet pipe sprinkler system shall be designed and installed for the entire shelf and rack storage facility including the top level and shall be in conformance with N.F.P.A. 13-1983, and N.F.P.A. 231C-1980 or the appropriate N.F.P.A. Standard for the most severe hazard that it is exposed to. Sprinklers are not required where only Class I commodities as defined in the following paragraph 8.(2) are stored.
10. (1) (a) The entire shelf and rack storage dimension shall be limited to Table 10.A. based on the type of commodity stored as defined in paragraph 10.(2), (3), (4) and

(5). Excerpts of N.F.P.A. 231C-1980 are outlined in the attached appendix and these shall apply to this authorization.

(b) A firewall as defined in the Ontario Building Code Regulation 419/86, may divide the confining building into two or more separate buildings, wherein, one of the following classes may be assigned to each of the separate buildings.

(2) Class I commodities are non-combustible products, as defined in N.F.P.A. 231C-1980; or

(3) Class II, III and IV commodities are combustible products, as defined in N.F.P.A. 231C-1980; or

(4) Class SS commodities are special hazard products not covered in paragraph 8.(2), (3) or (5);

(5) Aerosol products composed of greater than 55% non-water miscible flammable products including lubricants; paints; oil-based anti-perspirants, furniture polish, insecticides and automotive products, are to be stored only:

(a) On the ground floor of the racking system, and

(b) In a designed area separated by,

(i) a vertical 1 hr. fire separation, or

(ii) a vertical chain link fencing not lighter than 9 ga. steel wire made into a 50 mm (2 in) diamond mesh, located not less than 2.5 m (8 ft) from all other storage where the adjacent storage is more hazardous than Class IV commodity, or

(iii) a method acceptable to the chief Fire Official, and

(c) In the designed area protected by an in-rack sprinkler system. The sprinkler demand shall be a minimum of 1.9 L/s (30 g.p.m. (U.S.)) discharge per head with 74C (165F) heads or less and shall be 2.5 m (8 ft) apart maximum. This design shall be further based on the operation of the hydraulically most remote;

(i) 8 sprinklers if one level, or

(ii) 6 sprinklers on each level if only two levels, or

(iii) 6 sprinklers on each of the top three levels if three or more levels.

(d) Single row racks shall require only the in-rack sprinklers, whereas, double row racks shall require sprinklers in longitudinal flue as well as on face sprinklers which shall be staggered on opposite sides of racks.

TABLE 10.A.

Forming Part of Paragraph 10

Shelf and Rack Storage Facility				
Commodity Classes	**Maximum Height (1)**		**Maximum Area (2)**	
	m	ft	m^2	ft^2
Class I	6 12 18	20 40 60	unlimited 20,070 13,380	unlimited 216,000 144,000
Class II, III, AND IV	6 12 18	20 40 60	8,920 4,460 2,230	96,000 48,000 24,000
Class SS	6 12 18	20 40 60	3,340 1,670 1,110	36,000 18,000 12,000
COLUMN 1	2	3	4	5

NOTES: (1) The maximum height shall be from the floor supporting the shelf and rack system to the topmost portion of the racking system.

(2) The maximum area is the sum total of all levels of the shelf and rack system as well as the floor.

11. A plain legible sign or signs, with contrasting letters and titled "NOTICE", shall describe the above Class and requirements for each shelf and rack storage facility. This sign or signs shall be permanently mounted, at or near the main water supply for the sprinkler system and shall be maintained at all times. For Class I commodities this "NOTICE" shall be permanently mounted, at or near the main entrance to this shelf and rack storage facility.
12. (1) Exits shall be separated from the rack storage facilities with fire separations, having a fire-resistance rating conforming to Subsection 3.4.4. of the Ontario Building Code; and

    (2) the exit stairs shafts shall conform to all requirements for exits as stated in Section 3.4 of the Ontario Building Code; and

    (3) no fewer than 2 exits are required from each deck or walkway level, except where there are not more than two levels above the building floor, and the level area does not exceed 139 m (1500 ft), two means of egress shall be required without the requirements of fire separation for exit, and

(4) any opening in a deck for egress, convenience stairs, ramps or chutes, shall be protected by smoke baffles and close spaced sprinklers as per paragraph 7 of this authorization.

13. The maximum travel distance to exits shall not exceed 46 m (150 ft) and to a fire extinguisher shall not exceed 23 m (75 ft).
14. (1) Where a shelf and rack storage facility contains two or more deck or walkway levels and where each level is greater than 239 m (2,500 ft), a smoke detection system shall be installed on the underside of each deck level on which a walkway or aisle is located, and

    (2) the number of system smoke detectors installed shall be in accordance to CAN4-S524-M1982.

15. The clear aisle width shall not be less than 760 mm (30 inches). This clearance is for access to exits and shall not be used for conveyors, trolleys, tracks or any other similar mode of product transportation within an aisle or walkway.
16. This shelf and rack storage facility is not permitted in F-1 occupancy as defined in the Ontario Building Code.
17. The shelf and rack storage facilities shall be used only for storage and not for manufacturing, production, wrapping or assembly.
18. The shelf and rack storage facilities shall be accessible to employees only and shall be designated, signed and posted as a "NO SMOKING" area conforming to Subsection 2.4.3. of the Ontario Fire Code.
19. (1) In building areas containing shelf and rack storage facilities exceeding 4,645 m (50,000 ft) and except for storage of Class I commodities as defined in paragraph 8 of this document, manually operated smoke vents shall be installed in accordance with N.F.P.A. 204, Section 230, and

    (2) The smoke vent opening shall be not less than 1.2 m by 1.8 m (4 ft by 6 ft) and the openings shall be located not more than 23 m (75 ft) from an exterior wall and not more than 46 m (150 ft) from each other.

20. (1) A standpipe and hose system shall be installed in accordance with Article 3.2.5.4. of the Ontario Building Code where the shelf and rack storage facility height is more than 3 levels including floor level or 14 m (45 ft) in height.

    (2) Where a standpipe and hose system is required, 63.5 mm (2-1/2 in) diameter hose connections shall be provided, except that 38.1 mm (1-1/2 in) hose connections are permitted in the shelf and rack storage facilities which:

    (a) neither exceed 6 levels including the floor level, and

    (b) do not exceed 3,716 m (40,000 ft) in the sum total of all levels of the shelf and rack storage facility.

APPENDIX

Commodity Classifications:

The following guide for commodity classification applies specifically to rack storage and is not related to any other method of classifications of materials.

Class I commodity is defined as essentially non-combustible product on wood pallets, or in ordinary corrugated cartons with or without single thickness dividers or in ordinary paper wrappings, all on wood pallets. Such products may have a negligible amount of plastic trim, such as knobs or handles.

Examples or Class I products are:

Metal Products. Metal desks with plastic tops and trim, electrical coils, electrical devices in their metal enclosures, pots and pans, electrical motors, dry cell batteries, metal parts, empty cans, stoves, washers, dryers and metal cabinets.

Glass Products. Glass bottles, empty or filled with non-combustible liquids, mirrors.

Foods. Foods in non-combustible containers; frozen foods; meat, fresh fruits and vegetables in non-plastic trays or containers; dairy products in nonwax-coated paper containers, beer or wine up to 20 percent alcohol, in metal, ceramic or glass containers.

Others. Oil-filled and other types of distribution transformers, cement in bags, electrical insulators, gypsum board, inert pigments, dry insecticides.

Class II commodity is defined as Class I products in slatted wooden crates, solid wood boxed, multiple thickness paperboard cartons, or equivalent combustible packaging material on wood pallets.

Examples of Class II products are: thinly coated fine wire such as radio coil wire on reels or in cartons; incandescent or fluorescent light bulbs; beer or wine up to 20 percent alcohol in wood containers; and Class I products, if any small cartons or small packages placed in ordinary corrugated cartons.

Class III commodity is defined as wood, paper, natural fiber cloth, or products thereof, on wood pallets. Products may contain a limited amount of plastics. Wood dressers with plastic drawer guides, handles, and trim are examples of a commodity with limited amount of plastic.

Examples of Class III products are:

Paper Products. Books, magazines, newspapers, stationery, plastic coated paper food containers, paper or cardboard games, tissue products, rolled paper on side or steel banded on end, and regenerated cellulosics (cellophane).

Leather Products. Shoes, jackets, gloves, and luggage.

Wood Products. Doors, windows, door and window frames, combustible fiberboard, wood cabinets, furniture and other wood products.

Textiles. Natural fiber upholstered non-plastic furniture, wood or metal furniture with plastic padded and covered arm rests, mattresses without expanded plastic or rubber, absorbent cotton in cartons, natural fiber and viscose yarn thread, and products, and natural fiber clothing or textile products.

Others. Tobacco products in paperboard cartons, non-flammable liquids such as soaps, detergent and bleaches, and non-flammable pharmaceuticals in plastic containers; combustible foods or cereal products, and non-negative producing film packs in sealed metal foil wrappers in paperboard packages.

Class IV commodity is defined in Class I, II and/or III products contained an appreciable amount of plastics in a paperboard carton or Class I, II and/or III products with plastic packaging in paperboard cartons on wood pallets.

Examples of Class IV products are small appliances, typewriters and cameras with plastic parts, plastic backed tapes and synthetic fabrics or clothing. An example of packing material is a metal product in a foamed plastic cocoon in a corrugated carton.

Class IV commodity also includes:

Textiles. Synthetic thread and yarn except viscose, and non-viscose synthetic fabrics or clothing.

Others. Telephone, vinyl floor tile, wood or metal frame upholstered furniture or mattresses with plastic covering and/or padding, and plastic padded metal dashboards or metal bumpers.

AUTHORIZATION REPORT

CLAY ROOF TILE SYSTEM

Date of Authorization: March 21, 1990

BMEC REFERENCE: BMEC-89-11-128

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Sereni Sergio
Laterizi Sereni S.P.A.
Via Codeferro n.100
Martignana Di Po (Cremona)
Italy

AGENT:

A. Baska
European Clay Roofing Ltd.
405 The West Mall, Ste. #700
Toronto, Ontario
M8V 2Z6

ON THE SUBJECT OF:

Clay Roof Tile System, in styles namely: Portuguese, Marscilles and Dutch, to be used on pitched roofs of building structures.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant

or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter 51, R.S.O. 1980, Ontario Regulation 419/86 as amended shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.
7. The applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization.
8. (1) All aspects of the Ontario Building Code, as applicable, shall be complied with for new and existing roof support framing, rafters, trusses, sheathing, underlay and flashings, and to the recommendations of the manufacturer and his agent. Should there be a conflict the most rigid requirement shall be met.

   (2) For Part 9 buildings where Ontario Building Code design tables are used, the roof design load shall be increased to allow for the weight of the various types of roof tiles.

9. For existing roofs the structural adequacy of the roof framing and the supporting walls shall be certified by a Professional Engineer registered in the Province of Ontario,

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

CHIMNEY LINER

Date of Authorization: January 31, 1990

BMEC REFERENCE: BMEC-89-10-127

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Refratco Inc.
139, Route 249 South
St. Elie D'Orford, Quebec
J0B 2S0

ON THE SUBJECT OF:

Refratco (Flameguard) Flue Liner, a chimney liner to line or reline residential masonry chimneys. This liner is made from Refratco No. 110 mix which is a proprietary refractory aggregate concrete and refractory mortar composite. Varying sizes and shapes are used for solid fuel fireplaces and heating appliances.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any

manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. This AUTHORIZATION is limited to the Ontario Building Code buildings where the flue is for the use of solid fuel only and where the chimney is in a good state of repair. (Note: Gas and liquid fuel appliances are regulated separately by the Fuels Safety Branch and a separate application may be made to them, and a copy of any approval shall be sent to B.M.E.C. by Refratco.)
7. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter 51, R.S.O. 1980, Ontario Regulation 419/86 as amended shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.
8. Refratco shall enclose a copy of a manufacturer's recommendations with each on site installation complete with company name, address and telephone number and this shall be left with the building occupant.
9. This authorization has been evaluated by the COMMISSION on the basis of the Warnock Hersey Professional Services test reports No. 50192-C7-301200, DATED 21 March 1989 and No. 195/031800, DATED 15 May 1986, copies of which may be requested from the Refratco Inc. by any party related to the installation.
10. The lined chimney shall be capped by the use of a flue tile extending not more than 100 mm (4 in) above a precast waterproof concrete cap which has a sloping top and overhangs the chimney by at least 50 mm (2 in) with drip edges cast into the concrete cap not less than 25 mm (1 in) from the face of the chimney, or a stainless steel cap with formed drip edges.
11. Installation and materials shall be in accordance to the published instructions of the manufacturer as submitted to the COMMISSION to date of this AUTHORIZATION.
12. Since at the present time there is no available "Standard", this authorization determined that the Refratco Inc. liner did withstand the requirements of the draft ULC S640-M1988, standard for Liners for Masonry Chimneys, however, when the appropriate "Standard" is published and should it be different to the draft, then Refratco shall have the liner retested to that "Standard" at which

time this authorization shall be required to be amended. A copy of the retest shall be submitted to the COMMISSION by Refratco Inc.

13. Refracto shall enter a follow-up program of inspection with an accredited testing agency with copies to the COMMISSION and this authorization is subject to the continuance of such a program. However, when the present draft of ULC S640-M1988 becomes a Standard, Refracto shall enter into a certification program with an accredited testing agency.

LIMITATION

14. Subject to the above paragraph 1, this authorization shall be further limited to buildings for which a permit is applied for prior to 31 December 1993. However, the applicant may by written registered letter to the COMMISSION request an amendment to this limitation at least three months prior to that date.

AUTHORIZATION REPORT

WINDOW SPRINKLER ASSEMBLY

Date of Authorization: December 21, 1989

BMEC REFERENCE: BMEC-89-09-126

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Merber Corporation Consulting Engineers
155 Gordon Baker Road
Toronto, Ontario
M2H 3N7

ON THE SUBJECT OF:

A window sprinkler assembly system to provide a two hour fire-resistance rated separation in a wall to consist of tempered or heat strengthened glass fixed in a non-openable hollow metal steel frame or extruded aluminum frame and a special sidewall window sprinkler with quick response action.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials,

technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. This window sprinkler assembly system shall be designed, engineered, inspected and verified by a fire protection Professional Engineer (authorized in Ontario) and a document of certification by the Professional Engineer with stamp shall be forwarded to the Chief Building Official and the Building Owner(s).
7. The sprinkler system shall be installed and tested in accordance with N.F.P.A. 13 as a wet pipe system and maintained in accordance with Section 6.5 (sprinkler) of the Ontario Fire Code.
8. The special designed sprinkler head shall be designated as a horizontal sidewall window nozzle, Grinnell Canada Fire Protection Company Limited model FR-1/Q-60, 12.7 mm (1/2 in) orifice, 74C (165F) activation temperature quick response link. The optimum position of the sprinkler head shall be as determined by the tests submitted by National Research Council Canada.
9. The interior glazing shall consist of one sheet of fixed non-operable tempered or heat strengthened glass installed in a hollow metal steel frame 1.35 mm (16 gauge) minimum thickness or extruded aluminum 1.8 mm (1/16 in) minimum thickness. The maximum glazing shall be 2134 mm (7 ft) wide by 2844 mm (9 ft 4 in) high and minimum 6 mm (1/4 in) thick.
10. (1) This window sprinkler system may be used in either a sprinklered or unsprinklered building to protect non-openable window openings to a maximum of 2 hr. fire-resistance rating provided.

    (a) in an exposing building face or exterior spatial separation the window sprinkler is installed on the interior side of the window, or

    (b) in an interior fire separation the window sprinkler is installed on both sides of the window in the fire separation.

11. Interior or exterior installations may be made in all types of occupancies except Group F, Division 1 and shall not be used in a firewall. Should the system be located in a loadbearing wall, all loadbearing components shall be protected independently of this window sprinkler assembly system.
12. This window sprinkler system shall not be used in exits as defined in the Ontario Building Code.

13. This horizontal sidewall window sprinkler system shall be served by either a separate riser or separate cross main independent of any regular sprinkler or standpipe system serving the floor area.
14. Separate flow switches or alarm check valves and supervised control valves and each fire compartment on each system shall be electrically supervised and indicated separately at the fire/sprinkler alarm annunciator panel.
15. Where the water supply is from a standpipe system conforming to the Code, the siamese connection shall be labelled as per the standard except for this dual purpose which shall read "STANDPIPE AND WINDOW SPRINKLERS".
16. A noncombustible sign legibly printed in not less than 12.7 mm (1/2 in) block letters with contrasting white background and red letters shall be permanently mounted and maintained beside the main water supply source to this window sprinkler assembly system to indicate:

W A R N I N G

SPECIAL SPRINKLER HEADS ON THIS SYSTEM ARE AN INTEGRAL PART OF WINDOW FIRE SEPARATION. THIS WATER SUPPLY MAY ONLY BE SHUT OFF AFTER ALL THE PROPER AUTHORITIES HAVE RECEIVED NOTICE IN WRITING.

BUILDING MATERIALS EVALUATION COMMISSION

BMEC-89-07-124

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

LAMINATED VENEER LUMBER PANELS

Date of Authorization: September 27, 1989

BMEC REFERENCE: BMEC-89-07-124

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Gang-Nail Systems Inc.
7525 N.W., 37th Avenue
Miami, Florida
33159-2037
U.S.A.

AGENT:

Gang-Nail Canada Inc.
725 Denison Street East
Markham, Ontario
L3R 1B8

ON THE SUBJECT OF:

"GANG-LAM LVL, 3,100f - 2.0E, & 3,400f - 2.1E", these are laminated veneer lumber panels used for structural beams, studs, headers, truss chords or I-Beam flanges.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant

or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter 51, R.S.O 1980, Ontario Regulation 419/86 as amended shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of construction with the building permit.
7. The applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization.
8. This AUTHORIZATION is subject to the terms and conditions of a current valid C.M.H.C. Building Materials Evaluation Report. Any conflict between the Ontario Regulations, C.M.H.C. Report or this AUTHORIZATION the most restricted matter shall apply.
9. GANG-LAM LVL shall not be used where prevailing environmental and weather conditions and moisture content exceeds 19 percent, they shall be used under dry service conditions and stored or protected to prevent excessive weathering.
10. GANG-LAM LVL shall be handled during shipping, storage, installation and application in a manner to prevent bowing and damage. Damaged or defective GANG-LAM LVL shall not be used or repaired.
11. GANG-LAM LVL shall not support construction loads or support workmen during erection until the material is properly installed and laterally restrained.
12. The subject matter shall conform to manufacturer's published installation instructions and shall be designed, engineered, inspected and verified for each project by the architect or engineer (authorized in Ontario). All related documents and drawings shall bear the professional seal and signature of the architect or engineer skilled in wood design. The drawings shall show the applicable design loads and deflections.

BUILDING MATERIALS EVALUATION COMMISSION

BMEC-89-06-123

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

LAMINATED WOOD I-BEAMS

Date of Authorization: September 27, 1989

BMEC REFERENCE: BMEC-89-06-123

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Gang-Nail Systems Inc.
7525 N.W., 37th Avenue
Miami, Florida
33159-2037 U.S.A.

AGENT:

Gang-Nail Canada Inc.
725 Denison Street East
Markham, Ontario
L3R 1B8

ON THE SUBJECT OF:

"GNI-Beam", these are I-shaped wood beams used for structural floor, ceiling or roof joists, beams, lintels, headers, blocking or rafters.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter 51, R.S.O 1980, Ontario Regulation 419/86 as amended shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of construction with the building permit.
7. The applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization.
8. This AUTHORIZATION is subject to the terms and conditions of a current valid C.M.H.C. Building Materials Evaluation Report. Any conflict between the Ontario Regulations, C.M.H.C. Report or this AUTHORIZATION the most restricted matter shall apply.
9. GNI-BEAMS shall not be used where prevailing environmental and weather conditions and moisture content exceeds 19 percent, they shall be used under dry service conditions and stored or protected to prevent excessive weathering.
10. GNI-BEAMS shall be handled during shipping, storage, installation and application in a manner to prevent bowing and damage. Damaged or defective GNI-BEAMS shall not be used or repaired.
11. GNI-BEAMS shall not support construction loads or support workmen during erection until the material is properly installed and laterally restrained.
12. The subject matter shall conform to manufacturer's published installation instructions and shall be designed, engineered, inspected and verified for each project by the architect or engineer (authorized in Ontario). All related documents and drawings shall bear the professional seal and signature of the architect or engineer skilled in wood design. The drawings shall show the applicable design loads and deflections.

DATED at Toronto this 27th day in the month of SEPTEMBER in the year 1989 for Authorization #89-06-123 on behalf of:

BUILDING MATERIALS EVALUATION COMMISSION

AMENDED
AUTHORIZATION #89-5-122
BY THE 13 November 1991
BUILDING MATERIALS EVALUATION COMMISSION

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF the Applicant:

Ark-Seal Inc.
2185 South Jason
Denver, Colorado, U.S.A.
80223

ON THE SUBJECT OF:

Blow-In-Blanket System (BIBS), for insulating conventionally framed wood exterior or interior wall or ceiling construction, manufactured on site as custom spray in batt using Mineral Fibre Insulation or Cellulose Insulation and combined with a binder/adhesive pneumatically pumped into only exposed cavities while held in place by nylon netting attached to the construction cavity.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

/2...

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter 51, R.S.O. 1980, Ontario Regulation 419/86 as amended shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of construction with the building permit.

7. This applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization.

8. This AUTHORIZATION is subject to the terms and conditions of a current valid C.C.M.C. Building Materials Evaluation Report. Any conflict between the Ontario Regulations or C.C.M.C. Report the most restricted matter shall apply.

9. The only two insulating materials used in this BIB System shall where applicable conform to the following standards:

   (a) Canadian Standards Association (CSA) A101-M1983, "Thermal Insulation, Mineral Fibre for Buildings", and

   (b) Canadian General Standard Board (CGSB) 51-GP-60M, "Thermal Insulation, Cellulose Fibre, Loose Fill", and

10. Insulating materials in the above paragraph 9 shall be combined with a water based adhesive by trade name "Insulbinder", via the mixing chamber nozzle of the Ark-Seal blowing machine for injecting into the construction cavity behind the nylon netting.

/3...

11. The subject Blow-In-Blanket System may be used either in vertical, horizontal or anywhere when open cavities are held in place by nylon netting trade name "Insulnet" which is left intact for the duration of the insulation life span.

12. The installation shall not be permitted at temperatures below freezing 0°C (32°F) on the interior side of the building and shall not be used where prevailing environmental and weather conditions and moisture content exceeds 20 percent of the dry weight of the installed material.

13. The Blow-In-Blanket and netting shall only be installed in cavities that are free of frost and shall be exposed to atmosphere for a minimum of 24 hours after installation to permit drying, no vapour barrier, drywall or other covering shall be applied during this time.

14. The Blow-In-Blanket System shall conform to manufacterer's published "Technical Manual For Blow-In-Blanket System (BIBS)", revision date 90-06-15, pages 1 to 9 inclusive.

15. (a) A copy of the "Technical Manual ..." in paragraph 14 and this B.M.E.C. Authorization shall be given to each prospective purchaser of the BIB System, and

(b) copies of same shall be permanently posted on each jobsite along with a copy of an installation record on an Ark-Seal letterhead (similar as shown in CSA-A101-M1983) also showing indoor air temperature, time insulation completed, time interior wall covering started, and

(c) signed witnessed by the person in charge of construction as well as the BIBS applicator. These copies as posted shall be informative for all future owner(s) and other vested parties.

16. This BIB System shall only be installed by qualified applicators who shall carry an identification card with their photograph and a statement by Ark-Seal Inc. that the installer has been trained and is qualified in the installation of this Blow-In-Blanket System.

17. The building official with reasonable cause may take away samples of the BIB System at any time to be tested as specified in the above paragraphs of this authorization. This testing shall be done by an independent test agency at the expense of the applicant after being notified in writing by the building official.

BMEC-89-01-118

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

HORIZONTAL CAVITY SHAFT WALL SYSTEM

Date of Authorization: May 10, 1989

BMEC REFERENCE: BMEC-89-01-118

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Canadian Gypsum Company
777 Bay Street
Suite 1800
Toronto, Ontario
M5W 1K3

ON THE SUBJECT OF:

Canadian Gypsum Company (CGC) horizontal cavity shaft wall system, a gypsum sheetrock with steel studs, channels and runners forming a two hour fire-resistance assembly for metal duct enclosures or ceiling membrane.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials,

technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter 51, R.S.O. 1980, Ontario Regulation 419/86 as amended shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.
7. The applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization.
8. This system shall be constructed as non-loadbearing only and the supporting assembly shall be of at least the required fire-resistance rating.
9. The maximum span for this system shall be 2.13 m (7 ft) and the maximum of two hour fire-resistance rating from either side as determined on the basis of test results with ASTM E119.
10. This assembly consists of at least 25.4 mm (1 in) thick CGC gypsum shaft wall liner and three layers of 12.7 mm (1/2 in) sheetrock firecode "C" panels. The liner and panels shall be fitted and fastened with metal studs, channels, runners, screw, anchors, trim and sealant as per manufacturer's recommendations.
11. The manufacturers detail is contained in the publication by CGC for Cavity Shaft Walls Systems, Folder 09260-2E, copyright 1988, on page 10, titled 2 hr. rated assembly horizontal metal duct enclosure (fire tested both sides).
12. Any and all the above data, details and tests shall be made available to any and all parties responsible for the design, detail, construction, installation and inspection of each installation.

BUILDING MATERIALS EVALUATION COMMISSION

BMEC-88-10-117

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

WINDOW SPRINKLER ASSEMBLY

Date of Authorization: May 10, 1989

BMEC REFERENCE: BMEC-88-10-117

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

F. Verri & Associates Inc.
7370 Bramalea Road, Unit #20
Mississauga, Ontario
L5S 1N6

ON THE SUBJECT OF:

A window sprinkler assembly system to provide a two hour fire-resistance rated separation in a wall to consist of tempered or heat strengthened glass fixed in a non-openable hollow metal steel frame or extruded aluminum frame and a special sidewall window sprinkler with quick response action.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials,

technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. This window sprinkler assembly system shall be designed, engineered, inspected and verified by a fire protection Professional Engineer (authorized in Ontario) and a document of certification by the Professional Engineer with stamp shall be forwarded to the Chief Building Official and the Building Owner(s).
7. The sprinkler system shall be installed and tested in accordance with N.F.P.A. 13 as a wet pipe system and maintained in accordance with Section 6.5 (sprinkler) of the Ontario Fire Code.
8. The special designed sprinkler head shall be designated as a horizontal sidewall window nozzle, Grinnell Canada Fire Protection Company Limited model FR-1/Q-60, 12.7 mm (1/2 in) orifice, 74C (165F) activation temperature quick response link. The optimum position of the sprinkler head shall be as determined by the tests submitted by National Research Council Canada.
9. The interior glazing shall consist of one sheet of fixed non-operable tempered or heat strengthened glass installed in a hollow metal steel frame 1.35 mm (16 gauge) minimum thickness or extruded aluminum 1.8 mm (1/16 in) minimum thickness. The maximum glazing shall be 2134 mm (7 ft) wide by 2844 mm (9 ft 4 in) high and minimum 6 mm (1/4 in) thick.
10. (1)This window sprinkler system may be used in either a sprinklered or unsprinklered building to protect non-openable window openings to a maximum of 2 hr. fire-resistance rating provided,

    (a) in an exposing building face or exterior spatial separation the window sprinkler is installed on the interior side of the window, or

    (b) in an interior fire separation the window sprinkler is installed on both sides of the window in the fire separation.

11. Interior or exterior installations may be made in all types of occupancies except Group F, Division 1 and shall not be used in a firewall. Should the system be located in a loadbearing wall, all loadbearing components shall be protected independently of this window sprinkler assembly system.
12. This window sprinkler system shall not be used in exits as defined in the Ontario Building Code.

13. This horizontal sidewall window sprinkler system shall be served by either a separate riser or separate cross main independent of any regular sprinkler or standpipe system serving the floor area.
14. Separate flow switches or alarm check valves and supervised control valves and each fire compartment on each system shall be electrically supervised and indicated separately at the fire/sprinkler alarm annunciator panel.
15. Where the water supply is from a standpipe system conforming to the Code, the siamese connection shall be labelled as per the standard except for this dual purpose which shall read "STANDPIPE AND WINDOW SPRINKLERS".
16. A noncombustible sign legibly printed in not less than 12.7 mm (1/2 in) block letters with contrasting white background and red letters shall be permanently mounted and maintained beside the main water supply source to this window sprinkler assembly system to indicate:

WARNING

SPECIAL SPRINKLER HEADS ON THIS SYSTEM ARE AN INTEGRAL PART OF WINDOW FIRE SEPARATION. THIS WATER SUPPLY MAY ONLY BE SHUT OFF AFTER ALL THE PROPER AUTHORITIES HAVE RECEIVED NOTICE IN WRITING.

BUILDING MATERIALS EVALUATION COMMISSION

BMEC-88-09-116

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

SHELF AND RACK STORAGE

Date of Authorization: May 10, 1989

AMENDED: September 19, 1990

BMEC REFERENCE: BMEC-88-09-116

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

E-Z-RECT Manufacturing Ltd.
268 Rutherford Road South
Brampton, Ontario
L6W 3N3

ON THE SUBJECT OF:

A self-contained structural shelf and rack storage facility within a building, having one or more solid intermediate deck or walkway levels for personnel access.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials,

technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. (1)(a) Deck level shall be a continuous horizontal construction membrane through the entire shelf rack facility, and

   (b) Walkway level shall be the horizontal construction membrane between the solid shelving installed on the same plane, and

   (c) Level area means the greatest horizontal area of the shelf and rack storage facility.

   (2)(a) Deck or walkway levels shall be constructed of solid closed surface steel planking or,

   (b) Steel roof decking with minimum 16 mm (5/8 in) maximum 19 mm (3/4 in) thick tongue and groove solid wood or plywood.

   (3) The structural design of the entire shelf and rack storage facility support system including posts, beams, decks, walkways, connections, and their supports such as concrete slabs, separate foundations or similar shall be in accordance with Ontario Building Code Part 4 requirements.

   (4) Detailed drawings for each installation shall be stamped by a member of the Association of Professional Engineers of Ontario Certifying conformity with this authorization. These drawings shall also detail an appropriate sign to indicate the maximum permissible design loads for each rack storage system and such sign shall be permanently fixed to the building interior and displayed in a prominent unobstructed viewing position. These drawings shall be submitted for a building permit in the usual way.

7. An approved wet pipe sprinkler system shall be designed and installed for the entire shelf and rack storage facility including the top level and shall be in conformance with N.F.P.A. 13-1983, and N.F.P.A. 231C-1980 or the appropriate N.F.P.A. Standard for the most severe hazard that it is exposed to. Sprinklers are not required where only Class I commodities as defined in the following paragraph 8.(2) are stored.

8. (1)(a) The entire shelf and rack storage dimension shall be limited to Table 8.A. based on the type of commodity stored as defined in paragraph 8.(2), (3), (4) and (5). Excerpts of N.F.P.A. 231C-1980 are outlined in the attached appendix and these shall apply to this authorization.

   (b) A firewall as defined in the Ontario Building Code Regulation 419/86, may divide the confining building into two or more separate buildings, wherein, one of the following classes may be assigned to each of the separate buildings.

   (2) Class I commodities are non-combustible products, as defined in N.F.P.A. 231C-1980; or

   (3) Class II, III and IV commodities are combustible products, as defined in N.F.P.A. 231C-1980; or

   (4) Class SS commodities are special hazard products not covered in paragraph 8.(2), (3) or (5);

   (5) Aerosol products composed of greater than 55% non-water miscible flammable products including lubricants; paints; oil-based anti-perspirants, furniture polish, insecticides and automotive products, are to be stored only:

   (a) On the ground floor of the racking system, and

   (b) In a designed area separated by,

   (i) a vertical 1 hr. fire separation, or

   (ii) a vertical chain link fencing not lighter than 9 ga. steel wire made into a 50 mm (2 in) diamond mesh, located not less than 2.5 m (8 ft) from all other storage where the adjacent storage is more hazardous than Class IV commodity, or

   (iii) a method acceptable to the chief Fire Official, and

   (c) In the designated area protected by an in-rack sprinkler system. The sprinkler demand shall be a minimum of 1.9 L/s (30 g.p.m. (U.S.)) discharge per head with 74C (165F) heads or less and shall be 2.5 m (8 ft) apart maximum. This design shall be further based on the operation of the hydraulically most remote;

   (i) 8 sprinklers if one level, or

   (ii) 6 sprinklers on each level if only two levels, or

   (iii) 6 sprinklers on each of the top three levels if three or more levels.

(d) Single row racks shall require only the in-rack sprinklers, whereas, double row racks shall require sprinklers in longitudinal flue as well as on face sprinklers which shall be staggered on opposite sides of racks.

TABLE 8.A.

Forming Part of Paragraph 8

Shelf and Rack Storage Facility				
Commodity Classes	**Maximum Height (1)**		**Maximum Area (2)**	
	m	ft	m^2	ft^2
Class I	6 12 18	20 40 60	unlimited 20,070 13,380	unlimited 216,000 144,000
Class II, III, AND IV	6 12 18	20 40 60	8,920 4,460 2,230	96,000 48,000 24,000
Class SS	6 12 18	20 40 60	3,340 1,670 1,110	36,000 18,000 12,000
COLUMN 1	2	3	4	5

NOTE:

(1) The maximum height shall be from the floor supporting the shelf and rack system to the topmost portion of the racking system.

(2) The maximum area is the sum total of all levels of the shelf and rack system as well as the floor.

9. A plain legible sign or signs, with contrasting letters and titled "NOTICE", shall describe the above Class and requirements for each shelf and rack storage facility. This sign or signs shall be permanently mounted, at or near the main water supply for the sprinkler system and shall be maintained at all times. For Class I commodities this "NOTICE" shall be permanently mounted, at or near the main entrance to this shelf and rack storage facility.
10. (1) Exits shall be separated from the rack storage facilities with fire separations, having a fire resistance rating conforming to Subsection 3.4.4. of the Ontario Building Code; and

    (2) the exit stair shafts shall conform to all requirements for exits as stated in Section 3.4 of the Ontario Building Code; and

(3) no fewer than 2 exits are required from each deck or walkway level, except where there are not more than two levels above the building floor, and the level area does not exceed 139 m (1500 ft), two means of egress shall be required without the requirements of fire separation for exit, and

(4) any opening in a deck for egress, convenience stairs, ramps or chutes, shall be protected by smoke baffles and close spaced sprinklers as per paragraph 7 of this authorization.

11. The maximum travel distance to exits shall not exceed 46 m (150 ft) and to a fire extinguisher shall not exceed 23 m (75 ft).
12. (1) Where a shelf and rack storage facility contains two or more deck or walkway levels and where each level is greater than 239 m (2,500 ft), a smoke detection system shall be installed on the underside of each deck level on which a walkway or aisle is located, and

    (2) the number of system smoke detectors installed shall be in accordance to CAN4-S524-M1982.

13. The clear aisle width shall not be less than 760 mm (30 inches). This clearance is for access to exits and shall not be used for conveyors, trolleys, tracks or any other similar mode of product transportation within an aisle or walkway.
14. This shelf and rack storage facility is not permitted in F-1 occupancy as defined in the Ontario Building Code.
15. The shelf and rack storage facilities shall be used only for storage and not for manufacturing, production, wrapping or assembly.
16. The shelf and rack storage facilities shall be accessible to employees only and shall be designated, signed and posted as a "NO SMOKING" area conforming to Subsection 2.4.3. of the Ontario Fire Code.
17. (1) In building areas containing shelf and rack storage facilities exceeding 4,645 m (50,000 ft) and except for storage of Class I commodities as defined in paragraph 8 of this document, manually operated smoke vents shall be installed in accordance with N.F.P.A. 204, Section 230, and

    (2) The smoke vent opening shall be not less than 1.2 m by 1.8 m (4 ft by 6 ft) and the openings shall be located not more than 23 m (75 ft) from an exterior wall and not more than 46 m (150 ft) from each other.

18. (1) A standpipe and hose system shall be installed in accordance with Article 3.2.5.4. of the Ontario Building Code where the shelf and rack storage facility height is more than 3 levels including floor level or 14 m (45 ft) in height.

    (2) Where a standpipe and hose system is required, 63.5 mm (2-1/2 in) diameter hose connections shall be provided, except that 38.1 mm (1-1/2 in) hose connections are permitted in the shelf and rack storage facilities which:

(a) neither exceed 6 levels including the floor level, and

(b) do not exceed 3,716 m (40,000 ft) in the sum total of all levels of the shelf and rack storage facility.

APPENDIX

Commodity Classifications:

The following guide for commodity classification applies specifically to rack storage and is not related to any other method of classification of materials.

Class I commodity is defined as essentially non-combustible product on wood pallets, or in ordinary corrugated cartons with or without single thickness dividers or in ordinary paper wrappings, all on wood pallets. Such products may have a negligible amount of plastic trim, such as knobs or handles.

Examples or Class I products are:

Metal Products. Metal desks with plastic tops and trim, electrical coils, electrical devices in their metal enclosures, pots and pans, electrical motors, dry cell batteries, metal parts, empty cans, stoves, washers, dryers and metal cabinets.

Glass Products. Glass bottles, empty or filled with non-combustible liquids, mirrors.

Foods. Foods in non-combustible containers; frozen foods; meat, fresh fruits and vegetables in non-plastic trays or containers; dairy products in nonwax-coated paper containers, beer or wine up to 20 percent alcohol, in metal, ceramic or glass containers.

Others. Oil-filled and other types of distribution transformers, cement in bags, electrical insulators, gypsum board, inert pigments, dry insecticides.

Class II commodity is defined as Class I products in slatted wooden crates, solid wooden boxed, multiple thickness paperboard cartons, or equivalent combustible packaging material on wood pallets.

Examples of Class II products are: thinly coated fine wire such as radio coil wire on reels or in cartons; incandescent or fluorescent light bulbs; beer or wine up to 20 percent alcohol in wood containers; and Class I products, if any small cartons or small packages placed in ordinary corrugated cartons.

Class III commodity is defined as wood, paper, natural fiber cloth, or products thereof, on wood pallets. Products may contain a limited amount of plastics. Wood dressers with plastic drawer guides, handles, and trim are examples of a commodity with limited amount of plastic.

Examples of Class III products are:

Paper Products. Books, magazines, newspapers, stationery, plastic coated paper food containers, paper or cardboard games, tissue products, rolled paper on side or steel banded on end, and regenerated cellulosics (cellophane).

Leather Products. Shoes, jackets, gloves, and luggage.

Wood Products. Doors, windows, door and window frames, combustible fiberboard, wood cabinets, furniture and other wood products.

Textiles. Natural fiber upholstered non-plastic furniture, wood or metal furniture with plastic padded and covered arm rests, mattresses without expanded plastic or rubber, absorbent cotton in cartons, natural fiber and viscose yarn thread, and products, and natural fiber clothing or textile products.

Others. Tobacco products in paperboard cartons, non-flammable liquids such as soaps, detergent and bleaches, and non-flammable pharmaceuticals in plastic containers; combustible foods or cereal products, and non-negative producing film packs in sealed metal foil wrappers in paperboard packages.

Class IV commodity is defined in Class I, II and/or III products contained an appreciable amount of plastics in a paperboard carton or Class I, II and/or III products with plastic packaging in paperboard cartons on wood pallets.

Examples of Class IV products are small appliances, typewriters and cameras with plastic parts, plastic backed tapes and synthetic fabrics or clothing. An example of packing material is a metal product in a foamed plastic cocoon in a corrugated carton.

Class IV commodity also includes:

Textiles. Synthetic thread and yarn except viscose, and non-viscose synthetic fabrics or clothing.

Others. Telephone, vinyl floor tile, wood or metal frame upholstered furniture or mattresses with plastic covering and/or padding, and plastic padded metal dashboards or metal bumpers.

BUILDING MATERIALS EVALUATION COMMISSION

BMEC-88-08-115

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

KITCHEN EXHAUST AND FILTRATION SYSTEM

Date of Authorization: May 10, 1989

BMEC REFERENCE: BMEC-88-08-115

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Spring Air Systems Inc.
3155 Grandby Drive
Oakville, Ontario
L6H 3Y9

ON THE SUBJECT OF:

Kitchen exhaust and filtration system with or without heat reclaim unit for supply return air make-up to kitchen area only.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

- The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
- This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
- This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

- Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

- The kitchen exhaust duct beyond the fire damper located on the exhaust side of the filtered unit may be installed in accordance with the Ontario Building Code 6.2.4. when it passes directly to atmosphere and not through any fire separation.
- Installation and maintenance shall comply with the application dated 3 March 1989, and proposal as submitted by the applicant titled, "Specifications Sheets for KES, KRS, KHR and KHR-EN for Commercial Kitchen Exhaust", dated 28 March 1989.
- The tempered supply air duct system shall be installed in accordance with the Ontario Building Code Subsection 6.2.4. and discharge only to the kitchen area. There shall be a fire damper in this supply return air duct at the reclaim unit.
- Where a heat reclaim unit is used with gas-fired kitchen cooking equipment, the heat reclaim unit shall have separate air streams for exhaust to outside of the building and the make-up air system to only the kitchen area.
- This authorization does not include any gas- or liquid-fired make-up air units, any such units may be separately approved by the Fuels Safety Branch.
- Except as noted above the entire system shall conform to NFPA 96-1984 as amended to 1 January 1986.

AUTHORIZATION REPORT

CLAY TILE EXTERIOR WALL SYSTEM

Date of Authorization: December 7, 1988

BMEC REFERENCE: BMEC-88-06-113

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

NSP Inc.
P.O. Box 1800
Oakville, Ontario
L6J 5C7

ON THE SUBJECT OF:

"Bardeaubric, Bardatuil and Bardeaudal" this is an exterior wall covering to be used as siding, this system comprises of clay tile with integral hanging bracket and treated wood or galvanized iron purlins fastened to the wall framing members or existing masonry walls.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials,

technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter 51, R.S.O. 1980, Ontario Regulation 419/86 as amended shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.
7. The applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization.
8. Each installation shall conform to the manufacturer's published installation instructions and shall be reviewed in detail, stamped, dated and signed for construction as specified by the manufacturer's listed trained personnel.
9. Attachment of this siding to the integral hanging bracket shall be as per manufacturer's published installation instructions using treated wood or galvanized iron purlins securely fastened to the wall framing members or existing masonry walls.
10. This siding system may be considered noncombustible when used with the galvanized iron purlins.
11. The supporting structures shall be adequate to support the expected loads as per the manufacturer's published installation instructions.

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

WINDOW SPRINKLER ASSEMBLY

Date of Authorization: December 7, 1988

BMEC REFERENCE: BMEC-88-05-112

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Leber/Rubes Inc.
34 Ross St.
Toronto, Ontario
M5T 1Z9

ON THE SUBJECT OF:

A window sprinkler assembly system to provide a two hour fire-resistance rated separation in a wall to consist of tempered or heat strengthened glass fixed in a non-openable hollow metal steel frame or extruded aluminum frame and a special sidewall window sprinkler with quick response action.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials,

technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. This window sprinkler assembly system shall be designed, engineered, inspected and verified by a fire protection Professional Engineer (authorized in Ontario) and a document of certification by the Professional Engineer with stamp shall be forwarded to the Chief Building Official and the Building Owner(s).
7. The sprinkler system shall be installed and tested in accordance with N.F.P.A. 13 as a wet pipe system and maintained in accordance with Section 6.5 (sprinkler) of the Ontario Fire Code.
8. The special designed sprinkler head shall be designated as a horizontal sidewall window nozzle, Grinnell Canada Fire Protection Company Limited model FR-1/Q-60, 12.7 mm (1/2 in) orifice, 74C (165F) activation temperature quick response link. The optimum position of the sprinkler head shall be as determined by the tests submitted by National Research Council of Canada.
9. The interior glazing shall consist of one sheet of fixed non-operable tempered or heat strengthened glass installed in a hollow metal steel frame 1.35 mm (16 gauge) minimum thickness or extruded aluminum 1.8 mm (1/16 in) minimum thickness. The maximum glazing shall be 2134 mm (7 ft) wide by 2844 mm (9 ft 4 in) high and minimum 6 mm (1/4 in) thick.
10. (1) This window sprinkler system may be used in either a sprinklered or unsprinklered building to protect non-openable window openings to a maximum of 2 hr. fire-resistance rating provided,

    (a) in an exposing building face or exterior spatial separation the window sprinkler is installed on the interior side of the window, or

    (b) in an interior fire separation the window sprinkler is installed on both sides of the window in the fire separation.

11. Interior or exterior installations may be made in all types of occupancies except Group F, Division 1 and shall not be used in a firewall. Should the system be located in a loadbearing wall, all loadbearing components shall be protected independently of this window sprinkler assembly system.
12. This window sprinkler system shall not be used in exits as defined in the Ontario Building Code.

13. This horizontal sidewall window sprinkler system shall be served by either a separate riser or separate cross main independent of any regular sprinkler or standpipe system serving the floor area.
14. Separate flow switches or alarm check valves and supervised control valves and each fire compartment on each system shall be electrically supervised and indicated separately at the fire/sprinkler alarm annunciator panel.
15. Where the water supply is from a standpipe system conforming to the Code, the siamese connection shall be labelled as per the standard except for this dual purpose which shall read "STANDPIPE AND WINDOW SPRINKLERS".
16. A noncombustible sign legibly printed in not less than 12.7 mm (1/2 in) block letters with contrasting white background and red letters shall be permanently mounted and maintained beside the main water supply source to this window sprinkler assembly system to indicate:

W A R N I N G !

SPECIAL SPRINKLER HEADS ON THIS SYSTEM ARE AN INTEGRAL PART OF WINDOW FIRE SEPARATION. THIS WATER SUPPLY MAY ONLY BE SHUT OFF AFTER ALL THE PROPER AUTHORITIES HAVE RECEIVED NOTICE IN WRITING.

AUTHORIZATION REPORT

PARALLEL STRAND LUMBER

Date of Authorization: December 7, 1988

BMEC REFERENCE: BMEC-88-01-108

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

MacMillan Bloedel Ltd.
1272 Derwent Way
Annacis Island, B.C.
V3M 5R1

ON THE SUBJECT OF:

"Parallam" parallel strand lumber (PSL) is manufactured by laminating long stands of Douglas fir with an exterior-type adhesive (phenol formaldehyde). The strands are oriented to the length of the member and then compressed under heat and pressure to the desired lay-up pattern to form a continuous billet. The billet may then be cross-cut to any length.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter 51, R.S.O. 1980, Ontario Regulation 419/86 as amended shall be met. A valid copy of this authorization shall be attached to the application for a building permit and a similar copy shall be posted and maintained on the site of the construction with the building permit.
7. The applicant shall be wholly responsible for the complete discharge of each paragraph of this authorization.
8. This AUTHORIZATION is subject to the terms and conditions of a current valid C.M.H.C. Building Materials Evaluation Report. Any conflict between the Ontario Regulations, C.M.H.C. Report or this AUTHORIZATION the most restricted matter shall apply.
9. The subject matter shall conform to the manufacturer's published installation instructions and shall be designed, engineered, inspected and verified for each project by the architect or engineer (authorized in Ontario). All related documents and drawings shall bear the professional seal and signature of the architect or engineer skilled in wood design.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein, all applicable requirements of the Ontario Building Code Act and Ontario Regulation 419/86 shall be met. A copy of this Authorization shall be kept and maintained on the site of construction.
7. When this roofing system is used for noncombustible construction all components and support members shall be of noncombustible materials.
8. Conformance shall be made to a current CMHC Evaluation Report, however, in case of conflict with this authorization the more stringent matter shall prevail.
9. Subject to paragraphs herein this roofing system shall be in accordance with the manufacturer's published instructions and installation shall be by the manufacturer's trained qualified tradespersons.
10. In lieu of wood roof sheathing for this roofing system, wood purlins (battens) may be used.
11. For existing roofs, the structural adequacy of the roof framing and the supporting members shall be examined by a qualified manufacturer's representative and a written, signed and dated certificate shall be attached to the manufacturer's warranty with copies to the building official and owner(s).
12. Voids between existing roofing systems and this new roofing system shall not be filled with insulation.

And see paragraph 9 (a)(b).

ON THE SUBJECT OF:

Vinyl/Gypsum System, this is the use of combustible vinyl cladding over sheathing paper and gypsum board sheathing applied to the exterior of a building as an integral cladding system in lieu of noncombustible cladding within limitation.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the

authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. The gypsum shall be as per Code requirements for exterior grade gypsum board sheathing with a minimum of 12.7 mm (1/2 in) thickness, fastening to the building structure shall be as per Code requirements.
7. Sheathing paper shall be as per Code requirements.
8. The vinyl cladding shall conform to the requirements of CGSB 41-GP-24Ma, fastening to the building structure shall be as per Code requirements.
9. (a) Each manufacturer to date of this authorization has tested their vinyl cladding for a Flame-Spread Rating of not more than 25 using the CAN-4-S102.2-M83 "Standard Method of Test for Surface Burning Characteristics of Flooring and Miscellaneous Materials and Assemblies" and

   (b) Manufacturers listed after the date of this authorization shall test in conformance to the above paragraph 9.(a).

10. Vinyl/Gypsum System is acceptable in Part 9 of the Building Code where noncombustible cladding is required:

    (a) in buildings containing dwelling units only where there is no dwelling unit above another dwelling unit, or

    (b) in all other buildings where the limiting distance is not less than 0.6 m (2 ft)

11. (a) Vinyl/Gypsum System shall be allowed as a combustible element in noncombustible construction as cladding where an occupancy classification is

such as to permit an exposing building face to have unprotected openings of greater than 25 per cent in Part 3 of the Building Code.

(b) The requirements of the Building Code with respect to limiting distance shall apply to all installations under the authorization.

12. (a) Unprotected openings, limiting distance and exposing building face shall be as defined by the Building Code.

    (b) Each installation shall conform to the manufacturer's installation instructions and shall be installed by the manufacturer's listed trained personnel.

BUILDING MATERIALS EVALUATION COMMISSION

BMEC-87-06-103

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

KATECH ROOFING PANEL SYSTEM

Date of Authorization: September 10, 1987

BMEC REFERENCE: BMEC-87-06-103

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Steel Tile Co. (Div. 621158 Ontario Limited)
R.R. #1
Thornton, Ontario
L0L 2N0

ON THE SUBJECT OF:

Katech Roofing Panel System, rolled formed and pressed pre-painted, galvalume or galvanized sheet steel shaped in various profiles of tile, coated on the exposed side with poly vinyl.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising materials, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for

termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein, all applicable requirements of the Ontario Building Code Act and Ontario Regulation 419/86 shall be met. A copy of this Authorization shall be kept and maintained on the site of construction.
7. When this roofing system is used for noncombustible construction all components and support members shall be of noncombustible materials.
8. Conformance shall be made to a current CMHC Evaluation Report, however, in case of conflict with this authorization the more stringent matter shall prevail.
9. Subject to paragraphs herein, this roofing system shall be in accordance with the manufacturer's published instructions and installation shall be by the manufacturer's trained qualified tradespersons.
10. In lieu of wood roof sheathing for this roofing system, wood purlins (battens) may be used.
11. For existing roofs, the structural adequacy of the roof framing and the supporting members shall be examined by a qualified manufacturer's representative and a written, signed and dated certificate shall be attached to the manufacturer's warranty with copies to the building official and owner(s).
12. Voids between existing roofing systems and this new roofing system shall not be filled with insulation.

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

MORTARLESS INTERLOCKING POLYURETHANE BLOCKS

Date of Authorization: August 12, 1987

BMEC REFERENCE: BMEC-87-03-100

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Canadian Insulock Corporation
475 Howe Street
Suite 504
Vancouver, B.C.
V6C 2B3

ON THE SUBJECT OF:

Insulock Building System, a mortarless, interlocking polyurethane block that serves as a permanent form for steel reinforced cast-in-place concrete. For use above or below grade as an exterior or interior insulated bearing wall of combustible construction.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising materials, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for

termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein, all applicable requirements of the Ontario Building Code Act and Regulations shall be met. A copy of this Authorization shall be attached to the application for a building permit and a copy shall be kept and maintained on the site of construction as per Code requirements.
7. This AUTHORIZATION is limited to use in buildings where the design is based on engineering analysis of the structural effects of the loads and forces acting on the structure. An architect or professional engineer shall be responsible for this matter.
8. Engineering inspection of the subject construction shall be carried out, to ensure that construction is consistent with the design, by the person responsible for its design details and general review during construction; or by another person qualified in the inspection of this construction and who is responsible to the design architect or engineer and all construction documents shall be duly sealed.
9. Each installation shall conform to the manufacturer's published installation instructions and shall be reviewed in detail, stamped, dated and signed for construction as specified by the manufacturer or by qualified trained personnel listed by the manufacturer.
10. Each building where the Insulock Building System is installed shall be provided with a mechanical means of air change to provide a minimum of 0.5 air changes per hour on a continuous basis throughout the year.
11. Precautions shall be taken to keep the Insulock Building System away from heat emitting devices, such as recessed light fixtures, chimneys and direct sun rays. Also, this system shall not be used in direct contact with the ground or water.
12. The Insulock Block shall be manufactured by equipment utilizing direct proportioning pumps, which use a positive displacement fixed ratio basis. This production shall be by qualified trained personnel listed by the manufacturer. Identification cards shall be carried by all personnel.

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

ISOCYANURATE FOAMED-IN PLACE INSULATION

Date of Authorization: August 12, 1987

AMENDED: July 25, 1990

BMEC REFERENCE: BMEC-87-02-099

IN THE MATTER OF Section 18(4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Mr. Ragui Ghali
Uthane Research Limited
2400 14th Avenue
Unit 8
Unionville, Ontario
L3R 2L6

AGENT:

Icynene Inc.
376 Watline Road
Mississauga, Ontario
L4Z 1X2

ON THE SUBJECT OF:

Goldseal-Icynene 50 TM, a two-component combustible spray-in-place semi- flexible, isocyanurate, open and closed cellular, foamed plastic thermal insulation which may be applied on site or in a manufacturing facility.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision of change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the Commission.

AND SPECIFIC REQUIREMENTS

6. This AUTHORIZATION is further limited to the continuance of a current valid C.C.M.C. Report #12070-R which shall be adhered to.
7. Since at the present time there are not available "Standards"; this AUTHORIZATION determined that the subject matter did satisfy appropriate requirements. However, when the appropriate "Standards" are published, the applicant shall retest to those "Standards", at which time this AUTHORIZATION shall be required to be amended.
8. Follow-up inspection services shall be maintained at all times by the applicant or his agent by an Accredited Testing Organization.
9. Each installation shall conform to the manufacturer's published installation instructions and shall be reviewed in detail, stamped, dated and signed for construction as specified by the manufacturer's listed trained personnel. Identification cards for installers shall be issued only to qualified trained personnel listed by the manufacturer.
10. Only fixed ration equipment and the employment of positive displacement pumps for metering shall be used by the trained applicator/installer.
11. Precautions shall be taken around recessed electrical fixtures and or any other heat sources to relieve any heat build up.
12. This sprayed-in-place foamed insulation as described in this subject authorization, shall be for the application only in open cavities where visual control and sampling are relatively easy for the trained applicator/installer.

AND IN THE MATTER OF an application by:

Dr. Juan Haener
8215 Harton Place
San Diego, California
92123
U.S.A.

AGENT:

TCG Materials Limited
P.O. Box 5000
Burlington, Ontario
L7R 3Y8

ON THE SUBJECT OF:

Haener Stack-King (TM) Interlocking Blocks...

(a) dry stacking blocks with surface bonding mortar **or**

(b) dry stacking blocks utilizing the blocks as a permanent concrete forming system, which allows steel reinforcing bars to be located horizontally and vertically within the cast-in-place concrete.

INFORMATION:

This application has been examined by the Building Materials Evaluation Commission and the finding on the submission by the Applicant is that the subject matter conforms to the requirements for unit masonry in C.S.A. Standard CAN 3-A165 Series M85. The block may be used with any valid B.M.E.C. authorization for surface bonding mortar **or** used under

Part 4 of O.B.C. O. Reg. 419/86.

REASON:

Disposition of this application; and to cease current investigation and examination of the matter.

MOVED AND ADOPTED THIS 12TH DAY OF AUGUST, 1987 BY THE BUILDING MATERIALS EVALUATION COMMISSION.

(BMEC)
AUTHORIZATION REPORT

NASCOR WALL SYSTEM

Date of Authorization: November 7, 1986

AMENDED: September 27, 1989

BMEC REFERENCE: BMEC-86-05-095

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Nascor Incorporated
7803 P - 35 Street SE
Calgary, Alberta
T2C 1V3

ON THE SUBJECT OF:

Nascor TM System, which is prefabricated components for loadbearing, above grade, combustible construction, exterior integrated wall assembly. Constructed from double studs used on the flat, fastened to sill and header plates and bonded to a rigid board expanded polystyrene core, mechanically fastened to each other with spiral nails.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein, all applicable requirements of the Ontario Building Code Act and Regulations shall be met. A copy of this Authorization shall be attached to the application for a building permit and a copy shall be kept and maintained on the site of construction as per Code requirements.
7. This AUTHORIZATION is further limited to the continuance of a valid C.M.H.C. Building Materials Evaluation Report.
8. Each installation shall conform to the manufacturer's published installation instructions and shall be reviewed in detail, stamped, dated and signed for construction as specified by the manufacturer's listed trained personnel. Identification cards for installers shall be issued only to qualified trained personnel listed by the manufacturer.
9. The subject matter shall be designed, engineered, inspected and verified by the architect or engineer as per Code requirements. A document of certification with an architect or engineer's (authorized in Ontario) stamp shall be forwarded to the Chief Building Official and the building owner(s).
10. Engineering inspection of the subject construction shall be carried out; to ensure that construction is consistent with the design, by the person responsible for its design details and general review during construction; or by another person qualified in the inspection of this construction and who is responsible to the design architect or engineer and all construction documents shall be duly sealed.
11. The manufacturer shall further produce a written guarantee on the Nascor Wall System for each building wherein this system has been constructed. Copies of this guarantee shall be forwarded to the Chief Building Official and the building owner(s).
12. Subject to the above paragraph 1 of this authorization shall be further limited to buildings using the subject matter for which a permit is applied for prior to 31 December 1992. However, the applicant may by written registered letter to this COMMISSION request an amendment to this paragraph at least three months before that date.

DATED at Toronto this 27th day in the month of SEPTEMBER in the year 1989 for Authorization #86-05-095 amended on behalf of:

BUILDING MATERIALS EVALUATION COMMISSION

BMEC-86-04-094

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

FORRER DRY BLOCK

Date of Authorization: April 23, 1987

BMEC REFERENCE: BMEC-86-04-094

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Forrer Chemical
7221 W. Parkland Court
P.O. Box 23432
Milwaukee, Wisconsin
53223 U.S.A.

AGENT:

TCG Materials Limited
P.O. Box 5000
Burlington, Ontario
L7R 3Y8

ON THE SUBJECT OF:

Dry Block (R) System, is an integral polymeric water repellent admixture as manufactured by Forrer Chemical for the manufacturing of concrete block and mortar. This admixture is used in above grade exterior masonry single wythe walls in lieu of subsequent externally applied water repellents and interior dampproofing.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising materials, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein, all applicable requirements of the Ontario Building Code Act and Ontario Regulation 419/86 shall be met. A copy of this Authorization shall be kept and maintained on the site of construction.
7. Subject to paragraphs herein, this system shall be in accordance with the manufacturer's published instructions and installation shall be by the manufacturer's trained qualified tradespersons.
8. In lieu of interior dampproofing, sheathing and membranes of breather type materials; concrete blocks and mortar with this FORRER DRY BLOCK (R) admixture may be used for above grade exterior masonry single wythe loadbearing and non-loadbearing walls.
9. This authorization number "BMEC #86-4-94" shall be legibly cast into each of these blocks at the time of manufacturing.
10. The building official shall confirm on the jobsite the quantity of dry block mortar additive to be used as noted in the instructions on the labels of the containers, then the building official shall obliterate the labels on the required containers.
11. The building official with reasonable cause may take away samples of the block and/or mortar at any time to be tested to the manufacturer's published specifications by an independent test agency at the expense of the block manufacturer or the mortar mixing contractor.
12. To confirm the validity of this authorization on ANY building, a document supplied by the block manufacturer shall be filed with the "chief official" for each building. The purpose of that document is to certify that the block and mortar as supplied and installed complies with this authorization. The document shall also reference the building name, address, date of construction and shall be signed and dated by an authorized representative of the block manufacturer, masonry installer and the chief official.

13. This Dry Block System shall be classified as a breather type membrane and not a vapour barrier, which does not allow the passage of water vapours. However, exterior surface wetness occurs and vapours are dissipated within the open cores and the mortar joints are broken between the front and rear of the block.

ON THE SUBJECT OF:

Decrabond Roofing System, a galvanized sheet steel shaped in various profiles of tile, coated on the exposed side with natural crushed stone chips bonded by a base coat of acrylic resin and clear acrylic overglaze.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant

or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein, all applicable requirements of the Ontario Building Code Act and Ontario Regulation 583/83 shall be met. A copy of this Authorization shall be kept and maintained on the site of construction.
7. When this roofing system is used for noncombustible construction all components and support members shall be of noncombustible materials.
8. Conformance shall be made to a current CMHC Evaluation Report, however, in case of conflict with this authorization the more stringent matter shall prevail.
9. Subject to paragraphs herein, this roofing system shall be in accordance with the manufacturer's published instructions and installation shall be by the manufacturer's trained qualified tradespersons.
10. In lieu of wood roof sheathing for this roofing system, wood purlins (battens) may be used.
11. Eave protection, except for over unheated garages, carports and porches, shall be laid beneath the starter strip extending from the edge of the roof to not less than 750 mm (30 in) inside the inner face of the exterior wall and shall consist of;

    (a) No. 15 asphalt-saturated felt laid in two plies lapped 480 mm (19 in) and cemented together with lap cement, or

    (b) Type S smooth surface roll roofing, or

    (c) Self-sealing composite membranes consisting of polyethylene and bituminous materials.

12. When underlay is provided beneath this roofing system it shall be in compliance with the Code for the materials and the installation shall be in accordance to the manufacturer's recommendations.

13. In addition to paragraphs 11 and 12, positive drainage of the eave protection and the underlay materials shall be made at the lower end.
14. For existing roofs, the structural adequacy of the roof framing and the supporting members shall be examined by a qualified manufacturer's representative and a written, signed and dated certificate shall be attached to the manufacturer's warranty with copies to the building official and owner(s).
15. Voids between existing roofing systems and this new roofing system shall not be filled with insulation.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant

or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Except as authorized herein, all applicable requirements of the Ontario Building Code Act and Ontario Regulation 583/83 shall be met. A copy of this Authorization shall be kept and maintained on the site of construction.
7. When this roofing system is used for noncombustible construction all components and support members shall be of noncombustible materials.
8. Conformance shall be made to a current CMHC Evaluation Report, however, in case of conflict with this authorization the more stringent matter shall prevail.
9. Subject to paragraphs herein, this roofing system shall be in accordance with the manufacturer's published instructions and installation shall be by the manufacturer's trained qualified tradespersons.
10. In lieu of wood roof sheathing for this roofing system, wood purlins (battens) may be used.
11. Eave protection, except for over unheated garages, carports and porches, shall be laid beneath the starter strip extending from the edge of the roof to not less than 750 mm (30 in) inside the inner face of the exterior wall and shall consist of;

    (a) No. 15 asphalt-saturated felt laid in two plies lapped 480 mm (19 in) and cemented together with lap cement, or

    (b)Type S smooth surface roll roofing, or

    (c) Self-sealing composite membranes consisting of polyethylene and bituminous materials.

12. When underlay is provided beneath this roofing system, it shall be in compliance with the Code for the materials and the installation shall be in accordance to the manufacturer's recommendations.

13. In addition to paragraphs 11 and 12, positive drainage of the eave protection and the underlay materials shall be made at the lower end.
14. For existing roofs, the structural adequacy of the roof framing and the supporting members shall be examined by a qualified manufacturer's representative and a written, signed and dated certificate shall be attached to the manufacturer's warranty with copies to the building official and owner(s).
15. Voids between existing roofing systems and this new roofing system shall not be filled with insulation.

DATED at Toronto this 7th day in the month of NOVEMBER in the year 1986 for Authorization #85-11-089 on behalf of:

BUILDING MATERIALS EVALUATION COMMISSION

BMEC-85-07-085

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

WINDOW SPRINKLER ASSEMBLY

Date of Authorization: March 15, 1986

AMENDED: December 7, 1988

BMEC REFERENCE: BMEC-85-07-085

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Rolf Jensen & Associates Limited
4100 Yonge Street
Willowdale, Ontario
M2P 2B5

ON THE SUBJECT OF:

A window sprinkler assembly system to provide a two hour fire-resistance rated separation in a wall to consist of tempered or heat strengthened glass fixed in a non-openable hollow metal steel frame or extruded aluminum frame and a special sidewall window sprinkler with quick response action.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. This window sprinkler assembly system shall be designed, engineered, inspected and verified by a fire protection Professional Engineer (authorized in Ontario) and a document of certification by the Professional Engineer with stamp shall be forwarded to the Chief Building Official and the Building Owner(s).
7. The sprinkler system shall be installed and tested in accordance with N.F.P.A. 13 as a wet pipe system and maintained in accordance with Section 6.5 (sprinkler) of the Ontario Fire Code.
8. The special designed sprinkler head shall be designated as a horizontal sidewall window nozzle, Grinnell Canada Fire Protection Company Limited model FR-1/Q-60, 12.7 mm (1/2 in) orifice, 74C (165F) activation temperature quick response link. The optimum position of the sprinkler head shall be as determined by the tests submitted by National Research Council Canada.
9. The interior glazing shall consist of one sheet of fixed non-operable tempered or heat strengthened glass installed in a hollow metal steel frame 1.35 mm (16 gauge) minimum thickness or extruded aluminum 1.8 mm (1/16 in) minimum thickness. The maximum glazing shall be 2134 mm (7 ft) wide by 2844 mm (9 ft 4 in) high and minimum 6 mm (1/4 in) thick.
10. This window sprinkler system may be used in either a sprinklered or unsprinklered building to protect non-openable window openings to a maximum of 2 hr. fire-resistance rating provided,

    (a) in an exposing building face or exterior spatial separation the window sprinkler is installed on the interior side of the window, or

    (b) in an interior fire separation the window sprinkler is installed on both sides of the window in the fire separation.

11. Interior or exterior installations may be made in all types of occupancies except Group F, Division 1 and shall not be used in a firewall. Should the system be located in a loadbearing wall, all loadbearing components shall be protected independently of this window sprinkler assembly system.
12. This window sprinkler system shall not be used in exits as defined in the Ontario Building Code.

13. This horizontal sidewall window sprinkler system shall be served by either a separate riser or separate cross main independent of any regular sprinkler or standpipe system serving the floor area.
14. Separate flow switches or alarm check valves and supervised control valves and each fire compartment on each system shall be electrically supervised and indicated separately at the fire/sprinkler alarm annunciator panel.
15. Where the water supply is from a standpipe system conforming to the Code, the siamese connection shall be labelled as per the standard except for this dual purpose which shall read "STANDPIPE AND WINDOW SPRINKLERS".
16. A noncombustible sign legibly printed in not less than 12.7 mm (1/2 in) block letters with contrasting white background and red letters shall be permanently mounted and maintained beside the main water supply source to this window sprinkler assembly system to indicate:

W A R N I N G !

SPECIAL SPRINKLER HEADS ON THIS SYSTEM ARE AN INTEGRAL PART OF WINDOW FIRE SEPARATION. THIS WATER SUPPLY MAY ONLY BE SHUT OFF AFTER ALL THE PROPER AUTHORITIES HAVE RECEIVED NOTICE IN WRITING.

AUTHORIZATION REPORT

STEEL ANCHOR STRAPS

Date of Authorization: November 7, 1986

AMENDED: August 17, 1990

BMEC REFERENCE: BMEC-85-05-083

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Cresent Engineering Ltd.
2489 - 123A Street
White Rock, B.C.
V4A 6M7

ON THE SUBJECT OF:

Galvanized steel anchor straps to be used for securing wood sill plates to concrete walls in lieu of anchor bolts.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the forementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials,

technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Installation of the anchor straps shall conform to the manufacturer's installation instructions and recommendations.
7. The anchor straps shall be constructed of a minimum of 26 gauge (.020") galvanized steel with 114 mm (4-1/2 in) by 38 mm (1-1/2 in) corrugated section for embedding into the concrete, the zinc coating shall be a minimum thickness of 0.025 mm.
8. The exposed two tangs of the anchor strap shall be of sufficient length to overlap the topside of the sill plate or a minimum of 101 mm (4 in) vertically on both sides of the sill plate and or the stud.
9. The anchor strap shall be installed at 914 mm (3 ft) on centre, or a minimum of two anchor straps per sill plate length when less than 914 mm (3 ft) in overall length. Location of the anchor strap to be approximately centre of the area where the sill plate is located.
10. Four galvanized nails with minimum gauge as 63 mm (2-1/2 in) common nails and with a minimum length of 38 mm (1-1/2 in) shall be used in the holes provided in the tangs of the anchor straps.
11. Each anchor strap shall be stamped with the Canadian Patent number 950698 for identification by inspectors.
12. The building official with reasonable cause may take away samples of the galvanized steel anchor strap at any time to be tested as specified in the above paragraphs of this authorization. This testing shall be done by an independent test agency at the expense of the applicant.

CHIMNEY LINER

Date of Authorization: October 16, 1985

BMEC REFERENCE: BMEC-85-04-082

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

American Chimney Lining Systems Inc.
9797 Clyde Park SW
Byron Centre, Michigan
49315 U.S.A.
ON THE SUBJECT OF:

SOLID/FLUE, a chimney liner to line/reline residential masonry chimneys with a lightweight, insulating material.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. This authorization is limited to the Ontario Building Code, Part 9 buildings where the flue is for the use of solid fuel only and where the chimney is in a good state of repair. (Note: Gas and liquid fuel appliances are regulated separately by the Fuels Safety Branch and a separate application may be made to them.)
7. Protection from the elements shall conform to O.B.C. Subsection 9.20.17. Installation shall be done by the manufacturer's trained personnel only.
8. This chimney liner shall have a minimum thickness of 16 mm (5/8 inches) and shall not negate the Code requirements for flue sizes of chimney construction.
9. The lined chimney shall be capped by the use of a circular flue tile extending not more than 100 mm (4 in) above a precast waterproof concrete cap which has a sloping top and overhangs the chimney by a least 50 mm (2 in) with drip edges cast into the concrete cap not less than 25 mm (1 in) from the face of the chimney, or a stainless steel cap with formed drip edges.
10. Installation and materials shall be in accordance to the published instructions of the manufacturer as submitted to the COMMISSION to date of this AUTHORIZATION.

KITCHEN EXHAUST HEAT RECLAIM SYSTEM

Date of Authorization: May 21, 1985

AMENDED: November 7, 1996

BMEC REFERENCE: BMEC-85-03-081

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Leslie Bros. (1966) Limited
35 Pullman Court
Scarborough, Ontario
M1X 1E4

ON THE SUBJECT OF:

Kitchen exhaust and filtration system with or without heat reclaim unit for supply return air make-up to kitchen area only.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials,

technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. The kitchen exhaust duct beyond the fire damper located on the exhaust side of the filtered unit may be installed in accordance with the Ontario Building Code 6.2.3. when it passes directly to atmosphere and not through any fire separation.
7. Installation and maintenance shall comply with the application dated 2 May 1985, and proposal as submitted by the applicant titled, "Specifications Sheets for Series 85; Models 23, 24, 25 for Commercial Kitchen Exhaust," dated 8 April 1985 which include drawings #1 to #7 inclusive.
8. The tempered supply return air duct system shall be installed in accordance with the Ontario Building Code Subsection 6.2.3. and discharge only to the kitchen area. There shall be a fire damper in this supply return air duct at the reclaim unit.
9. Where a heat reclaim unit is used with gas-fired kitchen cooking equipment, the heat reclaim unit shall have separate air streams for exhaust to outside of the building and the make-up air system to only the kitchen area.
10. This authorization does not include any gas- or liquid-fired make-up air units, any such units may be separately approved by the Fuels Safety Branch.
11. Except as noted above the entire system shall conform to NFPA 96-1980. Where any reference to date has been made by the APPLICANT or the COMMISSION on any submission or authorization to the N.F.P.A. 96 regardless of the date it shall read as of the date proclaimed for amendments to the Ontario Building Code.

EXTERIOR BASEMENT WALL INSULATION

Date of Authorization: October 16, 1985

BMEC REFERENCE: BMEC-85-02-080

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Fiberglas Canada Inc.
3080 Yonge Street
Toronto, Ontario
M4N 3N1

ON THE SUBJECT OF:

(a) BASECLAD EBWI, system of exterior above or below grade basement wall insulation.

(b) GLASCLAD, system of exterior above grade, non-structural, insulating wall sheathing.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. BASECLAD EBWI system shall be installed only so long as CMHC Evaluation Report No. 09860 dated 82-01-15, revised on 84-06-25 has not been withdrawn.
7. GLASCLAD system shall be installed only so long as CMHC Evaluation Report No. 08900 dated 82-03-17, revised on 84-06-10 has not been withdrawn.
8. GLASCLAD installed on the exterior in conformance to manufacturer's instructions with TYVEK facing and joints taped with Y-8086 Contractor Sheathing Tape CMHC Report No 10418, may be in lieu of the required building paper.
9. Installation and materials shall be in accordance to the published instructions of the manufacturer as submitted to the COMMISSION to date of this AUTHORIZATION.

P.O. Box 1232
602 Grand Avenue East
Chatham, Ontario
N7M 5R9

ON THE SUBJECT OF:

Laumans Clay Roof tile system used on pitched roofs of building structures.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant

or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. (1) All aspects of the Ontario Building Code Part 9 or Part 4 as applicable shall be complied with for new and existing roof support framing, rafters, trusses, sheathing, underlay and flashings, as designed to the recommendations of the manufacturer and his agent.

   (2) For Part 9 buildings where Ontario Building Code design tables are used the roof design load shall be increased by 0.5 KN/m (10 lbs/ft) to allow for the weight of the roof tiles.

7. For existing roofs the structural adequacy of the roof framing and the supporting walls shall be certified by a Professional Engineer registered in the Province of Ontario.
8. Construction of this clay tile roof system as noted above shall comply with the published literature of Laumans and Great Lakes Brick & Stone Limited as submitted with the application and entitled "Report to Building Code Evaluation Commission" for the use of Laumans Clay Roofing Tiles, by Thames Valley Engineering Inc. Professional Engineers, Project 84-44, dated March 1985.

AND IN THE MATTER OF an application by:

Dow Chemical Canada Inc.
3035 Orlando Drive
Mississauga, Ontario
L4V 1L6

ON THE SUBJECT OF:

Styrofoam brand Foundation Coating, which is a latex modified, fibre-reinforced, portland cement parging applied to the Styrofoam SM brand insulation, used on exterior basement walls.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for

termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. Installation and materials of Styrofoam SM brand insulation and Styrofoam brand Foundation Coating, shall be in accordance with the published instruction of Dow Chemical as submitted to the COMMISSION to date of this authorization.
7. Maximum Coating coverage height above grade shall not exceed 1200 mm (4') and a minimum of 305 mm (1') below grade. Expansion joints in the Coating shall be placed over those required to be constructed in the wall and shall not exceed a coverage area of 14 m (150 ft). The Coating shall only be applied above 5C (40F) for a minimum of 48 hr. curing.
8. The Chief Building Official may request each installation to include the following verification procedure:

   (1) a visual examination of the whole area when the Styrofoam SM brand Insulation is in place.
   (a) to check mechanical anchoring of Styrofoam SM brand Insulation, and

   (b) to check minimum 3 mm (1/8") thick spacers in place or removed for screeding application, and

   (c) a determination of the quality of material used by count of the on site containers, and a comparison of this quantity with that required for the area covered as noted in the instructions on the labels regarding the amounts of application, and

   (d) the obliteration of the labels on the empty or to be used containers by the building official.

9. All installation literature by Dow Chemical shall include the above method of installation.

SHELF AND RACK STORAGE

Date of Authorization: October 16, 1985

AMENDED: September 19, 1990

BMEC REFERENCE: BMEC-84-10-076

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Redirack Industries Limited
114 Clayson Road
Weston, Ontario
M9M 2H3

ON THE SUBJECT OF:

A self-contained structural shelf and rack storage facility within a building, having one or more solid intermediate deck or walkway levels for personnel access.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials,

technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. (1) (a) Deck level shall be a continuous horizontal construction membrane through the entire shelf rack facility, and

   (b) Walkway level shall be the horizontal construction membrane between the solid shelving installed on the same plane, and

   (c) Level area means the greatest horizontal area of the shelf and rack storage facility.

   (2) (a) Deck or walkway levels shall be constructed of solid closed surface steel planking or,

   (b) Steel roof decking with minimum 16 mm (5/8 in) maximum 19 mm (3/4 in) thick tongue and groove solid wood or plywood.

   (3) The structural design of the entire shelf and rack storage facility support system including posts, beams, decks, walkways, connections, and their supports such as concrete slabs, separate foundations or similar shall be in accordance with Ontario Building Code Part 4 requirements.

   (4) Detailed drawings for each installation shall be stamped by a member of the Association of Professional Engineers of Ontario certifying conformity with this authorization. These drawings shall also detail an appropriate sign to indicate the maximum permissible design loads for each rack storage system and such sign shall be permanently fixed to the building interior and displayed in a prominent unobstructed viewing position. These drawings shall be submitted for a building permit in the usual way.

7. An approved wet pipe sprinkler system shall be designed and installed for the entire shelf and rack storage facility including the top level and shall be in conformance with NFPA 13-1983, and NFPA 231C-1980 or the appropriate NFPA Standard for the most severe hazard that it is exposed to. Sprinklers are not required where only Class 1 commodities as defined in the following paragraph 8.(2) are stored.

8. (1) (a) The entire shelf and rack storage dimension shall be limited to Table 8.A. based on the type of commodity stored as defined in paragraph 8.(2), (3), (4) and (5). Excerpts of NFPA 231C-1980 are outlined in the attached appendix and these shall apply to this authorization.

   (b) A firewall as defined in the Ontario Building Code Regulation 583/83, many divide the confining building into two or more separate buildings, herein, one of the following classes may be assigned to each of the separate buildings.

   (2) Class I commodities are non-combustible products, a defined in NFPA 231C-1980; or

   (3) Class II, III, and IV commodities are combustible products, as defined in NFPA 231C-1980; or

   (4) Class SS commodities are special hazard products not covered in paragraph 8.(2), (3) or (5);

   (5) Aerosol products composed of greater than 55% non-water miscible flammable products including lubricants; oil-based paints, anti-perspirants, furniture polish, insecticides and automotive products, are to be stored only:

   (a) On the ground floor of the racking system, and

   (b) In a designed areas separated by,

   (i) a vertical 1 hr. fire separation, or

   (ii) a vertical chain link fencing not lighter than 9 ga. steel wire made into a 50 mm (2 in) diamond mesh, located not less than 2.5 m (8 ft) from all other storage where the adjacent storage is more hazardous than Class IV commodity, or

   (iii) a method acceptable to the Chief Fire Official, and

   (c) In the designated area protected by an in-rack sprinkler system. The sprinkler demand shall be a minimum of 1.9 L/s (30 g.p.m. (U.S.)) discharge per head with 74C (165F) heads or less and shall be 2.5 m (8 ft) apart maximum. This design shall be further based on the operation of the hydraulically most remote;

   (i) 8 sprinklers if one level, or

   (ii) 6 sprinklers on each level if only two levels, or

   (iii) 6 sprinklers on each of the top three levels if three or more levels.

(d) Single row racks shall require only the in-rack sprinklers, whereas, double row racks shall require sprinklers in longitudinal flue as well as on face sprinklers which shall be staggered on opposite sides of racks.

TABLE 8.A.

Forming Part of Paragraph 8

Shelf and Rack Storage Facility				
Commodity Classes	**Maximum Height (1)**		**Maximum Area (2)**	
	m	ft	m^2	ft^2
Class I	6 12 18	20 40 60	unlimited 20,070 13,380	unlimited 216,000 144,000
Class II, III, AND IV	6 12 18	20 40 60	8,920 4,460 2,230	96,000 48,000 24,000
Class SS	6 12 18	20 40 60	3,340 1,670 1,110	36,000 18,000 12,000
COLUMN 1	2	3	4	5

NOTE:

(1) The maximum height shall be from the floor supporting the shelf and rack system to the topmost portion of the racking system.

(2) The maximum area is the sum total of all levels of the shelf and rack system as well as the floor.

9. A plain legible sign or signs, with contrasting letters and titled "NOTICE", shall describe the above Class and requirements for each shelf and rack storage facility. This sign or signs shall be permanently mounted, at or near the main water supply for the sprinkler system and shall be maintained at all times. For Class 1 commodities this "NOTICE" shall be permanently mounted, at or near the main entrance to this shelf and rack storage facility.
10. (1) Exits shall be separated from the rack storage facilities with fire separations, having a fire-resistance rating conforming to Subsection 3.4.4. of the Ontario Building Code; and

    (2) the exit stair shafts shall conform to all requirements for exits as stated in Section 3.4 of the Ontario Building Code; and

(3) no fewer than 2 exits are required from each deck or walkway level, except where there are not more than two levels above the building floor, and the level area does not exceed 139 m (1500 ft) two means of egress shall be required without the requirements of fire separation for exit, and

(4) any opening in a deck for egress, convenience stairs, ramps or chutes, shall be protected by smoke baffles and close spaced sprinklers as per paragraph 7 of this authorization.

11. The maximum travel distance to exits shall not exceed 46 m (150 ft) and to a fire extinguisher shall not exceed 23 m (75 ft).
12. (1) Where a shelf and rack storage facility contains two or more deck or walkway levels and where each level is greater than 239 m (2,500 ft), a smoke detection system shall be installed on the underside of each deck level on which walkway or aisle is located, and

    (2) the number of system smoke detectors installed shall be in accordance to CAN4-S524-M1982.

13. The clear aisle width shall not be less than 760 mm (30 inches). This clearance is for access to exits and shall not be used for conveyors, trolleys, tracks or any other similar mode of product transportation within an aisle or walkway.
14. This shelf and rack storage facility is not permitted in F-1 occupancy as defined in the Ontario Building Code.
15. The shelf and rack storage facilities shall be used only for storage and not for manufacturing, production, wrapping or assembly.
16. The shelf and rack storage facilities shall be accessible to employees only and shall be designated, signed and posted as a "NO SMOKING" area conforming the Subsection 2.4.3. of the Ontario Fire Code.
17. (1) In building areas containing shelf and rack storage facilities exceeding 4,645 m (50,000 ft) and except for storage of Class I commodities as defined in paragraph 8 of this document, manually operated smoke vents shall be installed in accordance with NFPA 204, Section 230, and

    (2) The smoke vent opening shall be not less than 1.2 m by 1.8 m (4 ft by 6 ft) and the openings shall be located not more than 23 m (75 ft) from any exterior wall and not more than 46 m (150 ft) from each other.

18. (1) A standpipe and hose system shall be installed in accordance with Article 3.2.5.4. of the Ontario Building Code where the shelf and rack storage facility height is more than 3 levels including floor level or 14 m (45 ft) in height.

    (2) Where a standpipe and hose system is required, 63.5 mm (2-1/2 in) diameter hose connections shall be provided, except that 38.1 mm (1-1/2 in) hose connections are permitted in the shelf and rack storage facilities which;

(a) neither exceed 6 levels including the floor level.

(b) do not exceed 3,716 m (40,000 ft) in the sum total of all levels of the shelf and rack storage facility.

APPENDIX

Commodity Classifications:

The following guide for commodity classification applies specifically to rack storage and is not related to any other method of classification of materials.

Class I commodity is defined as essentially non-combustible product on wood pallets, or in ordinary corrugated cartons with or without single thickness dividers or in ordinary paper wrappings, all on wood pallets. Such products may have a negligible amount of plastic trim, such as knobs or handles.

Examples of Class I products are:

Metal Products. Metal desks with plastic tops and trim, electrical coils, electrical devices in their metal enclosures, pots and pans, electrical motors, dry cell batteries, metal pots and pans, electrical motors, dry cell batteries, metal parts, empty cans, stoves, washers, dryers and metal cabinets.

Glass Products. Glass bottles, empty or filled with non-combustible liquids, mirrors.

Foods. Foods in non-combustible containers; frozen foods; meat, fresh fruits and vegetables in non-plastic trays or containers; dairy products in nonwax-coated paper containers, beer or wine up to 20 percent alcohol, in metal, ceramic or glass containers.

Others. Oil-filled and other types of distribution transformers, cement in bags, electrical insulators, gypsum board, inert pigments, dry insecticides.

Class II commodity is defined as Class I products in slatted wooden crates, solid wooden boxes, multiple thickness paperboard cartons, or equivalent combustible packaging material on wood pallets.

Examples of Class II products are: thinly coated fine wire such as radio coil wire on reels or in cartons; incandescent or fluorescent light bulbs; beer or wine up to 20 percent alcohol in wood containers; and Class I products, if in small cartons or small packages placed in ordinary corrugated cartons.

Class III commodity is defined as wood, paper, natural fiber cloth, or products thereof, on wood pallets. Products may contain a limited amount of plastics. Wood dressers with plastic drawer guides, handles, and trim are examples of a commodity with limited amount of plastic.

Examples of Class III products are:

Paper Products. Books, magazines, newspapers, stationary, plastic coated paper food containers, paper or cardboard games, tissue products, rolled paper on side or steel banded on end, and regenerated cellulosics (cellophane).

Leather Products. Shoes, jackets, gloves, and luggage.

Wood Products. Doors, windows, door and window frames, combustible fiberboard, wood cabinets, furniture and other wood products.

Textiles. Natural fiber upholstered non-plastic furniture, wood or metal furniture with plastic padded and covered arm rests, mattresses without expanded plastic or rubber, absorbent cotton in cartons, natural fiber and viscose yarn thread, and products, and natural fiber clothing or textile products.

Others. Tobacco products in paperboard cartons, non-flammable liquids such as soaps, detergent and bleaches, and non-flammable pharmaceuticals in plastic containers; combustible foods or cereal products, and non-negative producing film packs in sealed metal foil wrappers in paperboard packages.

Class IV commodity is defined in Class I, II and/or III products containing an appreciable amount of plastics in a paperboard carton or Class I, II and/or III products with plastic packaging in paperboard cartons on wood pallets.

Examples of Class IV products are small appliances, typewriters and cameras with plastic parts, plastic backed tapes and synthetic fabrics or clothing. An example of packing material is a metal product in a foamed plastic cocoon in a corrugated carton.

Class IV commodity also includes:

Textiles. Synthetic thread and yarn except viscose, and non-viscose synthetic fabrics or clothing.

Others. Telephones, vinyl floor tile, wood or metal frame upholstered furniture or mattresses with plastic covering and/or padding, and plastic padded metal dashboards or metal bumpers.

DATED at Toronto this 19th day in the month of SEPTEMBER in the year 1990 for Authorization #84-10-076 amended on behalf of:

BUILDING MATERIALS EVALUATION COMMISSION

BMEC-84-09-075

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

KITCHEN EXHAUST HEAT RECLAIM SYSTEM

Date of Authorization: May 21, 1985

AMENDED: November 7, 1986

BMEC REFERENCE: BMEC-84-09-075

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Engineered Air
1175 Twinney Cres.
Newmarket, Ontario
L3Y 5V7

ON THE SUBJECT OF:

Kitchen exhaust and filtration system with or without heat reclaim unit for supply return air make-up to kitchen area only.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials,

technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. The kitchen exhaust duct beyond the fire damper located on the exhaust side of the filtered unit may be installed in accordance with the Ontario Building Code 6.2.3. when it passes directly to atmosphere and not through any fire separation.
7. Installation and maintenance shall comply with the application dated 24 February 1985, and proposal as submitted by the applicant titled, "Specifications for Application for Authorization to Manufacture and Install Heat Reclaim Systems for Kitchen Ventilation", dated 5 February 1985 which include drawings #1 to #6 inclusive.
8. The tempered supply return air duct system shall be installed in accordance with the Ontario Building Code Subsection 6.2.3. and discharge only to the kitchen area. There shall be a fire damper in this supply return air duct at the reclaim unit.
9. Where a heat reclaim unit is used with gas-fired kitchen cooking equipment, the heat reclaim unit shall have separate air stream for exhaust to outside of the building and the make-up air system to only the kitchen area.
10. This authorization does not include any gas- or liquid-fired make-up air units, any such units may be separately approved by the Fuels Safety Branch.
11. Except as noted above the entire system shall conform to NFPA 96-1980. Where any reference to date has been made by the APPLICANT or the COMMISSION on any submission or authorization to the N.F.P.A. 96 regardless of the date it shall read as of the date proclaimed for amendments to the Ontario Building Code.

DATED at Toronto this 7th day in the month of NOVEMBER in the year 1986 for Authorization #85-09-075 on behalf of:

BUILDING MATERIALS EVALUATION COMMISSION

BMEC-84-08-074

BUILDING MATERIALS EVALUATION COMMISSION

AUTHORIZATION REPORT

ORIENTED STRAND BOARD

Date of Authorization: October 16, 1985

BMEC REFERENCE: BMEC-84-08-074

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Pelican Spruce Mills Ltd.
1150 - 154 Street
Edmonton, Alberta
T5M 3N8

ON THE SUBJECT OF:

Sturdi-Wood (oriented strand board) as an equivalent to plywood or waferboard in certain circumstances.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system

and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. The applicable standards for this AUTHORIZATION shall be the CAN3-0437.0-M85 Waferboard and Strandboard and the CAN3-0437.1-M85 Testing Methods for Waferboard and Strandboard.

7. Sturdi-Wood may be used for fire stopping, subflooring, roof sheathing and wall sheathing, when it has a minimum thickness as shown in the appropriate Ontario Building Code Article or Table for minimum plywood thickness.

8. Sturdi-Wood may be used for siding, interior finish and underlay when it conforms the appropriate Ontario Building Code article for minimum waferboard thickness.

CLAY TILE ROOF SYSTEM

Date of Authorization: December 13, 1984

BMEC REFERENCE: BMEC-84-05-071

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Jeka Dakpannen B.V.
Postbus 3054
5930 AB Tegelen
Holland

AGENT:

Great Lakes Brick & Stone Limited
P.O. Box 1232
602 Grand Avenue East
Chatham, Ontario
N7M 5R9

ON THE SUBJECT OF:

Jeka Clay or Pantiles Roof tile system used on pitched roofs of building structures.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising materials, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. (1) All aspects of the Ontario Building Code Part 9 or Part 4 as applicable shall be complied with for new and existing roof support framing, rafters, trusses, sheathing, underlay and flashings, as designed to the recommendations of the manufacturer and his agent.

   (2) For Part 9 buildings where Ontario Building Code design tables are used the roof design load shall be increased by 0.5 KN/m (10 lbs/ft) to allow for the weight of the roof tiles.

7. For existing roofs the structural adequacy of the roof framing and the supporting walls shall be certified by a Professional Engineer registered in the Province of Ontario.
8. Construction of this clay tile roof system as noted above shall comply with the published literature of Jeka Dakpannen and by the Great Lakes Brick Stone Limited as submitted with the application and entitled "Report to Building Code Evaluation Commission" for the use of Jeka Clay Roofing Tiles, by Thames Valley Engineering Inc. Professional Engineers, Project 84-44, dated October 1984.

CHIMNEY LINER

Date of Authorization: May 3, 1984

BMEC REFERENCE: BMEC-84-02-068

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

James A. Ryder Manufacturing Limited
241 Arvin Avenue
Stoney Creek, Ontario
L8E 2L9

ON THE SUBJECT OF:

Model SC-liner a stainless steel liner for masonry chimney.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising materials, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. This authorization is limited to Ontario Building Code Part 9 buildings where a building permit is required and where the existing masonry chimney is in a good state of repair and where the flue is for the use of solid fuel.
7. James A. Ryder shall enclose a copy of manufacturer's recommendations with each on site installation complete with company name, address and telephone number and this shall be left with the building occupant.
8. The stainless steel SC-liner shall extend not more than 152 mm (6 in) above the top of the masonry chimney and be attached to a stainless steel raincap and chimney flashing with sloping top and formed drip edges extending to minimum of 100 mm (4 in) below the top of the masonry chimney which shall be securely attached to the masonry chimney and this whole assembly shall be sealed against the weather.
9. This authorization has been evaluated by the COMMISSION on the basis of the U.L.C. File CMH1086 February 29, 1984, guide #60 13.17, which requires the U.L.C. label or listed marking on the product for identification under the Listing and Follow-Up Service.
10. Since at the present time there is no available "Standard", this authorization determined that the model SC-liner stainless steel did withstand the requirements of "ULC-S629-M1981 Standard for 650C Factory Built Chimneys", however, when the appropriate "Standard" is published James A. Ryder shall have SC-liner retested to that "Standard" at which time this authorization shall be required to be amended.

Z-Flex Inc.
Division of Flexmaster Canada Ltd.
36 Shelley Road
Richmond Hill, Ontario
L4C 5G3

ON THE SUBJECT OF:

"Z-Flex" a flexible stainless steel liner for masonry chimney.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising materials, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein

shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. This authorization is limited to Ontario Building Code Part 9 buildings where a building permit is required and where the existing masonry chimney is in a good state of repair and the existing flue size is not less than 305 mm X 305 mm (12 in X 12 in) and where the flue is for the use of solid fuel.
7. Flexmaster shall enclose a copy of manufacturer's recommendations with each on site installation complete with company name, address and telephone number and this shall be left with the building occupant.
8. The stainless steel Z-flex liner shall extend not more than 152 mm (6 in) above the top of the masonry chimney and be attached to a stainless steel raincap and chimney flashing with sloping top and formed drip edges extending to minimum of 100 mm (4 in) below the top of the masonry chimney which shall be securely attached to the masonry chimney and this whole assembly shall be sealed against the weather.
9. This authorization has been evaluated by the COMMISSION on the basis of the Warnock Hersey Professional Services test report #1, file F1 200-290-0463 May 31, 1983 and #3951, file 490-0086-F86 March 4 to 9, 1983, copies of which many be requested from Flexmaster by any party related to the installation.
10. Since at the present time there is no available "Standard", this authorization determined that the Z-flex stainless steel liner did withstand the requirements of "ULC-S629-M1981 Standard for 650C Factory Built Chimneys", however, when the appropriate "Standard" is published Flexmaster shall have Z-flex retested to that "Standard" at which time this authorization shall be required to be amended.

AUTHORIZATION REPORT

ISOREN THERMOSTUCCO SYSTEM

Date of Authorization: March 22, 1984

BMEC REFERENCE: BMEC-83-05-064

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Alvise de Buzzaccarini
Epsilon Building Materials Ltd.
385 Lynn Avenue
North Vancouver, B.C.
V7C 2C4

ON THE SUBJECT OF:

Isoren S4 Thermostucco (scratch coat) and Isoren F acrylic finishing coat to be used on the exterior or interior of buildings as an alternative to stucco.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising materials, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for

termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. The Applicant shall train and approve the necessary applicators who shall strictly follow the manufacturer's recommendations for site protection, substructure materials, mixes, curing, application and location and construction of control joints.
7. Isoren S4 and F may be used either separately or together and/or with other compatible masonry and stucco materials when the appropriate bonding agent for the substructure as recommended by the manufacturer is used.
8. The Isoren Thermostucco System shall not be used as a loadbearing material. The wall sheathing or masonry material to which the Isoren S4 Thermostucco System is applied must be capable of resisting all vertical, lateral and racking shear loads applied to the wall.
9. Isoren S4 in conjunction with Isoren F shall be considered as a 1 hr. fire-resistance cladding when the S4 is a minimum of 25.4 mm (1 in) thickness and the F is a minimum of 1.58 mm (1/16 in) thickness.
10. Permanent labelling on all containers and/or packages of Isoren S4 and F shall include but not be limited to the following information: manufacturer's name, product name, quality, storage procedure, shelf life, installation instructions and the name of the recognized independent test agency responsible for the quality control.
11. This AUTHORIZATION is limited to the continuance of a "Certification Program" by a recognized independent test agency providing reports describing ongoing inspections and tests for product quality control. Records shall be kept by the manufacturer on batching, production and site delivery.

AUTHORIZATION REPORT

SPARFIL WALL SYSTEM II

Date of Authorization: December 13, 1984

AMENDED: November 7, 1986

BMEC REFERENCE: BMEC-83-02-061

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Sparfil International Inc.

8241 Keele St., #15
Concord, Ontario
L4K 1Z5

ON THE SUBJECT OF:

Sparfil Wall System II, a building block manufactured from expanded polystyrene (EPS) beads, combined with portland cement, fine sand and chemical additives which, with Sparbond surface mortar and alkali resistant glass fibre fabric mesh applied to the surface of all exposed faces of the dry stacked "Sparfil Block" is in lieu of conventional cement mortar and block.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. (a) The applicant of this authorization shall be wholly responsible for the complete discharge of each paragraph of this authorization, also at any time upon a request by any person, show proof with a signed receipt, that a copy of this authorization has been **received** by the architect or professional engineer responsible for the masonry design and the Chief Building Official and those persons in charge at the site of construction.

   (b) Except as authorized herein all applicable requirements of the Ontario Building Code Act, Chapter 51, R.S.O. 1980, and the Ontario Regulation 419/86 as amended shall be met. A valid copy of this Authorization shall be attached to the application for building permit and a similar copy shall be posted and maintained on the site of construction with the building permit.

7. (a) Sparfil Wall System II is classified as a combustible MATERIAL. However, the Sparfil Wall System II may be used as a combustible element in a building required to be of noncombustible construction or in combustible construction as a fire separation providing not more than a 2 hour fire-resistance rating when using units of 200 mm (8 in) thick for non-loadbearing or loadbearing walls, except this system shall not be permitted for firewalls, cavity walls, columns, chimneys or as fire stopping in any type of construction, and

   (b) this system shall not be permitted as a fire separation when required to provide not more than a 2 hour fire-resistance rating where the wall is to be reinforced and cores grouted in solid for any type of construction.

8. An architect or professional engineer shall be responsible for the masonry design, details and general review during construction of the Sparfil Wall System II and all construction documents shall be duly sealed, for

   (a) each use of the system, and

(b) after exposure of any fire condition.

9. The design, details and general review shall also be subject to:

   (a) All previous issues of "Tech Sheets, Design and/or Construction Manuals" are superseded as of 10 May 1989, and

   (b) The new current "Design Manual for Sparfil Wall System II" submitted via Sparfil International Inc. and Robert G. Drysdale, Ph.D., P.Eng. of Drysdale Engineering and Associates Limited, Ancaster, Ontario, dated 10 May 1989, First Edition shall be the only valid data included in this authorization as of 10 May 1989, and

   (c) SPARFIL TECH SHEETS 1, 2, 3, 4 and 7 dated 10 May 1989, First Edition, shall be the only technical sheets included in this authorization and the "Design Manual for Sparfil Wall System II", and

   (d) All WARRANTY disclaimers on any data, tech sheets or literature shall be eliminated as a further condition of this authorization.

10. Site control procedures for protection and installation shall be carefully followed as per Sparfil TECH SHEETS 1, 2, 3, 4 and 7, dated 10 May 1989.
11. Inspection of masonry construction shall be carried out to ensure that construction is consistent with design details and specifications and in compliance with Design Manual for Sparfil Wall System II and TECH SHEETS 1, 2, 3, 4 and 7, all dated 10 May 1989. Such inspection shall be carried out by the architect or professional engineer responsible for the masonry wall design or by another person qualified in the inspection of masonry construction and who is responsible to the masonry wall design architect or professional engineer.
12. (a) Based on an average of 5 tests Sparfil Blocks shall have the following minimum unit compressive strength based on gross area...

Normal Block Size	MPA	psi
200 mm x 200 mm x 400 mm (8" x 8" x 16")	2.2	320
250 mm x 200 mm x 400 mm (10" x 8" x 16")	1.8	260
300 mm x 200 mm x 400 mm (12" x 8" x 16")	1.6	230

13. (b) Tolerances on Sparfil Block sizes shall be maintained and verified to be within 1/16" by an accredited testing agency at the manufacturing level at least every three months or more often as required by the agency. All discrepancies shall be reported by the agency to the Building Materials Evaluation Commission at once.
14. (c) Based on an average of five tests, Sparbond surface mortar with fibre glass mesh shall have a minimum unit tensile strength of 30.0 N/mm.

15. (d) The above tests and tolerances shall be made available to the Chief Building Official at the time of an application for building permit **and** the Building Materials Evaluation Commission at any time upon request and no later than within 10 days of such a request.
16. (a) Sparbond surface mortar shall conform to all the requirements of "ASTM C887-79a (Reapproved 1984)" except for any reference to glass fibers in a prepackaged form or chopped fibers for reinforcement in a cementitious matrix and flexural strength for which resistance is dependent on the addition of the Sparfil fibre glass mesh at the jobsite, and

    (b) Sparfil fibre glass mesh shall be as supplied by Sparfil International Inc. and shall use a 7 x 7 construction (6 strands per 25.4 mm) at a weight of 150 g/m 10%.

DATED at Toronto this 29th day in the month of OCTOBER in the year 1990 for Authorization #88-02-061 amended on behalf of:

BUILDING MATERIALS EVALUATION COMMISSION

BMEC-82-18-056

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

CHIMNEY LINER

Date of Authorization: April 14, 1983

BMEC REFERENCE: BMEC-82-18-056

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, R.S.O. 1980

AND IN THE MATTER OF an application by:

Doughty Concrete Products Limited
P.O. Box 501
Smith Township
Peterborough, Ontario
K9J 6Z6
ON THE SUBJECT OF:

The use of DCP High Temperature Flue liners to line/reline concrete or masonry chimneys with this concrete flue liner.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. This authorization is limited to Ontario Building Code Part 9 buildings where the flue is for the use of solid fuel and where the chimney is in a good state of repair.
7. This DCP High Temp liner shall be installed with high temperature cement mortar conforming to CGSB Standard 10-GP-3M, "Mortar, Refractory Air Setting".
8. This chimney liner shall have an approximate wall thickness of 25 mm (1in) and shall not negate the Code requirements for flue sizes or chimney construction as in O.B.C. Section 9.21.
9. The DCP High Temp Flue lined chimney shall be capped by the use of the flue liner extending not more than 100 mm (4 in) above a precast waterproof concrete cap which has a sloping top and overhangs the chimney by at least 50 mm (2 in), with drip edges cast into the concrete cap not less than 25 mm (1 in) from the face of the chimney, or a stainless steel cap with formed drip edges.
10. This authorization is further limited to the continuance of C.M.H.C. Building Materials Evaluation Commission.

BUILDING MATERIALS EVALUATION COMMISSION

BMEC-82-17-055

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

KITCHEN EXHAUST HEAT RECLAIM SYSTEMS

Date of Authorization: April 14, 1983

AMENDED: November 7, 1986

BMEC REFERENCE: BMEC-82-17-055

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, R.S.O. 1980.

AND IN THE MATTER OF an application by:

Temperite Industries Ltd.
5 Centennial Road
Orangeville, Ontario
L9W 1R1

ON THE SUBJECT OF:

Temprite HRK series Kitchen Heat Reclaim Systems via heat plate/pipe exchanger with separate air streams.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for

termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIAL REQUIREMENTS

6. The tempered supply return air duct system shall be for the kitchen area only with a fire damper at the recovery unit, and the duct beyond shall be installed in accordance with the Ontario Building Code 6.2.4.
7. Installation and maintenance shall comply with the Application and proposals dated 11 February or 22 and 25 April 1983, as submitted by the Applicant and including drawings X11664, X11663, X6700/W, X11549/P, X11621 and Installation and Instruction Manual for Heat Recovery Systems.
8. This authorization does not include any gas- or liquid-fired make-up air units. A separate approval must be made to the Fuels Safety Branch for the use of such units.
9. Except as noted above the entire system shall conform to NFPA 96-1980.
10. Where any reference to date has been made by the APPLICANT or the COMMISSION on any submission or authorization to the N.F.P.A. 96 regardless of the date it shall read as of the date proclaimed for amendments to the Ontario Building Code.

BUILDING MATERIALS EVALUATION COMMISSION

BMEC-82-16-054

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

SHELF AND RACK STORAGE

Date of Authorization: October 20, 1983

AMENDED:
October 16, 1985
September 19, 1990

BMEC REFERENCE: BMEC-82-16-054

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Triple-A Manufacturing Company Limited
44 Milner Avenue
Scarborough, Ontario
M1S 3P8

ON THE SUBJECT OF:

A self-contained structural shelf and rack storage facility within a building, having one or more solid intermediate deck or walkway levels for personnel access.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. (1) (a) Deck level shall be a continuous horizontal construction membrane through the entire shelf rack facility, and

   (b) Walkway level shall be the horizontal construction membrane between the solid shelving installed on the same plane, and

   (c) Level area means the greatest horizontal area of the shelf and rack storage facility.

   (2) (a) Deck or walkway levels shall be constructed of solid closed surface steel planking or,

   (b) Steel roof decking with minimum 16 mm (5/8 in) maximum 19 mm (3/4 in) thick tongue and groove solid wood or plywood.

   (3) The structural design of the entire shelf and rack storage facility support system including posts, beams, decks, walkways, connections, and their supports such as concrete slabs, separate foundations or similar shall be in accordance with Ontario Building Code Part 4 requirements.

   (4) Detailed drawings for each installation shall be stamped by a member of the Association of Professional Engineers of Ontario certifying conformity with this authorization. These drawings shall also detail an appropriate sign to indicate the maximum permissible design loads for each rack storage system and such sign shall be permanently fixed to the building interior and displayed in a prominent unobstructed viewing position. These drawings shall be submitted for a building permit in the usual way.

7. An approved wet pipe sprinkler system shall be designed and installed for the entire shelf and rack storage facility including the top level and shall be in conformance with NFPA 13-1983, and NFPA 231C-1980 or the appropriate NFPA Standard for the most severe hazard that it is exposed to. Sprinklers are not

required where only Class 1 commodities as defined in the following paragraph 8.(2) are stored.

8. (1) (a) The entire shelf and rack storage dimension shall be limited to Table 8.A. based on the type of commodity stored as defined in paragraph 8.(2), (3), (4) and (5). Excerpts of NFPA 231C-1980 are outlined in the attached appendix and these shall apply to this authorization.

   (b) A firewall as defined in the Ontario Building Code Regulation 583/83, may divide the confining building into two or more separate buildings, wherein, one of the following classes may be assigned to each of the separate buildings.

   (2) Class I commodities are non-combustible products, as defined in NFPA 231C-1980; or

   (3) Class II, III, and IV commodities are combustible products, as defined in NFPA 231C-1980; or

   (4) Class SS commodities are special hazard products not covered in paragraph 8.(2), (3) or (5); (5) Aerosol products composed of greater than 55% non-water miscible flammable products including lubricants; oil-based paints, anti-perspirants, furniture polish, insecticides and automotive products, are to be stored only:

   (a) On the ground floor of the racking system, and

   (b) In a designed areas separated by,

   (i) a vertical 1 hr. fire separation, or

   (ii) a vertical chain link fencing not lighter than 9 ga. steel wire made into a 50 mm (2 in) diamond mesh, located not less than 2.5 m (8 ft) from all other storage where the adjacent storage is more hazardous than Class IV commodity, or

   (iii) a method acceptable to the chief Fire Official, and

   (c) In the designated area protected by an in-rack sprinkler system. The sprinkler demand shall be a minimum of 1.9 L/s (30 g.p.m. (U.S.)) discharge per head with 74C (165F) heads or less and shall be 2.5 m (8 ft) apart maximum. This design shall be further based on the operation of the hydraulically most remote;
   (i) 8 sprinklers if one level, or

   (ii) 6 sprinklers on each level if only two levels, or

   (iii) 6 sprinklers on each of the top three levels if three or more levels.

(d) Single row racks shall require only the in-rack sprinklers, whereas, double row racks shall require sprinklers in longitudinal flue as well as on face sprinklers which shall be staggered on opposite sides of racks.

TABLE 8.A.
Forming Part of Paragraph 8

Shelf and Rack Storage Facility				
Commodity Classes	**Maximum Height (1)**		**Maximum Area (2)**	
	m	ft	m^2	ft^2
Class I	6 12 18	20 40 60	unlimited 20,070 13,380	unlimited 216,000 144,000
Class II, III, AND IV	6 12 18	20 40 60	8,920 4,460 2,230	96,000 48,000 24,000
Class SS	6 12 18	20 40 60	3,340 1,670 1,110	36,000 18,000 12,000
COLUMN 1	2	3	4	5

NOTE:

(1) The maximum height shall be from the floor supporting the shelf and rack system to the topmost portion of the racking system.

(2) The maximum area is the sum total of all levels of the shelf and rack system as well as the floor.

- A plain legible sign or signs, with contrasting letters and titled "NOTICE", shall describe the above Class and requirements for each shelf and rack storage facility. This sign or signs shall be permanently mounted, at or near the main water supply for the sprinkler system and shall be maintained at all times. For Class 1 commodities this "NOTICE" shall be permanently mounted, at or near the main entrance to this shelf and rack storage facility.
- (1) Exits shall be separated from the rack storage facilities with fire separations, having a fire-resistance rating conforming to Subsection 3.4.4. of the Ontario Building Code; and

(2) the exit stair shafts shall conform to all requirements for exits as stated in Section 3.4 of the Ontario Building Code; and

(3) no fewer than 2 exits are required from each deck or walkway level, except where there are not more than two levels above the building floor, and the level area does not exceed 139 m (1500 ft), two means of egress shall be required without the requirements of fire separation for exit, and

(4) any opening in a deck for egress, convenience stairs, ramps or chutes, shall be protected by smoke baffles and close spaced sprinklers as per paragraph 7 of this authorization.

- The maximum travel distance to exits shall not exceed 46 m (150 ft) and to a fire extinguisher shall not exceed 23 m (75 ft).
- (1) Where a shelf and rack storage facility contains two or more deck or walkway levels and where each level is greater than 239 m (2,500 ft), a smoke detection system shall be installed on the underside of each deck level on which walkway or aisle is located, and

(2) the number of system smoke detectors installed shall be in accordance to CAN4-S524-M1982.

- The clear aisle width shall not be less than 760 mm (30 inches). This clearance is for access to exits and shall not be used for conveyors, trolleys, tracks or any other similar mode of product transportation within an aisle or walkway.
- This shelf and rack storage facility is not permitted in F-1 occupancy as defined in the Ontario Building Code.
- The shelf and rack storage facilities shall be used only for storage and not for manufacturing, production, wrapping or assembly.
- The shelf and rack storage facilities shall be accessible to employees only and shall be designated, signed and posted as a "NO SMOKING" area conforming the Subsection 2.4.3. of the Ontario Fire Code.
- (1) In building areas containing shelf and rack storage facilities exceeding 4,645 m (50,000 ft) and except for storage of Class I commodities as defined in paragraph 8 of this document, manually operated smoke vents shall be installed in accordance with NFPA 204, Section 230, and

(2) The smoke vent opening shall be not less than 1.2 m by 1.8 m (4 ft by 6 ft) and the openings shall be located not more than 23 m (75 ft) from any exterior wall and not more than 46 m (150 ft) from each other.

- (1) A standpipe and hose system shall be installed in accordance with Article 3.2.5.4. of the Ontario Building Code where the shelf and rack storage facility height is more than 3 levels including floor level or 14 m (45 ft) in height.

(2) Where a standpipe and hose system is required, 63.5 mm (2-1/2 in) diameter hose connections shall be provided, except that 38.1 mm (1-1/2 in) hose connections are permitted in the shelf and rack storage facilities which;

(a) neither exceed 6 levels including the floor level.

(b) do not exceed 3,716 m (40,000 ft) in the sum total of all levels of the shelf and rack storage facility.

APPENDIX

Commodity Classifications:

The following guide for commodity classification applies specifically to rack storage and is not related to any other method of classification of materials.

Class I commodity is defined as essentially non-combustible product on wood pallets, or in ordinary corrugated cartons with or without single thickness dividers or in ordinary paper wrappings, all on wood pallets. Such products may have a negligible amount of plastic trim, such as knobs or handles.

Examples of Class I products are:

Metal Products. Metal desks with plastic tops and trim, electrical coils, electrical devices in their metal enclosures, pots and pans, electrical motors, dry cell batteries, metal pots and pans, electrical motors, dry cell batteries, metal parts, empty cans, stoves, washers, dryers and metal cabinets.

Glass Products. Glass bottles, empty or filled with non-combustible liquids, mirrors.

Foods. Foods in non-combustible containers; frozen foods; meat, fresh fruits and vegetables in non-plastic trays or containers; dairy products in nonwax-coated paper containers, beer or wine up to 20 percent alcohol, in metal, ceramic or glass containers.

Others. Oil-filled and other types of distribution transformers, cement in bags, electrical insulators, gypsum board, inert pigments, dry insecticides.

Class II commodity is defined as Class I products in slatted wooden crates, solid wooden boxes, multiple thickness paperboard cartons, or equivalent combustible packaging material on wood pallets.

Examples of Class II products are: thinly coated fine wire such as radio coil wire on reels or in cartons; incandescent or fluorescent light bulbs; beer or wine up to 20 percent alcohol in wood containers; and Class I products, if in small cartons or small packages placed in ordinary corrugated cartons.

Examples of Class III products are:

Paper Products. Books, magazines, newspapers, stationary, plastic coated paper food containers, paper or cardboard games, tissue products, rolled paper on side or steel banded on end, and regenerated cellulosics (cellophane).

Leather Products. Shoes, jackets, gloves, and luggage.

Wood Products. Doors, windows, door and window frames, combustible fiberboard, wood cabinets, furniture and other wood products.

Textiles. Natural fiber upholstered non-plastic furniture, wood or metal furniture with plastic padded and covered arm rests, mattresses without expanded plastic or rubber, absorbent cotton in cartons, natural fiber and viscose yarn thread, and products, and natural fiber clothing or textile products.

Others. Tobacco products in paperboard cartons, non-flammable liquids such as soaps, detergent and bleaches, and non-flammable pharmaceuticals in plastic containers; combustible foods or cereal products, and non-negative producing film packs in sealed metal foil wrappers in paperboard packages.

Class IV commodity is defined in Class I, II and/or III products containing an appreciable amount of plastics in a paperboard carton or Class I, II and/or III products with plastic packaging in paperboard cartons on wood pallets.

Examples of Class IV products are small appliances, typewriters and cameras with plastic parts, plastic backed tapes and synthetic fabrics or clothing. An example of packing material is a metal product in a foamed plastic cocoon in a corrugated carton.

Class IV commodity also includes:

Textiles. Synthetic thread and yarn except viscose, and non-viscose synthetic fabrics or clothing.

Others. Telephones, vinyl floor tile, wood or metal frame upholstered furniture or mattresses with plastic covering and/or padding, and plastic padded metal dashboards or metal bumpers.

DATED at Toronto this 19th day in the month of September in the year 1990 for Authorization #82-16-54 amended on behalf of:

BUILDING MATERIALS EVALUATION COMMISSION

BMEC-82-16-054

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

SHELF AND RACK STORAGE

Date of Authorization: October 20, 1983

AMENDED:
October 16, 1985
September 19, 1990

BMEC REFERENCE: BMEC-82-16-054

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Triple-A Manufacturing Company Limited
44 Milner Avenue
Scarborough, Ontario
M1S 3P8

ON THE SUBJECT OF:

A self-contained structural shelf and rack storage facility within a building, having one or more solid intermediate deck or walkway levels for personnel access.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. (1) (a) Deck level shall be a continuous horizontal construction membrane through the entire shelf rack facility, and

   (b) Walkway level shall be the horizontal construction membrane between the solid shelving installed on the same plane, and

   (c) Level area means the greatest horizontal area of the shelf and rack storage facility.

   (2) (a) Deck or walkway levels shall be constructed of solid closed surface steel planking or,

   (b) Steel roof decking with minimum 16 mm (5/8 in) maximum 19 mm (3/4 in) thick tongue and groove solid wood or plywood.

   (3) The structural design of the entire shelf and rack storage facility support system including posts, beams, decks, walkways, connections, and their supports such as concrete slabs, separate foundations or similar shall be in accordance with Ontario Building Code Part 4 requirements.

   (4) Detailed drawings for each installation shall be stamped by a member of the Association of Professional Engineers of Ontario certifying conformity with this authorization. These drawings shall also detail an appropriate sign to indicate the maximum permissible design loads for each rack storage system and such sign shall be permanently fixed to the building interior and displayed in a prominent unobstructed viewing position. These drawings shall be submitted for a building permit in the usual way.

7. An approved wet pipe sprinkler system shall be designed and installed for the entire shelf and rack storage facility including the top level and shall be in conformance with NFPA 13-1983, and NFPA 231C-1980 or the appropriate NFPA Standard for the most severe hazard that it is exposed to. Sprinklers are not required where only Class 1 commodities as defined in the following paragraph 8.(2) are stored.
8. (1) (a) The entire shelf and rack storage dimension shall be limited to Table 8.A. based on the type of commodity stored as defined in paragraph 8.(2), (3), (4) and (5). Excerpts of NFPA 231C-1980 are outlined in the attached appendix and these shall apply to this authorization.

   (b) A firewall as defined in the Ontario Building Code Regulation 583/83, may divide the confining building into two or more separate buildings, wherein, one of the following classes may be assigned to each of the separate buildings.

   (2) Class I commodities are non-combustible products, as defined in NFPA 231C-1980; or

(3) Class II, III, and IV commodities are combustible products, as defined in NFPA 231C-1980; or

(4) Class SS commodities are special hazard products not covered in paragraph 8.(2), (3) or (5); (5) Aerosol products composed of greater than 55% non-water miscible flammable products including lubricants; oil-based paints, anti-perspirants, furniture polish, insecticides and automotive products, are to be stored only:

(a) On the ground floor of the racking system, and

(b) In a designed areas separated by,

(i) a vertical 1 hr. fire separation, or

(ii) a vertical chain link fencing not lighter than 9 ga. steel wire made into a 50 mm (2 in) diamond mesh, located not less than 2.5 m (8 ft) from all other storage where the adjacent storage is more hazardous than Class IV commodity, or

(iii) a method acceptable to the chief Fire Official, and

(c) In the designated area protected by an in-rack sprinkler system. The sprinkler demand shall be a minimum of 1.9 L/s (30 g.p.m. (U.S.)) discharge per head with 74C (165F) heads or less and shall be 2.5 m (8 ft) apart maximum. This design shall be further based on the operation of the hydraulically most remote;
(i) 8 sprinklers if one level, or

(ii) 6 sprinklers on each level if only two levels, or

(iii) 6 sprinklers on each of the top three levels if three or more levels.

(d) Single row racks shall require only the in-rack sprinklers, whereas, double row racks shall require sprinklers in longitudinal flue as well as on face sprinklers which shall be staggered on opposite sides of racks.

TABLE 8.A.
Forming Part of Paragraph 8

Shelf and Rack Storage Facility				
Commodity Classes	**Maximum Height (1)**		**Maximum Area (2)**	
	m	ft	m^2	ft^2
Class I	6 12 18	20 40 60	unlimited 20,070 13,380	unlimited 216,000 144,000
Class II, III, AND IV	6 12	20 40	8,920 4,460	96,000 48,000

	18	60	2,230	24,000
Class SS	6 12 18	20 40 60	3,340 1,670 1,110	36,000 18,000 12,000
COLUMN 1	2	3	4	5

NOTE:

(1) The maximum height shall be from the floor supporting the shelf and rack system to the topmost portion of the racking system.

(2) The maximum area is the sum total of all levels of the shelf and rack system as well as the floor.

- A plain legible sign or signs, with contrasting letters and titled "NOTICE", shall describe the above Class and requirements for each shelf and rack storage facility. This sign or signs shall be permanently mounted, at or near the main water supply for the sprinkler system and shall be maintained at all times. For Class 1 commodities this "NOTICE" shall be permanently mounted, at or near the main entrance to this shelf and rack storage facility.
- (1) Exits shall be separated from the rack storage facilities with fire separations, having a fire-resistance rating conforming to Subsection 3.4.4. of the Ontario Building Code; and

(2) the exit stair shafts shall conform to all requirements for exits as stated in Section 3.4 of the Ontario Building Code; and

(3) no fewer than 2 exits are required from each deck or walkway level, except where there are not more than two levels above the building floor, and the level area does not exceed 139 m (1500 ft), two means of egress shall be required without the requirements of fire separation for exit, and

(4) any opening in a deck for egress, convenience stairs, ramps or chutes, shall be protected by smoke baffles and close spaced sprinklers as per paragraph 7 of this authorization.

- The maximum travel distance to exits shall not exceed 46 m (150 ft) and to a fire extinguisher shall not exceed 23 m (75 ft).
- (1) Where a shelf and rack storage facility contains two or more deck or walkway levels and where each level is greater than 239 m (2,500 ft), a smoke detection system shall be installed on the underside of each deck level on which walkway or aisle is located, and

(2) the number of system smoke detectors installed shall be in accordance to CAN4-S524-M1982.

- The clear aisle width shall not be less than 760 mm (30 inches). This clearance is for access to exits and shall not be used for conveyors, trolleys, tracks or any other similar mode of product transportation within an aisle or walkway.
- This shelf and rack storage facility is not permitted in F-1 occupancy as defined in the Ontario Building Code.
- The shelf and rack storage facilities shall be used only for storage and not for manufacturing, production, wrapping or assembly.
- The shelf and rack storage facilities shall be accessible to employees only and shall be designated, signed and posted as a "NO SMOKING" area conforming the Subsection 2.4.3. of the Ontario Fire Code.
- (1) In building areas containing shelf and rack storage facilities exceeding 4,645 m (50,000 ft) and except for storage of Class I commodities as defined in paragraph 8 of this document, manually operated smoke vents shall be installed in accordance with NFPA 204, Section 230, and

(2) The smoke vent opening shall be not less than 1.2 m by 1.8 m (4 ft by 6 ft) and the openings shall be located not more than 23 m (75 ft) from any exterior wall and not more than 46 m (150 ft) from each other.

- (1) A standpipe and hose system shall be installed in accordance with Article 3.2.5.4. of the Ontario Building Code where the shelf and rack storage facility height is more than 3 levels including floor level or 14 m (45 ft) in height.

(2) Where a standpipe and hose system is required, 63.5 mm (2-1/2 in) diameter hose connections shall be provided, except that 38.1 mm (1-1/2 in) hose connections are permitted in the shelf and rack storage facilities which;

(a) neither exceed 6 levels including the floor level.

(b) do not exceed 3,716 m (40,000 ft) in the sum total of all levels of the shelf and rack storage facility.

APPENDIX

Commodity Classifications:

The following guide for commodity classification applies specifically to rack storage and is not related to any other method of classification of materials.

Class I commodity is defined as essentially non-combustible product on wood pallets, or in ordinary corrugated cartons with or without single thickness dividers or in ordinary paper wrappings, all on wood pallets. Such products may have a negligible amount of plastic trim, such as knobs or handles.

Examples of Class I products are:

Metal Products. Metal desks with plastic tops and trim, electrical coils, electrical devices in their metal enclosures, pots and pans, electrical motors, dry cell batteries, metal pots and pans, electrical motors, dry cell batteries, metal parts, empty cans, stoves, washers, dryers and metal cabinets.

Glass Products. Glass bottles, empty or filled with non-combustible liquids, mirrors.

Foods. Foods in non-combustible containers; frozen foods; meat, fresh fruits and vegetables in non-plastic trays or containers; dairy products in nonwax-coated paper containers, beer or wine up to 20 percent alcohol, in metal, ceramic or glass containers.

Others. Oil-filled and other types of distribution transformers, cement in bags, electrical insulators, gypsum board, inert pigments, dry insecticides.

Class II commodity is defined as Class I products in slatted wooden crates, solid wooden boxes, multiple thickness paperboard cartons, or equivalent combustible packaging material on wood pallets.

Examples of Class II products are: thinly coated fine wire such as radio coil wire on reels or in cartons; incandescent or fluorescent light bulbs; beer or wine up to 20 percent alcohol in wood containers; and Class I products, if in small cartons or small packages placed in ordinary corrugated cartons.

Examples of Class III products are:

Paper Products. Books, magazines, newspapers, stationary, plastic coated paper food containers, paper or cardboard games, tissue products, rolled paper on side or steel banded on end, and regenerated cellulosics (cellophane).

Leather Products. Shoes, jackets, gloves, and luggage.

Wood Products. Doors, windows, door and window frames, combustible fiberboard, wood cabinets, furniture and other wood products.

Textiles. Natural fiber upholstered non-plastic furniture, wood or metal furniture with plastic padded and covered arm rests, mattresses without expanded plastic or rubber, absorbent cotton in cartons, natural fiber and viscose yarn thread, and products, and natural fiber clothing or textile products.

Others. Tobacco products in paperboard cartons, non-flammable liquids such as soaps, detergent and bleaches, and non-flammable pharmaceuticals in plastic containers; combustible foods or cereal products, and non-negative producing film packs in sealed metal foil wrappers in paperboard packages.

Class IV commodity is defined in Class I, II and/or III products containing an appreciable amount of plastics in a paperboard carton or Class I, II and/or III products with plastic packaging in paperboard cartons on wood pallets.

Examples of Class IV products are small appliances, typewriters and cameras with plastic parts, plastic backed tapes and synthetic fabrics or clothing. An example of packing material is a metal product in a foamed plastic cocoon in a corrugated carton.

Class IV commodity also includes:

Textiles. Synthetic thread and yarn except viscose, and non-viscose synthetic fabrics or clothing.

Others. Telephones, vinyl floor tile, wood or metal frame upholstered furniture or mattresses with plastic covering and/or padding, and plastic padded metal dashboards or metal bumpers.

DATED at Toronto this 19th day in the month of September in the year 1990 for Authorization #82-16-54 amended on behalf of:

BUILDING MATERIALS EVALUATION COMMISSION

BMEC-82-12-050

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

CHIMNEY LINER

Date of Authorization: November 17, 1982

BMEC REFERENCE: BMEC-82-12-050

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, R.S.O. 1980

AND IN THE MATTER OF an application by:

ISO-KAREN Aps
Industrivej
7470 Karup J.
Denmark

AGENT:

Norwegian Woodstoves
Division of Dahl Brothers (Canada) Ltd.
2600 South Sheridan Way
Mississauga, Ontario
L5J 3Y1

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials,

technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. This authorization is limited to Ontario Building Code Part 9 buildings for new self-contained chimneys and/or to line or reline existing masonry chimneys where such chimneys are in a good state of repair.

   (**NOTE:** Since this is listed to ULC-S629M and shall bear ULC labels it may be used with solid, gas or liquid fuels.)

7. Protection from the elements shall conform to O.B.C. Subsection 9.20.17. and installation shall be done by factory trained personnel only.
8. This chimney liner shall not negate the O.B.C. requirements for flue sizes.
9. The Iso-Karen chimney or liner shall be capped by extending the liner not more that 100 mm (4 in) above a precast waterproof concrete cap which has sloping top and overhangs the chimney by at least 50 mm (2 in) with drip edges cast into the concrete cap not less than 25 mm (1 in) from the face of the chimney, or a stainless steel cap with formed drip edges.

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

KITCHEN EXHAUST DUCT DAMPER

Date of Authorization: September 9, 1982

BMEC REFERENCE: BMEC-82-11-049

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, R.S.O. 1980

AND IN THE MATTER OF an application by:

Ministry of Government Services
Ontario Ministry of Revenue
33 King Street West
Oshawa, Ontario
L1H 1A1
ON THE SUBJECT OF:

The use of an automatic fire damper on the terminus of a kitchen exhaust duct, to reduce the exfiltration of air from this building AT THE ABOVE ADDRESS.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. This authorization is for the installation of an automatic damper equal to Ruskin FD-35 and installed on the discharge outlet of the kitchen exhaust duct outside above the roof complete with a clear cut opening or openings through the approximate centre of the damper to equal 7 square inches to vent the gas pilots on the appliances served by this exhaust duct.
7. In lieu of a fusible link a limit switch mounted outside of the air stream to prove damper is fully open shall be activated by the **blade** of the damper.
8. Damper shall be driven open/closed with an electric motor mounted outside the air stream and in a weatherproof enclosure. Necessary wiring and control shall be provided not to allow the fan to start until the damper is in the fully open position and then only close when the fan is stopped.
9. Except as noted above the entire kitchen duct system shall conform to the NFPA 96-1980.

KITCHEN EXHAUST HEAT RECOVERY SYSTEM

Date of Authorization: September 9, 1982

AMENDED:
November 7, 1986
August 12, 1987

BMEC REFERENCE: BMEC-82-10-048

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Kilmer Environmental Inc.
208 Britannia Road East, Unit #1
Mississauga, Ontario
L4Z 1S6

AGENT:

McCarthy Robinson Inc.
321 Progress Avenue
Scarborough, Ontario
M1P 2Z7

ON THE SUBJECT OF:

The use of Kitchen Exhaust, Heat Recovery by means of a washable plate type heat exchanger or heat coil.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.

2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. The tempered supply return air duct system shall be for the kitchen area only with a fire damper at the reclaim unit and the air duct beyond shall be installed in accordance with the Ontario Building Code 6.2.4.
7. Installation and maintenance shall comply with the Application and submitted data dated 10 August 1982 entitled Specification Sheets for Indusco Kitchen Heat Reclaim System including Typical drawing for Coil or Plate Heat Exchanger.
8. Except as noted above the entire system shall conform to NFPA 96-1980.
9. Where any reference to date has been made by the APPLICANT or the COMMISSION on any submission or authorization to the N.F.P.A. 96 regardless of the date it shall read as of the date proclaimed for amendments to the Ontario Building Code.

CONCRETE ROOF TILE SYSTEM

Date of Authorization: July 8, 1982

AMENDED: April 14, 1983

BMEC REFERENCE: BMEC-82-08-046

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, R.S.O. 1980

AND IN THE MATTER OF an application by:

Marley Roof Tiles Limited
281 Alliance Road
Milton, Ontario
L9T 3M6

ON THE SUBJECT OF:

Marley Concrete Roof Tile system used on pitched roofs of building structures.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for

termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. All aspects of the Ontario Building Code Part 9 or Part 4 as applicable shall be complied with for new and existing roof support framing, rafters, trusses, sheathing, underlay and flashings. For Part 9 buildings the roof dead load shall be increased by 0.5 kN/m (10 lbs/ft) to allow for the weight of the roof tiles. In lieu of plywood sheathing, 19 mm x 38 mm (nominal 1" x 2") wood purlins (battens or strapping) at 338 mm (13-1/4 in) maximum spacing in conjunction with sheathing equivalent to Thermo-ply or Thermo-bar may be used.
7. For existing roofs the structural adequacy of the roof framing and supporting walls shall be certified by a Professional Engineer registered in the Province of Ontario.
8. Construction of this concrete tile roof system as noted above shall comply with the published literature of Marley Roof Tiles Limited as submitted and dated on 25 June, 1982 with the application and entitled Technical Requirements, Installation and Marketing Policy, Engineering Report (No. J1702), Warranty and Specifications Manual (07300 June 1982).

Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. The kitchen exhaust duct beyond the fire damper located on the exhaust side of the Systems 111 unit may be installed in accordance with the Ontario Building Code 6.2.4. when it passes directly to atmosphere and not through any fire separations.
7. The tempered supply return air duct system beyond the fire damper separating the supply and exhaust systems shall be installed in accordance with the Ontario Building Code 6.2.4.
8. Installation and maintenance shall comply with the published literature dated 22 April, 1982 as submitted by the Applicant entitled Specification Sheets for Systems 111 and Heat Reclaim System for Commercial Kitchen Exhaust including Drawings #1 to #11 inclusive.
9. Reference to NFPA 96 in the above drawings and specification sheet shall be hereby amended to read NFPA 96-1980.
10. Where any reference to date has been made by the APPLICANT or the COMMISSION on any submission or authorization to the N.F.P.A. 96 regardless of the date it shall read as of the date proclaimed for amendments to the Ontario Building Code.

MOVED AND ADOPTED THIS 7th DAY OF NOVEMBER, 1986 BY THE BUILDING MATERIALS EVALUATION COMMISSION.

(BMEC)
AUTHORIZATION REPORT

KITCHEN EXHAUST HEAT RECOVERY SYSTEM

Date of Authorization: February 11, 1982

AMENDED: May 13, 1982

BMEC REFERENCE: BMEC-81-08-038

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Garland Commercial Ranges Limited
1021 Brevik Place
Mississauga, Ontario
L4W 3R7

ON THE SUBJECT OF:

Kitchen Exhaust Heat Reclaim Systems

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for

termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. The kitchen exhaust duct system shall be installed in accordance with the Ontario Building Code in all respects except as authorized herein and shall conform to all other applicable governing legislation and local by-laws.
7. The kitchen exhaust duct beyond the fire damper located on the exhaust side of the ecology unit may be installed in accordance with the Ontario Building Code 6.2.4. when it passes directly to atmosphere and not through any fire separations.
8. The tempered supply return air duct system beyond the fire damper separating the supply and exhaust systems shall be installed in accordance with the Ontario Building Code 6.2.4.
9. Installation and maintenance shall comply with the published literature dated 1 October, 1981 as submitted by the Applicant entitled Specification Sheet for Ecology and Heat Reclaim System for Commercial Kitchen Exhaust including Drawings #1 to #15 inclusive.
10. Where any reference to date has been made by the APPLICANT or the COMMISSION on any submission or authorization to the N.F.P.A. 96 regardless of the date it shall read as of the date proclaimed for amendments to the Ontario Building Code.

ON THE SUBJECT OF:

New and re-roofing over existing built-up roofing systems with Spray-in-place Urethane Foam complete with Elastomeric Weather Proofing topcoat.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. This authorization is limited to materials conforming to (a) C.G.S.B. standard for: Thermal Insulation, Urethane Spray in Place 51-GP-23M, November 1978. (b) U.L.C. Report on Built-up Roof Covering Materials (Coating) File CR1242, Application No. 79T351 dated November 12, 1979.
7. This authorization shall also be limited until further notice from the Commission, that the Applicant and/or his Agent shall notify the Commission in writing thirty (30) days of any confirmed installations, with all necessary information respecting this installation, owner, location. Also the "Daily Report" on page 27 and 28 in the designed Appendix "A" must be available at all times for each installation to the Commission upon request.
8. This authorization if proposed to be used in a "Fire-Rated Roof Assembly" shall be Listed by Underwriters Laboratories of Canada for that purpose.
9. All applicable aspects of the Ontario Building Code shall be complied with except as authorized above.

BUILDING MATERIALS EVALUATION COMMISSION

AUTHORIZATION REPORT

THERMAL HOMES DOUBLE WALL CONSTRUCTION

Date of Authorization: September 11, 1980

BMEC REFERENCE: BMEC-80-01-023

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, 1974

AND IN THE MATTER OF an application by:

John Hix, Architect
207 Queen's Quay West
Toronto, Ontario
M5J 1A7

ON THE SUBJECT OF:

Thermal Homes and the use of double wall construction for heating energy saving.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. A continuous Fire Stop Flap on Fusible Link is positioned at the bottom of the north double wall space as per detailed sketch.
7. There is to be no combustible structural members, horizontal or vertical, in the north double wall space.
8. 3/8" gypsum board is applied to the outer surface of the inner wall.
9. The inner wall is filled with a minimum of 3-1/2" of fibreglass insulation with 1/2" gypsum board on the inside surface.
10. The normal Fire Stops are provided at the junction of the floors and ceiling and all inner walls as required by the Ontario Building Code.
11. Product of combustion detectors are placed, one in the crawl space, one in the attic space and the normal number required internally in the dwelling. These detectors, while giving alarm to the occupants, are also inter connected to shut down the fan in the attic space.
12. A back draft damper is installed on the fan to stop the convective flow should a fire occur.
13. There is an access panel to the attic space and an access panel in the gypsum board and stud partition that divides the attic space into two compartments.
14. The summer attic vents capable of venting each side of the attic stud partition and at each end of the cable are opened when the heating season is over. This allows air warmed in the sun room to flow to the outside by natural convection. The doors are opened to the outside during this period. At the end of the summer these attic vents are closed.
15. Insulation and Vapour Barrier. The outer envelope roof is filled with fibreglass insulation and fitted with four mil vapour barrier is lapped and taped. The vapour barrier and insulation are fully accessible for inspection. The house shall be fitted with exhaust ducts and fans for all kitchen and bathrooms.
16. All applicable aspects of the Ontario Building Code shall be complied with except as authorized above.

BUILDING MATERIALS EVALUATION COMMISSION

BMEC-79-06-021

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

BRUSH APPLIED FIRE RETARDANT COATINGS

Date of Authorization: December 13, 1979

BMEC REFERENCE: BMEC-79-06-021

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, 1974

AND IN THE MATTER OF an application by:

American Vamag Co. Inc.
1061 Linden Avenue
Ridgefield, New Jersey
U.S.A. 07657

ON THE SUBJECT OF:

Compliance with the requirements of OBC Clause 3.1.4.4.(13)(b) and Subclause 3.1.4.5.(3)(h)(ii) of interior wood finish materials, to which Flame Retardant Coating has been applied and for which the flame-spread rating is not more than 25, (as described and reported in ULC Report identified as File 886 Application No. 79T31 July 12, 1979).

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for

termination, unless prior approval is granted for such revision or change by the COMMISSION.

5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. This authorization is limited to wood finish materials that are not more than 1 inch thick and which consist of sawn lumber, or plywood conforming with the requirements of CSA Standard 0121-1973, or 0151-1974, or 0153-1976, to which the FLAME RETARDANT COATING has been applied to all surfaces that may be exposed to ambient air. For the purpose of this authorization it is considered that, after having been given the Flame Retardant Coating described in this authorization, any species shown in Table 1 of CWC 1977 Datafile FP-6 as having a Flame-Spread Rating of not more than 118, will then have a Flame-Spread Rating of not more than 25.
7. To confirm the validity of this compliance on ANY project, a DOCUMENT - an inspection and testing report for THAT project - must be filed with the "Chief Official".

   (a) This DOCUMENT must have been produced and signed by an authorized representative of a testing organization accredited by the Standards Council of Canada, or otherwise acceptable to the "Chief Official".

   (b) The purpose of the DOCUMENT is to verify that the material used was that covered by the ULC Report identified as File CR886 Application No. 79T31, dated July 12, 1979; and that it was applied to all surfaces stipulated in para. 6 in accordance with the procedures described on the CARD issue by ULC, identified as Guide No. 40 UB.5.6, File CR886, dated April 23, 1976 (attached hereto) which shall be provided with the material.

8. The DOCUMENT referred to in para. 7 must show that the verification procedure included all of the following items, (a) to (e) inclusive, and that in each case the requirements were met:

   (a) a visual examination of the whole area and a comparison with whatever reference sample or samples may be required by the testing organization, for every species to which the material is to be applied for which acceptance is sought;

   (b) a determination of the quantity of material used, by a count of the empty containers, and a comparison of this quantity with that required for the area

covered, as noted on the CARD issued by ULC which is referred to in para. 7 and attached hereto;

(c) obliteration of all of the ULC labels on the empty containers;

(d) determination that the dry film thickness of the coating applied is not less than 7 mils, in accordance with the manufacturer's recommendations;

(e) a burn test when required by the "Chief Official". This burn test is the application of a gas flame to 3 or 4 square inches of the protected surface for 10 to 12 seconds and, for a satisfactory result, the intemescent mat or heat barrier developed must be not less than 1/4 inches thick.

AND IN THE MATTER OF an application by:

Gaylord Ventilators of Canada Inc.
2695 Drew Road
Mississauga, Ontario
L4T 3X1

ON THE SUBJECT OF:

Kitchen exhaust air heat reclaim system utilizing the same air stream for exhaust and make-up air, for use in the kitchen area, of new or existing buildings, and/or the discharge of same to outside atmosphere at various heights.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. This authorization includes that the supply air system downstream from the unit shall be installed in conformance with the Ontario Building Code Subsection 6.2.4. Air Duct Systems.
7. This authorization is only prevalent when the system is installed and maintained in accordance with the latest NFPA 96 complete with the listed extraction equipment normally required to be installed by NFPA-96, except as noted in the above paragraphs 4 and 6.
8. This authorization shall include the use of either "Unisorb" or "Purifil" where the latter is now specified with the odour removable media filters.
9. Where any reference to date has been made by the APPLICANT or the COMMISSION on any submission or authorization to the NFPA 96 regardless of the date it shall read as of the date proclaimed for amendments to the Ontario Building Code.

ON THE SUBJECT OF:

Surewall(R) Surface Bonding Cement, a glass-fibered Portland cement. This system is applied to the surface of both interior and exterior sides of dry stacked concrete masonry unit construction in lieu of conventional mortar for below or above grade walls.

THE COMMISSION HEREBY AUTHORIZES to the applicant the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.
3. This AUTHORIZATION may be mentioned in promotional and/or advertising materials, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.

4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS

6. This authorization is limited to use in buildings where the design is based on engineering analysis of the structural effects of the loads and forces acting on the structure, by an architect or professional engineer.
7. Engineering inspection of masonry construction shall be carried out, to ensure that construction is consistent with the design, by the person responsible for its design or by another person qualified in the inspection of masonry construction and who is responsible to the design architect or engineer.
8. The maximum allowable design stresses shall be 15% of the ultimate stresses of the masonry as determined by tests performed in accordance with ASTM E72-68 "Conducting Strength Tests of Panels for Building Construction" as revised to 1 May 1975. Tests shall be carried out on panels using the same materials and the same thickness of blocks and coatings as proposed to be used in the building under consideration.
9. This authorization limits the use of this system to walls not greater in height than 7.62 m (25 ft), above the top of the foundation wall.
10. Surewall bonding mortar shall meet the Standard Specification ASTM C887-79.
11. The construction of Surewall surface bonded concrete block walls shall comply with the published literature of the W.R. Bonsal Company entitled, "Building with Surewall Surface Bonding Cement".
12. All applicable aspects of the Ontario Building Code shall be complied with except as authorized above.

DATED at Toronto this 12th day in the month of AUGUST in the year 1987 for Authorization #78-7-15 amended on behalf of:

BUILDING MATERIALS EVALUATION COMMISSION

BMEC-78-05-013

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

KITCHEN EXHAUST HEAT RECOVERY SYSTEM

Date of Authorization: April 19, 1979

AMENDED:
June 11, 1981
February 11, 1982
May 13, 1982
November 7, 1986

BMEC REFERENCE: BMEC-78-05-013

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, Revised Statutes of Ontario, 1980, Chapter 51

AND IN THE MATTER OF an application by:

Gaylord Ventilators of Canada Inc.
2695 Drew Road
Mississauga, Ontario
L4T 3X1

ON THE SUBJECT OF:

Kitchen exhaust air heat reclaim system utilizing two separate air streams for exhaust and make-up buildings, and/or the discharge of same to outside atmosphere at various heights.

THE COMMISSION HEREBY AUTHORIZES the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.
6. This authorization shall include the use of either "Unisorb" or "Purifil" where the latter is now specified with the odour-removable media filters.
7. This authorization does not include the use of Canadian Chromalox Thermal Recovery Coils as Heat Recovery Coils. At this point in time they are only in a designed stage and cannot be accepted on that basis.
8. Where any reference to date has been made by the APPLICANT or the COMMISSION on any submission or authorization to the N.F.P.A. 96 regardless of the date it shall read as of the date proclaimed for amendments to the Ontario Building Code.

MOVED AND ADOPTED THIS 7th DAY OF NOVEMBER, 1986 BY THE BUILDING MATERIALS EVALUATION COMMISSION.

BUILDING MATERIALS EVALUATION COMMISSION

BMEC-78-04-012

BUILDING MATERIALS EVALUATION COMMISSION
(BMEC)
AUTHORIZATION REPORT

DUCTLESS WASHROOM EXHAUST

Date of Authorization: December 14, 1978

AMENDED: July 12, 1979

BMEC REFERENCE: BMEC-78-04-012

IN THE MATTER OF Section 18 (4) (b) of the Building Code Act, 1974

AND IN THE MATTER OF an application by:

Rush-Hampton Industries
3000 Industrial Park
Longwood, Florida, U.S.A.
32750

AGENT:

Wally Iwamoto
Downstream Components
64 Misthollow Sq.
Scarborough, Ontario
M1E 4P4

ON THE SUBJECT OF:

CA/90 Ductless Fan to be used as alternate to a window or mechanical ventilation in toilets and bathrooms of new construction.

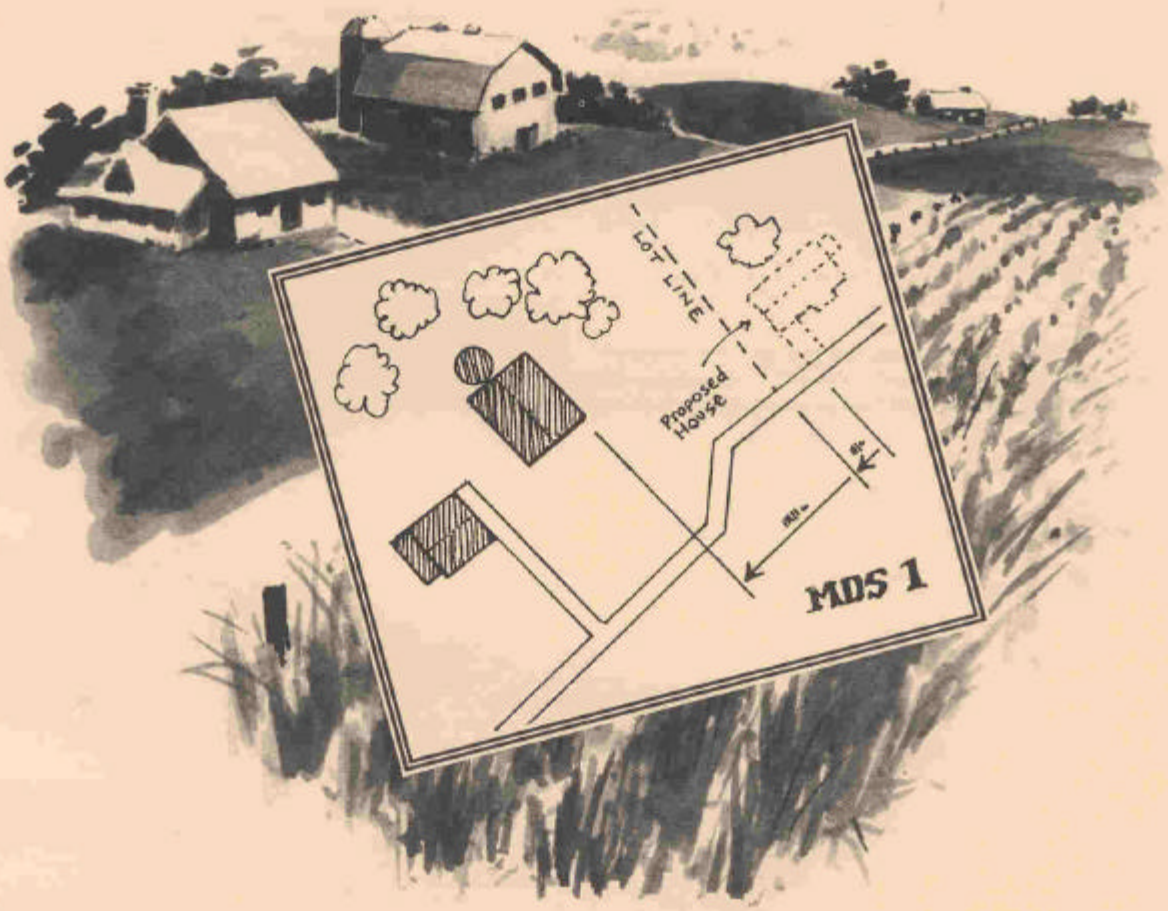
THE COMMISSION HEREBY AUTHORIZES the use of the aforementioned matter subject to the following terms and conditions:

1. Where in the opinion of the COMMISSION negative experience indicates that this authorization should be amended and/or terminated, the COMMISSION may by written notice to the applicant or the agent at the above address, withdraw the authorization and no further installations shall be made subsequent to the effective date of the termination as set out in the written notice.
2. The COMMISSION does not assume or undertake to discharge any responsibility of the applicant to any other party or parties and does not in any manner warrant

or guarantee the correctness and/or the successful performance of the subject matter.

3. This AUTHORIZATION may be mentioned in promotional and/or advertising material, however, it is not to be used expressly or impliedly as an endorsement of any product, material, technique or design which is described herein.
4. This AUTHORIZATION is not transferable to any other party. If the APPLICANT makes any revision or change to the address or the materials, technique, design, system and/or use of the same shall automatically be cause for termination, unless prior approval is granted for such revision or change by the COMMISSION.
5. Construction and installation shall be in conformance to all applicable governing legislation except that compliance with the terms and conditions described herein shall be deemed not to be a contravention of the Building Code. Where applicable, any change in the Act, Regulation or Code provisions shall be grounds for re-evaluation by the COMMISSION.

AND SPECIFIC REQUIREMENTS:



6. Until further written notice from the Commission the Applicant and/or his agent shall notify the Commission in writing within thirty days of completion of the installation of each system pursuant to this authorization with all the necessary information respecting the owner and location of the installation, also what type of follow up procedure is to be used in regard to replacing the filter, and what quantity of filter stock on hand is available locally.
7. The permitted use of this fan in paragraph 5 in two piece washrooms is only if neither of the two pieces are bathtub or shower.

BUILDING MATERIALS EVALUATION COMMISSION

MARCH 1995

MINIMUM DISTANCE SEPARATION I (MDS I)

(Replaces the Minimum Distance Formula I in the *Agricultural Code of Practice*, 1976)

ONTARIO MINISTRY OF AGRICULTURE, FOOD AND RURAL AFFAIRS
ONTARIO MINISTRY OF ENVIRONMENT AND ENERGY

Ontario
Ministry of Agriculture,
Food and Rural Affairs

This document is to be used for the review of planning and development applications. It provides distance separation requirements between existing farm and new non-farm uses.

BACKGROUND

A principle of land use planning is the grouping together of compatible land uses and the separating of incompatible land uses. Industrial parks, residential subdivisions and commercial areas as separate parts of an urban area are a reflection of this principle.

The agricultural community generally acknowledges that even with the best management, noise and dust cannot be eliminated from certain agricultural operations and that odours are associated with livestock production. Not all rural residents, including some farmers, can accept these conditions particularly when the nuisance is perceived to exceed acceptable levels.

In rural areas, this principle of separating different and incompatible land uses has not always been applied. Where there has been sufficient separation distance between differing rural uses, however, there have been few complaints. The distance separation will vary with the source of the potential complaint and the sensitivity of the neighbouring land use.

The primary purpose and use of prime agricultural areas should be for agriculture. Non-farm residents who seek the advantages of country life must be aware of the noise, odour and dust associated with normal farm practices.

Should complaints about odours, noise or dust occur, the Ministry of the Environment and Energy will respond. If the complaint is valid, Ministry of the Environment and Energy staff in cooperation with the farm operator and in consultation with Ministry of Agriculture Food and Rural Affairs staff recommend measures to resolve the complaint. If the complainant still has concerns they may request a hearing by the Farm Practices Protection Board. This Board can only hold hearings in regard to odour, dust or noise concerns. The Board rules whether the occurrence is a normal farming practice.

The Minimum Distance Separation (MDS) is a tool to determine a recommended distance between a livestock facility and another land use. The objective is to prevent land use conflicts and minimize nuisance complaints from odour. MDS does not account for noise and dust.

Minimum Distance Separation will vary according to a number of variables including type of livestock, size of the farm operation, type of manure system and the form of development present or proposed.

MDS I provides minimum distance separation for new development from existing livestock facilities.

MDS II provides minimum distance separation for new or expanding livestock facilities from existing or approved development.

The *Guide To Agricultural Land Use* contains advice on avoiding or reducing the potential for conflict between neighbouring land uses through appropriate farm practices.

These three above documents replace the 1976 *Agricultural Code of Practice*.

Ultimately, land use planning decisions (including MDS) and good farm practices must go hand-in-hand to promote harmony in the rural community and to ensure agriculture as an ongoing activity.

IMPLEMENTATION GUIDELINES

General

1. MDS formulae and criteria are to be referenced in official plans and included in by-laws and are to be applied in designations and zones where livestock facilities are a permitted use and is to be implemented at the time of planning and/or development review.
2. MDS I applies when locating development in proximity to existing livestock facilities on an existing or proposed separate parcel of land.
3. MDS I calculates a separation distance based on either the actual housing capacity or potential capacity according to tillable hectares (maximum 150 Livestock Units), whichever is greater. Existing housing capacity can be based on Canada Plan Service data, available from any OMAFRA office.
4. MDS I is applied in any non-urban designation where agriculture and the keeping of livestock is a permitted use. The Ontario Ministry of Agriculture, Food and Rural Affairs (OMAFRA) does not apply MDS I to proposed non-agricultural uses in an approved urban designation; however, individual municipalities may require the MDS I separation distances be met for livestock facilities located within an urban designation as stipulated in their Official Plan or Zoning By-law.
5. MDS I applies to empty livestock facilities if they are structurally sound and reasonably capable of housing livestock. In such cases, Animal Group (Table 1) will be based upon the most probable use.
6. MDS I is applied to urban expansions. In this instance only, the separation distance is based on the existing housing capacity and not tillable hectares.
7. MDS I only applies to livestock facilities. It is not used to calculate separation distances from uses such as abattoirs, apiaries, greenhouses, kennels and mushroom farms.
8. The direction of the prevailing winds, the presence of berms or other forms of screening do not affect MDS I.
9. The separation distances generated allow for some future expansion of adjacent livestock facilities.
10. MDS I is to be applied to new applications even though there may be existing non-farm uses that do not conform to the MDS I requirements. Where there are 4 or more non-farm uses closer to the subject livestock facility and in immediate proximity to the current application, MDS I will not be applied. The current application must not be located any closer to the livestock facility than the existing non-farm uses.

Official Plan Amendments

11. In addition to Guideline #1 above, MDS I is applied to lands being considered for a non-agricultural designation through the Official Plan Amendment process.

Zoning By-Law Amendments

12. In addition to Guideline #1 above, MDS I is be applied when new development is proposed by way of a re-zoning in a designation where agriculture is a permitted use.

Consent Applications

13. MDS I is applied to a proposed lot, vacant or with existing structures.
14. MDS I is not applied to a proposed lot with an existing building when that building is already located on a parcel of land separate from the subject livestock facility.

Lots of Record

15. Municipalities have the option, but are encouraged, to apply MDS I to building proposed for existing lots of record. The application of MDS I in such cases will take its direction from the municipal planning document.

Measurement

16. Applications to create an industrial, commercial, institutional, recreational or residential uses by consent or subdivision are measured as the shortest distance between the livestock facility and the area of land use change.
17. If the consent is for a residential lot (vacant or residence existing) and the lot is no greater than the size required to provide private septic services (generally no greater than 1 hectare in size), the measurement is taken as the shortest distance between the livestock facility and the lot line of the lot being created.
18. Where larger lots may be permitted, a suitable location must be identified for a building envelope of approximately one hectare outside of the minimum separation distance.

DEFINITIONS

Active Recreational Use:
Recreational use usually with buildings and/or with a concentration of uses such as golf courses, other playing fields, trailer parks, campgrounds and conservation areas with facilities.

Agriculturally Related Commercial/Industrial Uses:
Uses directly related to agriculture and necessary in close proximity to farm operations, such as animal husbandry services, produce or grain storage facilities, or farm machinery outlets.

Animal Group:
Livestock and poultry grouped according to their manure production.

Housing Capacity:
Total maximum livestock capacity for the facility at any one time.

Livestock Facilities:
Livestock barns where animals or poultry are housed, including beef feedlots, and the associated manure storage.

Livestock Unit:
Equivalent values for various types of animals and poultry based on manure production and production cycles.

Multiple Residential:
Three or more residential units in same building.

Passive Recreational Use:
Recreational use not requiring buildings and not altering the soil or topography, such as open space and environmental areas.

Rural Residential Cluster:
Four or more adjacent rural residential lots, generally 1 hectare or less in size, sharing a common boundary. Lots located directly across a road from one another shall be considered as having a common boundary.

Tillable Hectares:
Land including pasture that can be worked or cultivated.

Urban Expansion:
Outward expansion of cities, towns, villages, and hamlets for such uses as residential, recreational, institutional, and commercial and industrial.

MINIMUM DISTANCE SEPARATION I (MDS I)
CALCULATION SHEET FOR NON-AGRICULTURAL USES

USE: To determine the required Minimum Distance Separation (MDS I) for non-agricultural uses establishing or expanding in proximity to livestock facilities

PURPOSE: To reduce the potential for odour conflicts between existing livestock facilities and proposed neighbouring land uses

APPLICATION: MDS will be used for:

- assessing official plan amendments
- assessing zoning bylaw amendments
- evaluating consent applications
- other land use proposals

The following information is to be completed as it relates to the livestock operation. A separate calculation sheet is to be filled out for each livestock operation in proximity to the proposed non-agricultural use.

APPLICANT'S NAME _____ PHONE _____

ADDRESS _____ POSTAL CODE _____

FARMER'S NAME _____ PHONE _____

ADDRESS _____ POSTAL CODE _____

COUNTY/REGION _____ TOWNSHIP _____ LOT _____ CONC. _____

FILE # _____ EVALUATION DATE _____ EVALUATOR _____

Minimum Distance Separation required from Livestock Facility = _____ metres (from Table 2)

Actual distance as reported or estimated from Livestock Facility = _____ metres

Minimum Distance Separation required from Manure Storage = _____ metres (from Table 3)

Actual distance as reported or estimated from Manure Storage = _____ metres

This application MEETS ☐ DOES NOT MEET ☐ MDS requirements for the barn and manure storage.

MINIMUM DISTANCE SEPARATION I (MDS I)
CALCULATION SHEET FOR NON-AGRICULTURAL USES

USE: To determine the required Minimum Distance Separation (MDS I) for non-agricultural uses establishing or expanding in proximity to livestock facilities

PURPOSE: To reduce the potential for odour conflicts between existing livestock facilities and proposed neighbouring land uses

APPLICATION: MDS will be used for:

- assessing official plan amendments
- assessing zoning bylaw amendments
- evaluating consent applications
- other land use proposals

The following information is to be completed as it relates to the livestock operation. A separate calculation sheet is to be filled out for each livestock operation in proximity to the proposed non-agricultural use.

Minimum Distance Separation required from Manure Storage = _____ metres (from Table 3)

Actual distance as reported or estimated from Manure Storage = _____ metres

This application MEETS ☐ DOES NOT MEET ☐ MDS requirements for the barn and manure storage.

ASSESSMENT OF THE LIVESTOCK FACILITY

To calculate Livestock Units, complete Step 1 based on information in Table 1 below.

STEP 1. TOTAL LIVESTOCK UNITS

Column 1 TYPE OF LIVESTOCK	Column 2 HOUSING CAPACITY	Column 3 NUMBER OF ANIMALS PER LIVESTOCK UNIT (From Table 1)	Column 4 NUMBER OF LIVESTOCK UNITS (Col. 2/Col.3)
	(A) = TOTAL LIVESTOCK UNITS (sum of Column 4)		**(A)**

If there are more than 300 livestock units, reference must be made to a full set of tables available from the Ontario Ministry of Agriculture, Food and Rural Affairs

TABLE 1. ANIMAL GROUPS

ANIMAL GROUP 1	ANIMAL GROUP 2	ANIMAL GROUP 3	ANIMAL GROUP 4	ANIMAL GROUP 5
1 Livestock Unit equals	**1 Livestock Unit equals**	**1 Livestock Unit equals**	**1 Livestock Unit equals**	**1 Livestock Unit equals**
200..Chicken Broilers 1.....Horse[3]	4.....Adult Sheep[3] 1....Beef Cow[1 Confinement] 10...Feeder Lambs 100..Ducks 5.....Emu 4.....Adult Goats[3] 10....Feeder Goats 3.....Ostrich 500..Pullets 50...Turkeys (>10kg) 75...Turkeys (5-10kg) 100..Turkeys (<5kg)	1....Beef Cow[1] Yard/Barn 2....Beef Feeder Yard/Barn 1....Dairy Cow[1,2] 2...Dairy HeiferYard/Barn 40...Adult Rabbits[4] 3....Red Veal <300kg 125..Chicken Breeder Layers 75...Turkey Breeder Layers	80.....Adult Mink[4] 40.....Adult Fox[4] 125....Caged Layers	4....Feeder Hogs 5....Sows/Boars 20..Weaners 4-30kg 6....White Veal

[1] Includes calf to 150 kg, [2] Multiply the number of milking cows by 1.5 to account for dry cows, heifers and calves on the same farm,
[3] Includes offspring until weaned, [4] Includes offspring to market size.

Select Animal Group **1 2 3 4 or 5**, depending on type of animals on farm. If there are animals from different groups, select the highest group number. The group number is used when referring to Table 2.

STEP 2. LAND BASE ASSESSMENT (B)

Number of tillable hectares* on site _____ x 5 = _____ (B) Potential Livestock Units

*Maximum (B) is 150 Livestock Units.

STEP 3.

Enter the GREATER OF (A) Total Livestock Units OR (B) Potential Livestock Units _____

Use this figure to enter Column 1 of Table 2.

STEP 4. TABLE 2. MINIMUM DISTANCE SEPARATION FROM LIVESTOCK FACILITY

Read across appropriate line from Column 1 to respective Animal Group and Land Use Type. This number is the Minimum Distance Separation requirement in metres from a livestock facility.

COLUMN 1	TYPE "A" LAND USE To permit: • Up to 3 rural residential lots, either by consent or by plan of subdivision • the severance of an existing dwelling • passive recreational • the building of a dwelling on an existing lot of record • agriculturally related commercial • industrial					TYPE "B" LAND USE To permit: • residential subdivision • active recreational • institutional • commercial • urban expansion • multiple residential • or result in a Rural Residential Cluster				
Greater of Livestock Units (A) or Potential Livestock Units (B)	Animal Group					Animal Group				
	(1)	(2)	(3)	(4)	(5)	(1)	(2)	(3)	(4)	(5)

Continue to TABLE 3 (next page).

STEP 5 TABLE 3. MINIMUM DISTANCE SEPARATION FROM MANURE STORAGE

The following table is used to calculate MDS requirements in metres from manure storages associated with livestock facilities.

Using the resulting MDS distance from Table 2, read across the appropriate line to Column 1, 2, 3 or 4. Select the distance under the appropriate Land Use Type.

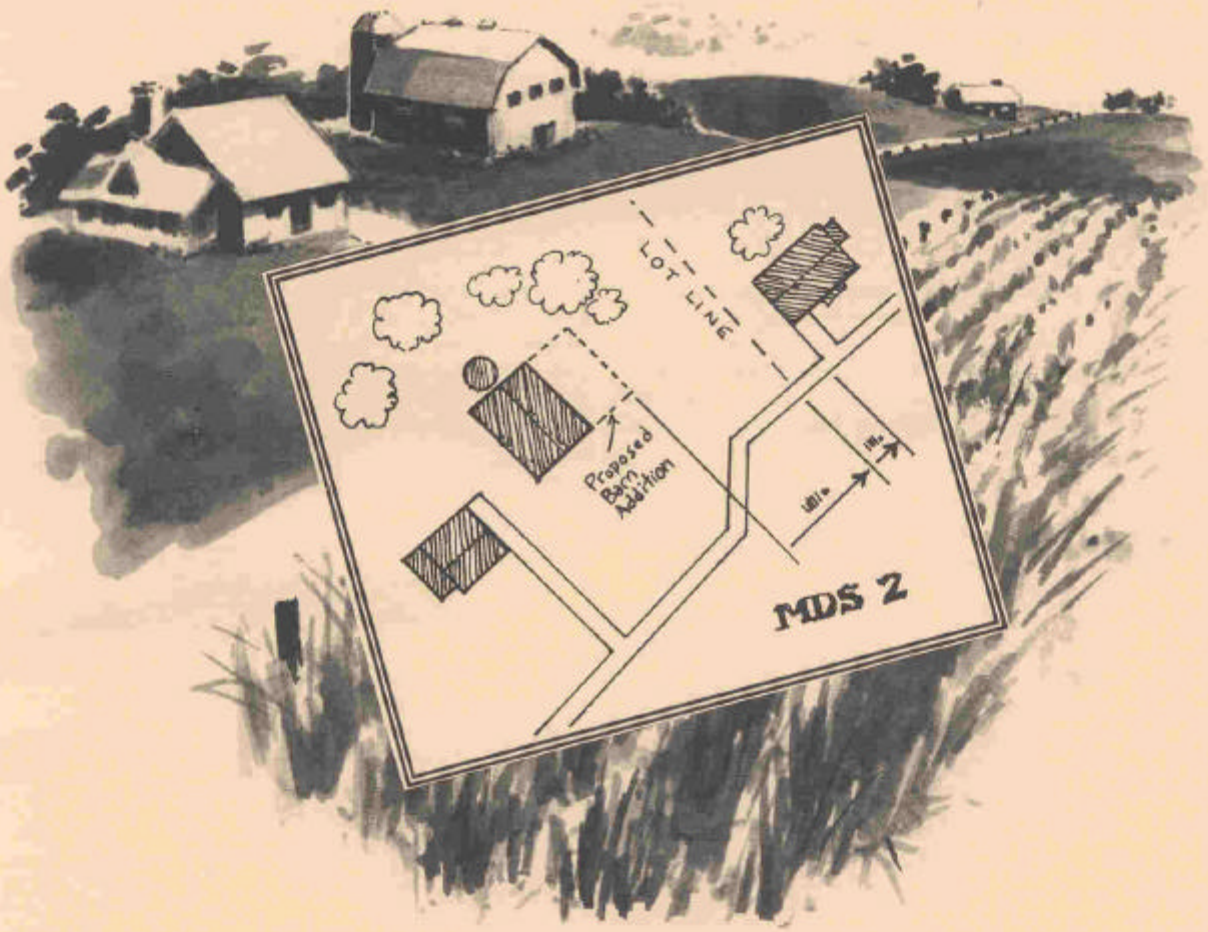
This is the MINIMUM DISTANCE SEPARATION REQUIREMENT from the manure storage of a livestock facility for the establishment of a non-farm use.

Column 1: Roofed or covered storages for manure, runoff, and milkhouse washwater. Includes any covered or roofed concrete, steel or earthen storages, in-barn solid manure packs, and storages under fully slatted floors.

Column 2: Open solid manure pile on concrete slab. Includes the runoff storages (concrete or earthen) used for capturing seepage liquids from solid manure storage or runoff liquids from yards. If yards are scraped into runoff storage, use column 3 when runoff storage is a concrete or steel tank and column 4 when runoff storage is earthen. Milkhouse washwater may be added to runoff storage.

Column 3: Open concrete or steel tanks used for storing liquid manure, milkhouse washwater, or yard runoff where yard is scraped into storage.

Column 4: Open earth-sided or earth-sided storage with concrete floor to be used for storing liquid manure or yard runoff when yard is scraped into storage or milkhouse washwater.



MANURE STORAGE DISTANCE

Distance for Livestock Facility from Table 2 (Step 4). (m)	Column 1 Covered Storage Systems (m)		Column 2 Open Solid and Runoff Storage Systems (m)		Column 3 Open Liquid Tank and Runoff Storage Systems (m)		Column 4 Earthen Liquid and Runoff Storage Systems (m)

MARCH 1995

MINIMUM DISTANCE SEPARATION II (MDS II)

(Replaces the Minimum Distance Formula II in the *Agricultural Code of Practice*, 1976)

ONTARIO MINISTRY OF AGRICULTURE, FOOD AND RURAL AFFAIRS
ONTARIO MINISTRY OF ENVIRONMENT AND ENERGY

Ontario

Ministry of Agriculture, Food and Rural Affairs

This document provides minimum distance separation requirements for livestock facilities within agricultural areas.

BACKGROUND

A principle of land use planning is the grouping together of compatible land uses and the separating of incompatible land uses. Industrial parks, residential subdivisions and commercial areas as separate parts of an urban area are a reflection of this principle.

The agricultural community generally acknowledges that even with the best management, noise and dust cannot be eliminated from certain agricultural operations and that odours are associated with livestock production. Not all rural residents, including some farmers, can accept these conditions particularly when the nuisance is perceived to exceed acceptable levels.

In rural areas, this principle of separating different and incompatible land uses has not always been applied. Where there has been sufficient separation distance between differing rural uses, however, there have been few complaints. The distance separation will vary with the source of the potential complaint and the sensitivity of the neighbouring land use.

The primary purpose and use of prime agricultural areas should be for agriculture. Non-farm residents who seek the advantages of country life must be aware of the noise, odour and dust associated with normal farm practices.

Should complaints about odours, noise or dust occur, the Ministry of the Environment and Energy will respond. If the complaint is valid, Ministry of the Environment and Energy staff in cooperation with the farm operator and in consultation with Ministry of Agriculture, Food and Rural Affairs staff recommend measures to resolve the complaint. If the complainant still has concerns they may request a hearing by the Farm Practices Protection Board. This Board can only hold hearings in regard to odour, dust or noise concerns. The Board rules whether the occurrence is a normal farming practice.

The Minimum Distance Separation (MDS) is a tool to determine a recommended distance between a livestock facility and another land use. The objective is to prevent land use conflicts and minimize nuisance complaints from odour. MDS does not account for noise and dust.

Minimum Distance Separation will vary according to a number of variables including type of livestock, size of the farm operation, type of manure system and the form of development present or proposed.

MDS I provides minimum distance separation for new development from existing livestock facilities.

MDS II provides minimum distance separation for new or expanding livestock facilities from existing or approved development.

The *Guide To Agricultural Land Use* contains advice on avoiding or reducing the potential for conflict between neighbouring land uses through appropriate farm practices.

These three above documents replace the 1976 *Agricultural Code of Practice*.

Ultimately, land use planning decisions (including MDS) and good farm practices must go hand-in-hand to promote harmony in the rural community and to ensure agriculture as an ongoing activity.

IMPLEMENTATION GUIDELINES

The applicant completes the MDS II Data Sheet available from OMAFRA or municipal offices. The completed data sheet is submitted to the OMAFRA Agricultural Engineer, or, in some municipalities, directly to the municipal office for determination of separation distances.

General

1. MDS formulae and criteria are to be referenced in official plans and included in by-laws and are to be applied in designations and zones where livestock facilities are a permitted use and is to be implemented at the time of planning and/or development review.
2. MDS II applies when an application is made for a new, existing, modified or expanding livestock facility. The application may be for a building permit or an application under the Ontario Certificate of Compliance Program.
3. MDS II applies only to livestock and poultry facilities. It is not used to calculate separation distances from uses such as kennels, apiaries, greenhouses, mushroom farms, stockyards, assembly yards, or slaughterhouses.
4. MDS II is to be applied in any non-urban designation where agriculture and the keeping of livestock is a permitted use. MDS II is not applied where the livestock facility is within an approved urban designation.
5. The direction of the prevailing winds, the presence of berms or other forms of screening do not affect the calculated MDS II distance.
6. In cases of rebuilding such as after a fire, municipalities have the option of applying MDS II.
7. Minor variances to the MDS II distances can be considered based on site specific circumstances. Municipal officials must consult with Ontario Ministry of Agriculture, Food & Rural Affairs staff when considering a variance application. Conditions that meet the intent, if not the precise distance of MDS II or mitigate environmental impacts, will receive further consideration.

Measurement

8. Distances to the Nearest Neighbours Dwelling are measured as the shortest distance between the barn, or manure storage and the dwelling.
9. Distances to Residential Subdivisions, Urban Areas, areas zoned or designated Agriculturally Related Commercial Use, Passive Recreational, Institutional, Active Recreational or Commercial/Industrial are measured as the shortest distance between the barn or manure storage and the land uses noted above.
10. Distances to the Nearest Side Lot Line, Rear Lot Line, and Nearest Road Allowance are measured between the closest point of the barn or manure storage and the lot line or road allowance.
11. All distances are measured from the closest point of the barn used for animal housing.

DEFINITIONS

Active Recreational Use:
Recreational use usually with buildings or with a concentration of users such as golf courses, other playing fields, trailer parks, campgrounds and conservation areas with facilities.

Agriculturally Related Commercial Uses:
Uses directly related to agriculture and necessary in close proximity to farm operations, such as animal husbandry services, produce or grain storage facilities, or farm machinery outlets.

Housing Capacity:
Total maximum livestock/poultry capacity for the facility at any one time.

Institutional Use:
Uses such as schools, churches, hospitals, seniors complexes.

Livestock Facilities:
Livestock/poultry barns where agricultural animals are housed and the associated manure storage.

Livestock Unit:
Equivalent values for various types of animals including poultry, based on manure production and production cycles.

Passive Recreational Use:
Recreational use not requiring buildings and not altering the soil or topography, such as open space and environmental areas.

Residential Area:
Areas zoned or designated residential.

Tillable Hectares:
Land, including pasture, that can be worked or cultivated.

Urban Area:
Cities, towns, villages, and hamlets for such uses as residential, recreational, institutional, commercial and industrial.

MINIMUM DISTANCE SEPARATION II
DATA SHEET

USE: To determine the required minimum distance for livestock and poulty facilities within agricultural areas.

PURPOSE: To permit the orderly development of livestock operations within agricultural areas, and to reduce the potential for enviornmental conflicts between livestock or poultry operations and incompatible land uses.

APPLICATION:

- As a method of siting livestock and poultry housing and manure facilities by municipalities through incorporation into by-laws as authorized under the Planning Act.
- As a guideline for certification of new, proposed expansion of or modification of livestock facilities under the Ontario Certificate of Compliance Program.

The following information is to be completed as it relates to the livestock operation.

Farm Name/Owner _____

Farm Location: County/Region _____ Twp. _____ Lot _____ Con. _____

Address: _____ Postal Code: _____ Phone: (___) _____ - _____

Fax: (___) _____ - _____

This project consists of:

- ☐ Existing livestock or poultry facilities.
- ☐ Modifications to existing livestock or poultry facilities.
- ☐ Manure storage.
- ☐ New livestock or poultry facilities.
- ☐ Pollution abatement program.
- ☐ Rebuilding (ie. after fire).

Use the table below to list the type and number of livestock or poultry housed at any one time on the property:

Type of Animal Housed/Fenced	HOUSING CAPACITY	
	Existing Operation	Final Operation
e.g. chicken broilers	20000	22000

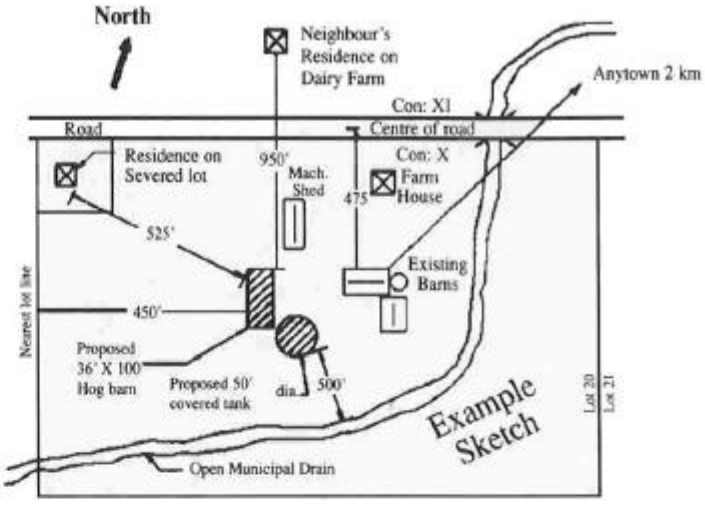
Manure Storage Information:

Dry Manure Collection
- ☐ Stable Cleaner/Belts
- ☐ Tractor Scraper
- ☐ Manure Pack in Barn
- ☐ _____

Dry Manure Storage
- ☐ Manure Pack
- ☐ Roofed Solid Storage
- ☐ Open Solid Storage with Concrete Runoff Tank
- ☐ Open Solid Storage with Earthen Runoff Tank
- ☐ Open Solid Storage
- ☐ _____

Liquid Manure Collection
- ☐ Stable Cleaner, Alley Scraper
- ☐ Flush System
- ☐ Flow Gutter, Fully-Slatted Floors
- ☐ Flow Gutter, Partially-Slatted Floors
- ☐ Full Storage Under Slats

_____



Liquid Manure Storage
- ☐ Full Storage under Slats
- ☐ Open Concrete or Steel Storage
- ☐ Open Earthen Storage
- Covered Concrete Storage

_____

SKETCH:

The following items must be shown on the property sketch (below):

- Location of all lot lines.
- North direction.
- Location and size of all existing and proposed buildings on the property.
- Distances in metres from proposed structures to public roads and neighbouring dwellings.
- Location and distance in metres of subject structures to all streams, ditches, municipal drains, severances, etc.
- Locations of all manure tanks, pads and earthen storages.
- Location and distances in metres from subject structures to nearest area zoned 'Residential'.
- Locate and Identify (drilled, dug) water wells
- Current use of lands/buildings adjacent to property.
- Any other unusual siting conditions.

Draw Sketch Below: (If necessary, please attach additional drawings for clarification)

	125	Caged Layers ..... (daily manure removal)	0.8
	125	Chicken Breeder Layers	0.8
	200	Chicken Broilers/Roasters	0.65
	500	Pullets (replacement layers)	0.7
DAIRY	1	Milking Cow[1,2] ..... (tie-stall)	0.65
	1	" " ..... (free-stall)	0.7
	2	Dairy Heifers ..... (barn confinement)	0.7
	2	" " ..... (barn with yard)	0.8
DUCK	100	Ducks	0.7
EMU	5	Emu	0.7
FOX	40	Adult Fox[4]	1.1
GOAT	4	Adult Goats[3]	0.7
	10	Feeder Goats (>20 kg)	0.7
HORSE	1	Horse[3]	0.65
MINK	80	Adult Mink[4]	1.1
OSTRICH	3	Ostrich	0.7
RABBIT	40	Adult Rabbits[4]	0.8
SHEEP	4	Adult Sheep[3]	0.7
	10	Feeder Lambs (>20 kg)	0.7
SWINE	5	Sows/Boars	1.0
	20	Weaners (4-30 kg)[5]	1.0
	4	Feeder Hogs (30-120 kg)	1.0
TURKEY	50	Meat Turkeys (>10 kg)	0.7
	75	Meat Turkeys (5-10 kg)	0.7
	75	Turkey Breeder Layers	0.8
	100	Meat Turkeys (<5 kg)	0.7
	500	Pullets (replacement breeders)	0.7
VEAL	6	White Veal	1.0
	3	Red Veal (<300 kg)	0.8

Notes: For all other animals/poultry use 1 livestock unit per 450 kg housed at one time (A=0.8).

[1]Includes calf to 150 kg.
[2]A dairy farm usually has milking cows, dry cows, heifers and calves. Multiply the number of milking cows by 1.5 to account for the followers when they are all kept on the same farm.
[3]Includes offspring until weaned.
[4]Includes offspring to market size.
[5]Multiply number of sows by 2.4 to determine the number of weaners.

110	—	0.85	260	—	1.02	700	—	1.14

Note: For new livestock farms or if the % increase is greater than 700 per-cent, use Factor C = 1.14

TABLE 4: SITING DISTANCES FOR MANURE STORAGES (metres).

Column 1: Roofed or covered storages for manure, runoff, and milkhouse washwater. Includes any covered or roofed concrete, steel or earthen storages, in-barn solid manure packs, and storages under fully slatted floors.

Column 2: Open solid manure pile on concrete slab. Includes the runoff storages (concrete or earthen) used for capturing seepage liquids from solid manure storage or runoff liquids from yards. If yards are scraped into runoff storage, use column 3 when runoff storage is a concrete or steel tank and column 4 when runoff storage is earthen. Milkhouse washwater may be added to runoff storage.

Column 3: Open concrete or steel tanks used for storing liquid manure, milkhouse washwater, or yard runoff where yard is scraped into storage.

Column 4: Open earth-sided or earth-sided storage with concrete floor to be used for storing liquid manure or yard runoff when yard is scraped into storage or milkhouse washwater.

PART I
DEFINITIONS

Definitions

1. (1) In this Act,

"community fire safety officer" means a community fire safety officer appointed under clause 2 (2) (a) or subsection 2 (4) or by an agreement under clause 3 (2) (a); ("agent local de la sécurité-incendie")

"community fire safety team" means a community fire safety team appointed under clause 2 (2) (a) or subsection 2 (4) or by an agreement under clause 3 (2) (a); ("équipe locale de la sécurité-incendie")

"fire chief" means a fire chief appointed under subsection 6 (1), (2) or (4); ("chef des pompiers")

"fire code" means the fire code established under Part IV; ("code de prévention des incendies")

"fire department" means a group of firefighters authorized to provide fire protection services by a municipality, group of municipalities or by an agreement made under section 3; ("service d'incendie")

"firefighter" means a fire chief and any other person employed in, or appointed to, a fire department and assigned to undertake fire protection services, and includes a volunteer firefighter; ("pompier")

"Fire Marshal" means the Fire Marshal appointed under subsection 8 (1); ("commissaire des incendies")

"fire protection services" includes,

(a) fire suppression, fire prevention and fire safety education,

(b) mitigation and prevention of the risk created by the presence of unsafe levels of carbon monoxide and safety education related to the presence of those levels,

(c) rescue and emergency services,

(d) communication in respect of anything described in clauses (a) to (c),

(e) training of persons involved in providing anything described in clauses (a) to (d), and

(f) the delivery of any service described in clauses (a) to (e); ("services de protection contre les incendies")

"Fire Safety Commission" means the Fire Safety Commission continued under Part X of this Act; ("Commission de la sécurité-incendie")

"Minister" means, in each Part of this Act, the member of the Executive Council to whom the administration of this Act, or of the Part of this Act, is assigned from time to time; ("ministre")

"municipality" means local municipality as defined in the *Municipal Act, 2001*; ("municipalité")

"prescribed" means prescribed by regulation; ("prescrit")

"regulation" means a regulation made under this Act; ("règlement")

"volunteer firefighter" means a firefighter who provides fire protection services either voluntarily or for a nominal consideration, honorarium, training or activity allowance. ("pompier volontaire") 1997, c. 4, s. 1 (1); 2001, c. 25, s. 475 (1).

Interpretation of land and premises

(2) For the purposes of this Act, a reference to land and premises or to land or premises includes any buildings, structures or things situated on or attached to the land or premises. 1997, c. 4, s. 1 (2).

Application of definition of firefighter

(3) The definition of firefighter in subsection (1) does not apply to Part IX. 1997, c. 4, s. 1 (3).

Automatic aid agreements

(4) For the purposes of this Act, an automatic aid agreement means any agreement under which,

(a) a municipality agrees to ensure the provision of an initial response to fires, rescues and emergencies that may occur in a part of another municipality where a fire department in the municipality is capable of responding more quickly than any fire department situated in the other municipality; or

(b) a municipality agrees to ensure the provision of a supplemental response to fires, rescues and emergencies that may occur in a part of another municipality where a fire department situated in the municipality is capable of providing the quickest supplemental response to fires, rescues and emergencies occurring in the part of the other municipality. 1997, c. 4, s. 1 (4).

Same

(5) A mutual aid plan established under section 7 does not constitute an automatic aid agreement for the purposes of subsection (4). 1997, c. 4, s. 1 (5).

PART II
RESPONSIBILITY FOR FIRE PROTECTION SERVICES

Municipal responsibilities

2. (1) Every municipality shall,

(a) establish a program in the municipality which must include public education with respect to fire safety and certain components of fire prevention; and

(b) provide such other fire protection services as it determines may be necessary in accordance with its needs and circumstances.

Methods of providing services

(2) In discharging its responsibilities under subsection (1), a municipality shall,

(a) appoint a community fire safety officer or a community fire safety team; or

(b) establish a fire department.

Services to be provided

(3) In determining the form and content of the program that it must offer under clause (1) (a) and the other fire protection services that it may offer under clause (1) (b), a municipality may seek the advice of the Fire Marshal.

Shared responsibilities

(4) Two or more municipalities may appoint a community fire safety officer or a community fire safety team or establish a fire department for the purpose of providing fire protection services in those municipalities.

Services outside municipality

(5) A municipality may, under such conditions as may be specified in the agreement, enter into an agreement to,

(a) provide such fire protection services as may be specified in the agreement to lands or premises that are situated outside the territorial limits of the municipality; and

(b) receive such fire protection services as may be specified in the agreement from a fire department situated outside the territorial limits of the municipality.

Automatic aid agreements

(6) A municipality may enter into an automatic aid agreement to provide or receive the initial or supplemental response to fires, rescues and emergencies.

Review of municipal fire services

(7) The Fire Marshal may monitor and review the fire protection services provided by municipalities to ensure that municipalities have met their responsibilities under this section and, if the Fire Marshal is of the opinion that, as a result of a municipality failing to comply with its responsibilities under subsection (1), a serious threat to public safety exists in the municipality, he or she may make recommendations to the council of the municipality with respect to possible measures the municipality may take to remedy or reduce the threat to public safety.

Failure to provide services

(8) If a municipality fails to adhere to the recommendations made by the Fire Marshal under subsection (7) or to take any other measures that in the opinion of the Fire Marshal will remedy or reduce the threat to public safety, the Minister may recommend to the Lieutenant Governor in Council that a regulation be made under subsection (9).

Regulation

(9) Upon the recommendation of the Minister, the Lieutenant Governor in Council may make regulations establishing standards for fire protection services in municipalities and requiring municipalities to comply with the standards.

Same

(10) A regulation under this section may be general or specific in its application and may be restricted to those municipalities specified in the regulation. 1997, c. 4, s. 2.

Territory without municipal organization

3. (1) The Fire Marshal, a services board established to provide services in territory without municipal organization or a prescribed person or organization may enter into agreements to provide fire protection services in territory without municipal organization and to govern the provision of those services.

Same

(2) An agreement referred to in subsection (1) may provide for,

(a) the appointment of a community fire safety officer or a community fire safety team; or

(b) the establishment of a fire department. 1997, c. 4, s. 3.

Community fire safety officer or team

4. (1) A community fire safety officer or a community fire safety team appointed in a municipality or in a group of municipalities shall provide the program established under clause 2 (1) (a) in the municipality or in the group of municipalities, as the case may be.

Same

(2) A community fire safety officer or a community fire safety team appointed by agreement with the Fire Marshal, a services board or a prescribed person or organization to provide services in territory without municipal organization shall provide a program which includes public education with respect to fire safety and certain components of fire prevention in the territory in accordance with the agreement. 1997, c. 4, s. 4.

Municipalities may establish fire departments

5. (0.1) The council of a municipality may establish, maintain and operate a fire department for all or any part of the municipality. 2001, c. 25, s. 475 (2).

Fire departments

(1) A fire department shall provide fire suppression services and may provide other fire protection services in a municipality, group of municipalities or in territory without municipal organization. 1997, c. 4, s. 5 (1).

Same

(2) Subject to subsection (3), the council of a municipality may establish more than one fire department for the municipality. 1997, c. 4, s. 5 (2).

Exception

(3) The council of a municipality may not establish more than one fire department if, for a period of at least 12 months before the day this Act comes into force, fire protection services in the municipality were provided by a fire department composed exclusively of full-time firefighters. 1997, c. 4, s. 5 (3).

Same

(4) The councils of two or more municipalities may establish one or more fire departments for the municipalities. 1997, c. 4, s. 5 (4).

Fire chief, municipalities

6. (1) If a fire department is established for the whole or a part of a municipality or for more than one municipality, the council of the municipality or the councils of the municipalities, as the case may be, shall appoint a fire chief for the fire department.

Same

(2) The council of a municipality or the councils of two or more municipalities may appoint one fire chief for two or more fire departments.

Responsibility to council

(3) A fire chief is the person who is ultimately responsible to the council of a municipality that appointed him or her for the delivery of fire protection services.

Fire chief, territory without municipal organization

(4) If a fire department is established in territory without municipal organization under subsection 3 (2), the agreement shall provide for the appointment of a fire chief.

Powers of fire chief

(5) The fire chief may exercise all the powers assigned to him or her under this Act within the territorial limits of the municipality and within any other area in which the municipality has agreed to provide fire protection services, subject to any conditions specified in the agreement.

Delegation

(6) A fire chief may delegate his or her powers or duties under sections 14, 19 and 20 and such other powers and duties as may be prescribed to any firefighter or class of firefighters, subject to such limitations, restrictions or conditions as may be prescribed or set out in the delegation. 1997, c. 4, s. 6.

Fire co-ordinators

7. (1) The Fire Marshal may appoint fire co-ordinators for such areas as may be designated in the appointment. 1997, c. 4, s. 7 (1).

Duties

(2) A fire co-ordinator shall, subject to the instructions of the Fire Marshal,

(a) establish and maintain a mutual aid plan under which the fire departments that serve the designated area agree to assist each other in the event of an emergency; and

(b) perform such other duties as may be assigned by the Fire Marshal. 1997, c. 4, s. 7 (2); 2002, c. 18, Sched. N, s. 1.

Municipal by-laws

7.1 (1) A council of a municipality may pass by-laws,

(a) regulating fire prevention, including the prevention of the spreading of fires;

(b) regulating the setting of open air fires, including establishing the times during which open air fires may be set;

(c) designating private roads as fire routes along which no parking of vehicles shall be permitted and providing for the removal and impounding of any vehicle parked or left along any of the fire routes at the expense of the owner of the vehicle. 2001, c. 25, s. 475 (3).

Definition

(2) For the purpose of clause (1) (c),

"private road" means any private road, lane, ramp or other means of vehicular access to or from a building or structure and may include part of a parking lot. 2001, c. 25, s. 475 (3).

Scope

(3) A by-law under this section may deal with different areas of the municipality differently. 2001, c. 25, s. 475 (3).

Officer

(4) A municipality may appoint an officer to enter upon land and into structures at any reasonable time to inspect the land and structures to determine whether by-laws enacted in accordance with this section are being complied with. 2001, c. 25, s. 475 (3).

Exercise of power

(5) The exercise of powers by an officer appointed under this section shall be carried out in accordance with Part XIV of the *Municipal Act, 2001,* other than clause 431 (a) of that Act or with Part

XV of the *City of Toronto Act, 2006*, other than paragraph 4 of subsection 375 (1) of that Act, as the case may be. 2001, c. 25, s. 475 (3); 2006, c. 32, Sched. C, s. 20 (1).

PART III
FIRE MARSHAL

Appointment of Fire Marshal

8. (1) There shall be a Fire Marshal who shall be appointed by the Lieutenant Governor in Council.

Deputy Fire Marshal

(2) There shall be a Deputy Fire Marshal, who shall be appointed by the Lieutenant Governor in Council and who shall act in the stead of the Fire Marshal if he or she is absent or unable to act, and who, when so acting, has all the power and authority of the Fire Marshal. 1997, c. 4, s. 8.

Powers of Fire Marshal

9. (1) The Fire Marshal has the power,

(a) to monitor, review and advise municipalities respecting the provision of fire protection services and to make recommendations to municipal councils for improving the efficiency and effectiveness of those services;

(b) to issue directives to assistants to the Fire Marshal respecting matters relating to this Act and the regulations;

(c) to advise and assist ministries and agencies of government respecting fire protection services and related matters;

(d) to issue guidelines to municipalities respecting fire protection services and related matters;

(e) to co-operate with any body or person interested in developing and promoting the principles and practices of fire protection services;

(f) to issue long service awards to persons involved in the provision of fire protection services; and

(g) to exercise such other powers as may be assigned under this Act or as may be necessary to perform any duty assigned under this Act. 1997, c. 4, s. 9 (1).

Duties of Fire Marshal

(2) It is the duty of the Fire Marshal,

(a) to investigate the cause, origin and circumstances of any fire or of any explosion or condition that in the opinion of the Fire Marshal might have caused a fire, explosion, loss of life or damage to property;

(b) to advise municipalities in the interpretation and enforcement of this Act and the regulations;

(c) to provide information and advice on fire safety matters and fire protection matters by means of public meetings, newspaper articles, publications, electronic media and exhibitions and otherwise as the Fire Marshal considers advisable;

(d) to develop training programs and evaluation systems for persons involved in the provision of fire protection services and to provide programs to improve practices relating to fire protection services;

(e) to maintain and operate a central fire college;

(f) to keep a record of every fire reported to the Fire Marshal with the facts, statistics and circumstances that are required under this Act;

(g) to develop and maintain statistical records and conduct studies in respect of fire protection services; and

(h) to perform such other duties as may be assigned to the Fire Marshal under this Act. 1997, c. 4, s. 9 (2).

Application of *Public Inquiries Act, 2009*

(3) Section 33 of the *Public Inquiries Act, 2009* applies to any inquiry or investigation by the Fire Marshal under this Act. 2009, c. 33, Sched. 6, s. 59.

Employment of expert, etc.

(4) The Fire Marshal may employ legal, technical, scientific, clerical or other assistance that the Fire Marshal considers advisable or necessary in the conduct of any inquiry or investigation under this Act or in carrying out any of his or her powers or duties under this Act. 1997, c. 4, s. 9 (4).

Delegation

10. (1) The Fire Marshal may delegate any power or duty that is granted to or vested in the Fire Marshal under this Act to any person or class of persons, subject to such limitations, restrictions, conditions and requirements as may be set out in the delegation.

Same

(2) Subsection (1) applies with respect to any power or duty held by the Fire Marshal under this Act, including such statutory or discretionary powers as may be assigned to the Fire Marshal under this Act.

Certificate of appointment

(3) A certificate under the hand and seal of the Fire Marshal of the appointment of a person under this Act is proof in the absence of evidence to the contrary of the appointment in any court or elsewhere. 1997, c. 4, s. 10.

Assistants to the Fire Marshal

11. (1) The following persons are assistants to the Fire Marshal and shall follow the Fire Marshal's directives in carrying out this Act,

(a) the fire chief of every fire department;

(b) the clerk of every municipality that does not have a fire department;

(c) any member of a fire prevention bureau established by a municipality; and

(d) every person designated by the Fire Marshal as an assistant to the Fire Marshal. 1997, c. 4, s. 11 (1); 2002, c. 18, Sched. N, s. 2 (1).

Duty to report

(2) The assistants to the Fire Marshal shall report to the Fire Marshal all fires and other matters related to fire protection services as may be specified by the Fire Marshal. 1997, c. 4, s. 11 (2).

Submitting report

(3) A report under subsection (2) shall be made in the form and manner and within the time period specified by the Fire Marshal. 1997, c. 4, s. 11 (3).

Workers' compensation not affected

(4) The relationship between a person who is an assistant to the Fire Marshal under this section and the municipality or such other person by which he or she is employed continues for the purposes of the

Workplace Safety and Insurance Act, 1997 as if the person were not an assistant to the Fire Marshal. 1997, c. 4, s. 11 (4); 2002, c. 18, Sched. N, s. 2 (2).

PART IV
FIRE CODE

Fire Code

12. (1) The Minister may make regulations that are considered advisable or necessary for the purpose of establishing a fire code for Ontario governing standards for equipment, systems, buildings, structures, land and premises, as those standards relate to fire safety or the risk created by the presence of unsafe levels of carbon monoxide. 2013, c. 14, s. 3.

Same

(1.1) A regulation made under this section may,

(a) prescribe any method, matter or thing relating to fire protection;

(b) prescribe any method, matter or thing relating to protection against the presence of unsafe levels of carbon monoxide;

(c) govern standards for reducing the risk of, or consequences of, a fire that would seriously endanger the health or safety of any person or the quality of the natural environment for any use that can be made of it;

(d) govern standards for reducing the risk of, or consequences of, the presence of unsafe levels of carbon monoxide that would seriously endanger the health or safety of any person or the quality of the natural environment for any use that can be made of it;

(e) require and regulate fire protection equipment and systems and govern the maintenance of the equipment and systems;

(f) require and regulate protection equipment and systems related to the presence of unsafe levels of carbon monoxide and govern the maintenance of the equipment and systems;

(g) require and regulate means of egress, separations, finish materials, furnishings and decorations, standards of housekeeping and heating, ventilation, air conditioning and incinerating equipment and systems;

(h) control or prohibit any material, substance, equipment or system affecting fire safety;

(i) control or prohibit any material, substance, equipment or system affecting safety from the presence of unsafe levels of carbon monoxide;

(j) require and regulate procedures respecting fire safety and the keeping and furnishing of records and reports;

(k) require and regulate procedures respecting safety from the presence of unsafe levels of carbon monoxide and the keeping and furnishing of records and reports;

(l) require the approval of the Fire Marshal or of a prescribed person respecting any method, matter or thing;

(m) require notice to be given to the Fire Marshal or to a prescribed person respecting any change in use or occupancy;

(n) prescribe conditions for use, occupation or demolition;

(o) exempt any class of building, structure, lands or premises from compliance with the regulations or any provision of them and attach terms and conditions to the exemptions;

(p) govern the qualifications and training of persons servicing, maintaining, testing or repairing fire protection devices, equipment or systems and the licensing of those persons;

(q) govern the qualifications and training of persons servicing, maintaining, testing or repairing protection devices, equipment or systems related to the presence of carbon monoxide and the licensing of those persons;

(r) adopt by reference, in whole or in part, with the changes that the Minister considers necessary, any code or standard and require compliance with any code or standard that is so adopted. 2013, c. 14, s. 3.

Limitation of application

(2) Any regulation made under this section may be limited in its application territorially or to any class of building, structure, land or premises or to any building, structure, land or premises used for any specified purpose. 1997, c. 4, s. 12 (2).

Buildings under construction

(3) Subject to subsection (4), the fire code does not apply to the unoccupied parts of a building that is under construction within the meaning of the *Building Code Act, 1992* or of a predecessor to that Act. 1997, c. 4, s. 12 (3).

Same

(4) The fire code applies to the unoccupied parts of a building that is under construction within the meaning of the *Building Code Act, 1992*, or of a predecessor to that Act, if,

(a) there has been no substantial work related to the construction of the building for at least six months; or

(b) the conditions in the unoccupied portions threaten the safety of the occupied portions. 1997, c. 4, s. 12 (4).

Municipal by-law prevails

(5) If there is a conflict between a provision of the fire code and a provision of a municipal by-law respecting the keeping and manufacturing of explosives, the provision that is the most restrictive prevails. 1997, c. 4, s. 12 (5).

PART V
RIGHTS OF ENTRY IN EMERGENCIES AND FIRE INVESTIGATIONS

Entry on adjacent lands by firefighters, etc.

13. (1) A firefighter or such other person as may be authorized by the fire chief, the Fire Marshal or an assistant to the Fire Marshal may, without a warrant, enter on lands or premises,

(a) that are adjacent to the lands or premises on which a fire or emergency has occurred or is occurring, for the purposes of fighting the fire or of providing rescue or emergency services; or

(b) that are adjacent to the lands or premises on which there is a serious threat to the health and safety of any person or the quality of the natural environment, for the purpose of removing or reducing the threat. 1997, c. 4, s. 13 (1); 2001, c. 25, s. 475 (4).

Prevention of fire spreading

(1.1) A firefighter or such other person as may be authorized by the fire chief may, without a warrant, enter on lands or premises on which a fire is occurring, or that are adjacent to those lands or premises, for the purposes of pulling down or removing buildings, structures or things on or attached to the lands

or premises on which a fire is occurring or that are adjacent to those lands or premises if, in the opinion of the fire chief, it is necessary to do so to prevent the spread of the fire. 2001, c. 25, s. 475 (5).

Entry onto land outside municipality

(2) A firefighter or such other person as may be authorized by the fire chief may, without a warrant, enter on lands or premises that are outside the territorial limits of the municipality of the fire department that employs the firefighter or fire chief for the purposes of fighting a fire or of providing rescue or emergency services on such lands or premises if,

(a) in the opinion of the fire chief, the fire or emergency threatens persons, property or the environment within the territorial limits of the municipality served by the fire department; and

(b) there is no fire department or other emergency response capability for the area in which the lands or premises are situated. 1997, c. 4, s. 13 (2).

Automatic aid

(3) A firefighter or such other person as may be authorized by the fire chief may, without a warrant, enter on lands or premises that are outside the territorial limits of the municipality of the fire department that employs the firefighter or fire chief for the purposes of fighting a fire or of providing rescue or emergency services on such lands or premises if the council of the municipality has entered into an automatic aid agreement or any other agreement under which the entry is permitted. 1997, c. 4, s. 13 (3).

Common law right of entry preserved

(4) Nothing in this section derogates from a firefighter's right of entry at common law. 1997, c. 4, s. 13 (4).

Entry where fire has occurred or is likely to occur

14. (1) The Fire Marshal or a fire chief may, without a warrant, enter on land or premises if,

(a) a fire has occurred on the land or premises; or

(b) he or she has reason to believe that a substance or device that is likely to cause a fire may be situated on the land or premises.

Powers upon entry

(2) Upon entering on land or premises under subsection (1), the Fire Marshal or a fire chief may,

(a) close, and prevent entry to, the land or premises for the length of time necessary to complete the examination of the land or premises;

(b) in the case of an entry under clause (1) (a), remove from the land or premises, retain and examine any article or material, and take such samples or photographs, make videotapes and other images electronic or otherwise that in his or her opinion may be of assistance in determining the cause of the fire under investigation;

(c) make such excavations on the land or premises as he or she considers necessary;

(d) require that any machinery, equipment or device be operated, used or set in motion under specified conditions; and

(e) make any reasonable inquiry of any person, orally or in writing.

Entry to adjacent lands

(3) A person who enters on land or premises under subsection (1), may, without a warrant, enter on adjacent land or premises if the entry is necessary for the purposes of conducting an investigation into the cause of a fire or of determining whether a substance or device that is likely to cause fire is situated on the land or premises.

Same

(4) A person who enters on adjacent land or premises under subsection (3) may exercise any of the powers mentioned in subsection (2) on or with respect to the adjacent land or premises.

Use of force

(5) A person who enters land or premises under subsection (1) or (3) shall not use force to enter the land or premises.

Warrant authorizing entry

(6) A justice of the peace may issue a warrant authorizing the Fire Marshal or a fire chief named in the warrant to enter on land or premises and exercise any of the powers referred to in subsection (2) or (3) if the justice of the peace is satisfied on evidence under oath that there are reasonable grounds to believe that entry on the lands or premises is necessary for the purposes of conducting an investigation into the cause of a fire or of determining whether a substance or device that is likely to cause fire is situated on the land or premises and,

(a) the Fire Marshal or fire chief has been denied entry to the land or premises or has been obstructed in exercising any other of those powers with respect to the land or premises; or

(b) there are reasonable grounds to believe that the Fire Marshal or fire chief will be denied entry to the land or premises or obstructed in exercising any other of those powers with respect to the land or premises.

Execution and expiry of warrant

(7) A warrant issued under subsection (6) shall,

(a) specify the times, which may be at any time during the day or night, during which the warrant may be carried out; and

(b) state when the warrant expires.

Extension of time

(8) A justice of the peace may extend the date on which a warrant expires for such additional periods as the justice of the peace considers necessary.

Use of force

(9) A person authorized by a warrant issued under subsection (6) to enter land or premises for the purpose of doing a thing may call on police officers as necessary and may use force as necessary to make the entry and do the thing.

Application without notice

(10) A justice of the peace may receive and consider an application for a warrant or extension of a warrant under this section without notice to the owner or occupant of the land or premises. 1997, c. 4, s. 14.

Immediate threat to life

15. (1) If the Fire Marshal, an assistant to the Fire Marshal or a fire chief has reasonable grounds to believe that a risk of fire poses an immediate threat to life, he or she may, without a warrant, enter on any land or premises and, for the purpose of removing or reducing the threat, may,

(a) remove persons on the land or premises;

(b) post a fire watch;

(c) remove combustible or explosive material or anything that may constitute a fire menace;

(c.1) dispose of any material or thing that was removed under clause (c), in accordance with any directives issued by the Fire Marshal;

(d) eliminate ignition sources;

(e) install temporary safeguards, including fire extinguishers and smoke alarms;

(f) make minor repairs to existing fire safety systems;

(g) do any other thing that the Fire Marshal, an assistant to the Fire Marshal or a fire chief has reasonable grounds to believe is urgently required to remove or reduce the threat to life. 1997, c. 4, s. 15 (1); 2002, c. 18, Sched. N, s. 3.

Notice to owner

(2) A person who enters land or premises under subsection (1) shall promptly after exercising any powers under this section give notice thereof to the owner if the owner's whereabouts in Ontario are known. 1997, c. 4, s. 15 (2).

Notice to be posted

(3) The person who gives notice under subsection (2) shall post a copy of the notice on the land or premises. 1997, c. 4, s. 15 (3).

Contents of notice

(4) The notice shall,

(a) describe the location of the land or premises;

(b) state the reason for the entry; and

(c) state the things done under subsection (1) to remove or reduce the threat to life. 1997, c. 4, s. 15 (4).

Use of force

(5) A person who enters on land or premises under this section may call on police officers as necessary and may use force as necessary to make the entry. 1997, c. 4, s. 15 (5).

Assistance

16. A person who enters on land or premises under section 14 or 15 may call on any other persons he or she considers advisable to assist. 1997, c. 4, s. 16.

Identification

17. On the request of an owner or occupant of the land or premises, a person who enters on land or premises under section 14 or 15 shall identify himself or herself and shall explain the purpose of the entry. 1997, c. 4, s. 17.

PART VI
INSPECTIONS

Interpretation

18. For the purposes of this Part, fire safety includes the following:

1. Safety from the risk that a fire, if started, would seriously endanger the health and safety of any person or the quality of the natural environment for any use that can be made of it.
2. Safety from the risk that the presence of unsafe levels of carbon monoxide on premises would seriously endanger the health and safety of any person. 2013, c. 14, s. 4.

Inspectors

19. (1) The Fire Marshal, an assistant to the Fire Marshal or a fire chief is an inspector for the purposes of this Part.

Inspections

(2) An inspector may, without a warrant, enter and inspect land and premises for the purposes of assessing fire safety.

Time of entry

(3) The power to enter and inspect land and premises without a warrant may be exercised at all reasonable times.

Assistance

(4) An inspector who enters land or premises under this section may take with him or her a police officer or such other person as he or she considers advisable to assist.

Identification

(5) On the request of an owner or occupant of the land or premises, an inspector shall identify himself or herself and shall explain the purpose of the entry.

Powers during inspection

(6) An inspector conducting an inspection may,

(a) examine a document or other thing that is relevant to the inspection;

(b) demand the production for inspection of a document or other thing that is relevant to the inspection;

(c) remove any thing that is relevant to the inspection for review and examination and remove any document that is relevant to the inspection for review and copying;

(d) conduct tests, take and remove samples, take photographs and make videotapes and other images, electronic or otherwise, that are relevant to the inspection;

(e) in order to produce a document in readable form, use data storage, information processing or retrieval devices or systems that are normally used in the premises being inspected; and

(f) question a person on matters relevant to the inspection.

Obligation to produce and assist

(7) If an inspector demands that a document or other thing be produced for inspection, the person who has custody of the document or thing shall produce it and, in the case of a document, shall on request provide any assistance that is reasonably necessary to interpret the document or to produce it in a readable form.

Document and thing removed from place

(8) A document or other thing that has been removed from land or premises,

(a) shall be made available to the person from whom it was removed on request and at a time and place that are convenient for the person and for the inspector; and

(b) shall, if it is possible to return the document or thing to the person, be returned within a reasonable time.

Copy admissible in evidence

(9) A copy of a document that purports to be certified by an inspector as being a true copy of the original is admissible in evidence to the same extent as the original and has the same evidentiary value. 1997, c. 4, s. 19.

Warrant authorizing entry

20. (1) A justice of the peace may issue a warrant authorizing an inspector named in the warrant to enter on lands or premises and exercise any of the powers referred to in subsection 19 (6) if the justice of the peace is satisfied on evidence under oath that there are reasonable grounds to believe that entry on the lands or premises is necessary to assess fire safety and,

(a) the inspector has been denied entry to the lands or premises or has been obstructed in exercising any other of those powers with respect to the lands or premises; or

(b) there are reasonable grounds to believe that the inspector will be denied entry to the lands or premises or obstructed in exercising any other of those powers with respect to the lands or premises.

Execution and expiry of warrant

(2) A warrant issued under subsection (1) shall,

(a) specify the times, which may be at any time during the day or night, during which the warrant may be carried out; and

(b) state when the warrant expires.

Extension of time

(3) A justice of the peace may extend the date on which a warrant expires for such additional periods as the justice of the peace considers necessary.

Use of force

(4) A person authorized under subsection (1) to enter land or premises for the purpose of doing a thing may call on police officers as necessary and may use force as necessary to make the entry and do the thing.

Assistance

(5) A person named in a warrant issued under subsection (1) may call on any other persons he or she considers advisable to execute the warrant.

Application without notice

(6) A justice of the peace may receive and consider an application for a warrant or extension of a warrant under this section without notice to the owner or occupant of the land or premises.

Identification

(7) On the request of an owner or occupant of the land or premises, a person who exercises a power conferred under subsection (1) shall identify himself or herself and shall explain the purpose of the entry.

Application

(8) Subsections 19 (7), (8) and (9) apply with respect to an inspection carried out under a warrant issued under this section. 1997, c. 4, s. 20.

Inspection orders

21. (1) An inspector who has carried out an inspection of land or premises under section 19 or 20 may order the owner or occupant of the land or premises to take any measure necessary to ensure fire safety on the land and premises and may for that purpose order the owner or occupant,

(a) to remove buildings or structures from the land or premises;

(b) to make structural and other repairs or alterations, including material alterations, to the buildings or structures;

(c) to remove combustible or explosive material or any thing that may constitute a fire hazard;

(d) to install and use specified equipment or devices as may be necessary to contain hazardous material on the land or premises and, in the event of a fire, to remove or transport the material;

(e) to discontinue the manufacturing, production or fabrication of any material, device or other thing that creates or poses an undue risk of fire or explosion;

(f) to do anything respecting fire safety including anything relating to the containment of a possible fire, means of egress, fire alarms and detection, fire suppression and the preparation of a fire safety plan;

(g) to remedy any contravention of the fire code.

Same, closure of premises

(2) An inspector who has carried out an inspection of land or premises under section 19 or 20 may, with the approval of the Fire Marshal and upon such terms and conditions as the Fire Marshal considers proper,

(a) order that the owner or occupant of the land or premises close the land or premises and prevent persons from entering thereon until such time as the corrective actions ordered under subsection (1) have been completed; or

(b) if the inspector is of the opinion that it is necessary for the immediate protection of persons and property that the lands or premises be closed immediately, cause the land or premises to be closed immediately and persons on the premises to be removed and direct that the lands or premises remain closed and that the premises be vacated until such time as the corrective actions ordered under subsection (1) have been completed. 1997, c. 4, s. 21 (1, 2).

Same, electrical installations

(3) If, upon an inspection, it is determined that the electrical installations in a building or structure create or pose a risk of fire because of the inadequacy or want of repair of the installations and their wiring, the inspector may order that the electrical installations in the building or structure be inspected by a representative of the Electrical Safety Authority referred to in Part VIII of the *Electricity Act, 1998* and that the costs of the inspection be paid by the owner or occupant of the building or structure. 1997, c. 4, s. 21 (3); 1998, c. 15, Sched. E, s. 12.

Limitation on orders relating to structural repairs

22. (1) No inspector shall make an order under clause 21 (1) (b) requiring structural repairs or alterations to a building, structure or premises that was constructed in compliance with the building code established under the *Building Code Act, 1992* or under a predecessor to that Act and that continues to comply with that code as it existed at the time of construction, unless the order is necessary to ensure compliance with the provisions of the fire code relating to the retrofitting of existing buildings.

Repairs, etc., deemed not to contravene Building Code

(2) If repairs, alterations or installations are carried out in compliance with an order made under subsection 21 (1) or for the purposes of complying with the fire code, the repairs, alterations or installations shall be deemed not to contravene the building code established under the *Building Code Act, 1992*.

Copy of order

(3) An inspector who makes an order requiring repairs, alterations or installations to be made to a building, structure or premises shall furnish a copy of the order to the proper chief building official appointed under the *Building Code Act, 1992*. 1997, c. 4, s. 22.

Contents of order

23. An order made under subsection 21 (1) or (2) shall set out,

(a) the reasons for the order;

(b) an explanation of the action required by the order;

(c) the time within which the owner or occupant must comply with the order; and

(d) the right to request a review of the order by the Fire Marshal under section 25 or, in the case of an order made by the Fire Marshal, the right of appeal to the Fire Safety Commission under section 26. 1997, c. 4, s. 23.

Service of order

24. (1) A copy of an order made under section 21 shall be served upon the owner and any occupant of the land and premises.

Same, multi-unit building

(2) In the case of an order respecting a building that contains two or more units intended for separate occupancy, the order shall be deemed to be served upon the occupants of the building if a copy of the order is posted in a conspicuous place in or outside the building.

Posting and service of order to close premises

(3) If an order is made under subsection 21 (2) requiring the closing of land or premises, a copy of the order shall be posted on the land or premises and shall be served on the owner of the lands or premises if the owner is in Ontario and his or her whereabouts are known. 1997, c. 4, s. 24.

Review of inspection order by Fire Marshal

25. (1) A person who considers himself or herself aggrieved by an order made by an inspector, other than the Fire Marshal, under subsection 21 (1) or (2) may, within 15 days after the order is served, submit a written request to the Fire Marshal for a review of the order. 1997, c. 4, s. 25 (1).

Extension of time

(2) The Fire Marshal may, upon application by a person referred to in subsection (1), extend the time for making a request under this section if he or she is satisfied that there are apparent grounds for granting relief to the person and that there are reasonable grounds for applying for the extension and may give directions that the Fire Marshal considers proper consequent upon the extension. 1997, c. 4, s. 25 (2); 2002, c. 18, Sched. N, s. 4 (1).

Same

(3) An application for an extension of time may be made either before or after the expiration of the time fixed in subsection (1) but shall be made within 30 days after a copy of the order under subsection 21 (1) or (2) is served. 1997, c. 4, s. 25 (3).

Powers of Fire Marshal

(4) The Fire Marshal may,

(a) refuse to consider the substance of the request and refer the matter to the Fire Safety Commission for a hearing under section 26; or

(b) confirm, amend or rescind the order or make such other order as he or she deems appropriate. 1997, c. 4, s. 25 (4).

No hearing required

(5) The Fire Marshal is not required to hold a hearing when conducting a review of an order under this section. 1997, c. 4, s. 25 (5).

Order stayed by application for review

(6) An application made under subsection (1) for a review operates as a stay of the order pending the outcome of the review. 2002, c. 18, Sched. N, s. 4 (2).

Lifting of stay

(7) The Fire Marshal may, upon request therefor by an inspector, which may be made without notice, order that the stay of the order be lifted if, in his or her opinion, the action is necessary in the interest of public safety. 2002, c. 18, Sched. N, s. 4 (2).

Appeal to Fire Safety Commission

26. (1) Any person who considers himself or herself aggrieved by an order made by the Fire Marshal under subsection 21 (1) or (2) or section 25 may appeal the order to the Fire Safety Commission. 1997, c. 4, s. 26 (1).

Time for filing appeal

(2) A notice of appeal from an order referred to in subsection (1) shall be filed with the Fire Safety Commission within 15 days after the order is served. 1997, c. 4, s. 26 (2).

Extension of time

(3) The Fire Safety Commission may, upon application by a person referred to in subsection (1), extend the time for appealing an order if it is satisfied that there are apparent grounds for granting the

appeal and that there are reasonable grounds for applying for the extension and may give directions that it considers proper consequent upon the extension. 1997, c. 4, s. 26 (3); 2002, c. 18, Sched. N, s. 5 (1).

Same

(4) An application for an extension of time may be made either before or after expiration of the time fixed in subsection (2) but shall be made within 30 days after a copy of the order from which the appeal is made is served. 1997, c. 4, s. 26 (4).

Hearing by Commission

(5) If an application is made under subsection (1) or if a matter is referred to the Fire Safety Commission by the Fire Marshal under clause 25 (4) (a), the Commission shall appoint a time for and hold the hearing. 1997, c. 4, s. 26 (5).

Powers of Commission

(6) The Fire Safety Commission may confirm, amend or rescind the order of the Fire Marshal or make such other order as the Commission deems appropriate. 1997, c. 4, s. 26 (6).

Order stayed by appeal

(7) An appeal under subsection (1) operates as a stay of the order pending the outcome of the appeal. 2002, c. 18, Sched. N, s. 5 (2).

Lifting of stay

(8) The Fire Safety Commission may, upon application therefor by an inspector or the Fire Marshal, which may be made without notice, order that the stay of the order be lifted if, in its opinion, the action is necessary in the interest of public safety. 2002, c. 18, Sched. N, s. 5 (2).

Appeal to Divisional Court

27. (1) Any party to the hearing before the Fire Safety Commission under section 26 may appeal from the decision of the Commission to the Divisional Court in accordance with the rules of court on any question that is not a question of fact alone.

Minister to be heard

(2) The Minister is entitled to be heard at a hearing under this section.

Powers of court on appeal

(3) The judge who hears an appeal under this section may,

(a) refer the matter back to the Commission for reconsideration by the Commission;

(b) confirm or alter the decision of the Commission; or

(c) make such other order as he or she sees fit, including an order that the Fire Marshal or an inspector do any act he or she is authorized to do under this Act. 1997, c. 4, s. 27.

PART VII
OFFENCES AND ENFORCEMENT

Offences

28. (1) Every person is guilty of an offence if he or she,

(a) hinders, obstructs or interferes with the Fire Marshal, an assistant to the Fire Marshal or a fire chief in the exercise of his or her powers and duties;

(b) prevents an inspector from entering land or premises under section 19 or 20, refuses to answer questions on matters relevant to the inspection or provides the inspector with information, on matters relevant to the inspection, that the person knows, or ought reasonably to know, to be false or misleading;

(c) subject to subsection (2) contravenes any provisions of this Act or the regulations; or

(d) refuses or neglects to obey or carry out the directives of the Fire Marshal, an assistant to the Fire Marshal or a fire chief given under the authority of this Act. 1997, c. 4, s. 28 (1); 2002, c. 18, Sched. N, s. 6.

Same

(2) A person who contravenes a provision in Part IX of this Act is not guilty of an offence. 1997, c. 4, s. 28 (2).

Penalty

(3) An individual convicted of an offence under subsection (1) is liable to,

(a) in the case of an offence other than one described in clause (b), a fine of not more than $20,000 or imprisonment for a term of not more than one year, or both; and

(b) in the case of an offence for contravention of the fire code, a fine of not more than $50,000 or imprisonment for a term of not more than one year, or both. 2005, c. 33, s. 8.

Same

(4) A corporation convicted of an offence under subsection (1) is liable to a fine of not more than $100,000. 2005, c. 33, s. 8.

Offence, director or officer of corporation

(5) A director or officer of a corporation who knows that the corporation is violating or has violated a provision of the fire code is guilty of an offence and on conviction is liable to a fine of not more than $50,000 or to imprisonment for a term of not more than one year, or to both. 2005, c. 33, s. 8.

Liability of directors

(6) Despite subsections (1) and (3), every director or officer of a corporation who knowingly commits an offence under subsection (1) is guilty of an offence and on conviction is liable to a fine of not more than $50,000 or to imprisonment for a term of not more than one year, or to both. 2005, c. 33, s. 8.

Offence, removal of posted notice

29. Any person who removes a copy of an order or of a notice posted in accordance with subsection 15 (3), 24 (2), (3) or 31 (4) without the approval of the Fire Marshal, an assistant to the Fire Marshal or a fire chief is guilty of an offence and on conviction is liable to a fine of not more than $2,000 or to imprisonment for a term of not more than one year, or to both. 2005, c. 33, s. 9.

Offence, failure to comply with inspection order

30. Every person who fails to comply with an order made under section 21, 25 or 26 is guilty of an offence and on conviction is liable to a fine of not more than $20,000 for every day during which the default continues, and the imposition or payment of the fine does not relieve the person from complying with the order. 2005, c. 33, s. 10.

Order to close premises, etc.

31. (1) The Fire Marshal, an assistant to the Fire Marshal or a fire chief may apply to the Ontario Court of Justice for an order under this section if,

(a) a person who has been convicted of an offence under section 30 for failing to comply with an inspection order under section 21 or an order under section 25 or 26 has not complied with the order within 30 days of the conviction; or

(b) a person who has been convicted of an offence under clause 28 (1) (c) for contravening a provision of the fire code has not ceased to contravene the provision or remedied the contravention within 30 days of the conviction. 1997, c. 4, s. 31 (1); 2002, c. 18, Sched. N, s. 7 (1).

No notice required

(2) An application under subsection (1) may be made without notice to the person referred to in clause (1) (a) or (b). 1997, c. 4, s. 31 (2).

Order

(3) Upon an application under subsection (1), a judge may, if in his or her opinion it is necessary in the interest of public safety, order that the Fire Marshal, assistant to the Fire Marshal or fire chief,

(a) close access to, or remove, the building, structure or premises to which the order relates; or

(b) remove or remove and dispose of any substance, material or thing from the building, structure or premises. 1997, c. 4, s. 31 (3); 2002, c. 18, Sched. N, s. 7 (2).

Application

(4) If an order is made under clause (3) (a), subsection 24 (3) applies with necessary modifications to the service and posting of the order. 1997, c. 4, s. 31 (4).

Compliance order

32. (1) The Fire Marshal, an assistant to the Fire Marshal or a fire chief may, in addition to any other rights he or she may have under this Act, apply to a judge of the Superior Court of Justice for an order,

(a) requiring a person to comply with an inspection order made under section 21 or with an order made under section 25 or 26 if the person has failed to comply with the order; or

(b) requiring a person to remedy any contravention of a provision of the fire code. 1997, c. 4, s. 32 (1); 2002, c. 18, Sched. N, s. 8.

Powers of judge

(2) Upon an application being made under subsection (1), a judge may make the order requested or such other order as he or she sees fit. 1997, c. 4, s. 32 (2).

Appeal

(3) An appeal lies to the Divisional Court from the judge's order. 1997, c. 4, s. 32 (3).

Fire Marshal to carry out inspection order

33. (1) If an order made under subsection 21 (1) or (2) or section 25 or 26 requires a thing to be done, an inspector may apply to the Fire Safety Commission for an order authorizing him or her to cause the thing to be done. 1997, c. 4, s. 33 (1).

Hearing

(2) Upon receiving an application under subsection (1), the Fire Safety Commission shall appoint a time for and hold a hearing. 1997, c. 4, s. 33 (2).

Consolidation of hearings

(3) If an application is made under this section and an appeal is made under section 26 in respect of the same order, the Fire Safety Commission may, if it considers it practical to do so, consolidate the hearings. 1997, c. 4, s. 33 (3).

Grounds for decision

(4) The Fire Safety Commission may authorize the inspector to cause to be done any thing required to be done by an order made under subsection 21 (1) or (2) or section 25 or 26 if,

(a) the person required by the order to do the thing,

(i) has refused to comply with or is not complying with the order,

(ii) is not likely, in the Commission's opinion, to comply with the order promptly,

(iii) is not likely, in the Commission's opinion, to carry out the order competently, or

(iv) requests the assistance of the inspector in complying with the order; and

(b) in the Commission's opinion, failure to do the thing would seriously endanger the health or safety of any person or the quality of the natural environment for any use that can be made of it. 1997, c. 4, s. 33 (4).

Powers of Commission

(5) The Fire Safety Commission may, in addition to authorizing an inspector to cause to be done any thing required to be done by an order under subsection 21 (1) or (2) or section 25 or 26,

(a) rescind the order; or

(b) amend the order, or make such other order as the Commission deems should have been made under the relevant section, and order the inspector to do the thing in accordance with the amended order or the other order. 1997, c. 4, s. 33 (5).

Same

(6) If the order amended or made under clause (5) (b) provides for the removal of any combustible or explosive material or any thing that may constitute a fire hazard, the Fire Safety Commission may also authorize the inspector to dispose of the material or thing. 2002, c. 18, Sched. N, s. 9.

Warrant authorizing entry

34. (1) If a justice of the peace is satisfied on evidence under oath that there are reasonable grounds to believe that entry on certain land or premises is necessary for the purpose of doing a thing that the Fire Safety Commission has authorized to be done under section 33, the justice of the peace may issue a warrant authorizing the person named in the warrant to enter and do the thing on the land or premises including, where necessary, entering an adjacent property in order to access the property named in the warrant.

Execution and expiry of warrant

(2) A warrant issued under subsection (1) shall,

(a) specify the times, which may be at any time during the day or night, during which the warrant may be carried out; and

(b) state when the warrant expires.

Extension of time

(3) A justice of the peace may extend the date on which a warrant expires for such additional periods as the justice of the peace considers necessary.

Use of force

(4) A person authorized under subsection (1) to enter land or premises for the purpose of doing a thing may call on police officers as necessary and may use force as necessary to make the entry and do the thing.

Assistance

(5) A person named in a warrant issued under subsection (1) may call on any other persons he or she considers advisable to execute the warrant.

Application without notice

(6) A justice of the peace may receive and consider an application for a warrant or extension of a warrant under this section without notice to the owner or occupant of the land or premises.

Identification

(7) On the request of an owner or occupant of the land or premises, a person who exercises a power conferred under subsection (1) shall identify himself or herself and shall explain the purpose of the entry. 1997, c. 4, s. 34.

PART VIII
RECOVERY OF COSTS

Fire Marshal's order to pay costs

35. (1) The Fire Marshal, a fire chief or an assistant to the Fire Marshal may issue an order to pay the costs incurred by the Province of Ontario or a municipality,

(a) in doing any thing done in accordance with an authorization given under section 33, to any person required by an order made under subsection 21 (1) or (2) or section 25 or 26 to do the thing; or

(b) in entering land or premises and doing any thing under section 15, to the owner or the person having control of the land or premises. 1997, c. 4, s. 35 (1).

Idem

(2) An order under subsection (1) to pay costs shall include,

(a) a description of the things done for which the costs were incurred and a statement of the authority for doing the things;

(b) a detailed account of the costs incurred by the Province of Ontario or the municipality, as the case may be; and

(c) a direction that the person to whom the order is issued pay the costs to the Minister of Finance or the municipality, as the case may be. 1997, c. 4, s. 35 (2); 2002, c. 18, Sched. N, s. 10.

Appeal to Fire Safety Commission

36. (1) A person to whom an order to pay costs is issued may, by written notice served on the person who issued the order and on the Fire Safety Commission within 15 days after service on the person of a copy of the order, require a hearing by the Commission.

Costs specified in order to pay may be increased by Commission

(2) At a hearing by the Fire Safety Commission on an order to pay costs, the Fire Marshal or an assistant to the Fire Marshal or a fire chief may, on reasonable notice to all parties, ask the Commission to amend the order by adding new items of cost or by increasing the amounts set out in the order.

What Commission may consider at hearing

(3) At a hearing by the Fire Safety Commission on an order to pay costs, the Commission shall consider only whether any of the costs specified in the order,

(a) are unreasonable having regard to what was done; or

(b) do not relate to a thing,

(i) that the person to whom the order to pay costs was issued was required to do by an order made under subsection 21 (1) or (2) or section 25 or 26 or on any appeal from any such order, or

(ii) that the Fire Marshal, an assistant to the Fire Marshal or a fire chief was authorized to do under section 15.

Appeal to Divisional Court

(4) Any party to a hearing by the Fire Safety Commission on an order to pay costs may appeal from the decision of the Commission to the Divisional Court on any question that is not a question of fact alone.

Idem

(5) Subsections 27 (2) and (3) apply with necessary modification to an appeal under subsection (4). 1997, c. 4, s. 36.

Enforcement of order to pay costs

37. (1) An order to pay costs may be filed with the Superior Court of Justice and enforced as if it were an order of the court. 1997, c. 4, s. 37 (1); 2002, c. 18, Sched. N, s. 11.

Interest

(2) Section 129 of the *Courts of Justice Act* applies in respect of an order filed under subsection (1) and, for the purpose, the date of filing shall be deemed to be the date of the order. 1997, c. 4, s. 37 (2).

Instructions for municipality to recover costs

38. (1) The Fire Marshal, a fire chief or an assistant to the Fire Marshal may inform a municipality as to the amount of any of the following expenses incurred by the municipality or the Province of Ontario that relate to things done in connection with land or premises in the municipality and instruct the municipality to recover the amounts:

1. Expenses incurred in carrying out an order made under subsection 31 (3) that relates to the land or premises.
2. Where an order to pay costs has been issued under section 35 to a person who owns the lands or premises in the municipality,
   i. expenses incurred in doing anything done in accordance with an authorization given under section 33 to do things to the land or premises, or
   ii. expenses incurred in doing a thing under section 15 in order to remove or reduce an immediate threat to life on the land or premises. 1997, c. 4, s. 38 (1).

Municipal lien

(2) Upon receiving instructions under subsection (1), a municipality shall have a lien against the land or premises in respect of which expenses referred to in subsection (1) were incurred for the amount of the expenses. 1997, c. 4, s. 38 (2).

Lien

(3) The amount of any expenses referred to in subsection (1) shall have priority lien status, as described in section 1 of the *Municipal Act, 2001*, or section 3 of the *City of Toronto Act, 2006*, as the case may be, and shall be added by the treasurer of the municipality to the tax roll. 2002, c. 17, Sched. F, Table; 2006, c. 32, Sched. C, s. 20 (2).

Remitting costs to Province

(4) Subject to subsection (7), money collected in accordance with subsection (3) in order to recover expenses referred to in subsection (1) that were incurred by the Province of Ontario shall be paid by the municipality to the Minister of Finance; but the municipality may retain such amounts as may be reasonably attributable to the collection. 1997, c. 4, s. 38 (4).

Same

(5) A lien created under subsection (2) in favour of a municipality for amounts incurred by the Province of Ontario is not an estate or interest of the Crown within the meaning of clause 379 (7) (b) of the *Municipal Act, 2001* or clause 350 (7) (b) of the *City of Toronto Act, 2006*, as the case may be. 1997, c. 4, s. 38 (5); 2002, c. 17, Sched. F, Table; 2006, c. 32, Sched. C, s. 20 (3).

Interpretation

(6) In subsections (7) and (8),

"cancellation price" has the same meaning as in Part XI of the *Municipal Act, 2001* or Part XIV of the *City of Toronto Act, 2006*, as the case may be. 2006, c. 32, Sched. C, s. 20 (4).

Proceeds of tax sale

(7) If there is a sale of land under Part XI of the *Municipal Act, 2001* or Part XIV of the *City of Toronto Act, 2006*, as the case may be, and amounts are payable out of the proceeds to the Minister of Finance under this Act, the *Environmental Protection Act* or the *Ontario Water Resources Act*, those amounts shall not be paid until after payment of all other amounts payable out of the proceeds in respect of the cancellation price of the land. 1997, c. 4, s. 38 (7); 2002, c. 17, Sched. F, Table; 2006, c. 32, Sched. C, s. 20 (5).

Cancellation price

(8) Despite Part XI of the *Municipal Act, 2001* or Part XIV of the *City of Toronto Act, 2006*, the treasurer of a municipality may sell land under those Acts for less than the cancellation price, so long as the land is not sold for less than what the cancellation price would have been but for this Act, the *Environmental Protection Act* and the *Ontario Water Resources Act*, and the purchaser may be declared to be the successful purchaser under Part XI of the *Municipal Act, 2001* or Part XIV of the *City of Toronto Act, 2006*, as the case may be. 2006, c. 32, Sched. C, s. 20 (6).

Collection of costs

39. (1) The Fire Marshal, an assistant to the Fire Marshal or a fire chief may give written notice to the Minister of Finance of the amount of any of the following expenses incurred by the Province of Ontario that relate to things done in connection with the land and premises in territory without municipal organization, requesting the collection of the amount under the *Provincial Land Tax Act, 2006*:

1. Expenses incurred in carrying out an order made under subsection 31 (3) that relates to the land or premises.
2. Where an order to pay costs has been issued under section 35 to a person who owns the lands or premises in territory without municipal organization,

i. expenses incurred in doing anything done in accordance with an authorization given under section 33 to do things to the land or premises, or

ii. expenses incurred in doing a thing under section 15 in order to remove or reduce an immediate threat to life on the land or premises. 1997, c. 4, s. 39 (1); 2006, c. 33, Sched. Z.3, s. 12 (1).

Same

(2) When the Minister of Finance receives notice of an amount under subsection (1), the amount may be collected under the *Provincial Land Tax Act, 2006* as if the amount was a tax imposed under that Act. 2006, c. 33, Sched. Z.3, s. 12 (2).

(3) REPEALED: 2006, c. 33, Sched. Z.3, s. 12 (2).

Expenses related to work on other lands

40. The amount to be recovered by way of municipal taxes against land or premises under section 38 or 39 shall include all expenses incurred in doing any thing in connection with the land or premises that the Fire Marshal, an assistant to the Fire Marshal or a fire chief was authorized to do under an order or authorization referred to in subsection 38 (1), whether or not the thing was done on the land or premises. 1997, c. 4, s. 40.

PART IX
FIREFIGHTERS: EMPLOYMENT AND LABOUR RELATIONS

DEFINITIONS

Definitions

41. (1) In this Part,

"Board" means the Ontario Labour Relations Board; ("Commission")

"collective agreement" means an agreement in writing between an employer and a bargaining agent that represents firefighters employed by the employer containing provisions respecting terms or conditions of employment or the rights, privileges or duties of the employer, the bargaining agent or the firefighters; ("convention collective")

"employer" means a municipality, person or organization that employs firefighters; ("employeur")

"firefighter" means a person regularly employed on a salaried basis in a fire department and assigned to fire protection services and includes technicians but does not include a volunteer firefighter. ("pompier")

Managers not firefighters

(2) For the purposes of this Part, a person shall be deemed not to be a firefighter if,

(a) in the opinion of the Board, he or she exercises managerial functions or is employed in a confidential capacity in matters relating to labour relations; or

(b) he or she is a person designated under subsection 54 (4).

Application of *LRA, 1995*

(3) Sections 110 to 112, subsections 114 (1) and (3), sections 116 to 118 and 120 to 123 of the *Labour Relations Act, 1995* apply with necessary modifications to proceedings before the Board under this Act and the Board may exercise the powers under those provisions as if they were part of this Act.

Transition

(4) An agreement made under section 5 of the *Fire Departments Act*, or a decision or award made under section 6 of that Act, that is in effect immediately before the day this Part comes into force shall, on and after that day, remain in effect and be deemed to be a collective agreement to which this Part applies.

Same

(5) If a request to bargain was made under section 5 of the *Fire Departments Act* before the day this Part comes into force, this Part applies as if notice had been given under section 47 on that day. 1997, c. 4, s. 41.

WORKING CONDITIONS

Strike and lock outs

42. (1) No firefighter shall strike and no employer of firefighters shall lock them out.

Definitions

(2) In this section,

"lock-out" and "strike" have the same meaning as in the *Labour Relations Act, 1995*. 1997, c. 4, s. 42.

Hours of work

43. (1) In every municipality having a population of not less than 10,000, the firefighters assigned to firefighting duties shall work according to,

(a) the two-platoon system where the firefighters are divided into two platoons, the hours of work of which shall be,

(i) for each platoon 24 consecutive hours on duty followed immediately by 24 consecutive hours off duty, or

(ii) for one platoon in day-time ten consecutive hours on duty followed immediately by 14 consecutive hours off duty and for the other platoon in night-time 14 consecutive hours on duty followed immediately by 10 consecutive hours off duty,

and the platoons shall alternate at least every two weeks from night work to day work and vice versa;

(b) the three-platoon system where the firefighters are divided into three platoons, the hours of work of which shall be eight consecutive hours on duty followed immediately by 16 consecutive hours off duty, and the platoons shall rotate in their periods of duty and time off as may be arranged for the purpose of changing shifts at least every two weeks; or

(c) any other system of platoons or hours of work under which the maximum hours of work or hours on duty on average in any work week are not more than 48 hours.

Other personnel

(2) Firefighters assigned to duties other than fire-fighting duties shall work such hours as are determined, but in no case shall such hours of work exceed the average work week of the other full-time firefighters.

Maximum hours

(3) No firefighters shall be required to be on duty on average in any work week more than 48 hours.

Weekly day off duty

(4) Every firefighter shall be off duty for one full day of 24 hours in every calendar week, but where a two-platoon system or a three-platoon system is in operation, the 24 hours release at the change of platoons shall not be regarded as a day off duty for the purposes of this section.

Time off duty

(5) Nothing in this Part prohibits any municipality from granting the firefighters more than one day off duty in every calendar week.

Off duty

(6) The hours off duty of firefighters shall be free from fire department duties.

Exception for emergencies

(7) Despite subsections (1) to (6), the fire chief may call in off-duty firefighters if, as a result of a major emergency, the fire department needs the services of more firefighters than are on duty. 1997, c. 4, s. 43.

Termination of employment

44. (1) The employment of a firefighter may be terminated upon seven days' notice. The notice must be accompanied by written reasons for the termination.

Independent review

(2) A firefighter who has received a notice of termination of employment may require a review of the termination to be conducted, unless a collective agreement provides for another review mechanism.

Same

(3) If a review of a termination is required under subsection (2), the municipality in which the firefighter is employed shall appoint a person who is not employed in the fire department to conduct the review.

Review, no hearing

(4) A person appointed to conduct a review shall conduct the review within 10 days after the day the review is required. The person is not required to hold a hearing in conducting a review under this section.

Decision

(5) A person conducting a review of a termination under this section may uphold the termination, order that the firefighter be returned to duties under such conditions as may be specified in the order or make such other order as he or she considers proper.

Probationary period

(6) The employment of a firefighter may be terminated without cause at any time during the first 12 months, unless a collective agreement provides otherwise. Subsections (2) to (5) do not apply with respect to a termination during that period. 1997, c. 4, s. 44.

ESTABLISHMENT OF BARGAINING RIGHTS BY CERTIFICATION

Bargaining unit

45. (1) The firefighters employed in a fire department constitute a bargaining unit for the purposes of collective bargaining under this Act.

Exclusion

(2) The bargaining unit shall not include persons who are deemed not to be firefighters under subsection 41 (2). 1997, c. 4, s. 45.

Bargaining agent

46. (1) The majority of firefighters in a bargaining unit may request an association of firefighters to represent them and act as their bargaining agent for purposes of collective bargaining under this Part.

Transition

(2) An association of firefighters that, immediately before the day this Part comes into force, was a party to, or bound by, an agreement made under section 5 of the *Fire Departments Act* or was bound by the decision or award of a board of arbitration under section 6 of that Act shall, on and after the day this Part comes into force and until such time as a new bargaining agent is requested under subsection (1), be deemed to be the bargaining agent for the firefighters in the bargaining unit. 1997, c. 4, s. 46.

DUTY OF FAIR REPRESENTATION

Duty of fair representation by bargaining agent

46.1 (1) A bargaining agent entitled to represent firefighters in a bargaining unit shall not act in a manner that is arbitrary, discriminatory or in bad faith in the representation of any of the firefighters in the unit, whether or not they are members of the bargaining agent. 2011, c. 13, s. 1.

Transition

(2) This section does not apply in respect of any conduct or events that occurred before December 1, 2011. 2011, c. 13, s. 1.

Inquiry, alleged contravention

46.2 (1) The Board may authorize a labour relations officer to inquire into any complaint alleging a contravention of section 46.1. 2011, c. 13, s. 1.

Duties

(2) The labour relations officer shall promptly inquire into the complaint and endeavour to effect a settlement of the matter complained of. 2011, c. 13, s. 1.

Report

(3) The labour relations officer shall report the results of his or her inquiry and endeavours to the Board. 2011, c. 13, s. 1.

Inquiry by Board

(4) If the labour relations officer is unable to effect a settlement of the matter complained of or if the Board considers it advisable to dispense with an inquiry by a labour relations officer, the Board may inquire into the complaint. 2011, c. 13, s. 1.

Remedy for contravention

(5) If the Board inquires into the complaint and is satisfied that a bargaining agent has failed to comply with section 46.1, the Board shall determine what, if anything, the bargaining agent, the employer or any other person shall do or refrain from doing with respect to the contravention, including, despite the provisions of any collective agreement,

(a) ceasing to do the act or acts complained of;

(b) rectifying the act or acts complained of;

(c) in the case of the bargaining agent, compensating the firefighter for loss of earnings or other employment benefits in an amount that may be assessed by the Board against the bargaining agent; or

(d) in the case of the employer,

(i) reinstating the firefighter in employment with compensation for loss of earnings or other employment benefits in an amount that may be assessed by the Board against the employer,

(ii) reinstating the firefighter in employment, without compensation, or

(iii) compensating the firefighter for loss of earnings or other employment benefits in an amount that may be assessed by the Board against the employer, without reinstatement. 2011, c. 13, s. 1.

Filing in court

(6) A bargaining agent, employer, firefighter or other person affected by the Board's determination under subsection (5) may file the determination, excluding the reasons, in the prescribed form in the Superior Court of Justice and the determination shall be entered and is enforceable in the same way as an order of that court. 2011, c. 13, s. 1.

Effect of settlement

(7) If a complaint under this section has been settled, whether through the endeavours of the labour relations officer or otherwise, and the terms of the settlement have been put into writing and signed by the parties or their representatives, the settlement is binding upon the parties and the bargaining agent, employer, firefighter or other person who agreed to the settlement and shall be complied with according to its terms. 2011, c. 13, s. 1.

Failure to comply

(8) A complaint that the parties or the bargaining agent, employer, firefighter or other person who agreed to the settlement of a complaint under this section has not complied with the terms of the settlement shall be dealt with as a new complaint under this section. 2011, c. 13, s. 1.

Board power re interim orders

46.3 (1) Subject to subsection (2), on application by any party to a pending inquiry under section 46.2, the Board may make any interim order it considers appropriate concerning procedural matters. 2011, c. 13, s. 1.

No reinstatement

(2) The Board shall not make an interim order requiring an employer to reinstate a firefighter in employment. 2011, c. 13, s. 1.

No power under SPPA

(3) The Board's power to make interim orders under this section applies instead of the power under subsection 16.1 (1) of the *Statutory Powers Procedure Act*. 2011, c. 13, s. 1.

Expedited enforcement

46.4 (1) This section applies when the Board receives a complaint that a bargaining agent has failed to comply with its duty under section 46.1. 2011, c. 13, s. 1.

Withdrawal of complaint

(2) A complaint described in subsection (1) may be withdrawn by the complainant on conditions determined by the Board. 2011, c. 13, s. 1.

No hearing

(3) The Board is not required to hold a hearing to determine a complaint under this section. 2011, c. 13, s. 1.

Interim orders

(4) Subject to subsection (5), the Board may, after consulting with the parties, make any interim order it considers appropriate concerning procedural matters. 2011, c. 13, s. 1.

No reinstatement

(5) The Board shall not make an interim order requiring an employer to reinstate a firefighter in employment. 2011, c. 13, s. 1.

Cease and desist orders

(6) In an interim order or after making an interim order, the Board may order any bargaining agent, employer, firefighter or any other person to cease and desist from doing anything intended or likely to interfere with the terms of an interim order respecting the assignment of work. 2011, c. 13, s. 1.

Final orders

(7) The Board may, after consulting with the parties, make any final order it considers appropriate. 2011, c. 13, s. 1.

Filing in court

(8) A party to an interim or final order may file the order, excluding the reasons, in the prescribed form in the Superior Court of Justice and the order shall be entered and is enforceable in the same way as an order of that court. 2011, c. 13, s. 1.

Enforcement

(9) An order that has been filed with the court is enforceable by a firefighter affected by it on the day after the date fixed in the order for compliance. 2011, c. 13, s. 1.

Interim orders prevail

(10) A bargaining agent, employer, firefighter or any other person affected by an interim order made by the Board under this section shall comply with the order despite any provision of this Part or of any collective agreement. 2011, c. 13, s. 1.

Same

(11) A bargaining agent, employer, firefighter or any other person who is complying with an interim order made by the Board under this section is deemed not to have violated any provision of this Part or of any collective agreement. 2011, c. 13, s. 1.

Proceedings in Superior Court of Justice

46.5 If a bargaining agent, employer, firefighter or any other person is affected by a determination of the Board under section 46.2, an interim order of the Board under section 46.3 or an interim or final order of the Board under section 46.4, proceedings to enforce the determination or the interim or final order may be instituted in the Superior Court of Justice by or against the bargaining agent, employer, firefighter or any other person who is subject to the determination or order. 2011, c. 13, s. 1.

COLLECTIVE BARGAINING

Notice of desire to bargain

47. (1) If no collective agreement is in effect, a bargaining agent acting pursuant to subsection 46 (1), shall give written notice to the employer of its desire to bargain with a view to making a collective agreement.

Same

(2) The employer or the bargaining agent may give written notice of its desire to bargain with a view to making a collective agreement within the period of 90 days before the expiry date set out in the collective agreement or, if no expiry date is set out in the agreement, within the period of 90 days before the expiry date referred to in subsection 52 (1). 1997, c. 4, s. 47.

Obligation to bargain

48. (1) The employer and the bargaining agent shall meet within 15 days after the notice is given, or within such longer period as they may agree upon, and they shall bargain in good faith and make every reasonable effort to make a collective agreement.

Parties

(2) The employer and the bargaining agent are the parties to the bargaining. 1997, c. 4, s. 48.

Conciliation

49. (1) After notice is given under section 47 or after the parties have met and bargained, and upon the request of either party, a conciliation officer shall be appointed in accordance with the regulations to endeavour to effect a collective agreement. 1997, c. 4, s. 49 (1).

Duties

(2) The conciliation officer shall confer with the parties and endeavour to effect a collective agreement. 1997, c. 4, s. 49 (2).

Report to Minister

(3) Within 14 days after being appointed or within such longer period as the parties may agree upon, the conciliation officer shall report the results of his or her endeavour to the Minister. The Minister may also extend the 14-day period if the conciliation officer advises him or her that, with the extension, an agreement may be made within a reasonable period of time. 1997, c. 4, s. 49 (3).

Report to parties

(4) The Minister shall forthwith, by notice in writing, inform the parties of the conciliation officer's report. 1997, c. 4, s. 49 (4).

Application of the *Labour Relations Act, 1995*

(5) The following provisions of the *Labour Relations Act, 1995* apply for the purposes of this section in respect of the following matters:

1. Subsection 119 (2), in respect of information or material furnished to or received by a conciliation officer.
2. Subsection 119 (3), in respect of the report of a conciliation officer.
3. Section 120, in respect of any information or material furnished to or received by a conciliation officer. 2006, c. 19, Sched. M, s. 2.

Arbitration

50. Where the Minister has informed the parties that the conciliation officer has been unable to effect a collective agreement, the matters remaining in dispute between the parties shall be decided by arbitration in accordance with this Part. 1997, c. 21, Sched. A, s. 3 (1).

Appointment of single arbitrator

50.1 (1) Where the parties agree to have the matters in dispute between them decided by a single arbitrator, they shall, within the time set out in subsection 50.2 (1), jointly appoint a person who agreed to act.

Single arbitrator's powers

(2) The person appointed under subsection (1) shall constitute the board of arbitration for the purposes of this Part and he or she shall have the powers and duties of the chair of a board of arbitration.

Notice to Minister

(3) As soon as the parties appoint a person to act as a single arbitrator, they shall notify the Minister of the name and address of the person appointed. 1997, c. 21, Sched. A, s. 3 (1).

Appointment of board of arbitration

50.2 (1) Within seven days after the day upon which the Minister has informed the parties that the conciliation officer has been unable to effect a collective agreement, each of the parties shall appoint to a board of arbitration a member who has agreed to act.

Extension of time

(2) The parties by a mutual agreement in writing may extend the period of seven days mentioned in subsection (1) for one further period of seven days.

Failure to appoint member

(3) Where a party fails to appoint a member of a board of arbitration within the period or periods mentioned in subsection (1), the Minister, upon the written request of either of the parties, shall appoint such member.

Third member

(4) Within ten days after the day on which the second of the members was appointed, the two members appointed by or on behalf of the parties shall appoint a third member who has agreed to act, and such third member shall be the chair.

Failure to appoint third member

(5) Where the two members appointed by or on behalf of the parties fail within ten days after the appointment of the second of them to agree upon the third member, notice of such failure shall be given forthwith to the Minister by the parties, the two members or either of them and the Minister shall appoint as a third member a person who is, in the opinion of the Minister, qualified to act.

Notice of appointment by party

(6) As soon as one of the parties appoints a member to a board of arbitration, that party shall notify the other party and the Minister of the name and address of the member appointed.

Notice of appointment by members

(7) As soon as the two members appoint a third member, they shall notify the Minister of the name and address of the third member appointed.

Selection of method

(8) If the chair of the board of arbitration was appointed by the Minister, subject to subsections (9) to (11), the Minister shall select the method of arbitration and shall advise the chair of the board of arbitration of the selection.

Same, mediation-arbitration

(9) The method selected shall be mediation-arbitration unless the Minister is of the view that another method is more appropriate.

Same, final offer selection

(10) The method selected shall not be final offer selection without mediation.

Same, mediation-final offer selection

(11) The method selected shall not be mediation-final offer selection unless the Minister in his or her sole discretion selects that method because he or she is of the view that it is the most appropriate method having regard to the nature of the dispute.

Vacancies

(12) If a person ceases to be a member of a board of arbitration by reason of resignation, death or otherwise before it has completed its work, the Minister shall appoint a member in his or her place after consulting the party whose point of view was represented by such person.

Replacement of member

(13) If, in the opinion of the Minister, a member of a board of arbitration has failed to enter on or to carry on his or her duties so as to enable it to render a decision within the time set out in subsection 50.5 (5) or within the time extended under subsection 50.5 (6), the Minister may appoint a member in his or her place after consulting the party whose point of view was represented by such person.

Replacement of chair

(14) If the chair of a board of arbitration is unable to enter on or to carry on his or her duties so as to enable it to render a decision within the time set out in subsection 50.5 (5) or within the time extended under subsection 50.5 (6), the Minister may appoint a person to act as chair in his or her place.

Where single arbitrator unable to act

(15) If the person appointed jointly by the parties as a single arbitrator dies before completing his or her work or is unable to enter on or to carry on his or her duties so as to enable him or her to render a decision within the time set out in subsection 50.5 (5) or within the time extended under subsection 50.5 (6), the Minister may, upon notice or complaint to him or her by either of the parties and after consulting the parties, inform the parties in writing that the arbitrator is unable to enter on or to carry on his or her duties and the provisions of this section relating to the appointment of a board of arbitration shall thereupon apply with necessary modifications.

Time and place of hearings

(16) Subject to subsection (17), the chair of the board of arbitration shall fix the time and place of the first or any subsequent hearing and shall give notice thereof to the Minister and the Minister shall notify the parties and the members of the board of arbitration thereof.

When hearings commence

(17) The board of arbitration shall hold the first hearing within 30 days after the last (or only) member of the board is appointed.

Exception

(18) If the method of arbitration selected by the Minister under subsection (8) is mediation-arbitration or mediation-final offer selection, the time limit set out in subsection (18) does not apply in respect of the first hearing but applies instead, with necessary modifications, in respect of the commencement of mediation.

Failure of member to attend

(19) Where a member of a board of arbitration appointed by a party or by the Minister is unable to attend the first hearing at the time and place fixed by the chair, the party shall, upon the request in writing of the chair, appoint a new member in place of such member and where such appointment is not made within five days of the date of the request, the Minister shall, upon the written request of the chair, appoint a new member in place of such member.

Order to expedite proceedings

(20) Where a board of arbitration has been established, the chair shall keep the Minister advised of the progress of the arbitration and where the Minister is advised that the board has failed to render a decision within the time set out in subsection 50.5 (5) or within the time extended under subsection 50.5 (6), the Minister may, after consulting the parties and the board, issue whatever order he or she considers necessary in the circumstances to ensure that a decision will be rendered within a reasonable time.

Procedure

(21) Subject to the other provisions of this section, a board of arbitration shall determine its own procedure but shall give full opportunity to the parties to present their evidence and make their submissions.

Same

(22) If the members of a board of arbitration are unable to agree among themselves on matters of procedure or as to the admissibility of evidence, the decision of the chair governs.

Time for submission of information

(23) If the method of arbitration selected by the Minister under subsection (8) is mediation-arbitration or mediation-final offer selection, the chair of the board of arbitration may, after consulting with the parties, set a date after which a party may not submit information to the board unless,

(a) the information was not available prior to the date;

(b) the chair permits the submission of the information; and

(c) the other party is given an opportunity to make submissions concerning the information.

Decision

(24) The decision of a majority of the members of a board of arbitration is the decision of the board, but, if there is no majority, the decision of the chair is the decision of the board.

Notice of agreement to recommence

(25) If any member of the board of arbitration was appointed by the Minister, the parties may, at any time before the arbitrator or board renders a decision, jointly serve written notice on the Minister that they have agreed that the arbitration should be recommenced before a different board of arbitration.

Termination of appointments

(26) If notice is served on the Minister under subsection (25), the appointments of all the members of the board of arbitration are terminated.

Effective date of terminations

(27) The terminations are effective on the day the Minister is served with the notice.

Obligation to appoint

(28) Within seven days after the day the Minister is served with the notice, the parties shall jointly appoint, under subsection 50.1 (1), a person who agreed to act or shall each appoint, under subsection (1) of this section, a member who has agreed to act and section 50.1 and this section apply with respect to such appointments.

Powers

(29) The chair and the other members of a board of arbitration established under this Act have, respectively, all the powers of a chair and the members of a board of arbitration under the *Labour Relations Act, 1995*. 1997, c. 21, Sched. A, s. 3 (1).

Appointment or proceedings of board not subject to review

50.3 Where a person has been appointed as a single arbitrator or the three members have been appointed to a board of arbitration, it shall be presumed conclusively that the board has been established in accordance with this Part and no application shall be made, taken or heard for judicial review or to question the establishment of the board or the appointment of the member or members, or to review, prohibit or restrain any of its proceedings. 1997, c. 21, Sched. A, s. 3 (1).

Single arbitration of several disputes

50.4 (1) Where there are matters in dispute between parties to be decided by more than one arbitration in accordance with this Part, the parties may agree in writing that the matters in dispute shall be decided by one board of arbitration.

Parties

(2) For the purposes of section 50.2, the bargaining agents for or on behalf of any firefighters to whom this Part applies shall be one party and the employers of such firefighters shall be the other party.

Powers of board

(3) In an arbitration to which this section applies, the board may, in addition to the powers conferred upon a board of arbitration by this Part,

(a) make a decision on matters of common dispute between all of the parties; and

(b) refer matters of particular dispute to the parties concerned for further bargaining.

Same

(4) Where matters of particular dispute are not resolved by further collective bargaining under clause (3) (b), the board shall decide the matters. 1997, c. 21, Sched. A, s. 3 (1).

Duty of board

50.5 (1) The board of arbitration shall examine into and decide on matters that are in dispute and any other matters that appear to the board necessary to be decided in order to conclude a collective agreement between the parties. 1997, c. 21, Sched. A, s. 3 (1).

Criteria

(2) In making a decision, the board of arbitration shall take into consideration all factors the board considers relevant, including the following criteria:

1. The employer’s ability to pay in light of its fiscal situation.

2. The extent to which services may have to be reduced, in light of the decision, if current funding and taxation levels are not increased.
3. The economic situation in Ontario and in the municipality.
4. A comparison, as between the firefighters and other comparable employees in the public and private sectors, of the terms and conditions of employment and the nature of the work performed.
5. The employer's ability to attract and retain qualified firefighters. 1997, c. 21, Sched. A, s. 3 (1).

Restriction

(3) Nothing in subsection (2) affects the powers of the board of arbitration. 1997, c. 21, Sched. A, s. 3 (1).

Board to remain seized of matters

(4) The board of arbitration shall remain seized of and may deal with all matters in dispute between the parties until a collective agreement is in effect between the parties. 1997, c. 21, Sched. A, s. 3 (1).

Time for decision

(5) The board of arbitration shall give a decision within 90 days after the last (or only) member of the board is appointed. 1997, c. 21, Sched. A, s. 3 (1).

Extension

(6) The parties may agree to extend the time described in subsection (5), either before or after the time has passed. 1997, c. 21, Sched. A, s. 3 (1).

Remuneration and expenses

(7) The remuneration and expenses of the members of a board of arbitration shall be paid as follows:

1. A party shall pay the remuneration and expenses of a member appointed by or on behalf of the party.
2. Each party shall pay one-half of the chair's remuneration and expenses. 1997, c. 21, Sched. A, s. 3 (1).

Enforcement of arbitration decisions

(8) Where a party or firefighter has failed to comply with any of the terms of the decision of an arbitration board, any party or firefighter affected by the decision may file in the Superior Court of Justice a copy of the decision, exclusive of the reasons therefor, whereupon the decision shall be entered in the same way as a judgment or order of that court and is enforceable as such. 1997, c. 21, Sched. A, s. 3 (1); 2002, c. 18, Sched. N, s. 12.

Non-application

(9) The *Arbitration Act, 1991* and the *Statutory Powers Procedure Act* do not apply with respect to an arbitration under this Part. 1997, c. 21, Sched. A, s. 3 (1).

Where agreement reached

50.6 (1) Where, during the bargaining under this Part or during the proceedings before the board of arbitration, the parties agree on all the matters to be included in a collective agreement, they shall put them in writing and shall execute the document, and thereupon it constitutes a collective agreement.

Failure to make agreement

(2) If the parties fail to put the terms of all the matters agreed upon by them in writing or if having put the terms of their agreement in writing either of them fails to execute the document within seven days

after it was executed by the other of them, they shall be deemed not to have made a collective agreement and the provisions of sections 49 to 50.5 apply, with necessary modifications.

Decision of board

(3) Where, during the bargaining under this Part or during the proceedings before the board of arbitration, the parties have agreed upon some matters to be included in the collective agreement and have notified the board in writing of the matters agreed upon, the decision of the board shall be confined to the matters not agreed upon by the parties and to such other matters that appear to the board necessary to be decided to conclude a collective agreement between the parties.

Same

(4) Where the parties have not notified the board of arbitration in writing that, during the bargaining under this Part or during the proceedings before the board of arbitration, they have agreed upon some matters to be included in the collective agreement, the board shall decide all matters in dispute and such other matters that appear to the board necessary to be decided to conclude a collective agreement between the parties.

Execution of agreement

(5) Within five days of the date of the decision of the board of arbitration or such longer period as may be agreed upon in writing by the parties, the parties shall prepare and execute a document giving effect to the decision of the board and any agreement of the parties, and the document thereupon constitutes a collective agreement.

Preparation of agreement by board

(6) If the parties fail to prepare and execute a document in the form of a collective agreement giving effect to the decision of the board and any agreement of the parties within the period mentioned in subsection (5), the parties or either of them shall notify the chair of the board in writing forthwith, and the board shall prepare a document in the form of a collective agreement giving effect to the decision of the board and any agreement of the parties and submit the document to the parties for execution.

Failure to execute agreement

(7) If the parties or either of them fail to execute the document prepared by the board within a period of five days from the day of its submission by the board to them, the document shall come into effect as though it had been executed by the parties and the document thereupon constitutes a collective agreement. 1997, c. 21, Sched. A, s. 3 (1).

Delegation

50.7 (1) The Minister may delegate in writing to any person the Minister's power to make an appointment, order or direction under this Act. 1997, c. 21, Sched. A, s. 3 (1); 2002, c. 18, Sched. N, s. 13 (1).

Proof of appointment

(2) An appointment, an order or a direction made under this Act that purports to be signed by or on behalf of the Minister shall be received in evidence in any proceeding as proof, in the absence of evidence to the contrary, of the facts stated in it without proof of the signature or the position of the person appearing to have signed it. 1997, c. 21, Sched. A, s. 3 (1); 2002, c. 18, Sched. N, s. 13 (2).

Existing proceedings discontinued

50.8 (1) Proceedings before a board of arbitration under this Part or a predecessor to this Act in which a hearing was commenced before the date on which subsection 3 (1) of the *Public Sector Dispute Resolution Act, 1997* comes into force are terminated and any decision in such proceedings is void.

Exception, completed proceedings

(2) This section does not apply with respect to proceedings in which a hearing was commenced before June 3, 1997 if,

(a) a final decision is issued on or before June 3, 1997; or

(b) a final decision is issued after June 3, 1997 and the decision is served before the date on which subsection 3 (1) of the *Public Sector Dispute Resolution Act, 1997* comes into force.

Exception, by agreement

(3) This section does not apply if the parties agree in writing after the date on which subsection 3 (1) of the *Public Sector Dispute Resolution Act, 1997* comes into force to continue the proceedings. 1997, c. 21, Sched. A, s. 3 (1).

OPERATION OF COLLECTIVE AGREEMENTS

Collective agreement

51. (1) Every collective agreement must be set out in writing.

Binding effect

(2) A collective agreement is binding upon the employer, the bargaining agent and the members of the bargaining unit.

Commencement

(3) A collective agreement comes into effect according to its terms. If the agreement does not provide for its commencement date, it comes into effect at the beginning of the first fiscal period in respect of which the employer budgets for expenditures under the agreement.

Same

(4) Despite subsection (3), if a collective agreement provides that it comes into effect on a specified day and that day occurs before the beginning of the first fiscal period in respect of which the employer can budget for expenditures under the agreement, the agreement shall be deemed to provide that it comes into effect at the beginning of that first fiscal period. 1997, c. 4, s. 51.

Minimum term of collective agreements

52. (1) If a collective agreement does not provide for its term of operation or provides for its operation for an unspecified term or for a term of less than one year, it shall be deemed to provide for its operation for a term of one year from the date that it commenced to operate.

Extension of term of collective agreement

(2) Despite subsection (1), the parties may, in a collective agreement or otherwise and before or after the collective agreement has ceased to operate, agree to continue the operation of the collective agreement or any of its provisions for a period of less than one year while they are bargaining for its renewal with or without modifications or for a new agreement and the continuation of the collective agreement may be terminated by either party upon 30 days notice to the other party.

Early termination of collective agreements

(3) A collective agreement shall not be terminated by the parties before it ceases to operate in accordance with its provisions or this Act without the consent of the Board on the joint application of the parties.

Revision by mutual consent

(4) Nothing in this section prevents the revision by mutual consent of the parties at any time of any provision of a collective agreement other than a provision relating to its term of operation. 1997, c. 4, s. 52.

Arbitration provision required

53. (1) Every collective agreement shall provide for the final and binding settlement by arbitration of all differences between the parties arising from the interpretation, application, administration or alleged violation of the collective agreement, including any question as to whether a matter is arbitrable, by a single arbitrator.

Same

(2) If a collective agreement does not contain the provision mentioned in subsection (1), it shall be deemed to contain the following provision:

> If a difference arises between the parties relating to the interpretation, application, administration of this agreement, including any question as to whether a matter is arbitrable, or if an allegation is made that this agreement has been violated, either of the parties may, after exhausting any grievance procedure established in this agreement, notify the other party in writing of its desire to submit the difference or allegation to a single arbitrator.

Selection of single arbitrator

(3) If a matter is referred to arbitration, the arbitrator shall be selected in accordance with the regulations.

Commencement of proceedings

(4) The arbitrator shall begin the arbitration proceedings within 30 days after his or her appointment or within such longer period as the parties may agree upon or as the arbitrator may determine.

Time for decision

(5) An arbitrator shall give a decision within 30 days after hearings on the matter submitted to arbitration are concluded.

Same

(6) The time described in subsection (5) for giving a decision may be extended,

(a) with the consent of the parties to the arbitration; or

(b) in the discretion of the arbitrator so long as he or she states in the decision the reasons for extending the time.

Oral decision

(7) An arbitrator may give an oral decision and, if he or she does so, subsection (5) does not apply and the arbitrator,

(a) shall give the decision promptly after hearings on the matter are concluded;

(b) shall give a written decision, without reasons, promptly upon the request of either party; and

(c) shall give written reasons for the decision within a reasonable period of time upon the request of either party.

Orders re decisions

(8) If the arbitrator does not give a decision within the time described in subsection (5) or does not provide written reasons within the time described in subsection (7), the Minister may,

(a) make such orders as he or she considers necessary to ensure that the decision or reasons will be given without undue delay; and

(b) make such orders as he or she considers appropriate respecting the remuneration and expenses of the arbitrator.

Powers of arbitrators

(9) An arbitrator has power,

(a) to require any party to furnish particulars before or during a hearing;

(b) to require any party to produce documents or things that may be relevant to the matter and to do so before or during the hearing;

(c) to fix dates for the commencement and continuation of hearings;

(d) to summon and enforce the attendance of witnesses and to compel them to give oral or written evidence on oath in the same manner as a court of record in civil cases;

(e) to administer oaths and affirmations,

(f) to accept the oral or written evidence as the arbitrator in his or her discretion considers proper, whether admissible in a court of law or not;

(g) to enter any premises where work is being done or has been done by the firefighters or in which the employer carries on business or where anything is taking place or has taken place concerning any of the differences submitted to the arbitrator, and inspect and view any work, material, machinery, appliance or article therein, and interrogate any person respecting any such thing or any of such differences;

(h) to authorize any person to do anything that the arbitrator may do under clause (g) and to report to the arbitrator thereon;

(i) to make interim orders concerning procedural matters;

(j) to interpret and apply human rights and other employment-related statutes, despite any conflict between those statutes and the terms of the collective agreement.

Restriction re interim orders

(10) An arbitrator shall not make an interim order under clause (9) (i) requiring an employer to reinstate a firefighter in employment.

Extension of time

(11) Except where a collective agreement states that this subsection does not apply, an arbitrator may extend the time for the taking of any step in the grievance procedure under a collective agreement, despite the expiration of the time, where the arbitrator is satisfied that there are reasonable grounds for the extension and that the opposite party will not be substantially prejudiced by the extension.

Substitution of penalty

(12) Where an arbitrator determines that a firefighter has been discharged or otherwise disciplined by an employer for cause and the collective agreement does not contain a specific penalty for the infraction that is the subject-matter of the arbitration, the arbitrator may substitute such other penalty for the discharge or discipline as to the arbitrator seems just and reasonable in all the circumstances.

Effect of arbitrator's decision

(13) The decision of an arbitrator is binding upon the parties and the firefighters who are covered by the agreement and affected by the decision.

Costs of arbitration

(14) Each party shall assume its own costs in the arbitration proceedings and pay one-half of the costs of the arbitrator.

Non-application

(15) The *Arbitration Act, 1991* and the *Statutory Powers Procedure Act* do not apply with respect to an arbitration under this section. 1997, c. 4, s. 53.

Mandatory retirement

Application

53.1 (1) This section applies to a firefighter only if the firefighter is regularly assigned to fire suppression duties. 2011, c. 13, s. 2.

Mandatory retirement provision permitted

(2) A collective agreement may contain a provision requiring firefighters to retire at a specified age of 60 or over and, if it does, a firefighter subject to the agreement shall, subject to subsection (4), retire at the specified age. 2011, c. 13, s. 2.

Existing and new collective agreements

(3) Subsection (2) applies to collective agreements that are in operation on the day section 2 of the *Fire Protection and Prevention Amendment Act, 2011* comes into force and to collective agreements that come into force after that day. 2011, c. 13, s. 2.

Deemed mandatory retirement provision

(3.1) If a collective agreement does not contain a provision requiring firefighters to retire at a specified age or if it contains a provision requiring firefighters to retire at an age under 60, the agreement is deemed to contain a provision requiring firefighters to retire at the age of 60 and a firefighter subject to the agreement shall, subject to subsection (4), retire at that age. 2011, c. 13, s. 3.

Reasonable accommodation

(4) A firefighter shall not be required to retire if the firefighter can be accommodated without undue hardship, considering the cost, outside sources of funding, if any, and health and safety requirements, if any. 2011, c. 13, s. 2.

Human Rights Code

(5) This section applies despite the *Human Rights Code*. 2011, c. 13, s. 2.

Managers, etc.

54. (1) An employer may assign a person employed by it to a position which, in the opinion of the employer, involves the exercise of managerial functions or employment in a confidential capacity in

matters relating to labour relations, but, subject to subsection (4), the assignment is not conclusive of the question of whether the person does exercise such functions or is employed in such capacity.

Board to decide status

(2) Subject to subsection (4), the Board, on application of an employer, has exclusive jurisdiction to determine any question as to whether a person exercises managerial functions or is employed in a confidential capacity in matters relating to labour relations, and its decision is final and conclusive for all purposes.

Same

(3) Subject to subsection (4), a person shall remain in the bargaining unit until the Board makes a determination under subsection (2), unless the parties otherwise agree.

Designation

(4) Subject to subsections (5) and (8), an employer may, in its sole discretion, designate a person described in subsection (1) as a person who shall for purposes of this Act be conclusively deemed to be exercising managerial functions or acting in a confidential capacity in matters relating to labour relations.

Consent required

(5) An employer shall not designate a person under subsection (4) unless the person consents to the designation.

If no consent

(6) If a person does not consent to a designation under subsection (4), the employer shall assign the person to a position in the bargaining unit. If the position to which a person is assigned has a lower salary than the position held by the person before the assignment, he or she is entitled to be paid the same salary and to receive the same benefits after the assignment as he or she was paid and received before the assignment.

Revocation

(7) A designation under subsection (4) may be revoked by the employer at any time.

Restriction

(8) An employer shall not designate under subsection (4) more than,

(a) two persons, if the employer employs fewer than 25 persons;

(b) three persons, if the employer employs 25 or more but fewer than 150 persons;

(c) four persons, if the employer employs 150 or more but fewer than 300 persons; or

(d) five persons, if the employer employs 300 or more persons. 1997, c. 4, s. 54 (1-8).

Amalgamations

(8.1) If, after the day on which subsection 3 (2) of the *Public Sector Dispute Resolution Act, 1997* comes into force, two or more municipalities that are employers of firefighters amalgamate, the amalgamated municipality is entitled under subsection (4) to designate the number of persons that is equal to the sum of the numbers of persons that each of the amalgamating municipalities would have been able to designate immediately before the amalgamation.

Dissolutions and incorporations

(8.2) If, after the day on which subsection 3 (2) of the *Public Sector Dispute Resolution Act, 1997* comes into force, two or more municipalities that are employers of firefighters are dissolved and the inhabitants of the municipalities are incorporated in a new municipality, subsection (8.1) shall apply as if the dissolved municipalities were amalgamating municipalities and the new municipality was an amalgamated municipality. 1997, c. 21, Sched. A, s. 3 (2).

Calculating number of persons employed

(9) For the purposes of subsection (8), the number of persons employed by the employer is the sum of,

(a) the number of persons employed by the employer who are firefighters; and

(b) the number of persons who are performing or conclusively deemed to be performing managerial functions with respect to firefighters or acting in a confidential capacity in matters relating to labour relations with respect to firefighters. 1997, c. 4, s. 54 (9).

Enforcement of decisions

55. (1) If a person or bargaining agent fails to comply with a decision of an arbitrator under section 53, the person or bargaining agent affected by the decision may file a copy of the decision (excluding the reasons for the decision) with the Superior Court of Justice. 1997, c. 4, s. 55 (1); 2002, c. 18, Sched. N, s. 14.

Same

(2) The decision shall not be filed with the court until 30 days have elapsed after the date the decision was released or after the date specified in the decision for complying with it. 1997, c. 4, s. 55 (2).

Effect of filing

(3) When it is filed with the court, the decision shall be entered in the same way as a judgment or order of the court and is enforceable as such. 1997, c. 4, s. 55 (3).

Working conditions not to be altered

56. (1) If notice has been given under section 47 by a bargaining agent for a unit of firefighters or an employer and no collective agreement is in operation,

(a) the employer shall not, except with the consent of the bargaining agent, alter the rates of wages or any other term or condition of employment or any right, privilege or duty of the employer or the firefighters until the right of the bargaining agent to represent the firefighters has been terminated; and

(b) the bargaining agent shall not, except with the consent of the employer, alter any term or condition of employment or any right, privilege or duty of the employer, the bargaining agent or the firefighters until the right of the bargaining agent to represent the firefighters has been terminated.

Arbitration if no agreement

(2) If notice has been given under subsection 47 (2) and no collective agreement is in operation, any difference between the parties as to whether or not subsection (1) was complied with may be referred to arbitration by either of the parties as if the collective agreement was still in operation and the arbitration shall proceed in accordance with section 53. 1997, c. 4, s. 56.

REGULATIONS

Regulations

57. The Minister may make regulations,

(a) governing the appointment of conciliation officers under this Act;

(b) governing the selection of arbitrators under section 53;

(c) prescribing forms for the purposes of subsections 46.2 (6) and 46.4 (8). 1997, c. 21, Sched. A, s. 3 (3); 2011, c. 13, s. 4.

PART X
FIRE SAFETY COMMISSION

Fire Safety Commission

58. (1) The Fire Code Commission is continued under the name the Fire Safety Commission in English and Commission de la sécurité-incendie in French and is composed of such number of members as is determined by the Lieutenant Governor in Council. 1997, c. 4, s. 58 (1).

Appointment of members

(2) The Lieutenant Governor in Council shall appoint the members to the Commission, and may designate one of the members as chair and one or more of the members as vice-chair. 2006, c. 35, Sched. C, s. 44 (1).

Ineligibility

(2.1) A person is not eligible to be a member of the Commission if the person is,

(a) a deputy minister of a ministry;

(b) a public servant employed under Part III of the *Public Service of Ontario Act, 2006*; or

(c) an employee of a municipality. 2006, c. 35, Sched. C, s. 44 (1).

Remuneration

(3) The members of the Commission shall receive such remuneration and expenses as the Lieutenant Governor in Council may determine. 1997, c. 4, s. 58 (3).

Quorum

(4) Three members of the Commission constitute a quorum. 1997, c. 4, s. 58 (4).

PART XI
FIRE MARSHAL'S PUBLIC FIRE SAFETY COUNCIL

Definition: "Council"

59. In this Part,

"Council" means the Fire Marshal's Public Fire Safety Council. 1997, c. 4, s. 59.

Council established

60. (1) A corporation without share capital is hereby constituted to be known in English as the Fire Marshal's Public Fire Safety Council and in French as Conseil public du commissaire des incendies sur la sécurité-incendie. 1997, c. 4, s. 60 (1).

Membership

(2) The Council shall consist of its board of directors and such other persons who are appointed as members of the Council by the Fire Marshal. 1997, c. 4, s. 60 (2).

Non-application of corporate Acts

(3) The *Corporations Act* and *Corporations Information Act* do not apply to the Council. 1997, c. 4, s. 60 (3).

Note: On a day to be named by proclamation of the Lieutenant Governor, subsection (3) is amended by striking out "The *Corporations Act*" at the beginning and substituting "The *Not-for-Profit Corporations Act, 2010*". See: 2010, c. 15, ss. 227, 249.

Conflict of interest

(4) Section 132 of the *Business Corporations Act* applies to the Council and to its directors and officers. 1997, c. 4, s. 60 (4).

Objects

61. The objects of the Council are,

(a) to promote fire safety throughout the province;

(b) to produce and distribute materials for public education with respect to fire safety;

(c) to provide or endorse training, education and fire prevention activities;

(d) to facilitate and co-ordinate the public exchange of information and ideas on matters of fire safety;

(e) to solicit, receive, manage and distribute money and other property to support the objects described in clauses (a), (b), (c) and (d);

(f) to enter into partnerships and agreements with persons or organizations in the private sector or with public bodies or organizations to further the objects described in clauses (a), (b), (c), (d) and (e); and

(g) to advise the Fire Marshal on matters of fire safety. 1997, c. 4, s. 61.

Board

62. (1) The affairs of the Council shall be managed by its board of directors.

Composition

(2) The board shall be composed of the Fire Marshal, or if he or she is absent or unable to act, the Deputy Fire Marshal, and at least six directors appointed from among the members by the Minister on the recommendation of the Fire Marshal.

Term of office

(3) A director is appointed for a term not exceeding three years, and may be reappointed for successive terms not exceeding three years each.

Chair

(4) The Fire Marshal, or if he or she is absent or unable to act, the Deputy Fire Marshal, is chair of the board.

Vice-chairs

(5) The Fire Marshal shall designate one or more other directors to be vice-chairs.

Same

(6) If the Fire Marshal or Deputy Fire Marshal is absent from a meeting of the board or is unable to act, a vice-chair shall act as and have all the powers of the chair.

Quorum

(7) A majority of the directors constitutes a quorum.

Vacancies

(8) If a director's position becomes vacant, the Minister may appoint another person to the board for the remainder of his or her term.

Remuneration

(9) The appointed directors shall receive such remuneration and reimbursement for reasonable expenses as may be determined by the Council. 1997, c. 4, s. 62.

Powers of Council

63. (1) The Council has the capacity and the rights, powers and privileges of a natural person, subject to the limitations set out in this Act, for the purpose of carrying out its objects.

Same

(2) Without limiting the generality of subsection (1), the board of directors of the Council may,

(a) enter into agreements with any organization with objects similar to or consistent with those of the Council;

(b) authorize any person or organization to use the Council's logo to indicate the Council's endorsement of a product, service, training course, education course or activity;

(c) otherwise endorse any product, service, training course, education course or activity;

(d) solicit, receive, manage, invest, transfer, use and distribute money and other property to support the objects of the Council.

Logo

(3) The board of directors shall by by-law adopt a logo for the Council. 1997, c. 4, s. 63.

Borrowing powers

64. (1) The board of directors of the Council may borrow money on the credit of the Council for the purposes of the Council and may use any money or property of the Council as security for such borrowing.

Limitation on borrowing powers

(2) The amount that may be borrowed under subsection (1), together with the total of any previous borrowing that remains unpaid, shall not exceed $50,000 at any one time without the approval of the Minister, but no lender shall be required to inquire into the board's compliance with this section and all loans to the Council shall be deemed to have been lawfully made under the authority of this section despite any non-compliance of the board. 1997, c. 4, s. 64.

By-laws

65. The board of directors of the Council may pass by-laws,

(a) regulating its proceedings;

(b) establishing the fiscal year for the Council;

(c) specifying the powers, duties and remuneration of its officers and employees;

(d) establishing an executive committee and other committees and delegating powers of the board to such committees;

(e) providing for membership in the Council, establishing classes of membership and prescribing the qualifications, conditions and rights of membership, the fees, if any, to be paid for membership and providing for and regulating members' meetings;

(f) generally for the management of the Council. 1997, c. 4, s. 65.

Council's property to be dedicated to objects

66. (1) All the property of the Council and all its income, revenue and profits shall be devoted and applied solely to carrying out the objects of the Council.

Investment

(2) Any funds of the Council that are not immediately required for promoting and carrying out its objects, and the proceeds of any property of the Council, subject to any trust affecting them, not immediately required for such purpose, may be invested and reinvested as the board of directors considers proper.

Money vests in Council

(3) All amounts in the Consolidated Revenue Fund credited, immediately before this section comes into force, to an advisory committee that was established under the *Fire Marshals Act*, being chapter F.17 of the Revised Statutes of Ontario, 1990, are hereby vested in the Council. 1997, c. 4, s. 66.

Employees

67. (1) The board of directors of the Council may employ or contract for the services of such persons, including any persons who are appointed directors, as it considers necessary for the functioning of the Council. 1997, c. 4, s. 67 (1).

Not an employee of the Crown

(2) A person who is employed or whose services are contracted under subsection (1) is not and shall not be deemed to be an employee of the Crown. 2006, c. 35, Sched. C, s. 44 (2).

Ministry support

68. The Office of the Fire Marshal may, on request, provide administrative, technical or expert advice or assistance to the Council. 1997, c. 4, s. 68.

Protection from personal liability

69. (1) No action or other proceeding for damages may be instituted against a director or a member of the Council or any employee of the Council for any act done in good faith in the execution or intended execution of the person's power or duty or for any alleged neglect or default in the execution in good faith of the person's power or duty.

Same

(2) Despite subsections 5 (2) and (4) of the *Proceedings Against the Crown Act*, subsection (1) does not relieve the Crown of liability in respect of a tort committed by a person mentioned in subsection (1) to which it would otherwise be subject.

Indemnification for legal costs

(3) With the approval of the Minister, a person described in subsection (1) or a former director, member or employee of the Council shall be indemnified by the Crown in right of Ontario for his or her reasonable legal costs in respect of any proceeding in which the person's execution in good faith of his or her duties is in issue, if the person acted in good faith. 1997, c. 4, s. 69.

Auditors

70. The board of directors of the Council shall appoint one or more auditors licensed under the *Public Accounting Act, 2004* to audit the accounts and transactions of the Council for each fiscal year. 1997, c. 4, s. 70; 2004, c. 8, s. 46.

Annual and other reports

71. The board of directors of the Council shall submit an annual report to the Minister on the affairs and transactions of the Council in the preceding fiscal year and shall submit such other reports as the Minister may request. 1997, c. 4, s. 71.

Winding-up

72. Upon the winding-up or dissolution of the Council, all its assets, after discharging all outstanding liabilities, shall vest in the Crown. 1997, c. 4, s. 72.

Review

73. The Minister shall, five years after this Part comes into force, undertake a review of the activities of the Council and submit to the Lieutenant Governor in Council a report that recommends the continuation, amendment or repeal of this Part. 1997, c. 4, s. 73.

PART XII
MISCELLANEOUS

Protection from personal liability

74. (1) No action or other proceeding for damages shall be instituted against a firefighter, a fire co-ordinator, a community fire safety officer, a member or employee of the Fire Safety Commission, an assistant to the Fire Marshal, the Deputy Fire Marshal, the Fire Marshal, or a person acting under his or her authority, for any act done in good faith in the execution or intended execution of his or her power or duty or for any alleged neglect or default in the execution in good faith of his or her power or duty.

Crown, municipality not relieved of liability

(2) Despite subsections 5 (2) and (4) of the *Proceedings Against the Crown Act*, subsection (1) does not relieve the Crown or a municipal corporation of liability in respect of a tort committed by a person referred to in subsection (1) to which they would otherwise be subject. 1997, c. 4, s. 74.

Indemnification

75. (1) A firefighter, a fire co-ordinator, a community fire safety officer, a member or employee of the Fire Safety Commission, an assistant to the Fire Marshal, the Deputy Fire Marshal, the Fire Marshal or a person acting under his or her authority shall be indemnified for reasonable legal costs incurred,

(a) in the defence of a civil action, if the person is not found to be liable;

(b) in the defence of a criminal prosecution, if the person is found not guilty;

(c) in respect of any other proceeding in which the person's execution of his or her duties is an issue, if the person acted in good faith.

Same

(2) Indemnification under subsection (1) shall be made by,

(a) in the case of a firefighter, community fire safety officer or assistant to the Fire Marshal who is employed by a municipality, the municipal corporation;

(b) in the case of a firefighter, community fire safety officer or assistant to the Fire Marshal who is working under an agreement with the Crown or in the case of a fire co-ordinator, a member or employee of the Fire Safety Commission, the Deputy Fire Marshal, the Fire Marshal or a person acting under his or her authority, the Crown.

Effect of collective agreement

(3) A collective agreement made under Part IX or a decision under section 53 may provide for indemnification of the legal costs of firefighters, except the legal costs of a firefighter who is found guilty of a criminal offence, and if such an agreement exists, the municipal corporation shall indemnify the firefighters in accordance with the agreement and subsections (1) and (2) shall not apply. 1997, c. 4, s. 75.

No action for damages from accidental fire

76. No action shall be brought against any person in whose house or building or on whose land any fire accidentally begins, nor shall any recompense be made by that person for any damage suffered thereby; but no agreement between a landlord and tenant is defeated or made void by this Act. 1997, c. 4, s. 76.

Manner of service

77. (1) Where a copy of an order or notice is required to be given to, or served on, a person under this Act, the copy may be served personally, by regular letter mail, by electronic transmission, by telephone transmission of a facsimile or by some other method that allows proof of receipt.

Deemed receipt

(2) Service by regular letter mail under subsection (1) shall be deemed to be received by the person on the fifth day after mailing unless the person establishes that the person did not, acting in good faith, through absence, accident, illness or other cause beyond the person's control receive a copy until a later date than the deemed date of receipt.

Same

(3) Service by electronic transmission or by telephone transmission of a facsimile under subsection (1) shall be deemed to be received the day after it is sent or, if that day is a Saturday or holiday, on the next day that is not a Saturday or holiday, unless the person establishes that the person did not, acting in good faith, through absence, accident, illness or other cause beyond the person's control receive a copy until a later date than the deemed date of receipt. 1997, c. 4, s. 77.

Regulations

78. (1) The Minister may make regulations,

(a) respecting the operation and administration of fire departments and community fire safety teams established or appointed by an agreement made under section 3 and respecting the functions of community fire safety officers appointed by such an agreement;

(b) prescribing persons or organizations for the purposes of subsections 3 (1) and 4 (2);

(c) prescribing powers and duties that a fire chief may delegate in addition to those mentioned in subsection 6 (6);

(d) prescribing limitations, restrictions, or conditions that apply to a delegation of powers or duties of a fire chief under subsection 6 (6), including restricting the type of power or duty that may be delegated or the class of person to whom the power or duty may be delegated;

(e) respecting the records and returns to be used, kept and made by fire chiefs in respect of their inspections of any class of premises or premises used for any specified purpose;

(f) requiring any person to furnish such statistical and other information to the Fire Marshal as he or she considers necessary;

(g) requiring the following persons or entities to report to the Fire Marshal the particulars of any insurance loss or claim,

(i) a fire insurance company authorized to transact business in Ontario,

(ii) a person adjusting a claim against a fire insurance company, whether the insurance company is licensed to transact business in Ontario or not and whether the adjuster represents the company or the claimant, or

(iii) a person sustaining or claiming to have sustained a loss by fire on property in Ontario insured wholly or partially by an insurance company that is not licensed or registered under the Insurance Act;

(h) defining "regularly employed" for the purposes of the definition of "firefighter" in subsection 41 (1) and "activity allowance" for the purposes of the definition of "volunteer firefighter" in subsection 1 (1);

(i) respecting standards for fire protection devices, equipment and systems;

(j) providing for licensing and regulating the manufacture, sale, installation, servicing, maintenance, testing and repairing of fire protection devices, equipment and systems;

(k) respecting practices and standards for fire protection services and certification and training of firefighters, including full-time, volunteer and part-time firefighters;

(l) prescribing fees and allowances for services and training provided by or on behalf of the Province or municipalities and respecting the person or body to whom the fees or allowances shall be paid;

(m) governing the inspection of hotels;

(n) respecting any matter necessary or advisable to carry out effectively the intent and purpose of this Act.

Same

(2) A regulation made under this section may be general or specific in its application. 1997, c. 4, s. 78.

Municipal by-laws superseded

79. A regulation, including the fire code, supersedes all municipal by-laws respecting standards for land and premises, as those standards relate to fire safety or the risk created by the presence of unsafe levels of carbon monoxide. 2013, c. 14, s. 5.

80.**-93.** OMITTED (AMENDS OR REPEALS OTHER ACTS). 1997, c. 4, ss. 80-93.

94. OMITTED (PROVIDES FOR COMING INTO FORCE OF PROVISIONS OF THIS ACT). 1997, c. 4, s. 94.

95. OMITTED (ENACTS SHORT TITLE OF THIS ACT). 1997, c. 4, s. 95.

Fire Protection and Prevention Act, 1997

Last amendment: O. Reg. 275/14.

ADMINISTRATIVE PROVISIONS

SECTION 1.1	GENERAL
Subsection 1.1.1.	Chief Fire Official
SECTION 1.2	QUALIFICATIONS
Subsection 1.2.1.	Qualifications and Responsibilities of Persons Performing Work on Fire Alarm Systems
Subsection 1.2.2.	Qualifications and Responsibilities of Persons Performing Work on Interconnected Smoke Alarm Systems
Subsection 1.2.3.	Qualifications of the Person who Ensures Implementation of a Fire Safety Plan under Subsection 2.8.2. of Division B
Subsection 1.2.4.	Qualifications of Chief Fire Officials
SECTION 1.3	ADMINISTRATIVE PROVISIONS

Subsection 1.3.1.	Required Testing
Subsection 1.3.2.	Alternative Solutions
SECTION 2.1	REVOCATION AND COMMENCEMENT
Subsection 2.1.1.	Revocation
Subsection 2.1.2.	Commencement

SECTION 1.1 ORGANIZATION OF THIS CODE

Subsection 1.1.1. General

Scope of Division A

1.1.1.1. Division A contains the compliance and application provisions, **objectives** and **functional statements** of this Code.

Scope of Division B

1.1.1.2. Division B contains the **acceptable solutions** of this Code.

Scope of Division C

1.1.1.3. Division C contains the administrative provisions of this Code.

Internal cross-references

1.1.1.4. If a provision of this Code contains a reference to another provision of this Code but no Division is specified, both provisions are in the same Division of this Code.

SECTION 1.2 COMPLIANCE

Subsection 1.2.1. Compliance with this Code

Owner's responsibility

1.2.1.1. Unless otherwise specified, the **owner** is responsible for carrying out the provisions of this Code.

Compliance with Parts 2 and 3

1.2.1.2. Compliance with Parts 2 and 3 is required only as it relates to the use of **alternative solutions** as set out in Subsection 1.2.2.

Subsection 1.2.2. Compliance with Division B

1.2.2.1. (1) Compliance with Division B shall be achieved

(a) by complying with the **acceptable solutions** in Division B, or

(b) by using **alternative solutions** that

(i) will achieve the level of performance required by the applicable **acceptable solutions** in respect of the **objectives** and **functional statements** attributed to the applicable **acceptable solutions** in OFMEM Fire Code Supplement FCS-1, "Objectives and Functional Statements Attributed to Acceptable Solutions",

(ii) do not contravene any other provision in Division B, and

(iii) have been **approved** and implemented in conformance with Subsection 1.3.2. of Division C.

(2) For the purpose of Clause (1)(b), the level of performance in respect of a **functional statement** refers to the performance required by the **functional statement** as it relates to the **objective** with which it is associated in OFMEM Fire Code Supplement FCS-1, "Objectives and Functional Statements Attributed to Acceptable Solutions".

(3) The use of **alternative solutions** as described in Clause (1) (b) is not applicable in respect of any **acceptable solutions** to which **objectives** and **functional statements** have not been attributed in OFMEM Fire Code Supplement FCS-1, "Objectives and Functional Statements Attributed to Acceptable Solutions".

Subsection 1.2.3. Compliance with Other Applicable Law

Compliance with other applicable law

1.2.3.1. Compliance with this Code does not relieve the **owner** from compliance with other applicable Acts and regulations, and, where a requirement of an applicable Act or regulation conflicts with a requirement of this Code, the more stringent requirement prevails, unless the more stringent requirement is in this Code and this Code says that the requirement of the other Act or regulation prevails.

SECTION 1.3 EXEMPTIONS

Subsection 1.3.1. Exemption for Farms

1.3.1.1. A **farm building** with an **occupant load** of not more than one person per 40 m^2 of floor area during normal use and other premises on a farm used for farming purposes are exempt from the requirements of this Code.

SECTION 1.4 TERMS AND ABBREVIATIONS

Subsection 1.4.1. Definitions of Words and Phrases

Non-defined terms

1.4.1.1. (1) Definitions of words and phrases used in this Code that are not included in the list of definitions in Article 1.4.1.2. have the meanings that are commonly assigned to them in the context in which they are used, taking into account the specialized use of terms with the various trades and professions to which the terminology applies.

(2) Despite Sentence (1), words and phrases may be assigned other meanings where specifically noted in another provision of this Code.

Defined terms

1.4.1.2. The words and terms used in this Code that are in bold face, and either in upper and lower case or in lower case, have the following meanings:

Acceptable solution means a requirement set out in Division B.

Access to exit means that part of a **means of egress** within a **floor area** that provides access to an **exit** serving the **floor area**.

Air-supported structure means a structure that consists of a pliable membrane that achieves and maintains its shape and support by internal air pressure.

Alarm signal means an audible signal transmitted throughout a zone or zones or throughout a **building** to advise occupants that a fire emergency exists.

Alert signal means an audible signal to advise designated persons of a fire emergency.

Alternative solution means a substitute for an **acceptable solution**.

Appliance means a device to convert fuel into energy, and includes all components, controls, wiring and piping required to be part of the device by the applicable standard referred to in this Code.

Approved means approved by the **Chief Fire Official**.

Architect means a member or licensee of the Ontario Association of Architects under the **Architects Act**.

Assembly occupancy means the **occupancy** or the use of a **building**, or part thereof, by a gathering of persons for civic, political, travel, religious, social, educational, recreational or like purposes or for the consumption of food or drink.

Atmospheric storage tank means a **storage tank** that is designed to operate at pressures from atmospheric to 3.5 kPa (gauge).

Attic space means the space between the roof and the ceiling of the top **storey** or between a dwarf wall and a sloping roof.

Basement means a **storey** or **storeys** of a **building** located below the **first storey**.

Boiler means an **appliance** intended to supply hot water or steam for **space heating**, processing or power purposes.

Building means any structure used or intended for supporting or sheltering any use or **occupancy**.

Building area means the greatest horizontal area of a **building** above **grade** within the outside surface of exterior walls or within the outside surface of exterior walls and the centre line of **firewalls**.

Building Code means any version of the **Ontario Building Code** that was in force at any time since it was made under **The Building Code Act, 1974**, the **Building Code Act** of the Revised Statutes of Ontario, 1980, the **Building Code Act** of the Revised Statutes of Ontario, 1990, the **Building Code Act, 1992** or a successor to the **Building Code Act, 1992**, and, where a specific version of the **Building Code** is referred to, that version of the **Building Code**.

Building height (in **storeys**) means the number of **storeys** contained between the roof and the floor of the **first storey**.

Business and personal services occupancy means the **occupancy** or use of a **building** or part thereof for the transaction of business or the rendering or receiving of professional or personal services.

Care and treatment occupancy means an **occupancy** in which persons receive special care and treatment.

Care occupancy means an **occupancy** in which special care is provided by a facility, directly through its staff or indirectly through another provider, to residents of the facility

(a) who require special care because of cognitive or physical limitations, and

(b) who, as a result of those limitations, would be incapable of evacuating the **occupancy**, if necessary, without the assistance of another person.

Care or detention occupancy REVOKED: O. Reg. 150/13, s. 1 (2).

Check means visual observation to ensure the device or system is in place and is not obviously damaged or obstructed.

Chief Fire Official means the assistant to the Fire Marshal who is the Municipal Fire Chief or a member or members of the **fire department** appointed by the Municipal Fire Chief under Article 1.1.1.2. of Division C or a person appointed by the Fire Marshal under Article 1.1.1.1. of Division C.

Chimney means a primarily vertical shaft enclosing at least 1 **flue** for conducting **flue** gases to the outdoors.

Class A fire means a fire involving combustible materials such as wood, cloth and paper.

Class B fire means a fire involving a **flammable** or **combustible liquid**, fat or grease.

Class C fire means a fire involving energized electrical equipment.

Class D fire means a fire involving a combustible metal.

Class K fire means a fire involving combustible cooking media such as vegetable oils, animal oils and animal fats.

Closed container means a container so sealed by means of a lid or other device that neither liquid nor vapour will escape from it at ordinary temperatures.

Closure means a device or assembly for closing an opening through a **fire separation** such as a door, a shutter, wired glass or glass block and includes all components, such as hardware, closing devices, frames and anchors.

Combustible construction means that type of construction that does not meet the requirements for **noncombustible construction**.

Combustible dust means dust and particles ignitable and liable to explode when mixed with air.

Combustible fibres means finely divided combustible vegetable or animal fibres and thin sheets or flakes of such materials that in a loose, unbaled condition present a flash fire hazard, and includes cotton, wool, hemp, sisal, jute, kapok, paper and cloth.

Combustible liquid means any liquid having a **flash point** at or above 37.8°C and below 93.3°C.

Compressed gas means any contained mixture or material with either an absolute pressure exceeding 275.8 kPa at 21°C or an absolute pressure exceeding 717 kPa at 54°C, or both, or any liquid having an absolute **vapour pressure** exceeding 275.8 kPa at 37.8°C.

Contained use area means a supervised area containing one or more rooms in which occupant movement is restricted to a single room by security measures not under the control of the occupant.

Dangerous goods means those products or substances which are regulated by the **Transportation of Dangerous Goods Act (Canada)** and its Regulations.

Demolition means the doing of anything in the removal of a **building** or any material part thereof.

Detention occupancy means an **occupancy** in which persons are under restraint or are incapable of self preservation because of security measures not under their control.

Distilled beverage alcohol means a beverage that is produced by fermentation and contains more than 20 per cent by volume of water-miscible alcohol.

Distillery means a **process plant** where **distilled beverage alcohols** are produced, concentrated or otherwise processed, and includes facilities on the same site where the concentrated products may be blended, mixed, stored or packaged.

Dwelling unit means a **suite** operated as a housekeeping unit, used or intended to be used by one or more persons and usually containing cooking, eating, living, sleeping and sanitary facilities, and includes a **residential unit**.

Exit means that part of a **means of egress**, including doorways, that leads from the **floor area** it serves to a separate **building**, an open public thoroughfare or an exterior open space protected from fire exposure from the **building** and having access to an open public thoroughfare.

Facility, for the purposes of Division A, means a property upon which a use regulated by this Code, including open air public assembly activities, open air industrial processing and outdoor storage, occurs, whether or not a **building** is located on the property.

Farm building means a **building** or part thereof associated with and located on land devoted to the practice of farming, and used primarily for the housing of equipment or livestock or the production, storage or processing of agricultural and horticultural produce or feeds, but is not used for **residential occupancy**.

Fire compartment means an enclosed space in a **building** that is separated from all other parts of the **building** by enclosing construction that provides a **fire separation** having a required **fire-resistance rating**.

Fire damper means a **closure** that consists of a damper installed in an air distribution system or in a wall or floor assembly that is normally held in the open position and that is designed to close automatically in the event of a fire in order to maintain the integrity of the **fire separation**.

Fire department means a group of firefighters authorized to provide fire protection services by a municipality, group of municipalities or by an agreement made under section 3 of the **Fire Protection and Prevention Act, 1997**.

Fire detector means a device which detects a fire condition and automatically initiates an electrical signal to actuate an **alert signal** or **alarm signal** and includes **heat detectors** and **smoke detectors**.

Fire-protection rating means the time in hours or fraction thereof that a **closure**, window assembly or glass block assembly will withstand the passage of flame when exposed to fire under specified conditions of **test** and performance criteria, or as otherwise prescribed in the **Building Code**.

Fire-resistance rating means the time in hours or fraction thereof that a material or assembly of materials will withstand the passage of flame and the transmission of heat when exposed to fire under specified conditions of **test** and performance criteria, or as determined by extension or interpretation of information derived therefrom as prescribed in the **Building Code**.

Fire separation means a construction assembly that acts as a barrier against the spread of fire and may or may not have a **fire-resistance rating** or a **fire-protection rating**.

Fire stop means a draft-tight barrier within or between construction assemblies that acts to retard the passage of smoke and flame.

Fire-stop flap means a device intended for use in horizontal assemblies that are required to have a **fire-resistance rating** and incorporate protective ceiling membranes and that operates to close off a duct opening through the membrane in the event of a fire.

Firewall means a **fire separation** of **noncombustible construction** that subdivides a **building** or separates adjoining **buildings** to resist the spread of fire that has a **fire-resistance rating** as prescribed in the **Building Code** and that has structural stability to remain intact under fire conditions for the required fire-rated time.

First storey means the **storey** with its floor closest to **grade** and having its ceiling more than 1.8 m above **grade**.

Flame-spread rating means an index or classification indicating the extent of spread of flame on the surface of a material or an assembly of materials as determined in the **Building Code**.

Flammable liquid means a liquid having a **flash point** below 37.8ºC and having a **vapour pressure** not more than 275.8 kPa (absolute) at 37.8ºC as determined by ASTM D 323, “Vapor Pressure of Petroleum Products (Reid Method)”.

Flash point means the minimum temperature at which a liquid within a container gives off vapour in sufficient concentration to form an ignitable mixture with air near the surface of the liquid.

Floor area means the space on any **storey** of a **building** between exterior walls and required **firewalls** and includes the space occupied by interior walls and **partitions**, but does not include **exits** and **vertical service spaces** that pierce the **storey**.

Flue means an enclosed passageway for conveying exhaust gases.

Flue pipe means the pipe connecting the **flue** collar of an **appliance** to a **chimney**.

Fuel dispensing station means any premises or part of premises at which **flammable liquids** or **combustible liquids** are dispensed from fixed equipment into the fuel tank of a motor vehicle, watercraft or floatplane.

Functional statement means a function set out in Part 3.

Furnace means a **space-heating appliance** that uses warm air as the heating medium and that usually has provision for the attachment of ducts.

Grade means the average level of finished ground adjoining a **building** at all exterior walls.

Guest suite means a single room or a series of rooms of complementary use providing sleeping accommodation for the travelling public or for recreational purposes in a **hotel establishment**.

Heat detector means a **fire detector** designed to operate at a predetermined temperature or rate of temperature rise.

Heavy timber construction means that type of **combustible construction** in which a degree of fire safety is attained by placing limitations on the sizes of wood structural members and on thickness and composition of wood floors and roofs, by avoidance of concealed spaces under floors and roofs and by use of **approved** fastenings, construction details and adhesives for structural members.

High hazard industrial occupancy means an **industrial occupancy** that contains sufficient quantities of highly combustible and flammable or explosive materials that, because of their inherent characteristics, constitute a special fire hazard.

Hotel means **floor areas**, a **floor area** or part of a **floor area** containing four or more **suites** that provide sleeping accommodation for the travelling public or for recreational purposes.

Hotel establishment means a **building** containing a **hotel** and all subsidiary **occupancies** that are operated in connection with the **hotel** and includes all connected or adjacent **buildings** that are operated in connection with the **hotel**.

Impeded egress zone means a supervised area in which occupants have free movement but require the release, by security personnel, of security doors at the boundary before they are able to leave the area, but does not include a **contained use area**.

Individual storage area means the area occupied by piles, bin boxes, **racks** or shelves, including subsidiary aisles providing access to the stored products, which is separated from the adjacent storage by aisles.

Industrial occupancy means the **occupancy** or use of a **building** or part thereof for assembling, fabricating, manufacturing, processing, repairing or storing of goods and materials.

Inspection means physical examination to determine that the device or system will apparently perform in accordance with its intended function.

Listed means equipment or materials included in a list published by a certification organization accredited by the Standards Council of Canada.

Low hazard industrial occupancy means an **industrial occupancy** in which the combustible content is not more than 50 kg/m^2 or 1200 MJ/m^2 of **floor area**.

Low pressure storage tank means a **storage tank** designed to operate at pressures greater than 3.5 kPa (gauge) to 100 kPa (gauge).

Lower explosive limit means the minimum concentration of vapour in air at which the propagation of flame occurs on contact with a source of ignition.

Major occupancy means the principal **occupancy** for which a **building** or part thereof is used or intended to be used, and includes the subsidiary **occupancies** that are an integral part of the principal **occupancy**.

Marine fuel dispensing station means a **fuel dispensing station** at which **flammable liquids** or **combustible liquids** are dispensed into the fuel tank of a watercraft or floatplane.

Means of egress means a continuous path of travel provided for the escape of persons from any point in a **building** or contained open space to a separate **building**, an open public thoroughfare or an exterior open space protected from fire exposure from the **building** and having access to an open public thoroughfare. **Means of egress** includes both **exits** and **access to exits**.

Medium hazard industrial occupancy means an **industrial occupancy** in which the combustible content is more than 50 kg/m^2 or 1200 MJ/m^2 of **floor area** and not classified as **high hazard industrial occupancy**.

Mercantile occupancy means the **occupancy** or use of a **building** or part thereof for the displaying or selling of retail goods, wares or merchandise.

Minimum explosible concentration (MEC) means the minimum concentration of **combustible dust** suspended in air, measured in mass per unit volume, that will support a deflagration as defined by the test procedure in ASTM E 1515, "Standard Test Method for Minimum Explosible Concentration of Combustible Dusts".

Noncombustible construction means that type of construction in which a degree of fire safety is attained by the use of noncombustible materials for structural members and other **building** assemblies.

Objective means an objective set out in Part 2.

Occupancy means the use or intended use of a **building** or part thereof for the shelter or support of persons, animals or property.

Occupant load means the number of persons for which a **building** or part thereof is designed.

Order means an order made under subsection 21(1) of the **Fire Protection and Prevention Act, 1997**.

Owner means any person, firm or corporation having control over any portion of the **building** or property under consideration and includes the persons in the **building** or property.

Partition means an interior wall, one **storey** or part of a **storey** in height, that is not load-bearing.

Plenum means a chamber forming part of an air duct system.

Pressure vessel means a **storage tank** that is designed to operate at pressures greater than 100 kPa (gauge).

Process plant means an **industrial occupancy** where materials, including **flammable liquids**, **combustible liquids** or Class 2 gases, are produced or used in a process.

Professional Engineer means a member or licensee of the Association of Professional Engineers of the Province of Ontario under the **Professional Engineers Act**.

Public amusement area means an area where the public is ordinarily invited or permitted access, either expressly or by implication, whether or not a fee is charged for entry, and includes entertainment displays or structures used on a temporary, seasonal or permanent basis.

Public corridor means a corridor that provides **access to exit** from more than one **suite**.

Rack means any combination of vertical, horizontal or diagonal members that support stored materials on solid or open shelves, including both fixed and portable units.

Rapid transit station means a **building** or part thereof used for the purpose of loading and unloading passengers of a rapid transit system but does not include open-air shelters at street level.

Refinery means any **process plant** in which **flammable** or **combustible liquids** are produced from crude petroleum, including areas on the same site where the resulting products are blended, packaged or stored on a commercial scale.

Refuse storage room means a room in a **building** that is used for the storage of combustible refuse, including waste materials and recyclables.

Residential occupancy means an **occupancy** in which sleeping accommodation is provided to residents who are not harboured for the purpose of receiving special care or treatment and are not involuntarily detained.

Residential unit means a **suite** operated as a housekeeping unit, used or intended to be used by one or more persons that contains cooking, eating, living, sleeping and sanitary facilities.

Retirement home means a retirement home regulated under the **Retirement Homes Act, 2010**, regardless of whether it is a **care occupancy** or a **residential occupancy**.

Retrofit means the minimum performance requirements for life safety for existing **buildings**.

Self-service outlet means a **fuel dispensing station**, other than a marine **fuel dispensing station**, where the public handles the dispenser.

Service room means a room in a **building** used to contain equipment associated with **building** services.

Service space means space in a **building** used to facilitate or conceal the installation of **building** service facilities such as chutes, ducts, pipes, shafts or wires.

Smoke alarm means a combined **smoke detector** and audible alarm device that is designed to sound an alarm within the room or **suite** in which it is located when there is smoke within the room or **suite**.

Smoke detector means a **fire detector** designed to operate when the concentration of airborne combustion products exceeds a predetermined level.

Space heater means a **space-heating appliance** that heats the room or space within which it is located without the use of ducts.

Space-heating appliance means an **appliance** that supplies heat to a room or space directly or indirectly or to rooms or spaces of a **building** through a heating system.

Spraying area means the area that is within 6 m of a **spray booth** or spraying operation and that is not separated therefrom by a vapour-tight separation.

Spray booth means a power-ventilated structure that encloses or accommodates a spraying operation so that spray vapour and residue can be controlled and exhausted.

Spray room means a **spraying area** on a **floor area** or part thereof in which an open spraying operation is confined and that is separated from the remainder of the **building** in which it is located by a noncombustible vapour-tight separation.

Sprinklered (as applying to a **building** or part thereof) means that the **building** or part thereof is equipped with a system of automatic sprinklers.

Storage garage means a building or part of a building that is intended for the storage or parking of motor vehicles and that contains no provision for the repair or servicing of motor vehicles.

Storage tank means a vessel for **flammable** or **combustible liquids** having a capacity of more than 230 L and designed to be installed in a fixed location.

Storey means that portion of a **building** that is situated between the top of any floor and the top of the floor next above it, and where there is no floor above it, that portion between the top of the floor and the ceiling above it.

Street means any highway, road, boulevard, square or other improved thoroughfare 9 m or more in width that has been dedicated or deeded for public use and is accessible to **fire department** vehicles and equipment.

Suite means a single room or series of rooms of complementary use, operated under a single tenancy, and includes **dwelling units**, individual guest rooms in motels, **hotels**, boarding houses, rooming houses and dormitories, as well as individual stores and individual or complementary rooms for **business and personal services occupancies**.

Supervisory staff means those occupants of a **building** who have some delegated responsibility for the fire safety of other occupants under the fire safety plan and may include the **fire department** where the **fire department** agrees to accept these responsibilities.

Tank vehicles means any vehicle, other than railroad tank cars and boats, with a cargo tank having a capacity of more than 450 L mounted or built as an integral part of the vehicle, used for the transportation of **flammable** or **combustible liquids**, and includes tank trucks, trailers and semi-trailers.

Tent means a shelter or structure with a covering that is made of pliable material.

Test means the operation of a device or system to ensure that it will perform in accordance with its intended operation or function.

Total area means the total area of all floors above and below **grade**, including mezzanines and penthouses, measured between the inside surfaces of exterior walls or between the inside surfaces of exterior walls and the inside surfaces of **firewalls**.

Travel distance means the distance from any point in a **floor area** to an exit measured along the path of **exit** travel, except that when **floor areas** are subdivided into rooms used singly or into **suites** of rooms and served by **public corridors** or exterior passageways, the distance is measured from the door of the rooms or **suites** to the nearest **exit**.

Unstable liquid means a liquid, including a **flammable** and **combustible liquid**, which is chemically reactive to the extent that it will vigorously react or decompose at or near normal temperature and pressure conditions or which is chemically unstable when subject to impact.

Vapour pressure means the pressure exerted by a liquid as determined by ASTM D 323, “Vapor Pressure of Petroleum Products (Reid Method)”.

Vertical service space means a shaft oriented essentially vertically that is provided in a **building** to facilitate the installation of **building** services, including elevators, refuse chutes, linen chutes and mechanical, electrical and plumbing installations.

Viscosity means the resistance that a liquid offers to flow.

Subsection 1.4.2. Symbols and Other Abbreviations

1.4.2.1. The symbols and abbreviations in this Code have the following meanings:

cm	centimetre(s)
cm/s	centimetre(s) per second
cm^2	square centimetre(s)
°C	degree(s) Celsius

h	hour(s)
kg	kilogram(s)
kN	kilonewton(s)
kPa	kilopascal(s)
L	litre(s)
L/h	litre(s) per hour
L/min	litre(s) per minute
$L/min/m^2$	litre(s) per minute per square metre
lx	lux
m	metre(s)
m^2	square metre(s)
m^3	cubic metre(s)
m/s	metre(s) per second
m/min	metre(s) per minute
m^3/h	cubic metre(s) per hour
m^3/min	cubic metre(s) per minute
min	minute(s)
MJ	megajoule(s)
mL	millilitre(s)
mm	millimetre(s)
mm^2/s	square millimetre(s) per second
N	newton(s)
ppm	part(s) per million
s	second(s)
t	tonne(s)
%	per cent

SECTION 1.5 REFERENCED DOCUMENTS

Subsection 1.5.1. Referenced Documents

Application of referenced documents

1.5.1.1. The provisions of documents referenced in this Code apply only to the extent that they are related to fire safety matters.

Conflicting requirements

1.5.1.2. In the case of a conflict between the provisions of this Code and those of a referenced document, the provisions of this Code prevail.

Secondary references

1.5.1.3. If a document in this Code refers to another document, only those portions of the second document that are specific to the subject matter are applicable.

O. Reg. 213/07, Division A, Part 1; O. Reg. 150/13, s. 1; O. Reg. 194/14, ss. 1, 2; O. Reg. 256/14, ss. 1-3.

SECTION 2.1 APPLICATION

Subsection 2.1.1. Scope and Application

Subsection 2.1.1. Application

2.1.1.1. (1) The **objectives** set out in Table 2.2.1.1. apply only to the extent that they relate to an **alternative solution** as provided in Article 1.2.2.1.

(2) The **objectives** described in this Part apply only as they relate to fire safety.

SECTION 2.2 OBJECTIVES

Subsection 2.2.1. Objectives

2.2.1.1. The **objectives** of this Code are those listed in Table 2.2.1.1.

TABLE 2.2.1.1.

Objectives
Forming Part of Article 2.2.1.1.

Column 1 Category	Column 2 Objective number	Column 3 Objective
SAFETY	OS	An **objective** of this Code is to limit the probability that, as a result of specific circumstances related to the **building** or **facility**, a person in or adjacent to the **building** or **facility** will be exposed to an unacceptable risk of injury.
Fire Safety	OS1	An **objective** of this Code is to limit the probability that, as a result of (a) activities related to the construction, use or **demolition** of the **building** or **facility**, (b) the condition of specific elements of the **building** or **facility**, (c) the design and construction of specific elements of the **facility** related to certain hazards, or (d) inadequate built-in protection measures for the current or intended use of the **building**, a person in or adjacent to the **building** or **facility** will be exposed to an unacceptable risk of injury due to fire. The risks of injury due to fire addressed in this Code are those caused by:
	OS1.1	fire or explosion occurring
	OS1.2	fire or explosion impacting areas beyond its point of origin
	OS1.3	collapse of physical elements due to a fire or explosion
	OS1.4	fire safety systems failing to function as expected
	OS1.5	persons being delayed in or impeded from moving to a safe place during a fire emergency
Safety in Use	OS3	An **objective** of this Code is to limit the probability that, as a result of (a) activities related to the construction, use or **demolition** of the **building** or **facility**, (b) of specific elements of the **building** or **facility**,

		(c) the design and construction of specific elements of the **facility** related to certain hazards, or (d) inadequate built-in protection measures for the current or intended use of the **building**, a person in or adjacent to the **building** or **facility** will be exposed to an unacceptable risk of injury due to hazards. The risks of injury due to hazards addressed in this Code are those caused by:
	OS3.1	tripping, slipping, falling, contact, drowning or collision
	OS3.2	contact with hot surfaces or substances
	OS3.3	contact with energized equipment
	OS3.4	exposure to hazardous substances
	OS3.7	persons being delayed in or impeded from moving to a safe place during an emergency
HEALTH	OH	An **objective** of this Code is to limit the probability that, as a result of specific circumstances related to the **building** or **facility**, a person will be exposed to an unacceptable risk of illness.
Indoor Conditions	OH1	An **objective** of this Code is to limit the probability that, as a result of an installation required by this Code, a person in the **building** or **facility** will be exposed to an unacceptable risk of illness due to indoor conditions. The risks of illness due to indoor conditions addressed in this Code are those caused by:
	OH1.1	inadequate indoor air quality
Hazardous Substances Containment	OH5	An **objective** of this Code is to limit the probability that, as a result of
		(a) activities related to the construction, use or **demolition** of the **building** or **facility**, (b) the condition of specific elements of the **building** or **facility**, (c) the design and construction of specific elements of the **facility** related to certain hazards, or (d) inadequate built-in protection measures for the current or intended use of the **building**, the public will be exposed to an unacceptable risk of illness due to the release of hazardous substances from the **building** or **facility**.
Fire Protection of **Buildings** and **Facilities**	OP	An **objective** of this Code is to limit the probability that, as a result of specific circumstances related to the **building** or **facility**, the **building** or **facility** will be exposed to an unacceptable risk of damage due to fire.
Fire Protection of the **Building** or **Facility**	OP1	An **objective** of this Code is to limit the probability that, as a result of (a) activities related to the construction, use or **demolition** of the **building** or **facility**, (b) the condition of specific elements of the **building** or **facility**, (c) the design and construction of specific elements of the **facility**

		related to certain hazards, or (d) inadequate built-in protection measures for the current or intended use of the **building**, the **building** or **facility** will be exposed to an unacceptable risk of damage to due to fire. The risks of damage due to fire addressed in this Code are those caused by:
	OP1.1	fire or explosion occurring
	OP1.2	fire or explosion impacting areas beyond its point of origin
	OP1.3	collapse of physical elements due to a fire or explosion
	OP1.4	fire safety systems failing to function as expected
Protection of Adjacent **Buildings** or **Facilities** from Fire	OP3	An **objective** of this Code is to limit the probability that, as a result of (a) activities related to the construction, use or **demolition** of the **building** or **facility**, (b) the condition of specific elements of the **building** or **facility**, (c) the design and construction of specific elements of the **facility** related to certain hazards, or (d) inadequate built-in protection measures for the current or intended use of the **building**, adjacent **buildings** or **facilities** will be exposed to an unacceptable risk of damage to due to fire. The risks of damage due to fire addressed in this Code are those caused by:
	OP3.1	fire or explosion impacting areas beyond the **building** or **facility** of origin

O. Reg. 213/07, Division A, Part 2.

SECTION 3.1 APPLICATION

Subsection 3.1.1. Application

3.1.1.1. The **functional statements** set out in Table 3.2.1.1. apply only to the extent that they relate to an **alternative solution** as provided in Article 1.2.1.1.

SECTION 3.2 FUNCTIONAL STATEMENTS

Subsection 3.2.1. Functional Statements

3.2.1.1. The **functional statements** of this Code are those set out in Table 3.2.1.1.

TABLE 3.2.1.1.

Functional Statements
Forming Part of Article 3.2.1.1.

Column 1 Function	Column 2 Functional Statement
F01	To minimize the risk of accidental ignition.
F02	To limit the severity and effects of a fire or explosion.
F03	To retard the effects of fire on areas beyond its point of origin.
F04	To retard failure or collapse due to the effects of fire.
F05	To retard the effects of fire on emergency egress **facilities**.
F06	To retard the effects of fire on **facilities** for notification, suppression and emergency response.
F10	To facilitate the timely movement of persons to a safe place in an emergency.
F11	To notify persons, in a timely manner, of the need to take action in an emergency.
F12	To facilitate emergency response.
F13	To notify emergency responders, in a timely manner, of the need to take action in an emergency.
F20	To support and withstand expected loads and forces.
F21	To limit or accommodate dimensional change.
F22	To limit movement under expected loads and forces.
F30	To minimize the risk of injury to persons as a result of tripping, slipping, falling, contact, drowning or collision.
F32	To minimize the risk of injury to persons as a result of contact with energized equipment.
F34	To resist or discourage unwanted access or entry.
F36	To minimize the risk that persons will be trapped in confined spaces.
F43	To minimize the risk of release of hazardous substances.
F44	To limit the spread of hazardous substances beyond their point of release.
F51	To maintain appropriate air and surface temperatures.
F80	To resist deterioration resulting from expected service conditions.
F81	To minimize the risk of malfunction, interference, damage, tampering, lack of use or misuse.
F82	To minimize the risk of inadequate performance due to improper maintenance or lack of maintenance.

O. Reg. 213/07, Division A, Part 3.

DIVISION B
ACCEPTABLE SOLUTIONS

PART 1
GENERAL

SECTION 1.1 GENERAL

Subsection 1.1.1. General

Notification

1.1.1.1. Where **tests**, repairs or alterations are made to fire protection installations, including sprinkler and standpipe systems, a procedure of notification shall be established, and the procedure shall include notifying the **fire department** and the **building** occupants where necessary for safety in the event of a fire emergency.

Check, inspect and test

1.1.1.2. (1) The **checking**, **inspection** and **testing** of fire safety devices shall be conducted in accordance with this Code.

(2) Where specific references to **checking**, **inspection** and **testing** of fire safety devices are not made in this Code, such devices shall be maintained to ensure they operate as per their design requirements.

(3) Any **appliance**, device or component of a device that does not operate or appear to operate as intended when **checked**, **inspected** or **tested** as required by this Code shall be repaired or replaced if the failure or malfunctioning of the **appliance**, device or component would adversely affect fire or life safety.

Subsection 1.1.2. Records of Tests and Inspections

Records to be prepared

1.1.2.1. (1) If a **test**, corrective measure or operational procedure required by this Code is conducted, a written record shall be prepared noting what was done and the date and time it was done.

(2) If an **inspection** required by this Code is conducted in a supported group living residence or an intensive support residence regulated under the **Services and Supports to Promote the Social Inclusion of Persons with Developmental Disabilities Act, 2008**, a written record shall be prepared noting what was **inspected** and the date and time of the **inspection**.

Retention of records

1.1.2.2. (1) Subject to Sentence (2), the original or a copy of any record required by this Code shall be retained at the **building** to which the record relates

(a) for a period of at least two years after being prepared, and

(b) so that at least the most recent and the immediately preceding record of a given **test** or **inspection** are retained.

(2) The initial verification or **test** reports for fire protection systems installed after November 21, 2007 shall be retained throughout the life of the systems, regardless of whether the systems are installed in accordance with this Code or the **Building Code**.

Records to be made available on request

1.1.2.3. The original or a copy of any record required by this Code shall be made available to the **Chief Fire Official** for examination on request.

SECTION 1.2 REFERENCED DOCUMENTS AND ORGANIZATIONS

Subsection 1.2.1. Referenced Documents

Applicable editions

1.2.1.1. (1) A reference in this Code to a document set out in Table 1.2.1.A. is to the edition designated in the table.

(2) If, on December 31, 2014, any **appliance**, equipment, system, installation or construction met the requirements of the edition that was designated in Table 1.2.1.A. of this Code as it read on December 31, 2014, the **appliance**, equipment, system, installation or construction is deemed to comply with the requirements of the edition referred to in Sentence (1).

Effective date

1.2.1.2. A reference in this Code to a document set out in Table 1.2.1.A. includes all amendments up to and including January 1, 2015.

Previous editions

1.2.1.3. Despite Articles 1.2.1.1. and 1.2.1.2., the **Chief Fire Official** may permit compliance with an edition of a document previous to that referred to in this Code if the **Chief Fire Official** is satisfied that compliance with the edition referred to in this Code is impractical.

Subsection 1.2.2. Organizations

Abbreviations of proper names

1.2.2.1. The abbreviations in this Code for the names of organizations shall have the meanings assigned to them as follows:

ANSI American National Standards Institute
API American Petroleum Institute

ASME	American Society of Mechanical Engineers
ASTM	American Society for Testing and Materials
CAN	Standards Council of Canada designation identifying a national standard. The number or name following the CAN designation represents the agency under whose auspices the standard is issued. CAN1 designates CGA, CAN2 designates CGSB, CAN3 designates CSA, and CAN4 designates ULC.
CGA	Compressed Gas Association
CGSB	Canadian General Standards Board
CPPI	Canadian Petroleum Products Institute
CSA	Canadian Standards Association
MAH	Ontario Ministry of Municipal Affairs and Housing
NFPA	National Fire Protection Association
NRC	National Research Council of Canada
NRCan	Natural Resources Canada
OFM	Ontario Office of the Fire Marshal
OFMEM	Ontario Office of the Fire Marshal and Emergency Management
TC	Transport Canada
UL	Underwriters Laboratories Inc.
ULC	Underwriters' Laboratories of Canada

O. Reg. 213/07, Division B, Part 1; O. Reg. 150/13, ss. 2, 3; O. Reg. 194/14, ss. 3, 4; O. Reg. 256/14, ss. 4-7.

PART 2
FIRE SAFETY

SECTION 2.1 GENERAL

Subsection 2.1.1. Scope and Application

Scope

2.1.1.1. This Part provides measures for the fire safety of persons and **buildings**, including the elimination or control of fire hazards in and around **buildings**, the maintenance of certain life safety systems in **buildings**, the establishment of a fire safety plan in certain **buildings** and the installation of **smoke alarms** and carbon monoxide alarms.

Application

2.1.1.2. Subject to Article 2.1.1.3., this Part applies to **buildings**, premises, **tents**, **air-supported structures** and outdoor **public amusement areas**.

Exceptions

2.1.1.3. (1) Subject to Sentences (2) and (3), this Part does not apply to individual **dwelling units**.

(2) Section 2.2 (Fire Separations), Article 2.4.4.4. (Open-air burning), Subsection 2.4.7. (Vacant Buildings), Section 2.6 (Service Equipment), Section 2.11 (Insulation and Re-Insulation), Section 2.13 (Installation of Smoke Alarms), Section 2.15 (Portable Oxygen Systems) and Section 2.16 (Installation of Carbon Monoxide Alarms) apply to individual **dwelling units**.

(3) This Part applies to individual **dwelling units** in a supported group living residence or an intensive support residence regulated under the **Services and Supports to Promote the Social Inclusion of Persons with Developmental Disabilities Act, 2008**.

Subsection 2.1.2. Classification of Buildings or Parts of Buildings by Major Occupancy

Classification of buildings or parts thereof

2.1.2.1. For the purpose of applying this Code, a **building** or part thereof shall be classified according to its **major occupancy** by the **Chief Fire Official** in conformance with the **Building Code**.

Hazardous activities

2.1.2.2. Activities that create a hazard and that are not allowed for in the original design shall not be carried out in a **building** unless **approved** provisions are made to control the hazard.

2.1.2.3. REVOKED: O. Reg. 256/14, s. 9.

Subsection 2.1.3. Prohibited Combinations of Occupancies

Prohibited combinations of occupancies

2.1.3.1. A **building** containing a **major occupancy** that is classified as an **assembly occupancy**, a **care occupancy**, a **care and treatment occupancy**, a **detention occupancy** or a **residential occupancy** shall not contain a **major occupancy** that is classified as a **high hazard industrial occupancy**.

SECTION 2.2 FIRE SEPARATIONS

Subsection 2.2.1. Major Occupancies

Damaged fire separations

2.2.1.1. Where **fire separations** between **major occupancies** are damaged in a manner so as to affect the integrity of their **fire-resistance rating**, such damaged **fire separations** shall be repaired so that the integrity of the **fire separations** is maintained.

Subsection 2.2.2. Rooms and Spaces

Damaged fire separations

2.2.2.1. Where **fire separations** between rooms, corridors, shafts and other spaces are damaged so as to affect the integrity of their **fire-resistance rating**, the damaged **fire separations** shall be repaired so that the integrity of the **fire separations** is maintained.

Subsection 2.2.3. Closures

Damaged closures

2.2.3.1. Where **closures** are damaged so as to affect the integrity of their **fire-protection rating**, the damaged **closures** shall be repaired so that the integrity of the **closures** is maintained.

Maintenance of closures

2.2.3.2. (1) **Closures** in **fire separations** shall be maintained to ensure that they are operable at all times by

(a) keeping fusible links and heat or smoke-actuated devices undamaged and free of paint and dirt,

(b) keeping guides, bearings and stay rolls clean and lubricated,

(c) making necessary adjustments and repairs to door hardware and accessories to ensure proper closing and latching, and

(d) repairing or replacing inoperative parts of hold-open devices and automatic releasing devices.

Operation of closures

2.2.3.3. **Closures** in **fire separations** shall not be obstructed, blocked, wedged open, or altered in any way that would prevent the intended operation of the **closure**.

Door in a fire separation

2.2.3.4. (1) A door in a **fire separation** shall be kept closed when not in use.

(2) A door in a **fire separation** shall be **checked** as frequently as necessary to ensure that the door remains closed.

(3) Sentences (1) and (2) do not apply to

(a) a door designed to close automatically in the event of a fire emergency, or

(b) a door for which an **approved** fire safety plan contains provisions for closing in the event of a fire emergency.

(4) A door in a **fire separation** shall be **inspected** monthly.

(5) A door opening in a **fire separation** and the areas surrounding the door opening shall be kept clear of anything that would be likely to obstruct or interfere with the free operation of the door.

Inspection of fire dampers and fire-stop flaps

2.2.3.5. **Fire dampers** and **fire-stop flaps** shall be **inspected** annually or on an **approved** time schedule.

2.2.3.6.-2.2.3.8 REVOKED: O. Reg. 256/14, s. 13.

SECTION 2.3 INTERIOR FINISHING, FURNISHING AND DECORATIVE MATERIALS

Subsection 2.3.1. General

2.3.1.1. (1) Where a **building** is refurbished or redecorated, interior finish materials used shall be in conformance with the **Building Code**.

(2) Despite Sentence (1), other interior finish materials may be **approved**.

Moveable partitions and screens

2.3.1.2. Moveable **partitions** or screens, including acoustical screens, shall have a **flame-spread rating** equal to that required for the interior finish of the area in which they are located as determined in the **Building Code**.

Subsection 2.3.2. Textile Flammability

Flame resistance of textiles

2.3.2.1. (1) Drapes, curtains, netting, and other similar or decorative materials, including textiles and films used in **buildings**, shall meet the requirements of CAN/ULC-S109, "Flame Tests of Flame-Resistant Fabrics and Films", when these materials are used in any

(a) **care and treatment occupancy** and **detention occupancy**,

(b) lobby or **exit**,

(c) **access to exit** in **assembly occupancies**, and **assembly occupancies** with an **occupant load** of more than 100 persons, or

(d) an open **floor area** exceeding 1500 m^2 in a **business and personal services occupancy**, **mercantile occupancy** or **industrial occupancy**, unless the **floor area** is divided into **fire compartments** each not exceeding 1500 m^2 in area and each having a **fire-resistance rating** not less than 1 h.

(2) Existing drapes, curtains, netting, and other similar or decorative materials, including textiles and films used in **buildings** which meet the requirements for a high degree of flame resistance as described in NOTE 4 of Test Method 27.1 of CAN2-4.2, "Textile Test Methods" are deemed to be in compliance with Sentence (1).

(3) For the purposes of Sentence (2),

"existing" means in place on November 21, 2007.

Flameproofing treatments

2.3.2.2. Flame retardant treatments shall be renewed as often as required to ensure that the material will pass the match flame **test** in NFPA 705, "Recommended Practice for a Field Flame Test for Textiles and Films".

SECTION 2.4 FIRE HAZARDS

Subsection 2.4.1. Combustible Materials

Accumulation of combustible materials

2.4.1.1. (1) Combustible materials shall not be accumulated in or around a **building** in such quantity or such location as to create a fire hazard.

(2) Combustible materials shall not be accumulated in any part of an elevator shaft, ventilation shaft, **means of egress**, **service room** or **service space**, unless the location, room or space is designed for those materials.

(3) Horizontal concealed spaces, such as crawl spaces and ceiling spaces, shall not be used for the storage of combustible materials.

(4) Combustible materials shall not be stored on a roof or adjacent to any **building** so as to create a fire hazard to the **building** or its occupants.

(5) Abandoned optical fibre cables and electrical wires and cables, with combustible insulation, jackets or sheaths, and nonmetallic raceways shall be removed from a **plenum** unless

(a) they are permanently enclosed by the structure or finish of the **building**,

(b) their removal would disturb the structure or finish of the **building**,

(c) their removal could affect the performance of cables in use, or

(d) the **plenum** is **sprinklered**.

(6) Outdoor storage receptacles, such as dumpsters, used for combustible materials shall be located so that they do not create a fire hazard to **buildings**.

Furniture in corridors serving guest suites

2.4.1.2. Despite Sentence 2.4.1.1.(2), corridors serving as **access to exits** for **guest suites** may contain solid wood or other **approved** furniture, provided the furniture does not create an obstruction to the egress route.

Waste receptacles

2.4.1.3. (1) Materials subject to spontaneous ignition, such as greasy or oily rags, shall be deposited in a receptacle conforming to Sentence (3) or be removed from the premises.

(2) Ashes shall be stored in receptacles that conform to Sentence (3) and combustible materials shall not be stored with ashes in the same receptacle.

(3) A receptacle required in Sentences (1) and (2) shall

(a) be constructed of noncombustible materials,

(b) have a close-fitting, self-closing metal cover,

(c) if the flooring material upon which it is placed is combustible, have a flanged bottom or legs not less than 50 mm high, and

(d) not be placed closer than 1 m to combustible materials, except as permitted in Clause (c).

Waste containers in hotels

2.4.1.4. (1) Waste containers in public washrooms and in other public areas in a **hotel establishment** shall be

(a) **approved**, or

(b) constructed of noncombustible material and have self-closing covers.

Lint traps for laundry equipment

2.4.1.5. Lint traps in laundry equipment shall be cleaned to prevent the accumulation of lint that creates an undue fire hazard.

Flammable or combustible liquid spills

2.4.1.6. **Flammable liquid** or **combustible liquid** spills in a **building** shall be removed immediately with an absorbent material that will not increase the hazard and shall be disposed of in a safe manner.

Subsection 2.4.2. RESERVED

Subsection 2.4.3. Smoking

Smoking prohibited

2.4.3.1. (1) If conditions are such that smoking would create a fire or explosion hazard, smoking shall not take place except in **approved** smoking areas.

(2) In supported group living residences and intensive support residences regulated under the **Services and Supports to Promote the Social Inclusion of Persons with Developmental Disabilities Act, 2008**, suitable noncombustible ashtrays shall be provided where smoking is permitted.

Signs

2.4.3.2. The areas where smoking is not permitted shall be identified by signs having black lettering 50 mm high with a 12.5 mm stroke on a yellow background, except that symbols of 150 mm by 150 mm may be used in lieu of lettering, or covered by instructions established under a fire safety plan and available to all persons.

Subsection 2.4.4. Open Flames

Open flames prohibited

2.4.4.1. (1) In a **building** used for a public assembly, open flames shall not be used in such quantity or manner as to create a fire hazard unless the use has been **approved**.

(2) Open flames shall not be used in dining areas in **care and treatment occupancies** and **care occupancies**.

(3) Despite Sentence (1), decorative and lighting devices with open flames shall not be used unless they are

(a) securely supported in noncombustible holders and located and protected so that combustible materials will not come into contact with or be ignited by the flame, or

(b) **approved**.

2.4.4.2. (1) Flaming meals or drinks shall not be served in **care and treatment occupancies** and **care occupancies**.

(2) In **assembly occupancies**, flaming meals or drinks shall be ignited only at the location of serving.

(3) In **assembly occupancies**, the refuelling of equipment used to flame meals or drinks, or to warm food, shall be carried out

(a) outside the serving area, and

(b) away from ignition sources.

(4) A portable extinguisher with a minimum rating of 5B:C shall be located on the serving cart or table at locations referred to in Sentences (2) and (3).

Devices having open flames

2.4.4.3. Devices having open flames shall be securely supported in noncombustible holders and located or protected so as to prevent accidental contact of the flame with combustible materials.

Open-air burning

2.4.4.4. (1) Open-air burning shall not take place unless

(a) it has been **approved**, or

(b) the open-air burning consists of a small, confined fire that is

(i) used to cook food on a grill, barbecue or spit,

(ii) commensurate with the type and quantity of food being cooked, and

(iii) supervised at all times.

(2) Sentence (1) does not apply to the use of an **appliance** that

(a) meets the requirements of the **Technical Standards and Safety Act, 2000**,

(b) is for outdoor use,

(c) if assembled, has been assembled in accordance with the manufacturer's instructions, and

(d) if installed, has been installed in accordance with the manufacturer's instructions.

Subsection 2.4.5. Use of Hazardous Materials

2.4.5.1. **Flammable liquids** shall not be used for cleaning purposes except where the cleaning is an essential part of a process.

2.4.5.2. Flammable gases shall not be used to inflate balloons.

Subsection 2.4.6. Electrical Hazards

Electrical wiring

2.4.6.1. Temporary electrical wiring shall not be used where it presents a fire hazard.

Subsection 2.4.7. Vacant Buildings

2.4.7.1. Vacant **buildings** shall be secured against unauthorized entry.

SECTION 2.5 FIRE DEPARTMENT ACCESS TO BUILDINGS

Subsection 2.5.1. General

Application

2.5.1.1. (1) This Section applies to fire access routes

(a) required to be constructed under the **Building Code**,

(b) required by municipal by-law, or

(c) required by this Code.

Maintaining access free of obstructions

2.5.1.2. (1) Fire access routes and access panels or windows provided to facilitate access for fire fighting operations shall not be obstructed by vehicles, gates, fences, **building** materials, vegetation, signs or any other form of obstruction.

(2) **Fire department** sprinkler and standpipe connections shall be clearly identified and maintained free of obstructions for use at all times.

Maintenance

2.5.1.3. Fire access routes shall be maintained so as to be immediately ready for use at all times by **fire department** vehicles.

Signs

2.5.1.4. **Approved** signs shall be displayed to indicate fire access routes.

SECTION 2.6 SERVICE EQUIPMENT

Subsection 2.6.1. Heating, Ventilating and Air-Conditioning

Application

2.6.1.1. This Subsection applies to cooking, heating, ventilating, air-conditioning equipment and their associated **appliances**.

Solid fuel bins

2.6.1.2. Bins containing solid fuel shall be located at least 1.2 m from any **appliance**.

Hoods, filters and ducts

2.6.1.3. (1) Hoods, ducts and filters subject to accumulations of combustible deposits shall be **checked** at intervals not greater than seven days, and shall be cleaned if the accumulation of combustible deposits creates a fire hazard.

(2) Sentence (1) does not apply to hoods, ducts or filters in an exhaust or ventilating system that serves only a single **suite** of **residential occupancy**.

Chimneys, flues and flue pipes

2.6.1.4. (1) Every **chimney**, **flue** and **flue pipe** shall be **inspected** to identify any dangerous condition

(a) at intervals not greater than 12 months,

(b) at the time of addition of any **appliance**, and

(c) after any **chimney** fire.

(2) A **chimney**, **flue**, or **flue pipe** shall be replaced or repaired to eliminate

(a) any structural deficiency or decay, and

(b) all abandoned or unused openings which are not effectively sealed in a manner that would prevent the passage of fire or smoke.

(3) **Chimneys**, **flues** and **flue pipes** that constitute a fire hazard shall be repaired or replaced in accordance with the **Building Code**.

2.6.1.5. **Chimneys**, **flues** and **flue pipes** shall be cleaned as often as necessary to keep them free from accumulations of combustible deposits.

2.6.1.6. RESERVED

Operation of systems

2.6.1.7. Heating, ventilating and air-conditioning systems, including **appliances**, **chimneys** and **flue pipes**, shall be operated and maintained so as not to create a hazardous condition.

Disconnect switches

2.6.1.8. (1) Disconnect switches for mechanical air-conditioning and ventilating systems shall be **tested** at intervals not greater than 12 months to establish that the system can be shut down in an emergency.

(2) Sentence (1) does not apply to an exhaust or ventilating system that serves only a single **suite** of **residential occupancy**.

Ventilation shafts

2.6.1.9. Ventilation shafts shall be used only for ventilating purposes.

Precautions during repairs or renovations

2.6.1.10. (1) No work on ducts involving the use of hot work equipment shall be performed unless

(a) the system has been shut down,

(b) the duct has been cleaned of any accumulations of combustible deposits, and

(c) any combustible lining and covering material that could be ignited by the work has been removed.

2.6.1.11. Precautions shall be taken, where necessary, to ensure that there is no damage to fuel supply piping or equipment that would result in fuel leakage or a fire hazard during renovations or excavations.

Exhaust and fire protection systems in cooking operations

2.6.1.12. (1) A cooking operation producing smoke or grease-laden vapours shall be provided with an exhaust system and fire protection system in accordance with NFPA 96, "Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations".

(2) Despite Sentence (1), an existing exhaust or fire protection system may be **approved**.

(3) Sentence (1) does not apply to

(a) an individual **suite** of **residential occupancy**, or

(b) a cooking operation producing insignificant amounts of smoke or grease-laden vapours that are controlled by other **approved** measures.

(4) In a **hotel establishment** regulated by Section 9.9, a cooking operation that meets the requirements of Article 9.9.2.19. is deemed to be in compliance with Sentence (1).

Maintenance of exhaust and fire protection systems

2.6.1.13. Exhaust and fire protection systems required under Article 2.6.1.12. shall be maintained in accordance with NFPA 96, "Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations".

2.6.1.14. (1) Instructions for manually operating the fire protection systems required under Article 2.6.1.12. shall be posted conspicuously in the kitchen.

(2) The instructions required in Sentence (1) shall be included in the fire safety plan where such a plan is required.

Subsection 2.6.2 Solid-Fuel-Burning Appliances

Solid-fuel-burning appliances

2.6.2.1. The installation of solid-fuel-burning **appliances** and equipment shall be in accordance with CSA-B365, "Installation Code for Solid-Fuel-Burning Appliances and Equipment".

2.6.2.2. Solid-fuel-burning **appliances** and equipment shall be maintained in accordance with CSA-B365, "Installation Code for Solid-Fuel-Burning Appliances and Equipment".

Subsection 2.6.3. Incinerators

Design, construction, installation and alteration

2.6.3.1. (1) The design, construction, installation and alteration of indoor incinerators shall conform to the requirements of the **Building Code**.

(2) The design, construction, installation, alteration and maintenance of outdoor incinerators shall conform to NFPA 82, "Standard on Incinerators and Waste and Linen Handling Systems and

Equipment", except that the **flue** venting an incinerator shall not serve as the chute conveying waste material to the incinerator.

Maintenance

2.6.3.2. All indoor and outdoor incinerators shall be maintained in accordance with NFPA 82, "Standard on Incinerators and Waste and Linen Handling Systems and Equipment".

Spark arresters

2.6.3.3. (1) Spark arresters installed in conformance with Article 2.6.3.1. shall be **inspected** and cleaned at intervals not greater than 12 months or more frequently where accumulations of debris will adversely affect operations.

(2) Burnt-out spark arresters shall be repaired or replaced.

2.6.3.4. REVOKED: O. Reg. 256/14, s. 27.

Subsection 2.6.4. Electrical Equipment Vaults

2.6.4.1. Electrical equipment vaults shall not be used for storage purposes.

2.6.4.2. Electrical equipment vaults shall be kept locked so that unauthorized persons will not have access to them.

SECTION 2.7 SAFETY TO LIFE

Subsection 2.7.1. Means of Egress and Occupant Load

Mercantile, business and personal services occupancies

2.7.1.1. Individual work areas in **business and personal services occupancies** and **mercantile occupancies** shall be located adjacent to aisles described in Articles 2.7.1.2. and 2.7.1.3.

2.7.1.2. Where two **exits** are required from **floor areas** in **buildings** of **business and personal services occupancy** and **mercantile occupancy** that are not subdivided into rooms or **suites** of rooms served by corridors giving **access to exits**, at least one aisle with access to the two **exits** and having a minimum clear width of 1100 mm shall be provided to serve the individual work areas where necessary.

2.7.1.3. Subsidiary aisles with a minimum clear width of 900 mm may branch off for a distance not exceeding 7.5 m from the aisles described in Article 2.7.1.2.

Occupant load

2.7.1.4. (1) The number of persons occupying a room or floor space in an **assembly occupancy** shall not exceed the **occupant load** for the intended use as determined in Sentence (2).

(2) The **occupant load** for any room or floor space shall be the lower of

(a) the **occupant load** as calculated in accordance with Sentences (3) to (7), or

(b) the **occupant load** for which **means of egress** are provided as determined by the **Building Code**.

(3) The **occupant load** of a **floor area** or part of a **floor area** in an **assembly occupancy** shall be based on

(a) the number of fixed seats, or

(b) the number of persons

(i) for which the area is designed, or

(ii) determined from Table 2.7.1.A. for **occupancies** other than those described in Clause (a).

(4) For the purposes of this Article, **mezzanines**, tiers and balconies shall be regarded as part of the **floor area**.

(5) Where fixed bench-type seats without arms are provided, the **occupant load** shall be based on a seat width of 450 mm per person.

(6) The **occupant load** of a room in which a dance floor is situated shall be based on that portion of the room that is not occupied by the dance floor except where the **occupant load** is determined using Subclause (3)(b)(i).

(7) At no time shall the maximum **occupant load** determined in Sentences (2) to (6) exceed the **occupant load** calculated on the basis of

(a) 0.60 m^2 of floor space per person in dining, alcoholic beverage and cafeteria space, and

(b) 0.40 m^2 of floor space per person for all other uses.

TABLE 2.7.1.A.

Forming Part of Article 2.7.1.4.

Type of Use of **Building** or **Floor Area** or Part Thereof	Area per Person m^2
Space with fixed seats	See Clause (3) (a)
Space with nonfixed seats	0.75
Stages for theatrical performances	0.75
Space with nonfixed seats and tables	0.95
Standing space	0.40
Stadia and grandstands	0.60
Bowling alleys, pool and billiard rooms	9.30
Classrooms	1.85
School shops and vocational rooms	9.30
Reading or writing rooms or lounges	1.85
Dining, alcoholic beverage and cafeteria space	1.10
Laboratories in schools	4.60
Exhibition halls other than those classified in **mercantile occupancy**	2.80

Posting occupant load

2.7.1.5. (1) When the **occupant load** as determined in Article 2.7.1.4. is more than 60 persons, the **occupant load** shall be posted in a conspicuous location.

(2) When the **occupant load** has been determined using Subclause 2.7.1.4.(3)(b)(i), a permanent sign indicating the **occupant load** shall be posted in a conspicuous location.

Nonfixed seating

2.7.1.6. (1) Nonfixed row seating in an **assembly occupancy** shall be arranged as described in Sentences (2) to (8).

(2) Aisles leading to **exits** shall be provided so that there are not more than seven seats between any seat and the nearest aisle.

(3) The minimum clear width of aisles shall be at least 1100 mm, except as permitted by Sentence (4).

(4) Aisles required in Sentence (3) may be reduced in width to 750 mm when serving 60 seats or less, or 900 mm when serving seats on one side only.

(5) Aisles shall terminate in a cross aisle, foyer or **exit** and the width of such cross aisle, foyer or **exit** shall be at least the required width of the widest aisle plus 50% of the total required width of the remaining aisles that it serves.

(6) The distance of travel to an **exit** door by an aisle shall not be greater than 30 m, except in a **sprinklered floor area** where the distance of travel shall not be greater than 45 m.

(7) If non-fixed row seating is provided for more than 200 persons in an **assembly occupancy**, the seats shall be fastened in units of not less than 4 and not more than 12 seats, or each end seat abutting an aisle shall be securely fastened to the floor.

(8) Seats may be arranged in a manner that does not meet the requirements of Sentence (7) where the aisle widths are increased by 50% above the requirements set out in Sentences (2) to (6), and where the maximum **occupant load** of the space is based on not less than 1.2 m^2 of floor space per person.

Maintenance and lighting for exits

2.7.1.7. (1) **Means of egress** shall be maintained in good repair and free of obstructions.

(2) Lighting provided for illumination in **exits** and **access to exits**, including corridors used by the public, shall be maintained.

(3) Despite Sentence (2), the lighting provided for illumination may be controlled by motion sensors installed in accordance with the **Building Code**.

Fire escapes

2.7.1.8. (1) Exterior passageways, exterior stairways and fire escapes in occupied **buildings** shall be maintained in good repair and operational and kept free of snow and ice accumulations.

(2) Where equipment is provided to melt snow or ice on exterior passageways, exterior stairways and fire escapes in an occupied **building**, the equipment shall be maintained in working order or alternative measures shall be taken as specified in Sentence (1).

Turnstiles and checkout counters

2.7.1.9. (1) Except as provided in Sentences (2) and (3), turnstiles, checkout counters, railings or barriers shall not obstruct the **exits** or **access to exits** from any room, **floor area** or **storey**.

(2) Checkout counters or control posts in retail outlets may be used within **access to exits** if there is a clear width of at least 450 mm up to a height of 914 mm.

(3) If the checkout counters or control posts exceed 914 mm in height, there shall be a clear width of at least 550 mm.

(4) The clear width may be less than that required by Sentences (2) and (3) if an alternative **means of egress** is adjacent to and plainly visible from the restricted egress.

(5) Wheeled carts shall be stored after use so as not to obstruct **access to exits** in retail outlets where wheeled carts are used by customers.

(6) Despite Sentences (1) to (5), the aggregate width of **exits** and **access to exits** shall be provided.

Subsection 2.7.2. Door Hardware

Door release hardware

2.7.2.1. (1) Every **exit** door shall be designed and installed so that, when the latch is released, the door will open in the direction of **exit** travel under a force of not more than 90 N, applied at the knob or other latch releasing device.

(2) **Approved** hardware designed to release the latch and allow the door to open in the direction of **exit** travel when a force of not more than 90 N is applied to the hardware is required on

(a) every door in an **access to exit** from a room or **suite** of **assembly occupancy** having an **occupant load** of more than 100 persons,

(b) every **exit** door from a **floor area** containing an **assembly occupancy** having an **occupant load** of more than 100 persons,

(c) every door leading to an **exit** lobby from an **exit** stair shaft in **buildings** having an **occupant load** of more than 100 persons,

(d) every exterior door leading from an **exit** stair shaft in **buildings** having an **occupant load** of more than 100 persons, and

(e) every **exit** door from a **floor area** containing a **high hazard industrial occupancy**.

(3) Every door that opens into a corridor or other facility providing **access to exit** from a **suite** or room not located within a **suite** shall swing

(a) on its vertical axis, and

(b) in the direction of **exit** travel where the room or **suite** is used or intended to be used for an **occupant load** of more than 60 persons or is designed for a **high hazard industrial occupancy**.

(4) Sentences (1) and (3) do not apply if the existing door is **approved** and either does not endanger life safety or is modified to provide life safety.

(5) Sentences (1), (2) and (3) do not apply in **rapid transit stations** which comply with the **Building Code**.

Requirements for locking, latching and fastening devices

2.7.2.2. (1) Subject to Sentences (2) and (3), locking, latching and other fastening devices shall be such that a door can be readily opened from the inside with no more than one releasing operation and without requiring keys, special devices or specialized knowledge of the door opening mechanism on,

(a) every **exit** door required by this Code, and

(b) every door that is in an **access to exit** and that opens into or is located within

(i) a **public corridor**,

(ii) a facility that provides **access to exit** from a **suite**, or

(iii) a facility that provides **access to exit** from a room serving patients or residents in a **care occupancy** or **care and treatment occupancy**.

(2) A door in an **access to exit** or an **exit** door may be equipped with an electromagnetic locking device that is **approved** or complies with the **Building Code**, unless the door is located in an elementary or secondary school or is an egress or **exit** door that serves a **high hazard industrial occupancy**.

(3) An egress door that serves a **contained use area** or **impeded egress zone** may be equipped with a locking device that can be released either locally or remotely in accordance with Sentences (4) to (6).

(4) A locking device with a local release permitted by Sentence (3) shall be capable of being unlocked with a key from both sides of the door.

(5) The controls for the remote release of a locking device permitted by Sentence (3) shall be in an area that is readily accessible to **supervisory staff**.

(6) A locking device permitted by Sentence (3) that is electrically operated shall be

(a) designed to operate on emergency power, and

(b) capable of being manually unlocked by **supervisory staff**.

(7) Sentence (1) does not apply in **rapid transit stations** that comply with the **Building Code**.

Subsection 2.7.3. Exit Lighting and Emergency Lighting

Exit signs

2.7.3.1. Required **exit** signs shall be clearly visible and maintained in a clean and legible condition.

Same

2.7.3.2. (1) **Exit** signs shall be illuminated externally or internally, as appropriate for the sign's design, while the **building** is occupied.

(2) **Exit** signs that contain self-luminous or photoluminescent material shall be maintained in accordance with

(a) the sign manufacturer's maintenance instructions, if any, and

(b) the conditions outlined in the approval of the designated evaluation body under the **Building Code**, if any.

Emergency lighting

2.7.3.3. (1) Pilot lights on emergency lighting unit equipment shall be **checked** monthly for operation.

(2) Emergency lighting unit equipment shall be **inspected** monthly to ensure that

(a) the terminal connections are clean, free of corrosion and lubricated when necessary,

(b) the terminal clamps are clean and tight as per manufacturer's specifications,

(c) the electrolyte level and specific gravity are maintained as per manufacturer's specifications, and

(d) the battery surface is kept clean and dry.

(3) Emergency lighting unit equipment shall be **tested**

(a) monthly to ensure that the emergency lights will function upon failure of the primary power supply, and

(b) annually to ensure that the unit will provide emergency lighting for a duration equal to the design criteria under simulated power failure conditions.

(4) After completion of the **test** required in Clause (3)(b), the charging conditions for voltage and current and the recovery period shall be **tested** to ensure that the charging system is in accordance with the manufacturer's specifications.

(5) Except as provided in Sentences (1) to (4), emergency lights shall be **inspected** at intervals not greater than 12 months to ensure that they are functional.

(6) Where emergency power for the lights referred to in Sentence (5) is provided from a system of batteries, the batteries shall be **inspected** and **tested** in accordance with the procedures set out in Sentences (2) to (4).

Subsection 2.7.4. Indoor Public Amusement Areas

Fire hazards

2.7.4.1. (1) **Public amusement areas** located in **buildings** shall be designed so that they do not create a fire hazard to the public using the facility.

(2) Hay, straw, shavings, textiles, films or similar combustible materials shall not be used in the design and construction or as decorative features in **public amusement areas** located in **buildings** unless **approved** provisions are made to control the hazard.

Emergency egress

2.7.4.2. (1) Indoor **public amusement areas** that involve enclosed, confined or otherwise confusing configurations shall be provided with emergency egress points that

(a) have appropriate width, height and capacity for the anticipated **occupant load**,

(b) are not more than 15 m travel from any point within the **public amusement area** except as **approved**,

(c) are clearly identified with signs, and

(d) are equipped with emergency lighting providing a minimum lighting level of 10 lx at floor or pathway level for a duration of at least 30 min, where natural lighting is not sufficient in the circumstances.

SECTION 2.8 EMERGENCY PLANNING

Subsection 2.8.1. General

Application

2.8.1.1. (1) This Section applies to **buildings** containing

(a) an **assembly occupancy**,

(b) a **care occupancy**,

(c) a **care and treatment occupancy,**

(d) a **detention occupancy**,

(e) a **residential occupancy** where the **occupant load** exceeds 10,

(f) a **retirement home**,

(g) a **business and personal services occupancy** where the **occupant load** exceeds 300,

(h) a **mercantile occupancy** where the **occupant load** exceeds 300,

(i) a **high hazard industrial occupancy** where the **occupant load** exceeds 25,

(j) a **medium hazard industrial occupancy** where the **occupant load** exceeds 100, or

(k) a **low hazard industrial occupancy** where the **occupant load** exceeds 300.

(2) This Section also applies to **buildings** or premises

(a) containing 4 **storeys** or more, counting **storeys** below **grade**,

(b) to which Subsection 3.2.1. applies,

(c) to which Article 4.1.5.6. applies,

(d) to which Article 4.12.4.1. applies,

(e) to which Section 9.3 applies,

(f) to which Sentence 9.5.3.1.(3) applies,

(g) used as a convalescent home or children's custodial home providing sleeping accommodation for more than three persons, or

(h) that have a **contained use area** or an **impeded egress zone**.

(3) This Section also applies to recreational camps regulated under the **Health Protection and Promotion Act**.

(4) This Section also applies to supported group living residences and intensive support residences regulated under the **Services and Supports to Promote the Social Inclusion of Persons with Developmental Disabilities Act, 2008**.

Instructions in emergency procedures

2.8.1.2. (1) **Supervisory staff** shall be instructed in the fire emergency procedures as described in the fire safety plan before they are given any responsibility for fire safety.

(2) **Supervisory staff** shall be available on notification of a fire emergency to fulfil their obligation as described in the fire safety plan.

(3) Subject to Article 2.8.2.2., **supervisory staff** are not required to be in the **building** on a continual basis.

2.8.1.3. (1) Employees in a **hotel establishment** shall be instructed on

(a) the procedures outlined in Article 2.8.2.1., and

(b) the use of fire fighting equipment, including portable extinguishers and, where applicable, standpipe and hose systems.

Subsection 2.8.2. Fire Safety Plan

Measures in a fire safety plan

2.8.2.1. (1) A fire safety plan shall be prepared, **approved** and implemented in **buildings** and premises to which this Section applies.

(2) A fire safety plan shall

(a) provide for the emergency procedures to be followed in case of fire, including

(i) sounding the fire alarm,

(ii) notifying the **fire department**,

(iii) instructing occupants on procedures to be followed when the fire alarm sounds,

(iv) evacuating occupants, including special provisions for persons requiring assistance,

(v) procedures for use of elevators, and

(vi) confining, controlling and extinguishing the fire,

(b) provide for the appointment and organization of **supervisory staff** to carry out fire safety duties,

(c) provide for the training of **supervisory staff** and the instruction of other occupants in their responsibilities for fire safety,

(d) include documents and diagrams showing the type, location and operation of the **building** fire emergency systems,

(e) provide for the holding of fire drills and set out fire drill procedures,

(f) provide for the control of fire hazards in the **building**,

(g) provide for the maintenance of **building** facilities provided for the safety of occupants, and

(h) provide for alternative measures to be provided for the safety of occupants during a shutdown of any or all fire protection equipment or systems.

(3) The fire safety plan shall be kept in the **building** or premises in an **approved** location.

(4) The fire safety plan shall be reviewed as often as necessary, but at least every 12 months, and shall be revised as necessary so that it takes into account changes in the use or other characteristics of the **building** or premises.

(5) Before **demolition** or construction, including hot surface applications, commences in or on the **building** or premises, the fire safety plan shall be revised to incorporate

(a) temporary alternative measures for the fire safety of the occupants during the **demolition** or construction, and

(b) temporary procedures to control fire hazards associated with the **demolition** or construction, including procedures to mitigate risks to adjacent **buildings**.

(6) The revised fire safety plan prepared under Sentence (4) or (5) shall be implemented.

(7) In the case of a **care occupancy**, **care and treatment occupancy** and **retirement home**, any training of **supervisory staff** carried out under a fire safety plan shall be recorded.

(8) The original or a copy of at least the most recent and the immediately preceding record referred to in Sentence (7) shall be retained in the **building** for a period of at least two years after being prepared and shall be made available to the **Chief Fire Official** for examination on request.

Supervisory staff

2.8.2.2. (1) There shall be sufficient **supervisory staff** available in **care occupancies**, **care and treatment occupancies**, **detention occupancies** and **retirement homes** to carry out the duties required in the fire safety plan.

(2) In **hotel establishments**

(a) there shall be sufficient **supervisory staff** available to carry out the duties as required in the fire safety plan, and

(b) in **buildings** greater than 3 **storeys** in **building height** or having a **total area** greater than 4000 m^2, **supervisory staff** shall be on duty whenever the **building** is occupied.

High buildings

2.8.2.3. (1) The fire safety plan in **buildings** within the scope of Subsection 3.2.6. of Division B of the **Building Code** shall, in addition to the requirements of Sentence 2.8.2.1.(2), include

(a) the instruction of **supervisory staff** on the use of the voice communication system,

(b) the action to be taken by **supervisory staff** in initiating any smoke control or other fire emergency systems installed in a **building** in the event of fire until the **fire department** arrives,

(c) the procedures established to facilitate **fire department** access to the **building** and fire location within the **building**, and

(d) the instructions for the **supervisory staff** and **fire department** for the operation of the fire emergency systems.

2.8.2.4. A copy of the fire emergency procedures and other duties for **supervisory staff** as laid down in the fire safety plan shall be given to all **supervisory staff**.

Posting fire emergency procedures

2.8.2.5. (1) At least one copy of the fire emergency procedures shall be prominently posted and maintained on each **floor area**.

(2) In addition to Sentence (1), in a **hotel establishment**

(a) one copy of the **approved** fire safety plan shall be posted in the main reception area, and

(b) a copy of the emergency procedures, location of **exits** and the fire safety rules shall be posted on the inside of the egress doors of each **guest suite**.

(3) Where a fire alarm system has been installed with no provisions to transmit a signal to the **fire department**, a legible notice, that is not easily removed, shall be affixed to the wall near each manual pull station with wording that the **fire department** is to be notified in the event of a fire emergency and including the emergency telephone number for the municipality or the telephone number of the **fire department**.

Subsection 2.8.3. Fire Drills

Procedures

2.8.3.1. (1) The procedure for conducting fire drills described in Clause 2.8.2.1.(2)(e) shall be included in the fire safety plan, taking into consideration

(a) the **building occupancy** and its fire hazards,

(b) the safety features provided in the **building**,

(c) the desirable degree of participation of occupants other than **supervisory staff**,

(d) the number and degree of experience of participating **supervisory staff**, and

(e) the **testing** and operation of the emergency systems installed in **buildings** within the scope of Subsection 3.2.6. of Division B of the **Building Code**.

(2) The fire drill procedures required in Sentence (1) shall be prepared in consultation with the **Chief Fire Official**.

Frequency

2.8.3.2. (1) Subject to Sentences (2), (3), (4) and (5), a fire drill shall be held for the **supervisory staff** at least once during each 12-month period.

(2) A fire drill shall be held for the **supervisory staff** at least monthly in

(a) a supported group living residence or intensive support residence regulated under the **Services and Supports to Promote the Social Inclusion of Persons with Developmental Disabilities Act, 2008**,

(b) a **care occupancy**,

(c) a **care and treatment occupancy**,

(d) a **detention occupancy**, and

(e) a day care centre for children, including a day nursery, as defined in the **Day Nurseries Act**, but excluding

(i) private-home day care, as defined in the **Day Nurseries Act**,

(ii) an extended day program or third party program operated under section 259 of the **Education Act**, and

(iii) a day nursery or part of a day nursery, as defined in the **Day Nurseries Act**, that is operated in a school, as defined in the **Education Act**, and that provides services only to children who are pupils of a board, as defined in the **Education Act**.

(3) In a school, as defined in the **Education Act**, and a private school, as defined in the **Education Act**, a total evacuation fire drill shall be held

(a) if the school or private school is in session during the fall term, at least three times during that term,

(b) if the school or private school is in session during the spring term, at least three times during that term, and

(c) if the school or private school is in session during the summer, at least three times or at least once a month during the period it is in session, whichever is less.

(4) For an extended day program or third party program operated under section 259 of the **Education Act**, or for a day nursery or part of a day nursery described in Subclause (2)(e)(iii), a total evacuation fire drill shall be held

(a) if the program, day nursery or part of a day nursery is in operation during the fall term, at least three times during that term,

(b) if the program, day nursery or part of a day nursery is in operation during the spring term, at least three times during that term, and

(c) if the program, day nursery or part of a day nursery is in operation during the summer, at least three times or at least once a month during the period it is in operation, whichever is less.

(5) A fire drill for **supervisory staff** shall be held at least every three months in a **building** to which Subsection 3.2.6. of Division B of the **Building Code** applies.

(6) In addition to the requirements of Sentence (2), in a **care occupancy**, a **care and treatment occupancy** or a **retirement home**, a fire drill for **supervisory staff** shall be carried out at least once during each 12-month period for an **approved** scenario representing the lowest staffing level complement in the **occupancy** in order to confirm that the requirements of Sentence 2.8.2.2.(1) have been met.

Notification of Chief Fire Official

2.8.3.3. The **Chief Fire Official** shall be notified within an **approved** time period before every fire drill carried out under Sentence 2.8.3.2.(6).

Records

2.8.3.4. (1) A record shall be prepared of every fire drill conducted under Article 2.8.3.2.

(2) The record shall be kept for at least 12 months after the fire drill.

Hotel employees

2.8.3.5. Every employee in a **hotel establishment** shall take part in at least one fire drill during each 12-month period.

SECTION 2.9 TENTS AND AIR-SUPPORTED STRUCTURES

Subsection 2.9.1. General

2.9.1.1. **Tents** and **air-supported structures** shall be in conformance with the **Building Code**.

2.9.1.2. This Section does not apply to **tents** that have an area of 30 m^2 or less and that are used for camping, personal or other non-commercial uses.

Subsection 2.9.2. Materials

Flameproofing treatments

2.9.2.1. Flameproofing treatments shall be renewed as often as necessary to ensure that the material will pass the match flame **test** in NFPA 705, "Recommended Practice for a Field Flame Test for Textiles and Films".

Subsection 2.9.3. Fire Hazards and Control

Combustible materials

2.9.3.1. (1) Subject to Sentences (2) and (3), hay, straw, shavings or similar combustible materials shall not be used within a **tent** or **air-supported structure** used for an **assembly occupancy.**

(2) Hay, straw or similar combustible materials may be used if necessary for the daily feeding and care of animals.

(3) Sawdust and shavings may be used if kept damp.

Smoking and open flames prohibited

2.9.3.2. Smoking shall not take place and open flame devices shall not be used in a **tent** or **air-supported structure** unless provisions have been made for such activities under the fire safety plan.

Fire alarm system or firewatch

2.9.3.3. (1) Despite Article 2.9.1.1., if a **tent** or **air-supported structure** does not have a fire alarm system that conforms to the **Building Code**,

(a) it may have an **approved** fire alarm system that does not conform to the **Building Code** where the reliability and performance of the system will provide an adequate early warning level, or

(b) a person shall be employed for firewatch duty.

2.9.3.4. (1) A person employed for firewatch duty in accordance with Article 2.9.3.3. shall

(a) be familiarized with all fire safety features, including the fire safety plan as provided in conformance with Section 2.8 and the condition of **exits**, and

(b) patrol the area to ensure that the **means of egress** are kept clear and that regulations are enforced.

Communications systems

2.9.3.5. When the conditions of Article 2.9.3.3. apply, an **approved** communications system shall be provided.

SECTION 2.10 DAY CARE CENTRES

Subsection 2.10.1. Application

Application

2.10.1.1. (1) Subject to Sentence (2), this Section applies to day care centres for children, including day nurseries as defined in the **Day Nurseries Act**.

(2) This Section does not apply to

(a) private-home day care, as defined in the **Day Nurseries Act**,

(b) an extended day program or a third party program operated under section 259 of the **Education Act**, or

(c) a day nursery or part of a day nursery, as defined in the **Day Nurseries Act**, that is operated in a school, as defined in the **Education Act**, and that provides services only to children who are pupils of a board, as defined in the **Education Act**.

Subsection 2.10.2. Combustible Materials

Artwork and teaching materials on walls

2.10.2.1. Combustible artwork and teaching materials that are attached to walls shall not exceed 20% of the area of the walls.

Waste receptacles

2.10.2.2. Waste receptacles shall be made of noncombustible materials.

Flammable and combustible liquids

2.10.2.3. **Flammable liquids** and **combustible liquids** shall be stored in conformance with Part 4 and in areas inaccessible to children.

Subsection 2.10.3. Staffing

2.10.3.1. Where children with disabilities are cared for, sufficient staff shall be present at all times during the period the children are in the centre to escort them to safety in the event of a fire emergency.

SECTION 2.11 INSULATION AND RE-INSULATION

Subsection 2.11.1. General

2.11.1.1. The installation of insulation, including the replacement of insulation, shall be carried out in accordance with the **Building Code**.

2.11.1.2. Unless otherwise **approved**, combustible insulation shall be protected as prescribed in the **Building Code**.

2.11.1.3. Insulation shall not be placed in **building** roof-ceiling or floor-ceiling assemblies, as described in Parts 3 and 9 of Division B of the **Building Code**, where the assemblies are required to have a **fire-resistance rating** unless the insulation does not reduce the **fire-resistance rating** of the assemblies.

SECTION 2.12 COVERED MALLS

Subsection 2.12.1. General

2.12.1.1. (1) Covered malls designed for ornamental and pedestrian uses only shall not be used for merchandising or public activities, except that such activities may occur on a temporary basis where they do not create a fire hazard.

(2) Where a covered mall described in Sentence (1) is used for merchandising or public activities, the fire safety plan described in Section 2.8 shall include additional provisions to offset any hazard that may be created by such activities.

2.12.1.2. Merchandising or public activities in a **sprinklered** covered mall described in Article 2.12.1.1. shall not be carried out where such activity will create a hazard exceeding the design criteria for which the sprinkler system was designed.

2.12.1.3. (1) When a covered mall having a width of 9 m or more has been provided for the purpose of considering each portion of the **building** separated by the mall as a separate **building**, no merchandising or public activities shall be carried on within the 9 m width.

(2) Despite Sentence (1), merchandising or public activities or both may be carried on within the 9 m width where they are **approved** and they do not endanger life safety or alternative measures are taken to provide life safety.

2.12.1.4. **Access to exits** within a covered mall shall be provided and maintained in conformance with Subsection 2.7.1.

2.12.1.5. Where a covered mall is used for merchandising or public activities, the activities shall be arranged so that access to fire protection equipment, including sprinkler control valves, fire hose stations, portable extinguishers and fire alarm stations, is not restricted.

2.12.1.6. Decorative materials used for merchandising or public activities in a covered mall shall conform to Subsection 2.3.2.

2.12.1.7. Where a covered mall is used for the display of fueled equipment, batteries shall be disconnected and caps for fuel tanks shall be locked or secured against tampering.

SECTION 2.13 INSTALLATION OF SMOKE ALARMS

Subsection 2.13.1. Application and Responsibility

Application

2.13.1.1. (1) Subject to Sentences (2) and (3), this Section applies to **suites** of **residential occupancy** and sleeping rooms not within a **dwelling unit**.

(2) This Section does not apply to **buildings** that are subject to Part 9.

(3) This Section does not apply if **smoke alarms** have been installed in the **dwelling unit** or sleeping room not within a **dwelling unit** in accordance with the **Building Code** as it read on or after April 6, 1998.

Landlord is responsible

2.13.1.2. Despite the definition of **owner** in Article 1.4.1.2. of Division A, in the case of a rental **suite**, only the landlord shall be considered to be the **owner** for the purpose of applying Article 1.2.1.1. of Division A to this Section.

Subsection 2.13.2. Installation Requirements

Installation requirements

2.13.2.1. (1) A **smoke alarm** shall be installed

(a) if a sleeping area in a **dwelling unit** is served by a hallway, in the hallway,

(b) if a sleeping area in a **dwelling unit** is not served by a hallway, between the sleeping area and the remainder of the **dwelling unit**,

(c) if a sleeping room is not within a **dwelling unit**, in the sleeping room, and

(d) on each **storey** without a sleeping area in a **dwelling unit**.

(2) A **smoke alarm** shall

(a) be permanently connected to an electrical circuit with no disconnect switch between the overcurrent device and the **smoke alarm**, or

(b) be battery-operated.

(3) A **smoke alarm** shall meet the requirements of CAN/ULC-S531, "Standard for Smoke Alarms".

SECTION 2.14 OUTDOOR PUBLIC AMUSEMENT AREAS

Subsection 2.14.1. General

Application

2.14.1.1. This Section applies to **public amusement areas** located outdoors.

Fire hazards

2.14.1.2. (1) Outdoor **public amusement areas** shall be designed so that they do not create a fire hazard to the public using them.

(2) Hay, straw, shavings, textiles, films or similar combustible materials shall not be used in the design and construction or as decorative features in outdoor **public amusement areas** unless **approved** provisions are made to control the hazard.

Ignition sources

2.14.1.3. Smoking shall not take place and open flames, temporary wiring, heat-producing equipment and similar ignition sources shall not be used if they would create a fire hazard, except in **approved** areas.

Emergency egress

2.14.1.4. (1) Outdoor **public amusement areas** that involve enclosed, confined or otherwise confusing configurations shall be provided with emergency egress points that

(a) have appropriate width, height and capacity for the anticipated number of occupants,

(b) are not more than 15 m travel from any point within the **public amusement area** except as **approved**,

(c) are clearly identified with signs, and

(d) are equipped with lighting providing a minimum lighting level of 10 lx at floor or pathway level for a duration of at least 30 min, where natural lighting is not sufficient in the circumstances.

Fire safety procedures

2.14.1.5. (1) The operator of the outdoor **public amusement area** shall develop and implement written fire safety procedures that include

(a) a means of alerting the persons in the **public amusement area** of a fire emergency and notifying the **fire department**,

(b) evacuation of endangered persons,

(c) appointment and instruction of **supervisory staff** to carry out fire safety duties, and

(d) fire prevention and control of fire hazards.

(2) The procedures described in Sentence (1) shall be made available to the **Chief Fire Official** upon request.

SECTION 2.15 PORTABLE OXYGEN SYSTEMS

Subsection 2.15.1. General

2.15.1.1. This Section applies to portable oxygen systems used for medical purposes in **residential occupancies** and health care facilities.

2.15.1.2. Storage, handling and use of portable oxygen systems shall be in conformance with CSA-Z305.12, “Safe Storage, Handling, and Use of Portable Oxygen Systems in Residential Buildings and Health Care Facilities”.

SECTION 2.16 INSTALLATION OF CARBON MONOXIDE ALARMS

Subsection 2.16.1. Application and Responsibility

Application

2.16.1.1. (1) Subject to Sentence (2), this Section applies to every **building** that contains a **residential occupancy** and

(a) a fuel-burning **appliance**,

(b) a fireplace, or

(c) a **storage garage**.

(2) This Section applies

(a) as of April 15, 2015, in the case of **buildings** that contain no more than six **suites** of **residential occupancy**, and

(b) as of October 15, 2015, in the case of **buildings** that contain more than six **suites** of **residential occupancy**.

Landlord is responsible

2.16.1.2. Despite the definition of **owner** in Article 1.4.1.2. of Division A, in the case of a rental **suite** of **residential occupancy**, only the landlord shall be considered to be the **owner** for the purpose of applying Article 1.2.1.1. of Division A to this Section.

Subsection 2.16.2. Installation Requirements

Installation requirements

2.16.2.1. (1) If a fuel-burning **appliance** or a fireplace is installed in a **suite** of **residential occupancy**, a carbon monoxide alarm shall be installed adjacent to each sleeping area in the **suite**.

(2) If a fuel-burning **appliance** associated with **building** services is installed in a **building**, but not within a **suite** of **residential occupancy**, a carbon monoxide alarm shall be installed

(a) in the **service room** or area where the **appliance** is installed,

(b) adjacent to each sleeping area in each **suite** of **residential occupancy** that has a common wall or common floor/ceiling assembly with the **service room** or area where the **appliance** is installed, and

(c) adjacent to sleeping rooms that are not within a **dwelling unit**.

(3) If a **building** contains a **storage garage**, a carbon monoxide alarm shall be installed

(a) adjacent to each sleeping area in each **suite** of **residential occupancy** that has a common wall or common floor/ceiling assembly with the **storage garage**, and

(b) adjacent to sleeping rooms that are not within a **dwelling unit**.

(4) A carbon monoxide alarm shall

(a) be permanently connected to an electrical circuit with no disconnect switch between the overcurrent device and the carbon monoxide alarm,

(b) be battery-operated, or

(c) be plugged into an electrical receptacle.

(5) A carbon monoxide alarm shall meet the requirements of CSA-6.19, “Residential Carbon Monoxide Alarming Devices” or UL 2034, “Single and Multiple Station Carbon Monoxide Alarms”.

(6) A carbon monoxide alarm shall be mechanically fixed, attached, plugged in or placed at the manufacturer’s recommended height or, if the manufacturer has not recommended a height, on or near the ceiling.

(7) A carbon monoxide alarm that is installed adjacent to a sleeping area shall be equipped with an alarm that is audible throughout the sleeping area, even if any doors between the carbon monoxide alarm and any parts of the sleeping area are closed.

O. Reg. 213/07, Division B, Part 2; O. Reg. 150/13, ss. 4-12; O. Reg. 194/14, ss. 5, 6; O. Reg. 256/14, ss. 4-46; O. Reg. 275/14, ss. 1-4.

PART 3
OUTDOOR AND INDOOR STORAGE

SECTION 3.1 GENERAL

Subsection 3.1.1. Application

Application

3.1.1.1. This Part applies to the use, storage and handling of hazardous materials and combustible materials.

SECTION 3.2 OUTDOOR STORAGE

Subsection 3.2.1. Outdoor Storage of Tires

Application

3.2.1.1. (1) This Subsection applies to outdoor tire storage yards where tires or shredded tires are stored if the bulk volume of the stored product exceeds 300 m^3.

(2) This Subsection does not apply if the stored tires or shredded tires in the storage yard are covered by a minimum depth of 150 mm of noncombustible material.

Fire protection provisions

3.2.1.2. (1) Open-air burning of tires or shredded tires shall not take place in storage yards.

(2) Hot works or heating devices shall not be operated in storage yards.

(3) Smoking shall not take place in storage yards, except as provided in Subsection 2.4.3.

(4) Storage piles of tires or shredded tires in storage yards shall not be located beneath electrical power lines with a voltage in excess of 750 volts or that supply power to fire emergency systems.

Fire safety planning

3.2.1.3. (1) Storage yards shall comply with the requirements of Section 2.8.

(2) The fire safety plan shall include provisions respecting access within the **fire department** access routes for water supply systems or other measures that are **approved** under Article 3.2.1.10.

(3) At least one copy of the fire emergency procedures shall be prominently posted and maintained at the storage yard.

(4) The telephone number of the **fire department** and location of the nearest telephone shall be posted conspicuously in attended locations.

Pile dimensions, locations and clearance

3.2.1.4. (1) Individual storage piles of tires or shredded tires in a storage yard shall not be more than 3 m in height and 100 m^2 in area.

(2) Despite Article 3.5.2.1., storage piles of tires or shredded tires in a storage yard shall be located

(a) at least 15 m from property lines,

(b) at least 15 m from **buildings**,

(c) at least 4.5 m from combustible ground vegetation comprised of grass and weeds, and

(d) at least 30 m away from combustible ground vegetation comprised of brush and forested areas.

(3) Despite Article 3.5.2.2., individual storage piles of tires or shredded tires in a storage yard shall be separated

(a) from other individual storage piles of tires or shredded tires by a clear space of at least 6 m, and

(b) from other individual storage piles by a clear space of at least 6 m.

Clearance for bulk volume over 4800 m^3

3.2.1.5. (1) This Article applies if the bulk volume of stored tires and shredded tires in a storage yard is more than 4800 m^3.

(2) The tires and shredded tires shall be stored in a group of no more than 16 individual storage piles.

(3) A minimum clearance of 22 m shall be provided around the perimeter of each group of storage piles.

Alternative approved measures

3.2.1.6. Despite Articles 3.2.1.4. and 3.2.1.5., other **approved** storage pile arrangements may be used to prevent the spread of fire.

Fire department access

3.2.1.7. (1) Each storage yard shall be provided with fire access routes.

(2) The fire access routes shall

(a) have a clear width of at least 6 m,

(b) be designed to support the loads imposed by fire fighting equipment,

(c) be surfaced with material designed to permit accessibility under all climatic conditions,

(d) be connected with a public thoroughfare in at least two places that are located as remotely from each other as is possible in the circumstances,

(e) be located within all storage pile clearances identified in Clauses 3.2.1.4.(2)(a) and (b) and Article 3.2.1.5.,

(f) be at least 6 m away from any storage pile,

(g) be accessible and unobstructed at all times, and

(h) be located so that every point in the storage yard where storage piles are located is within 50 m of a fire access route.

(3) Despite Sentences (1) and (2), alternate fire access routes may be provided if

(a) the routes permit fire fighting vehicles and equipment access and permit the use of fire suppression techniques appropriate in the circumstances, and

(b) the routes are **approved**.

Fencing and gateways

3.2.1.8. (1) If the bulk volume of stored tires and shredded tires is more than 600 m^3, the storage yard shall be surrounded by a firmly anchored fence or other **approved** method of security that controls unauthorized access to the storage yard.

(2) If a fence is used, the fence shall be at least 1.8 m high and constructed to discourage climbing.

(3) The fence shall have gateways with a clear width of at least 3.5 m.

(4) The gateways shall be high enough to permit the entry of **fire department** vehicles.

(5) The gateways shall be kept clear of obstructions so that the gates may be fully opened at all times.

(6) The gateways shall be locked when the storage yard is not staffed.

Water supply

3.2.1.9. (1) A public or private water supply shall be provided so that any part of the storage yard can be reached by using not more than 150 m of hose.

(2) If the bulk volume of stored tires and shredded tires is between 300 m^3 and 1200 m^3, the water supply system shall be capable of supplying at least 1860 L/min for a minimum of 3 h.

(3) If the quantity of stored product is 1200 m^3 or more, the water supply system shall be capable of supplying at least 3780 L/min for a minimum of 3 h.

(4) If on-site reservoirs or other established water supplies are used as a **fire department** draft source to meet the requirements of Sentences (1), (2) and (3), they shall be equipped with dry hydrants in accordance with Chapter 9 of NFPA 1142, "Standard on Water Supplies for Suburban and Rural Fire Fighting".

Water supply alternative measures

3.2.1.10. Despite Article 3.2.1.9., other water supply systems or other measures may be used if the systems or measures will provide sufficient fire suppression capability in the circumstances and if the systems or measures are **approved**.

Portable extinguishers

3.2.1.11. A motorized vehicle operating in a storage yard shall be equipped with at least one portable extinguisher having a minimum rating of 2A:30B:C.

Subsection 3.2.2. Outdoor Storage of Lumber and Forest Products

Application

3.2.2.1. (1) Subject to Sentence (2), this Subsection applies to outdoor storage yards where lumber and forest products are stored.

(2) This Subsection does not apply if

(a) the storage yard is **approved** and does not create a fire hazard or endanger life safety, or

(b) the storage yard is **approved** and **approved** alternative measures to the requirements set out in this Subsection are taken to prevent the creation of a fire hazard and protect life safety.

Surface of ground

3.2.2.2. (1) Except as permitted in Sentence (2) and Article 3.2.2.3., storage sites for lumber and other forest products shall consist of level and solid ground that is paved or surfaced with noncombustible material.

(2) Soft storage beds may be used for logs where embedment of stones or cinders may cause damage to cutting knives.

Surface under piling

3.2.2.3. (1) Forest products shall not be piled on refuse-filled or sawdust-filled land except where the site is covered with a layer of compacted earth to a minimum depth of 150 mm.

(2) Peat and humus are not acceptable materials for compacted earth cover in Sentence (1).

Clearance for yard storage areas

3.2.2.4. (1) Fire exposure to the yard areas from the mill operations and other structures shall be limited by providing clear space.

(2) The width of clear space shall be based upon the severity of exposure that will vary with the area, height, **occupancy**, construction and protection of the exposing structure and the type of piling and height of adjacent lumber piles.

(3) To provide for fire fighting operations, the clear space permanently available shall not be less than 4.5 m.

Clearance for stickered lumber piles

3.2.2.5. (1) Stickered lumber piles in storage yards shall be located at least 15 m from property lines and **buildings**.

(2) Large size timbers and flat-piled stock may be stored or piled on the perimeter of the yard.

Clearance from vegetation

3.2.2.6. Storage yards shall be maintained free of combustible ground vegetation, including grass and weeds, for 4.5 m from the stored material and 30 m from brush and forested areas.

Wood waste accumulation prohibited

3.2.2.7. Sawdust, chips and other waste material shall not be accumulated in piling areas in storage yards.

Separation of treated lumber piles

3.2.2.8. Lumber and timber treated with **combustible liquids** shall be stored in piles that are separated from other stored material so that the distance between piles is at least twice the height of the treated pile, but not less than 4.5 m.

Storage beneath power lines

3.2.2.9. Stickered lumber piles, and piles of lumber and timber treated with **combustible liquids** shall not be stored beneath electrical power lines having a voltage in excess of 750 volts or that supply power to fire emergency systems.

Pile heights

3.2.2.10. Pile heights for stickered lumber piles shall not exceed 6 m.

3.2.2.11. Pile heights for randomly stacked or unranked piles shall not exceed 6 m unless special fire suppression equipment, such as portable turrets, deluge sets and monitor towers, is installed.

Fire department access

3.2.2.12. (1) Unless otherwise **approved**, each storage yard shall be provided with at least two fire access routes in conformance with Sentence (2).

(2) The fire access routes required in Sentence (1) shall

(a) have a clear width of at least 6 m, unless it can be shown that lesser widths are satisfactory,

(b) be designed to support the expected loads imposed by fire fighting equipment and be surfaced with concrete, asphalt or other material designed to permit accessibility under all climatic conditions,

(c) be connected with a public thoroughfare, and

(d) be located as remotely as is possible in the circumstances from each other.

3.2.2.13. (1) Where storage areas are fenced or otherwise enclosed, gateways having a clear width of at least 3.5 m shall be provided to permit entry of **fire department** vehicles.

(2) Gateways shall be kept clear of obstructions so that gates may be opened fully at all times.

3.2.2.14. Groups of lumber piles shall be arranged with a maximum width of 15 m and a maximum length of 45 m, with **fire department** access routes surrounding each group of piles.

3.2.2.15. Vehicle parking and equipment storage is permitted on one side of a fire access route provided the clear width of the access route, as required under Clause 3.2.2.12.(2)(a), is maintained.

3.2.2.16. RESERVED

Burning of wood waste materials

3.2.2.17. Shavings, sawdust and refuse materials shall be burned only in **boilers** or **furnaces**, or in incinerators or refuse burners conforming to Subsection 2.6.3.

3.2.2.18. Refuse burners or incinerators referred to in Article 3.2.2.17. shall be located at least 15 m from **buildings**, property lines or piles of logs or lumber.

3.2.2.19. Where the size and design of the burner or spark-arresting screen, the prevailing winds or the location and arrangement of yard storage creates a fire hazard by conforming to Article 3.2.2.18., an **approved** increase in clear space referred to in Article 3.2.2.18. shall be provided to alleviate the fire hazard.

3.2.2.20. A refuse bin conforming to Sentence 2.4.1.3.(3) shall be provided at each **boiler**, **furnace**, incinerator and refuse burner referred to in Article 3.2.2.17.

3.2.2.21. Salamanders, braziers or other open flames shall not be used in storage yards.

Smoking prohibited

3.2.2.22. Smoking shall not take place in storage yards, except as provided in Subsection 2.4.3.

3.2.2.23. The telephone number of the **fire department** and location of the nearest telephones shall be posted conspicuously in working locations in the open yard and in each **building**.

Fire extinguishing provisions

3.2.2.24. (1) Outdoor lumber storage shall have fire protection provisions consisting of

(a) 200 L vessels with lids, having an opening of 457 mm least dimensions, located so that no person will have to travel more than 25 m from any part of the storage yard to reach a vessel, and

(b) three 12 L standard fire pails at each vessel.

(2) The water stored in the vessels and pump tanks shall be protected from freezing.

(3) The vessels, pails and pump tanks shall be painted red with the word “FIRE” in black painted thereon.

(4) Portable extinguishers having a 2A or higher rating conforming to the requirements of Section 6.2 may be provided in lieu of the requirements of Sentence (1).

3.2.2.25. Portable extinguishers shall be provided in conformance with Section 6.2 in each **building** located in a storage yard.

Hydrant systems and water supply

3.2.2.26. The water supply available shall be adequate for hose streams and monitor towers, based on the provision of **approved** fire protection.

Hydrant system

3.2.2.27. A storage yard shall be provided with a hydrant system or mobile pumping equipment that can reach all parts of the storage yard with no more than 60 m of hose.

Subsection 3.2.3. Outdoor Storage of Wood Chips

Application

3.2.3.1. (1) Subject to Sentence (2), this Subsection applies to outdoor storage yards where wood chips are stored.

(2) This Subsection does not apply if

(a) the storage yard is **approved** and does not create a fire hazard or endanger life safety, or

(b) the storage yard is **approved** and **approved** alternative measures to the requirements set out in this Subsection are taken to prevent the creation of a fire hazard and protect life safety.

Surface of ground

3.2.3.2. The storage site shall be well drained and be level, solid ground or paved with asphalt, concrete or other hard surface material.

3.2.3.3. The ground surface between piles shall be kept free of combustible materials.

Vegetation removal

3.2.3.4. (1) Weeds, grass and similar vegetation shall be removed from the yard.

(2) Portable open-flame weed burners shall not be used in chip storage yards.

Pile dimensions

3.2.3.5. Piles shall not exceed 18 m in height, 90 m in width and 150 m in length unless temporary water pipes with hose connections are laid on the top surface of the pile.

Fire department access

3.2.3.6. (1) Space shall be maintained between chip piles and exposing structures, yard equipment or stock equal to

(a) twice the pile height for combustible stock or **buildings**, or

(b) the pile height for noncombustible **buildings** and equipment.

(2) Despite Sentence (1), space between chip piles and exposing structures, yard equipment or stock shall not be less than 9 m.

3.2.3.7. Where storage areas are fenced or otherwise enclosed, gates at least 3.5 m in width shall be provided to permit entry of **fire department** vehicles.

3.2.3.8. (1) Permanently installed access walkways at least 1.8 m wide and constructed of noncombustible material shall be provided so that hose streams may be directed on any part of the piles.

(2) Despite Sentence (1), other **approved** means may be used to ensure adequate **fire department** access to the piles.

3.2.3.9. Piles exceeding 150 m in length shall be surrounded by **fire department** access routes at least 9 m wide.

Smoking prohibited

3.2.3.10. Smoking shall not take place in storage yards, except as provided in Subsection 2.4.3.

Fire extinguishing provisions

3.2.3.11. Portable extinguishers for **Class A fires** shall be provided on vehicles operating on chip piles in addition to the units for **Class B fires** normally required for the vehicles.

3.2.3.12. (1) Hose houses or cabinets shall be provided around the perimeter of chip piles at intervals not exceeding 120 m.

(2) One 75 m length of 65 mm hose and two portable extinguishers having a 2A or higher rating and conforming to Section 6.2 shall be installed in each hose house or cabinet.

(3) Each hose required in Sentence (2) shall be connected to a water supply capable of supplying 1140 L/min of water to it at a pressure that will allow the hose stream to reach the top of the chip pile.

3.2.3.13. Portable extinguishers in conformance with Section 6.2 shall be provided in transfer houses.

SECTION 3.3 INDOOR STORAGE

Subsection 3.3.1. Indoor Tire Storage

Application

3.3.1.1. This Subsection applies to **buildings** used for the storage of tires in which the bulk volume of tires stored in one **fire compartment** exceeds 425 m^3.

Tire pile dimensions

3.3.1.2. A single pile of tires in a tire storage location shall occupy an area not greater than 500 m^2 with a maximum length of 30 m.

3.3.1.3. (1) The maximum piling height of tires shall not exceed the height used for the design of the fixed extinguishing system installed as required in Article 3.3.1.8.

(2) The maximum piling height allowed in Sentence (1) shall be posted in conspicuous locations.

Pile clearance

3.3.1.4. A clearance of at least 914 mm shall be maintained between the tops of piles and sprinkler head deflectors.

3.3.1.5. Aisles between individual piles shall be at least 1.8 m wide.

3.3.1.6. A clearance of at least 600 mm shall be maintained between piles of tires and columns and enclosing walls.

3.3.1.7. A tire storage location shall be classified as a **medium hazard industrial occupancy**.

Warehouse fire extinguishing systems

3.3.1.8. (1) If the **floor area** of a tire storage location exceeds 250 m^2, the **floor area** shall be provided with a sprinkler system installed in accordance with NFPA 13, “Standard for the Installation of Sprinkler Systems”.

(2) The design of the sprinkler system required in Sentence (1) shall be based on the maximum piling height available.

3.3.1.9. A standpipe and hose system shall be installed in conformance with NFPA 13, “Standard for the Installation of Sprinkler Systems”.

Portable extinguishers

3.3.1.10. (1) In addition to the requirements of Section 6.2, multi-purpose dry chemical portable extinguishers having a rating of 4A:80B shall be installed

(a) in every 500 m^2 of **floor area**, and

(b) so that the distance travelled to any extinguisher does not exceed 25 m.

Subsection 3.3.2 Indoor General Storage

Application

3.3.2.1. (1) Subject to Sentences (2) and (3), this Subsection applies to the indoor general storage of combustible solids, noncombustible solids with combustible packaging or storage aids, including storage in bin boxes, shelves or **racks**.

(2) This Subsection, except Article 3.3.2.6., does not apply to special hazard commodities covered elsewhere in this Code.

(3) This Subsection does not apply to the bulk storage of unpackaged grain, coal or similar commodities.

Storage dimensions

3.3.2.2. (1) An **individual storage area** shall not exceed 500 m^2 in **buildings** that are not **sprinklered**.

(2) An individual storage area shall not exceed 1000 m^2 in **sprinklered buildings**.

(3) Heights of storage in **buildings** that are not **sprinklered** shall not exceed 4.5 m.

(4) The maximum height of storage of any **individual storage area** shall be determined according to

(a) the stability of the stored products as it relates to the base area and shape, and

(b) the height limitations otherwise set in this Subsection.

(5) **Buildings** containing **individual storage areas** that exceed 6.4 m in height shall be protected with

(a) a sprinkler system designed and installed in accordance with NFPA 13, “Standard for the Installation of Sprinkler Systems”, or

(b) a sprinkler system installed before January 1, 2015 that has been **approved**.

Pile clearance

3.3.2.3. (1) The clearance between sprinkler head deflectors and the top of any storage shall not be less than 457 mm.

(2) Where the top of any storage is above the lower chords of floor or roof structural framing members, a horizontal clear space of at least 300 mm shall be maintained between the storage and the structural members.

Fire access aisles

3.3.2.4. At least one main aisle having a width equal to at least half the height of the highest adjacent pile and extending the length of the structure shall be provided but in no case shall the width of the aisle be less than 2.4 m.

3.3.2.5. Aisles separating **individual storage areas** described in Article 3.3.2.2. shall be at least 2.4 m wide.

3.3.2.6. (1) Adequate access for fire fighting purposes shall be provided and maintained to all portions of the premises, in conformance with Sentences (2) to (6).

(2) Access aisles not less than 1.0 m wide shall be provided to **exits**, to **fire department** access panels and to fire protection equipment.

(3) Aisles shall be maintained free of obstruction.

(4) Except as permitted by Sentence (5), at least one main access aisle shall extend the length of the **building** with a minimum width of

(a) 2.4 m for storage heights not more than 6 m, and

(b) 3.6 m for storage heights of more than 6 m.

(5) Narrower aisles may be **approved** where the **building** is **sprinklered** and the sprinkler design is based on aisle widths less than required by Sentence (4) but in no case shall the aisle width be less than the aisle width on which the sprinkler design is based.

(6) In storage areas that exceed 200 m^2, main access aisles referred to in Sentence (4) shall be accessible from at least two **fire department** access points, which shall be located such that, in the event one becomes unusable due to fire, the other will still allow emergency responders to access the **building**.

3.3.2.7. Wall clearances of at least 600 mm shall be maintained where stored commodities may swell or expand with the absorption of water.

Palletized storage arrangements

3.3.2.8. Palletized storage shall be arranged so that unobstructed horizontal channels formed by the top and bottom of pallets shall not exceed 15 m.

3.3.2.9. Except as permitted in Article 3.3.2.10., pallets and dunnage not in use shall be stored outdoors and be located so as to avoid an exposure hazard.

Pallet storage

3.3.2.10. (1) Except as permitted in Sentences (2) and (3), combustible pallets shall be stored outdoors in conformance with Section 2.4.

(2) Indoor storage of combustible pallets is permitted in a **building** that is not **sprinklered**, provided

(a) the height of storage of combustible pallets is not more than 1.2 m,

(b) the width of an **individual storage area** is not more than 7.5 m, and

(c) the aggregate area of storage is not more than

(i) 100 m^2 for wood or solid deck non-expanded polyethylene pallets, or

(ii) 50 m^2 for plastic pallets not described in Subclause (i).

(3) In a **sprinklered building**, the storage of combustible pallets is permitted to exceed the values in Sentence (2) provided such storage conforms to NFPA 13, “Standard for the Installation of Sprinkler Systems”.

Smoking prohibited

3.3.2.11. Smoking shall not take place in indoor storage areas, except as provided in Subsection 2.4.3.

Subsection 3.3.3. Indoor Storage of Ammonium Nitrate

Application

3.3.3.1. (1) This Subsection applies to the storage of ammonium nitrate in a pure form or in a mixture, if

(a) the storage exceeds 1000 kg, and

(b) the mixture contains 60% or more ammonium nitrate by weight.

(2) This Subsection does not apply to

(a) blasting agents, or

(b) ammonium nitrate and ammonium nitrate mixture storage on railways regulated by the Canadian Transport Commission.

Storage buildings

3.3.3.2. (1) A **building** used for the storage of ammonium nitrate shall not be more than 1 **storey** in **building height**.

(2) A **building** used for the storage of ammonium nitrate shall not

(a) have **basements** or crawl spaces, or

(b) contain open floor drains, tunnels, elevator pits or other pockets which might trap molten ammonium nitrate.

(3) A **building** used for the storage of ammonium nitrate shall have not less than 70 cm^2 in vent area for each square metre of storage area unless mechanical ventilation is provided.

(4) All flooring in storage areas shall be of noncombustible materials.

(5) A **building** used for the bulk storage of ammonium nitrate shall be designed to prevent contact with **building** material that

(a) will cause the ammonium nitrate to become unstable,

(b) may corrode or deteriorate by reason of contact with the ammonium nitrate, or

(c) will become impregnated by ammonium nitrate.

(6) The distance between an ammonium nitrate storage facility and the property line of another property shall be not less than

(a) 15 m where the other property contains a warehouse for **flammable liquids** storage or a facility for loading or unloading **flammable liquids**,

(b) 15 m where the other property contains a **building** classified as **medium hazard industrial occupancy** or **low hazard industrial occupancy** provided the ammonium nitrate storage facility does not exceed 200 t of ammonium nitrate,

(c) 30 m where the other property contains a **building** classified as **industrial occupancy** not covered in Clause (b), **flammable liquids storage tanks**, flammable gas **storage tanks** or other tanks containing a hazardous substance, or

(d) 90 m for all other **occupancies**.

(7) The distance in Clause (6)(b) may be reduced to 7.5 m if a **firewall** that has a **fire-resistance rating** not less than 2 h is provided between the storage facility and the **building** it exposes.

(8) The distance in Clause (6)(c) may be reduced to 15 m for a **medium hazard industrial occupancy** or a **low hazard industrial occupancy** if a **firewall** that has a **fire-resistance rating** not less than 2 h is provided between the storage facility and the **building** it exposes.

(9) The use of **buildings** or structures that do not conform with the provisions of Sentences (6) to (8) may be **approved** where the **buildings** or structures do not constitute a hazard to life or property from fire or explosion.

(10) Except where other forms of exposure protection are **approved**, the walls of the exposed side of a storage **building** shall be noncombustible where such walls are within 15 m of a

(a) combustible **building**,

(b) forest, or

(c) pile of combustible material.

Industrial trucks

3.3.3.3. (1) In addition to the requirements of Section 3.4, industrial trucks used or stored within the **building** shall be maintained so that fuels or hydraulic fluids do not contaminate the ammonium nitrate.

(2) Fuel-dispensing operations shall not be carried out in **buildings** where ammonium nitrate is stored.

(3) An internal combustion engine shall be continuously monitored at all times in a **building** where ammonium nitrate is stored unless the engine is located in an area that will prevent the spread of a fire originating in the engine.

(4) Industrial trucks used for the transportation of ammonium nitrate shall be cleaned of remaining material following use.

Portable extinguishers

3.3.3.4. In addition to the requirements of Section 6.2, pressurized-water portable extinguishers having a rating of 2A or larger shall be installed.

Storage

3.3.3.5. (1) **Individual storage areas** of bagged ammonium nitrate shall not exceed 1500 m^2 in area and 9 m in height.

(2) Bags of ammonium nitrate shall not be stored closer than 400 mm from walls and **partitions** and not closer than 900 mm from a roof, overhead supporting beam or a sprinkler head deflector.

(3) Ammonium nitrate shall not be stored in an area where the ambient temperature is such that it can become unstable or susceptible to undesirable reactions.

(4) Ammonium nitrate storage shall be identified by signs of contrasting colours indicating the contents with letters 50 mm high.

(5) Bulk storage of ammonium nitrate shall be located indoors or in enclosed bin-type structures.

(6) Bins used for the storage of ammonium nitrate shall not contain galvanized iron, copper, lead or zinc, or other materials that may contaminate or be corroded by ammonium nitrate.

Automatic sprinklers

3.3.3.6. (1) Ammonium nitrate shall be stored only in **buildings** equipped with an automatic sprinkler system installed in conformance with NFPA 13, “Standard for the Installation of Sprinkler Systems”.

(2) Sentence (1) does not apply where the existing situation is **approved** and does not endanger life safety or alternative measures to the requirements set out in Sentence (1) are taken to provide life safety.

Disposal

3.3.3.7. (1) Spilled ammonium nitrate material shall be disposed of in conformance with Sentences (2) to (5).

(2) Uncontaminated material may be rebagged in suitable slip-over bags and sealed to prevent spillage.

(3) Unsalvageable material shall be removed by sweeping and burial.

(4) After flushing and scrubbing contaminated areas very thoroughly to dissolve all material, the residue shall be washed away with hoses.

(5) Empty bags shall be disposed of by burning outdoors where permitted in a safe area, or by burial.

Explosives prohibited

3.3.3.8. Explosives shall not be used to break up caked ammonium nitrate.

Smoking and open flames prohibited

3.3.3.9. (1) Smoking shall not take place and open flames shall not be used in **buildings** used for the storage of ammonium nitrate.

(2) Signs with letters 50 mm high indicating that ammonium nitrate is being stored and that smoking is not permitted shall be prominently displayed near each entrance on the exterior of **buildings** identified in Sentence (1).

Heating equipment

3.3.3.10. Heating equipment shall be separated from any storage area in conformance with the requirements of the **Building Code**.

Subsection 3.3.4. Indoor Storage of Combustible Fibres

Application

3.3.4.1. This Subsection applies to the indoor storage of **combustible fibres**.

Building size for storage and handling of combustible fibres

3.3.4.2. **Buildings** used for the storage and handling of **combustible fibres** shall comply with the height and area limitations of the **Building Code** for **medium hazard industrial occupancies**.

Loose fibre storage

3.3.4.3. (1) Up to 3 m^3 of loose **combustible fibres** may be stored in a single **fire compartment** if they are kept in metal-lined bins equipped with self-closing metal-lined covers.

(2) Quantities of loose **combustible fibres** exceeding 3 m^3 but not exceeding 15 m^3 shall be stored in rooms separated from the remainder of the **building** by a **fire separation** that has a **fire-resistance rating** not less than 1 h.

(3) Quantities of loose **combustible fibres** exceeding 15 m^3 but not exceeding 30 m^3 shall be stored in rooms separated from the remainder of the **building** by a **fire separation** that has a **fire-resistance rating** not less than 2 h.

(4) Quantities of loose **combustible fibres** that exceed 30 m^3 shall be stored in an individual room

(a) that is **sprinklered** in accordance with NFPA 13, “Standard for the Installation of Sprinkler Systems”, and

(b) that is separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 2 h.

(5) Quantities of loose **combustible fibres** stored in an individual room referred to in Sentence (4) shall be arranged so that an individual pile does not exceed 250 m^2 in area and is separated from other piles by aisles that are at least 2.4 m wide.

(6) Clause (4)(a) does not apply to a sprinkler system that met the requirements of this Code on December 31, 2014, as it read on that day.

Baled fibre storage

3.3.4.4. (1) Baled **combustible fibres** shall be stored so that

(a) a single pile will not contain more than 700 m^3,

(b) the maximum height of any single pile will not exceed 4.5 m,

(c) piles are separated by aisles not less than 1.5 m wide, and

(d) the clearance between piles and **building** walls is not less than 1 m.

Baled storage piles

3.3.4.5. The sides of baled storage piles shall be inclined back from the base of the pile with a slope of not less than 1 m for each 10 m of height.

Clearance for sprinklers and structural framing

3.3.4.6. (1) The clearance between sprinkler head deflectors and the tops of storage piles shall not be less than 457 mm.

(2) If the storage piles are above the lower chords of floor or roof structural framing members, a horizontal clear space of 300 mm shall be maintained between the storage and the structural members.

Heating equipment

3.3.4.7. (1) Unless controlled in a manner that will not create a fire or explosion hazard, fuel-fired **appliances** and electrical heating elements shall not be used in a storage area for **combustible fibres**.

(2) Shields shall be provided that will prevent stored material from coming within 300 mm of any part of a heating system heat distribution network.

Standpipe and hose system installations

3.3.4.8. Standpipe and hose systems shall be installed in accordance with the **Building Code**.

Portable extinguishers

3.3.4.9. Portable extinguishers shall be provided in accordance with Section 6.2.

Smoke vents

3.3.4.10. If **combustible fibres** are stored in a **building**, automatic smoke venting hatches that are manually operable from remote locations and have a combined opening area of 64 cm^2 for each square metre of **floor area** shall be provided.

Subsection 3.3.5. Indoor Storage of Matches

Classification, labelling and packaging

3.3.5.1. Matches shall be classified, packaged and labelled in accordance with the **Transportation of Dangerous Goods Act (Canada)**.

Storage compartment

3.3.5.2. If the aggregate volume of piles of stored matches exceeds 3 m^3, storage compartments shall be constructed in accordance with the requirements of the **Building Code** for **high hazard industrial occupancies**.

Carton pile arrangements

3.3.5.3. In a storage area with an aggregate volume of piles of stored matches that exceeds 3 m^3, shipping cartons containing matches shall be arranged in piles not exceeding 3 m in height or 40 m^3 in volume, with each pile separated by aisles at least 2.4 m wide.

Mixed storage

3.3.5.4. In mixed storage areas, matches shall be stored in a specific area separated from the remainder of the storage by a clear space of at least 2.4 m.

Storage restrictions

3.3.5.5. Matches shall not be stored within 3 m of any elevator shaft opening, stairway or other vertical opening.

SECTION 3.4 INDUSTRIAL TRUCKS

Subsection 3.4.1. General

General

3.4.1.1. The designation, use, maintenance and operation of industrial trucks, including fork lifts, tractors, sweepers and motorized hand trucks, shall comply with NFPA 505, “Fire Safety Standard for Powered Industrial Trucks Including Type Designations, Areas of Use, Conversions, Maintenance, and Operation”.

Subsection 3.4.2. Industrial Trucks

Fuel-fired industrial trucks

3.4.2.1. (1) Fuel-fired industrial trucks shall be stored in

(a) detached **buildings**,

(b) areas separated from the remainder of the storage area by a **fire separation** having a **fire-resistance rating** of not less than 1 h, or

(c) areas where the vehicles do not create a fire hazard to the storage area.

(2) Except as provided in Sentence (3), industrial trucks shall be refuelled only at designated locations outside **buildings**.

(3) Industrial trucks that are fuelled by replaceable propane cylinders are permitted to have their cylinders replaced indoors provided

(a) cylinder replacement is done at a safe location that is at least 7.5 m from ignition sources, open pits and underground entrances,

(b) the cylinder valves are closed, and

(c) when an automatic quick-closing coupling that closes in both directions when uncoupled and **listed** to ANSI/UL 558, “Industrial Trucks, Internal Combustion Engine-Powered”, is not provided, the engine is operated until the fuel in the system is consumed.

(4) Each fuel-fired industrial truck shall be equipped with at least one portable extinguisher having a minimum rating of 2A:30B:C.

(5) Propane cylinders shall be stored in conformance with Section 5.6.

Battery-powered industrial trucks

3.4.2.2. (1) Battery charging installations for battery-powered industrial trucks shall be located

(a) at least 1.5 m from combustible materials,

(b) when serving more than two trucks, in well ventilated areas,

(c) in areas where flammable gases or vapours, **combustible dusts** or **combustible fibres** are not present in hazardous quantities, and

(d) in areas where precautions are taken to prevent ignition sources, such as open flames, sparks or electric arcs.

(2) Battery charging installations for battery-powered industrial trucks shall be equipped with at least one portable extinguisher having a minimum rating of 2A:30B:C.

(3) Facilities shall be provided at battery charging installations for flushing and neutralizing spilled electrolyte and for protecting charging apparatus from mechanical damage.

Training

3.4.2.3. (1) Only trained and authorized personnel shall

(a) operate industrial trucks,

(b) replace or refuel propane cylinders for fuel-fired industrial trucks,

(c) refuel fuel-fired industrial trucks, or

(d) change or charge batteries for battery-powered industrial trucks.

SECTION 3.5 SALVAGE SHOPS AND SALVAGE YARDS

Subsection 3.5.1. General

Roof storage prohibited

3.5.1.1. The roof of a **building** located in a salvage yard shall not be used for storage purposes.

Fires prohibited

3.5.1.2. Open flames shall not be used in a salvage yard, except for the purposes of heating, operating machinery or performing hot works.

3.5.1.3. Gas tanks on vehicles to be salvaged shall be drained and ventilated prior to salvage operations.

Fire access gates

3.5.1.4. Where storage areas are fenced or otherwise enclosed, gates having a clear width of 3.5 m shall be provided to permit the entry of **fire department** vehicles.

Fire extinguishing provisions

3.5.1.5. Except where all salvage and scrap material is noncombustible and free of combustibles, water barrels of 200 L capacity with three 12 L pails or portable extinguishers having a 2A or higher rating conforming to the requirements of Section 6.2 shall be provided, so that the maximum distance travelled from any part of the yard to a barrel or extinguisher is 25 m.

3.5.1.6. Portable extinguishers in conformance with Section 6.2 shall be provided in each **building** located in a salvage yard.

Hydrant systems and water supply

3.5.1.7. Except as required in Article 3.5.1.8., where a municipal hydrant system exists and is adjacent to the yard, the hydrant system shall be extended into the yard area so that all parts of the salvage yard can be reached by using not more than 60 m of hose.

3.5.1.8. Article 3.5.1.7. does not apply where the fire protection that is provided by the municipal hydrants and mobile pumping equipment is **approved** as being adequate in the circumstances.

Smoking prohibited

3.5.1.9. Smoking shall not take place in salvage yards, except as provided in Subsection 2.4.3.

3.5.1.10. The telephone number of the **fire department** and location of the nearest telephones shall be posted conspicuously in working locations in the open yard and in each **building**.

Subsection 3.5.2. Piling

Pile clearance and dimensions

3.5.2.1. Piles that include combustible salvage shall be 3 m from property lines, and not more than 3 m in height and 100 m^2 in area.

3.5.2.2. Piles of salvage material shall be separated by a clear space of 3 m that is kept clear of grass and weeds.

Piles of tanks or drums

3.5.2.3. Tanks or drums shall be stored in piles separate from piles of other materials.

Combustible metals

3.5.2.4. (1) Piles or containers with metal shavings, turnings and dusts shall be stored in an area separate from other salvage materials and identified with warning signs.

(2) Warning signs required in Sentence (1) shall

(a) be visible from all directions of approach, and

(b) have the name of the metal and the words “COMBUSTIBLE METAL — DO NOT USE WATER” displayed in plain legible letters as described in Sentence (3).

(3) Lettering on warning signs shall be red or white letters 114 mm high with a 19 mm stroke on a contrasting background.

Subsection 3.5.3. REVOKED: O. Reg. 256/14, s. 76.

SECTION 3.6, 3.7 REVOKED: O. Reg. 256/14, s. 77.

O. Reg. 213/07, Division B, Part 3; O. Reg. 256/14, ss. 48-77.

PART 4
FLAMMABLE LIQUIDS AND COMBUSTIBLE LIQUIDS

SECTION 4.1 GENERAL

Subsection 4.1.1. Application and Compliance

Application and interpretation

4.1.1.1. (1) This Part applies to the storage, handling, processing, dispensing and use, in **buildings**, structures and open areas, of

(a) **flammable liquids,**

(b) **combustible liquids**, and

(c) liquids with **flash points** greater than 93.3°C, when processed, stored, handled or used at temperatures above their **flash points**.

(2) For the purposes of this Part,

"existing" means in existence on November 21, 1997;

"in-service" means installed and in use.

Application

4.1.1.2. (1) Areas in **process plants** need not conform to this Part where specific hazards are addressed by design and operational procedures that meet recognized standards and equivalent protection is provided.

(2) Except as specifically provided elsewhere in this Part, this Part does not apply to

(a) the transportation of **flammable liquids** or **combustible liquids** to which the **Transportation of Dangerous Goods Act (Canada)** and its regulations, or the **Dangerous Goods Transportation Act** and its regulations apply,

(b) the storage, handling, transportation and use of **flammable liquids** or **combustible liquids** to which the **Technical Standards and Safety Act, 2000** and its regulations apply,

(c) the storage, handling and use of **flammable liquids** or **combustible liquids** at airports, piers and wharves regulated under federal law,

(d) underground areas to which the **Occupational Health and Safety Act** and its regulations apply,

(e) the storage of aerosol products that fall under the scope of Subsection 3.2.5. of Division B of NRC, "National Fire Code of Canada", and

(f) the storage of **flammable liquids** or **combustible liquids** on farms for individual farm use.

Compliance

4.1.1.3. Existing conditions are acceptable with respect to Articles 4.3.2.1., 4.3.2.2., 4.3.2.3. and 4.3.8.2. and Sentence 4.3.8.1.(4) until replacement or relocation of a tank is carried out, at which time these requirements shall apply.

Compliance equivalency

4.1.1.4. (1) The composition, design, size and arrangement of any material, object, device or thing is deemed to be in compliance with this Part where

(a) the material, object, device or thing provides a level of protection with respect to strength, health and safety that is equal to or greater than that prescribed in this Part,

(b) the compliance equivalency in Clause (a) has been **approved**, and

(c) the compliance equivalency has been implemented.

(2) A proposal for compliance equivalency described in Sentence (1) shall bear the signature and seal of a **Professional Engineer** or **Architect** or both.

(3) A copy of the **approved** compliance equivalency shall be kept on the premises to which it relates and made available to the **Chief Fire Official** upon request.

(4) The compliance equivalency described in this Article is not applicable in respect of any **acceptable solutions** to which **objectives** and **functional statements** have not been attributed in OFMEM Fire Code Supplement FCS-1, "Objectives and Functional Statements Attributed to Acceptable Solutions".

Subsection 4.1.2. Classification

Classification

4.1.2.1. (1) For the purposes of this Part, **flammable liquids** and **combustible liquids** shall be classified in conformance with Sentences (2) and (3).

(2) **Flammable liquids** shall be Class I liquids, and shall be subdivided into

(a) Class IA liquids, which are those having a **flash point** below 22.8°C and a boiling point below 37.8°C,

(b) Class IB liquids, which are those having a **flash point** below 22.8°C and a boiling point at or above 37.8°C, and

(c) Class IC liquids, which are those having a **flash point** at or above 22.8°C and below 37.8°C.

(3) **Combustible liquids** shall be Class II or Class IIIA liquids, and shall be subdivided into

(a) Class II liquids, which are those having a **flash point** at or above 37.8°C and below 60°C, and

(b) Class IIIA liquids, which are those having a **flash point** at or above 60°C and below 93.3°C.

Heated liquids

4.1.2.2. When a liquid having a **flash point** at or above 37.8°C is being processed, stored, handled or used at a temperature at or above its **flash point**, it shall be treated as a Class I liquid.

Used lubricating oil

4.1.2.3. (1) Except as provided in Sentence (2), used lubricating oil drained from motor vehicles shall be classified as a Class IIIA liquid.

(2) When Class I or II liquids are added to the used oils described to in Sentence (1), the resulting mixture shall be classified

(a) through **tests** conforming to Subsection 4.1.3., or

(b) in the absence of **tests** referred to in Clause (a),

(i) as a Class IC liquid if Class I liquids are added, or

(ii) as a Class II liquid if only Class II liquids are added.

Subsection 4.1.3. Flash Point

Determination of flash point

4.1.3.1. (1) Except as provided in Sentences (3) and (4), the **flash point** of liquids having a **viscosity** less than 6 mm^2/s at 37.8°C and a **flash point** below 93.3°C shall be determined in conformance with ASTM D56, "Flash Point by Tag Closed Cup Tester".

(2) Except as provided in Sentences (3) and (4), the **flash point** of liquids having a **viscosity** of 6 mm^2/s or more at 37.8°C or a **flash point** of 93.3°C or higher shall be determined in conformance with ASTM D93, "Flash Point by Pensky-Martens Closed Cup Tester".

(3) The **flash point** of aviation turbine fuels may be determined in conformance with ASTM D3828, "Flash Point by Small Scale Closed Cup Tester"

(4) The **flash point** for paints, enamels, lacquers, varnishes and related products and their components having **flash points** between 0°C and 110°C, and having a **viscosity** less than 15000 mm^2/s at 25°C may be determined in conformance with ASTM D3278, "Flash Point of Liquids by Small Scale Closed-Cup Apparatus".

Subsection 4.1.4. Electrical Installations

Hazardous locations

4.1.4.1. (1) Electrical equipment in a location where **flammable liquids** or **combustible liquids** are present shall conform to the **Electrical Safety Code** made under the **Electricity Act, 1998**.

(2) Where refrigerators are used to keep Class I liquids, they shall be designed so that

(a) electrical equipment located within the storage compartment, within the outer shell, on the door and on the door frame of the refrigerator is in conformance with the **Electrical Safety Code** made under the **Electricity Act, 1998**, for Class I, Zone 0 or 1 hazardous locations based on the frequency of occurrence and duration of an explosive gaseous atmosphere, and

(b) electrical equipment mounted on the outside surface of the refrigerator is

(i) in conformance with the **Electrical Safety Code** made under the **Electricity Act, 1998**, for Class I, Zone 2 hazardous locations, or

(ii) located above the top of the storage compartment.

Subsection 4.1.5. Fire Prevention and Protection

Portable extinguishers

4.1.5.1. Portable extinguishers required in this Part shall be in accordance with Section 6.2.

4.1.5.2. RESERVED

Ignition sources

4.1.5.3. Unless controlled in a manner that will not create a fire or explosion hazard, a device, operation or activity that produces open flames, sparks or heat shall not be used or carried out in an area described in Article 4.1.1.1.

Smoking prohibited

4.1.5.4. Smoking shall not take place in areas described in Article 4.1.1.1., except as provided in Subsection 2.4.3.

Removal of combustibles

4.1.5.5. (1) Areas described in Article 4.1.1.1. shall be kept clean and free of ground vegetation and accumulations of combustible materials not essential to operations.

(2) Cleaning rags shall be stored in receptacles conforming to Sentence 2.4.1.3.(3).

Fire safety plan

4.1.5.6. The requirements of Section 2.8 shall apply to **buildings** and open areas where the quantities of **flammable liquids** and **combustible liquids** exceeds 500 L in total or exceeds 250 L of Class I liquids.

Access for fire fighting

4.1.5.7. Aisles and other access paths shall be maintained to permit the unobstructed movement of personnel and **fire department** apparatus so that fire fighting operations can be carried out in any part of an area used for the storage, use or handling of **flammable liquids** or **combustible liquids**.

Hot works

4.1.5.8. Hot works shall be performed in conformance with Section 5.17.

Basement storage

4.1.5.9. (1) Subject to Sentences (2) to (4) and Subsection 4.12.10., Class I liquids shall not be stored, handled or used in **basements** or pits.

(2) Class I liquids may be stored in **dwelling units** in accordance with Article 4.2.4.5.

(3) Class I liquids may be stored in **mercantile occupancies** in accordance with Subsection 4.2.5.

(4) Up to 5 L of Class I liquids may be stored in **basements** if the liquids are stored in safety containers that comply with ULC/ORD-C30, “Safety Containers”.

Routine maintenance

4.1.5.10. Maintenance of any equipment involved in the storage, handling, processing and use of **flammable liquids** or **combustible liquids**, whose failure would significantly increase the fire or explosion hazard and whose maintenance requirements are not addressed in another Part of this Code shall be maintained in accordance with its **listed** requirements and if not **listed**, be maintained in accordance with the manufacturer’s recommendations or good engineering practice.

Subsection 4.1.6. Spill Control and Drainage Systems

Spill control

4.1.6.1. (1) Except as permitted in Sentence (3), a spill of **flammable liquids** or **combustible liquids** shall be prevented from flowing outside the spill area and from reaching waterways, sewer systems and potable water sources by

(a) constructing a noncombustible barrier capable of containing the spill, or

(b) grading the site or sloping the floor to divert the spill to a drainage system conforming to Article 4.1.6.2.

(2) Where barriers required in Sentence (1) are provided to contain accidental spillage from aboveground **storage tanks**, they shall conform to the requirements for secondary containment in Subsection 4.3.7.

(3) Water-miscible effluent from spills and fire fighting operations is permitted to be directed into a sewer system provided it does not create a fire hazard or any risk to public health or safety.

(4) The fire safety plan required in Article 4.1.5.6. shall include measures to be taken to direct overflow of spilled liquids and fire fighting water away from

(a) **buildings**,

(b) adjoining properties,

(c) **means of egress**,

(d) air intakes or openings that could permit vapour entry into the **building**,

(e) fire alarm control panels,

(f) **fire department** access routes,

(g) valves controlling the water supply for fire fighting, or fire protection systems,

(h) **fire department** pumper connections or wall hydrants,

(i) isolation valves controlling processes, and

(j) valves controlling the flow of **flammable liquids** or **combustible liquids**.

Drainage systems

4.1.6.2. (1) A drainage system referred to in Clause 4.1.6.1.(1)(b) shall

(a) terminate at a location where such a spill will not create a fire hazard or any risk to health or safety or the natural environment, and

(b) direct the spill away from the areas identified in Sentence 4.1.6.1.(4).

(2) Closed drainage systems shall be equipped with a trap.

Spills and leaks

4.1.6.3. (1) Maintenance and operating procedures shall be established to prevent the escape of **flammable liquids** or **combustible liquids** to areas where they could create a fire or explosion hazard.

(2) Except as provided in Sentence (3), all reasonable steps shall be taken to recover escaped liquid and to remove or treat contaminated soil, surface water, ground water or aquatic sediments.

(3) Spilled or leaked **flammable liquids** or **combustible liquids** shall be

(a) flushed to a location where they will not create a fire or explosion hazard, or any risk to public health or safety, or

(b) neutralized or absorbed and cleaned up with the aid of a product that conforms to ULC/ORD-C410A, “Absorbents for Flammable and Combustible Liquids”, or is compatible and non-reactive with the liquid being cleaned up, and

(i) deposited in a receptacle conforming to Sentence 2.4.1.3.(3), or

(ii) disposed of in a manner that does not create a fire or explosion hazard.

(4) Clean-up shall conform with Part X (Spills) of the **Environmental Protection Act**.

Spill procedure

4.1.6.4. (1) A spill control procedure shall be **approved** and implemented for any **occupancy** where **flammable liquids** or **combustible liquids** are stored, handled, processed or used.

(2) The spill control procedure referred to in Sentence (1) shall include

(a) suitable operating procedures to prevent leaks and spills from piping, pumps, **storage tanks** or process vessels,

(b) ventilation,

(c) control of ignition sources,

(d) spill containment and cleanup (such as dikes and spill control agents such as sand),

(e) personal protective clothing or equipment that should be used (such as rubber gloves, rubber boots and self-contained breathing apparatus),

(f) chain of command, including notification of affected agencies and management,

(g) a preventive maintenance program, and

(h) training for new staff within three months of their being hired and for experienced staff every six months.

(3) Spill control procedures shall be prominently posted and maintained where **flammable liquids** or **combustible liquids** are stored, handled, processed or used.

Subsection 4.1.7. Ventilation

Rooms or enclosed spaces

4.1.7.1. Where **flammable liquids** or **combustible liquids** are processed, handled, stored, dispensed or used within rooms or enclosed spaces, ventilation shall conform to this Part and the **Building Code**.

Ventilation measures

4.1.7.2. (1) Except as permitted in Sentence (2), a room or enclosed space referred to in Article 4.1.7.1. shall be provided with a ventilation system having

(a) continuous mechanical ventilation where Class I liquids are processed, dispensed or used in a manner that releases flammable vapours into the room or enclosed space, or

(b) either natural or continuous mechanical ventilation where

(i) Class I liquids are stored, processed, dispensed or used in a manner that does not release flammable vapours into the room or enclosed space, or

(ii) Class II liquids are processed, dispensed or used.

(2) Ventilation referred to in Clause (1)(b) need not be provided for the storage of Class I liquids if

(a) storage consists of only **closed containers**, and

(b) no dispensing operations are performed.

(3) Ventilation required in Sentence (1) shall be sufficient to ensure that flammable vapour concentrations outside the zone identified as Class I, Division I in conformance with Article 4.1.4.1. do not exceed 25% of the **lower explosive limit** of the flammable vapour.

(4) A mechanical ventilation system is deemed to meet the requirements of Sentence (3) if it is capable of exhausting at least 18 m^3/h per square metre of room area and not less than 250 m^3/h in total.

(5) Where continuous mechanical ventilation is installed in order to meet the conditions of Sentence (1), it shall

(a) be provided with automatic interlocks so that the activity generating flammable vapours cannot be performed when the ventilation system is not in operation,

(b) sound an audible alarm in an attended area upon shutdown of the ventilation system, and

(c) conform to NFPA 91, “Standard for Exhaust Systems for Air Conveying of Vapors, Gases, Mists, and Noncombustible Particulate Solids”.

(6) Despite Sentences (1) and (2), for those **occupancies** of facilities that are regulated under **Ontario Regulation 851 of the Revised Regulations of Ontario, 1990 (Industrial Establishments)** made

under the **Occupational Health and Safety Act** or **Ontario Regulation 67/93 (Health Care and Residential Facilities)** made under the **Occupational Health and Safety Act**, ventilation requirements for a room or enclosed space referred to in Article 4.1.7.1. shall be provided with

(a) continuous mechanical ventilation where Class I liquids are processed, dispensed or used in a manner that releases flammable vapours into the room or enclosed space, and

(b) continuous mechanical or natural ventilation to the outdoors by upper and lower vents where

(i) Class I liquids are stored, or

(ii) Class II liquids are processed, dispensed or used.

Location of air inlets and outlets

4.1.7.3. (1) Ventilation air inlets and outlets within a room or enclosed space referred to in Article 4.1.7.1. shall be arranged to provide air movement in all areas of the room or enclosed space.

(2) If the flammable vapour being removed is as dense as air or heavier than air

(a) at least one ventilation air inlet shall be located near a wall, no higher than 300 mm from the floor, and

(b) at least one ventilation air outlet shall be located near the opposite wall, no higher than 300 mm from the floor.

(3) If the flammable vapour being removed is lighter than air

(a) at least one ventilation air inlet shall be located near a wall, no lower than 300 mm from the ceiling, and

(b) at least one ventilation air outlet shall be located near the opposite wall, no lower than 300 mm from the ceiling.

Location of mechanical ventilation exhaust air outlets

4.1.7.4. (1) Except as provided in Article 4.1.7.6., the exhaust air outlet from a mechanical ventilation system required in Article 4.1.7.2. shall be

(a) located outdoors, not less than 3 m from any **building** opening, and

(b) arranged so that the exhaust air does not discharge toward any unprotected opening within 7.5 m of the discharge point.

Make-up air

4.1.7.5. (1) Where make-up air for a mechanical ventilation system is taken from within the **building**, the opening into the room or enclosed space shall be provided with a **fire damper**.

(2) Make-up air for a natural or mechanical ventilation system shall be taken from a point remote from any exhaust air discharge described in Article 4.1.7.4.

(3) Make-up air for a natural ventilation system shall be taken from a point outside the **building**.

Recirculating ventilation systems

4.1.7.6. (1) A mechanical ventilation system referred to in Article 4.1.7.2. that recirculates exhaust air shall be provided with a fail-safe vapour detection and alarm system to continuously monitor the flammable vapour concentration in the exhaust air.

(2) If the flammable vapour concentration in the exhaust air exceeds 25% of the **lower explosive limit** of the vapour, the vapour detection and alarm system shall

(a) sound an alarm in an attended area,

(b) stop the recirculation of air, and

(c) redirect the exhaust air to an outdoor location.

Exclusive use of ducts

4.1.7.7. Ducts used in a ventilation system as required in Article 4.1.7.2. shall not be used for any other ventilation or exhaust system.

Maintenance

4.1.7.8. All components of the ventilation system shall be kept free of obstructions that may interfere with its operation.

Subsection 4.1.8. Handling of Flammable and Combustible Liquids

Containers and storage tanks

4.1.8.1. (1) Except as provided in Sentence 4.1.8.4.(1), **flammable liquids** and **combustible liquids** shall be kept in containers conforming to Subsection 4.2.3. or in **storage tanks** conforming to Subsection 4.3.1.

(2) Containers and **storage tanks** for **flammable liquids** or **combustible liquids** shall be kept closed when not in use.

(3) Containers and **storage tanks** shall not be filled beyond their safe filling level.

Control of static electric charge

4.1.8.2. (1) When Class I liquids are dispensed into a container or **storage tank**,

(a) if the container or **storage tank** is made of metallic or electrically-conducting material, such container or **storage tank** shall be electrically connected to the fill stem, or rest on a conductive floor that is electrically connected to the fill stem, or

(b) if the container or **storage tank** is made of non-electrically-conducting material, measures shall be taken to minimize the potential for a static electric charge to develop.

(2) Except as provided in Sentence (3), when Class I liquids are transferred into a **storage tank** through the top of the tank, the fill pipe shall terminate within 150 mm of the bottom of the tank.

(3) Sentence (2) shall not apply when

(a) the **storage tank** vapour space cannot exceed 25% of the **lower explosive limit** or is filled with an inert gas that prevents the ignition of the vapour mixture, or

(b) the liquid being transferred has a minimum conductivity that prevents the accumulation of static electricity.

(4) Fill pipes referred to in Sentence (2) shall be installed in such a way as to minimize vibration of the pipe.

Transfer

4.1.8.3. (1) Class I liquids shall be drawn from or transferred into containers or **storage tanks** within a **building**

(a) through a piping or transfer system conforming to Section 4.4,

(b) by means of a pump designed in conformance with good engineering practice on top of the container or **storage tank**, or

(c) by gravity through a self-closing valve designed in conformance with good engineering practice.

(2) Subject to Subsection 4.4.10., **flammable liquids** and **combustible liquids** shall not be transferred by means of pressure applied to a container or **storage tank**.

Fuel tanks

4.1.8.4. (1) Moveable tanks may be used to dispense **flammable liquids** or **combustible liquids** into the fuel tanks of vehicles or other motorized equipment if the moveable tanks are used in accordance with the requirements of this Part for **storage tanks**.

(2) Enclosed pumping equipment designed in accordance with good engineering practice shall be used to transfer Class I liquids to or from the fuel tanks of vehicles inside **buildings**.

SECTION 4.2 CONTAINER STORAGE AND HANDLING

Subsection 4.2.1. Application

Application

4.2.1.1. (1) Except as provided in Sentence (2), this Section applies to the storage, handling and use of **flammable liquids** or **combustible liquids** in

(a) containers conforming to Clauses 4.2.3.1.(1)(a) to (d) having a capacity of not more than 230 L,

(b) portable tanks conforming to Clause 4.2.3.1.(1)(e) having an individual capacity of not more than 2500 L, or

(c) intermediate bulk containers conforming to Clause 4.2.3.1.(1)(a) having an individual capacity of not more than 3000 L.

(2) Except as otherwise stated in this Part, this Section does not apply to

(a) properties subject to Section 4.6, **refineries** subject to Section 4.8 and **distilleries** subject to Section 4.9,

(b) liquids in the fuel tank of motors or engines,

(c) **distilled beverage alcohol** in **closed containers** that are stored in accordance with Part 3 of Division B of NRC, “National Fire Code of Canada”,

(d) food and pharmaceutical products that are stored in **closed containers** with a capacity of not more than 5 L,

(e) alcohol-based hand sanitizer products that have a capacity of not more than 1.2 L and that are in use, or

(f) products that contain no more than 50% by volume of water-miscible **flammable liquids** or **combustible liquids,** with the remainder of the solution being non-flammable, that are stored in **closed containers** with a capacity of not more than 5 L.

(3) Portable tanks having a capacity greater than 2500 L shall be installed in conformance with Section 4.3.

(4) For the purpose of this Section, **unstable liquids** shall meet the requirements for Class IA liquids.

(5) Except as otherwise stated, requirements for containers in this Part shall also apply to portable tanks described in Sentence (1).

Subsection 4.2.2. General

Storage locations

4.2.2.1. (1) **Flammable liquids** or **combustible liquids** shall not be stored in or adjacent to **exits**, including outdoors, elevators or principal routes that provide **access to exits**.

(2) Where **flammable liquids** or **combustible liquids** are stored, storage shall be in conformance with Subsections 4.2.4. to 4.2.11.

Storage arrangement

4.2.2.2. In addition to the provisions of this Section, the method of storage of **flammable liquids** and **combustible liquids** shall be determined to ensure the physical and chemical stability of the stored products.

Separation from other dangerous goods

4.2.2.3. (1) Except as provided in Sentence (2), **flammable liquids** and **combustible liquids** shall be separated from other **dangerous goods** in conformance with Sections 3.2 and 3.3 of Division B of NRC, "National Fire Code of Canada".

(2) For the purposes of applying Table 3.2.7.6. of Division B of NRC, "National Fire Code of Canada", Class IIIA liquids shall be treated as Class 3 **dangerous goods**.

Subsection 4.2.3. Containers and Portable Tanks

Design and construction

4.2.3.1. (1) Except as permitted in Article 4.2.3.3., containers and portable tanks for **flammable liquids** or **combustible liquids** shall be built in conformance with

(a) the **Transportation of Dangerous Goods Regulations (Canada)**,

(b) CSA-B376, "Portable Containers for Gasoline and Other Petroleum Fuels",

(c) CSA-B306, "Portable Fuel Tanks for Marine Use",

(d) ULC/ORD-C30, "Safety Containers", or

(e) Section 6 of CSA-B620, "Highway Tanks and Portable Tanks for the Transportation of Dangerous Goods".

Markings or labels

4.2.3.2. (1) Except as provided in Sentence (2) and Article 4.2.3.1., containers for **flammable liquids** or **combustible liquids** shall be distinctly marked or labelled in easily legible type which is in contrast to any other printed matter on the label with a warning to indicate that

(a) the material in the container is flammable,

(b) it should be kept away from heat, sparks and open flames, and

(c) it should be kept closed when not in use.

(2) Markings referred to in Sentence (1) are not required when the container is labelled in conformance with

(a) the **Transportation of Dangerous Goods Act (Canada)** and its regulations,

(b) the **Hazardous Products Act (Canada)** and its regulations, and

(c) the **Pest Control Products Act (Canada)** and its regulations.

Other types of containers

4.2.3.3. (1) The storage, handling and use of **flammable liquids** or **combustible liquids** in a container other than one of those set out in Article 4.2.3.1. may be used only if

(a) the required purity of the liquid would be affected by containers of the types set out in Article 4.2.3.1. or if the liquid would cause the excessive corrosion of those types of containers,

(b) the container not conforming to Article 4.2.3.1. has a capacity of not more than 1 L if used for Class I liquids and not more than 5 L if used for Class II or IIIA liquids, or

(c) the container not conforming to Article 4.2.3.1. is a sample container used for quality control purposes or for **testing** by regulatory officials.

Subsection 4.2.4. Assembly and Residential Occupancies

Application

4.2.4.1. (1) This Subsection applies to the storage and handling of **flammable liquids** and **combustible liquids** in **buildings** classified as **assembly** or **residential occupancies**, except that it shall not apply to nonresidential schools, universities or colleges covered in Subsection 4.2.6.

Maximum quantities

4.2.4.2. (1) Subject to Sentence (4) and Articles 4.2.4.5. and 4.2.4.6., the maximum quantity of **flammable liquids** or **combustible liquids** stored in a **building** or in a single **fire compartment** having a **fire-resistance rating** not less than 1 h shall meet the requirements of Sentences (2) and (3).

(2) If a single class of liquid is stored in a **building** or in a single **fire compartment** having a **fire-resistance rating** not less than 1 h, the total quantity of liquid shall not exceed

(a) 30 L of Class I liquids,

(b) 150 L of Class II liquids, or

(c) 600 L of Class IIIA liquids.

(3) If two or more classes of liquid are stored in the same **building** or in a single **fire compartment** having a **fire-resistance rating** not less than 1 h, the total quantity of stored liquid shall meet the requirements of the following equation:

$$qI/30 + qII/150 + qIIIA/600 \leq 1$$

where

qI = the actual quantity of Class I liquid present, in litres,

qII = the actual quantity of Class II liquid present, in litres, and

qIIIA= the actual quantity of Class IIIA liquid present, in litres.

(4) Quantities of **flammable liquids** or **combustible liquids** exceeding those permitted by Sentence (1) are permitted if they are kept

(a) in cabinets that comply with Subsection 4.2.10., but only if the total quantity of **flammable liquids** and **combustible liquids** stored in the cabinets does not exceed the quantity permitted for one cabinet, or

(b) in a room that complies with Subsection 4.2.9. and has no openings that communicate directly with the public portions of the **building**.

Cabinet and room location

4.2.4.3. The cabinets and rooms referred to in Sentence 4.2.4.2.(4) shall not be located above or below the **first storey**.

Exterior balconies

4.2.4.4. **Flammable liquids** and **combustible liquids** shall not be stored on exterior balconies.

Storage in dwelling units

4.2.4.5. No more than 30 L of **flammable liquids** and **combustible liquids**, of which not more than 10 L may be Class I liquids, may be stored in a **dwelling unit**.

Storage in attached garages or sheds

4.2.4.6. No more than 50 L of **flammable liquids** and **combustible liquids**, of which not more than 30 L may be Class I liquids, shall be stored in a garage or shed attached to a **dwelling unit**.

Subsection 4.2.5. Mercantile Occupancies

Maximum quantities

4.2.5.1. (1) Except as provided in Sentence (5), the quantities of **flammable liquids** and **combustible liquids** stored in **mercantile occupancies** shall not exceed those in Sentences (2) to (4).

(2) In **mercantile occupancies** that are not **sprinklered**, the maximum quantity of **flammable liquids** and **combustible liquids** stored in a single **suite** shall be the lesser of

(a) 8 L for every 1 m^2 of the area of the **suite**, provided that not more than 2 L per m^2 is Class I liquid, of which not more than 0.3 L per m^2 shall be Class IA, Class IB, or any combination of these two classes, or

(b) 8000 L, provided that not more than 2000 L is Class I liquid, of which not more than 300 L shall be Class IA or Class IB or any combination of these two classes.

(3) In **sprinklered mercantile occupancies**, the maximum quantity of **flammable liquids** and **combustible liquids** stored in a single **suite** shall be the lesser of

(a) 24 L for every 1 m^2 of the area of the **suite**, provided that not more than 6 L per m^2 is Class I liquid, of which not more than 1 L per m^2 shall be Class IA or Class IB or any combination of these two classes, or

(b) 24000 L, provided that not more than 6000 L is Class I liquid, of which not more than 1000 L shall be Class IA or Class IB or any combination of these two classes.

(4) For the purposes of calculating permissible quantities in Sentences (2) and (3), **mercantile occupancies** of less than 250 m^2 **floor area** shall be assumed to be 250 m^2 in area.

(5) Quantities of **flammable liquids** and **combustible liquids** in excess of those permitted in Sentences (2) to (4) shall be kept in a storage area conforming to Subsection 4.2.7.

Containers

4.2.5.2. (1) **Flammable liquids** and **combustible liquids** in **mercantile occupancies** shall be kept in **closed containers**.

(2) **Closed containers** of Class I and II liquids shall not be stacked more than 1.5 m high on floors, or 1 m high on individual fixed shelves.

(3) Class I liquids in **closed containers** are permitted to be stored in **basements** of **mercantile occupancies**.

Transfer

4.2.5.3. (1) Subject to Sentence (2), the transfer of **flammable liquids** or **combustible liquids** from or into containers shall take place in a storage room that complies with Subsection 4.2.9.

(2) Sentence (1) does not apply to tinting operations for paints that involve containers of up to 25 L in capacity.

Subsection 4.2.6. Business and Personal Services, Detention, Educational, Care, and Care and Treatment Occupancies

Application

4.2.6.1. This Subsection applies to the storage, handling and use of **flammable liquids** and **combustible liquids** in **business and personal services occupancies**, **care occupancies**, **care and treatment occupancies**, **detention occupancies**, non-residential schools, universities and colleges.

Storage cabinets and storage rooms

4.2.6.2. (1) Except as permitted in Article 4.2.6.3., **flammable liquids** and **combustible liquids** shall be kept in **closed containers** and stored

(a) in cabinets conforming to Subsection 4.2.10., except that the total quantity of **flammable liquids** and **combustible liquids** stored in such cabinets shall not exceed the quantity permitted for one cabinet, or

(b) in a room having no openings communicating directly with the public portions of the **building** and conforming to Subsection 4.2.9.

Maximum quantities

4.2.6.3. (1) Except as provided in Sentence (2), the storage of **flammable liquids** and **combustible liquids** outside of a cabinet or room required in Article 4.2.6.2. is permitted, provided such storage does not exceed

(a) 10 L, including not more than 5 L of Class I liquid, in a single room, or

(b) 250 L, including no more than 60 L of Class II liquid, or 10 L of Class I liquid, in a single **fire compartment** having a **fire-resistance rating** not less than 45 min.

(2) In automotive shop or industrial arts areas of an educational facility, storage of up to 75 L of **flammable liquids** and **combustible liquids**, including not more than 25 L of Class I liquid, shall be permitted outside of a cabinet or room as specified in Article 4.2.6.2.

Containers

4.2.6.4. Where individual containers with a capacity of more than 5 L are required for storage of **flammable liquids** or **combustible liquids** in a **building**, safety containers conforming to ULC/ORD-C30, “Safety Containers”, and of not more than 25 L capacity, shall be used.

Separation of dangerous goods

4.2.6.5. **Flammable liquids** or **combustible liquids** stored in cabinets or rooms shall be separated from other **dangerous goods** in conformance with Article 4.2.2.3.

Subsection 4.2.7. Industrial Occupancies

Application

4.2.7.1. This Subsection applies to the storage, handling and use of **flammable liquids** and **combustible liquids** in **industrial occupancies**, where storage in **closed containers** is the principal activity.

Storage facilities

4.2.7.2. (1) **Flammable liquids** and **combustible liquids** shall be stored

(a) in accordance with Subsection 4.2.8.,

(b) in cabinets that comply with Subsection 4.2.10.,

(c) in rooms that comply with Subsection 4.2.9., or

(d) in storage areas that comply with Article 4.2.7.5.

Fire compartments

4.2.7.3. **Fire compartments** regulated by this Subsection shall have a **fire-resistance rating** not less than 2 h.

Dispensing and transfer

4.2.7.4. (1) Except as permitted in Subsection 4.2.8. and in Sentence (2), the dispensing or transfer of Class I or II liquids shall be conducted in rooms conforming to Subsection 4.2.9.

(2) It is permitted to dispense or transfer Class I or II liquids in a storage area conforming to Article 4.2.7.5. provided

(a) the storage area does not exceed 100 m^2, and

(b) the dispensing or transfer operations conform to the applicable requirements of Subsection 4.2.9.

Maximum quantities

4.2.7.5. (1) Except as provided in Sentence (2), the storage of **flammable liquids** and **combustible liquids** in storage areas specified in Clause 4.2.7.2.(1)(d) shall

(a) conform to Table 4.2.7.A.

(i) where it consists of palletized or solid piled storage, or

(ii) where stored in **racks** in **buildings** not protected in conformance with Article 4.2.7.7., or

(b) conform to Table 4.2.7.B. where stored in **racks** in **buildings** protected in conformance with Article 4.2.7.7.

(2) Where a **building** is designed for the storage of **flammable liquids** or **combustible liquids**, there is no limit on the total quantity of storage per **fire compartment** provided

(a) the **building** is separated from adjacent **buildings** by

(i) a **firewall** having a **fire-resistance rating** of at least 4 h, or

(ii) spatial separation in conformance with the **Building Code**, and

(b) in protected **rack** storage, the quantities in each **individual storage area** do not exceed those specified in Table 4.2.7.B.

(3) Where containers for two or more liquids having different **flash points** are stored together in a single **individual storage area**, the maximum quantity permitted in the **individual storage area** shall equal that permitted for the liquid with the lowest **flash point**.

(4) If two or more classes of liquids are stored in a single **fire compartment**, the total quantities of stored liquids shall meet the requirements of the following equation:

$$[qIA/QIA + qIB/QIB + qIC/QIC + qII/QII + qIIIA/QIIIA]_{rack} +$$

$$[qIA/QIA + qIB/QIB + qIC/QIC + qII/QII + qIIIA/QIIIA]_{solid\ pile\ or\ pallet} \leq 1$$

where

qIA, IB or IC = the actual quantity of Class IA, IB or IC liquid present in a **rack**, solid pile or on pallets,

qII = the actual quantity of Class II liquid present in a **rack**, solid pile or on pallets,

qIIIA = the actual quantity of Class IIIA liquid present in a **rack**, solid pile or on pallets,

QIA, IB or IC = the maximum quantity of Class IA, IB or IC liquid permitted in Table 4.2.7.A. or 4.2.7.B. for the arrangement,

QII = the maximum quantity of Class II liquid permitted in Table 4.2.7.A. or 4.2.7.B. for the arrangement, and

QIIIA = the maximum quantity of Class IIIA liquid permitted in Table 4.2.7.A. or 4.2.7.B. for the arrangement.

TABLE 4.2.7.A.

Indoor Container Storage (Palletized or Solid Piled Storage and Unprotected **Rack** Storage)
Forming Part of Article 4.2.7.5.

Class of Liquid	Storage Level	Protected Storage (1) - Maximum Quantity per **Individual Storage Area**, L	Protected Storage (1) - Maximum Storage Height, m	Protected Storage (1) - Maximum Quantity per **Fire Compartment,** L	Unprotected Storage - Maximum Quantity per **Individual Storage Area**, L	Unprotected Storage - Maximum Storage Height, m	Unprotected Storage - Maximum Quantity per **Fire Compartment,** L
Class IA	**First Storey**	10000	1.5	50000	2500	1.5	2500
Class IA	**Storeys** above the **first storey**	7500	1.5	30000	2500	1.5	2500
Class IA	**Basement**	Not permitted	Not permitted	Not permitted	Not permitted	Not permitted	Not permitted
Class IB or IC	**First Storey**	20000	2.0	60000	10000	1.5	10000
Class IB or IC	**Storeys** above the **first storey**	10000	2.0	50000	10000	1.5	10000
Class IB or IC	**Basement**	Not permitted	Not permitted	Not permitted	Not permitted	Not permitted	Not permitted
Class II	**First Storey** and **storeys** above the **first storey**	40000	3.0	100000	15000	3.0	30000

Class II	**Basement**	25000	1.5	25000	Not permitted	Not permitted	Not permitted
Class IIIA	**First Storey** and **storeys** above the **first storey**	60000	6.0	200000	50000	4.5	100000
Class IIIA	**Basement**	40000	3.0	100000	Not permitted	Not permitted	Not permitted

Notes to Table 4.2.7.A.:

(1) See Article 4.2.7.7.

TABLE 4.2.7.B.

Indoor Container Storage (Protected **Rack** Storage)(1) Forming Part of Article 4.2.7.5.

Class of Liquid	Storage Level	Maximum Height, m	Maximum Quantity per **Individual Storage Area** or per **Fire Compartment**, L
Class IA	**First Storey**	7.5	30000
Class IA	**Storeys** above the **first storey**	4.5	17000
Class IA	**Basement**	Not permitted	Not permitted
Class IB or IC	**First Storey**	7.5	60000
Class IB or IC	**Storeys** above the **first storey**	4.5	35000
Class IB or IC	**Basement**	Not permitted	Not permitted
Class II	**First Storey**	7.5	100000
Class II	**Storeys** above the **first storey**	7.5	100000
Class II	**Basement**	4.5	35000
Class IIIA	**First Storey**	12.0	200000
Class IIIA	**Storeys** above the **first storey**	6.0	200000
Class IIIA	**Basement**	6.0	100000

Notes to Table 4.2.7.B.:

(1) See Article 4.2.7.7.

Spill control

4.2.7.6. Measures to control spilled **flammable liquids** or **combustible liquids** shall be provided in conformance with Subsection 4.1.6.

Fire suppression systems

4.2.7.7. (1) Where protection is required by this Part, storage areas for **flammable liquids** and **combustible liquids** shall be

(a) **sprinklered** in conformance with NFPA 30, "Flammable and Combustible Liquids Code", or

(b) protected by an automatic special fire suppression system in conformance with an applicable standard set out in Article 6.8.1.1.

Clearances

4.2.7.8. (1) The clearance between the top of storage and the lowest structural members, sprinkler head deflectors or other overhead fire protection system components shall be not less than 450 mm.

(2) A clearance of not less than 400 mm shall be maintained between stored **flammable liquids** and **combustible liquids** and walls, except that where the width of storage adjacent to the wall is not more than 1.5 m, such wall clearance is not required.

Aisles

4.2.7.9. Except as provided in Article 4.2.7.10., main aisles, access aisles and aisles defining **individual storage areas** shall be in conformance with Articles 3.3.2.5. and 3.3.2.6.

Separation from other dangerous goods

4.2.7.10. **Flammable liquids** and **combustible liquids** shall not be stored with other **dangerous goods** unless in conformance with Article 4.2.2.3.

Separation from combustible products

4.2.7.11. Combustible materials, other than those used for the packaging of **flammable liquids** or **combustible liquids**, shall not be stored in the same **individual storage area** with such liquids.

Absorbents

4.2.7.12. Absorbent materials shall be available in the storage area for use in clean-up of spilled **flammable liquids** or **combustible liquids** in conformance with Article 4.1.6.3.

Ventilation

4.2.7.13. Storage areas described in Article 4.2.7.1. shall be ventilated in conformance with Subsection 4.1.7.

Subsection 4.2.8. Incidental Use

Application

4.2.8.1. Except as otherwise noted in this Part, this Subsection applies to **industrial occupancies** where the use, storage and handling of **flammable liquids** or **combustible liquids** is secondary to the principal activity.

Maximum quantities

4.2.8.2. (1) Except as provided in Sentences (2) and (3) and in Article 4.2.8.4., the quantity of **flammable liquids** and **combustible liquids** permitted to be located outside of storage rooms conforming to Subsection 4.2.7., 4.2.9. or 4.3.13. or cabinets conforming to Subsection 4.2.10. in any one **fire compartment** of a **building** shall not be more than

(a) 600 L of **flammable liquids** and **combustible liquids** in **closed containers**, of which not more than 100 L shall be Class IA liquids, and

(b) 5000 L of Class IB, IC, II and IIIA liquids in **storage tanks** or portable tanks.

(2) Where required for normal plant activity, quantities of **flammable liquids** and **combustible liquids** are permitted to exceed those specified in Sentence (1), but shall not be greater than the supply for one day of normal operation.

(3) Where larger quantities than are permitted by Sentence (1) are required, such quantities shall be in **storage tanks** installed in conformance with Sentence 4.3.12.4.(2).

Handling

4.2.8.3. (1) Areas in which **flammable liquids** or **combustible liquids** are transferred from one container or **storage tank** to another, or are used in such a way as to release potentially explosive concentrations of flammable vapours, shall be

(a) separated from possible sources of ignition by a spatial separation of not less than 6 m, or by a **fire separation**,

(b) provided with a drainage system to control spills in conformance with Subsection 4.1.6.,

(c) provided with absorbent materials to assist in clean-up of small liquid spills in conformance with Article 4.1.6.3.,

(d) provided with either natural or mechanical ventilation in conformance with Subsection 4.1.7., and

(e) separated from other **dangerous goods** in conformance with Article 4.2.2.3.

General storage areas

4.2.8.4. (1) In a general storage area covered in Subsection 3.2.3. of Division B of NRC, “National Fire Code of Canada”, quantities of **flammable liquids** and **combustible liquids** may exceed those in Sentence 4.2.8.2.(1) if the storage area complies with Sentences (2) to (6).

(2) The storage area referred to in Sentence (1) shall be **sprinklered** in conformance with Article 3.2.3.3. of Division B of NRC, “National Fire Code of Canada”, providing a level of protection not less than that required for Class IV commodities stored up to a height of 6 m.

(3) The height of storage of **flammable liquids** and **combustible liquids** shall be not more than those permitted for unprotected storage in Table 4.2.7.A.

(4) When a single class of liquid is stored, the total quantity in a single **fire compartment** shall be not more than

(a) 2500 L of Class IB and IC liquid,

(b) 5000 L of Class II liquid, or

(c) 10000 L of Class IIIA liquid.

(5) When two or more classes of liquid are stored in the same **fire compartment**, the total quantities of stored liquids shall meet the requirements of the following equation:

$$qI/2500 + qII/5000 + qIIIA/10000 \leq 1$$

where

qI = the actual quantity of Class IB and IC liquid present,

qII = the actual quantity of Class II liquid present, and

qIIIA= the actual quantity of Class IIIA liquid present.

(6) When two or more classes of liquid are stored in the same **individual storage area**, the maximum quantity permitted in the **individual storage area** shall be that permitted for the liquid with the lowest limit set out in Sentence (4).

Subsection 4.2.9. Rooms for Container Storage and Dispensing

Maximum quantities

4.2.9.1. (1) Except as provided in Sentences (2) and (3), where **flammable liquids** and **combustible liquids** are stored in a room required in this Part, the storage densities averaged over the total room area and the total quantities of such liquids shall conform to Table 4.2.9.A.

(2) The maximum quantities and densities of **flammable liquids** and **combustible liquids** shown in Table 4.2.9.A. are permitted to be doubled provided the storage room is protected by an automatic fire suppression system conforming to Article 4.2.7.7.

(3) The maximum quantities of Class I liquids in an unprotected storage room with a **fire separation** having a **fire-resistance rating** of not less than 2 h shall

(a) not exceed those specified for unprotected storage in Table 4.2.7.A., and

(b) comply with Sentences 4.2.7.5.(3) and (4).

TABLE 4.2.9.A.

Rooms for Container Storage and Dispensing Forming Part of Article 4.2.9.1.

Maximum Quantity, L	Minimum **Fire Separation** Around Room, h	Maximum Density, L/m^2
1500	1	100
10000	2	200

Spill control

4.2.9.2. (1) Storage rooms referred to in Article 4.2.9.1. shall be equipped with

(a) liquid-tight seals between interior walls and the floor and a liquid-tight ramped sill at any door opening in an interior wall, and

(b) a drain connected to a dry sump or holding tank for those **occupancies** that regulated under by **Regulation 851 of the Revised Regulations of Ontario, 1990 (Industrial Establishments)** made under the **Occupational Health and Safety Act** or **Ontario Regulation 67/93 (Health Care and Residential Facilities)** made under the **Occupational Health and Safety Act**.

(2) Storage rooms referred to in Sentence (1) shall be designed to accommodate possible spills of **flammable liquids** and **combustible liquids** in conformance with Subsection 4.1.6.

Ventilation

4.2.9.3. Storage rooms referred to in Article 4.2.9.1. shall be ventilated in conformance with Subsection 4.1.7.

Aisles

4.2.9.4. The contents of **flammable liquids** and **combustible liquids** storage rooms referred to in Article 4.2.9.1. shall be arranged to provide aisle widths of not less than 1 m.

Dispensing

4.2.9.5. Dispensing of **flammable liquids** or **combustible liquids** from containers having a capacity of more than 30 L shall be by pumps or through self-closing valves, designed in conformance with good engineering practice.

Explosion venting

4.2.9.6. (1) If Class IA or IB liquids are dispensed or stored in open containers within a storage room, the room shall be designed to prevent critical structural and mechanical damage from an internal explosion in accordance with NFPA 68, "Standard on Explosion Protection by Deflagration Venting".

(2) Despite Sentence (1), if Class IA liquids are stored in **closed containers** or Class I liquids are dispensed or stored in open containers for those **occupancies** or facilities that are regulated under **Regulation 851 of the Revised Regulations of Ontario, 1990 (Industrial Establishments)** made under the **Occupational Health and Safety Act** or **Ontario Regulation 67/93 (Health Care and Residential Facilities)** made under the **Occupational Health and Safety Act**, the room shall be designed to prevent critical structural and mechanical damage from an internal explosion in accordance with NFPA 68, "Standard on Explosion Protection by Deflagration Venting".

(3) Sentence (1) does not apply to the storage of **distilled beverage alcohol**.

Portable extinguishers

4.2.9.7. Portable extinguishers shall be provided for storage rooms described in Article 4.2.9.1. in conformance with Section 6.2.

Egress doors

4.2.9.8. (1) This Article applies to a dispensing room in **occupancies** regulated under **Regulation 851 of the Revised Regulations of Ontario, 1990 (Industrial Establishments)** made under the **Occupational Health and Safety Act** or **Ontario Regulation 67/93 (Health Care and Residential Facilities)** made under the **Occupational Health and Safety Act** where the room

(a) has an area greater than 15 m^2, or

(b) has a distance of travel greater than 4.5 metres from any point in the room to an egress doorway.

(2) A dispensing room shall be equipped with self-closing doors hinged to swing outward on their vertical axis.

(3) A dispensing room shall be located in a **floor area** that has at least two **exits**.

(4) A dispensing room shall have at least two egress doorways that are at least three-quarters of the maximum diagonal dimension of the room from each other.

(5) At least one egress doorway shall be located within 23 m from any point in the dispensing room.

Subsection 4.2.10. Cabinets for Container Storage

Containers

4.2.10.1. **Flammable liquids** and **combustible liquids** stored in cabinets required in this Part shall be in **closed containers** conforming to Article 4.2.3.1.

Maximum quantity per cabinet

4.2.10.2. No more than 500 L of **flammable liquids** or **combustible liquids** shall be stored in a cabinet.

Maximum quantity per fire compartment

4.2.10.3. (1) Except as provided in Sentences (2) and (3), the total quantity of **flammable liquids** and **combustible liquids** stored in cabinets in a single **fire compartment** shall not exceed the quantity permitted in Article 4.2.10.2. for three cabinets.

(2) In **industrial occupancies**, quantities of **flammable liquids** and **combustible liquids** greater than those specified in Sentence (1) are permitted in a single **fire compartment** where

(a) the total quantity stored in a group of cabinets is not more than the quantity permitted for three cabinets, and

(b) the distance between groups of cabinets described in Clause (a) is not less than 30 m.

(3) In **care occupancies**, **care and treatment occupancies** and **detention occupancies**, the total quantity of **flammable liquids** and **combustible liquids** stored in cabinets in a single **fire compartment** shall not exceed the quantity permitted for one cabinet.

Labelling

4.2.10.4. Cabinets for container storage shall be labelled in conspicuous lettering to indicate that the cabinet contains flammable materials and that open flames must be kept away.

Cabinets

4.2.10.5. (1) Cabinets required in this Part shall

(a) comply with ULC/ORD-C1275, “Guide for the Investigation of Storage Cabinets for Flammable Liquid Containers”,

(b) comply with ULI 1275, “Flammable Liquid Storage Cabinets”,

(c) be “FM APPROVED” by FM Global, or

(d) be **listed** as meeting NFPA 30, “Flammable and Combustible Liquids Code”.

Ventilation

4.2.10.6. (1) When a cabinet required in this Part is provided with ventilation openings,

(a) the ventilation openings shall be sealed with materials providing fire protection at least equivalent to that required for the construction of the cabinet, or

(b) the cabinet shall be vented outdoors using vent piping providing fire protection at least equivalent to that required in Clause (a) for seals.

Subsection 4.2.11. Outdoor Container Storage

Quantities and clearances

4.2.11.1. (1) Except as provided in Sentence (2), the quantities and clearances for **flammable liquids** and **combustible liquids** stored in containers in outdoor storage areas shall conform to Table 4.2.11.A.

(2) The clearances required in Sentence (1) do not apply where not more than 5000 L of **flammable liquids** or **combustible liquids** are stored adjacent to a **building** on the same property, and

(a) the **building** is 1 **storey** in **building height** and used primarily for the storage or handling of **flammable liquids** or **combustible liquids**, or

(b) the exposed wall has a **fire-resistance rating** not less than 2 h and has no openings within 3 m of such outdoor storage.

TABLE 4.2.11.A.

Outdoor Container Storage Forming Part of Article 4.2.11.1.

Class of Liquid	Maximum Total Quantity per Pile, L	Minimum Distance Between Piles, m	Minimum Distance to a Property Line or to a **Building** on the Same Property, m
Class IA	5000	1.5	6
Class IB or IC	15000	1.5	6
Class II	35000	1.5	6
Class IIIA	85000	1.5	6

Mixed storage

4.2.11.2. If two or more liquids with different **flash points** are stored outdoors in containers that form a single pile, the maximum total quantity in the pile shall be equal to the maximum quantity permitted for the liquid with the lowest **flash point**.

Fire department access

4.2.11.3. An access route not less than 6 m wide, constructed in conformance with Subsection 3.2.5. in Division B of the **Building Code**, shall be provided in outdoor storage areas to permit the approach of **fire department** vehicles to within 60 m of any part of a pile.

Spill control

4.2.11.4. Outdoor storage areas for **flammable liquids** or **combustible liquids** shall be designed to accommodate possible spillage in conformance with Subsection 4.1.6.

Fencing

4.2.11.5. (1) An outdoor area used for the container storage of **flammable liquids** or **combustible liquids** shall be surrounded by a firmly anchored fence that is

(a) substantially constructed to discourage climbing and unauthorized entry,

(b) not less than 1.8 m high, and

(c) provided with gates that shall be locked when the storage area is not staffed.

SECTION 4.3 STORAGE TANKS

Subsection 4.3.1. Application and Storage Tank Design, Construction and Use

Application

4.3.1.1. This Section applies to **storage tanks** for **flammable liquids** and **combustible liquids**.

Atmospheric storage tanks

4.3.1.2. (1) Subject to Sentences (2), (3), (4), (5), (6), (7) and (8) and Section 4.9, **atmospheric storage tanks** shall be built in accordance with

(a) API 12B, “Bolted Tanks for Storage of Production Liquids”,

(b) API 12D, “Field Welded Tanks for Storage of Production Liquids”,

(c) API 12F, “Shop Welded Tanks for Storage of Production Liquids”,

(d) API 650, “Welded Tanks for Oil Storage”,

(e) CAN/ULC-S601, “Standard for Shop Fabricated Steel Aboveground Tanks for Flammable and Combustible Liquids”,

(f) CAN/ULC-S602, “Aboveground Steel Tanks for Fuel Oil and Lubricating Oil”,

(g) ULC-S603, “Standard for Steel Underground Tanks for Flammable and Combustible Liquids”,

(h) CAN/ULC-S603.1, “External Corrosion Protection Systems for Steel Underground Tanks for Flammable and Combustible Liquids”,

(i) ULC-S615, “Standard for Reinforced Plastic Underground Tanks for Flammable and Combustible Liquids”,

(j) CAN/ULC-S652, “Standard for Tank Assemblies for the Collection, Storage and Removal of Used Oil”,

(k) CAN/ULC-S653, “Standard for Aboveground Steel Contained Tank Assemblies for Flammable and Combustible Liquids”,

(l) ULC-S655, “Aboveground Protected Tank Assemblies for Flammable and Combustible Liquids”, or

(m) ULC/ORD-C142.5, “Concrete Encased Steel Aboveground Tank Assemblies for Flammable and Combustible Liquids”.

(2) Tanks built in conformance with Clauses (1)(a), (b) and (c) shall be used only for the storage of crude petroleum at oil fields.

(3) When necessitated by possible contamination of the liquid to be stored or possible rapid corrosion of the tank, **storage tanks** need not conform to Sentence (1), provided that they are designed and built in conformance with good engineering practice for the material being used.

(4) **Atmospheric storage tanks** shall not be used for the storage of **flammable liquids** or **combustible liquids** at temperatures at or above their boiling points.

(5) Existing in-service aboveground **atmospheric storage tanks** that do not comply with Sentence (1) may remain in-service if the tanks

(a) are not leaking,

(b) have no dents greater than 30 degrees or 35 mm in depth from the normal configuration,

(c) have no pitting in excess of 3 mm, and

(d) have metal thickness of at least 50% of the minimum permissible thickness specified in an applicable standard referred to in Sentence (1).

(6) Existing aboveground **atmospheric storage tanks** that do not comply with Sentence (1), (3), (5) or (9) shall be refurbished in conformance with Article 4.3.1.10. or be replaced.

(7) Existing in-service underground **storage tanks** that do not comply with Sentence (1) may remain in-service if the tanks are not leaking and steel **storage tanks** and associated piping are protected from external corrosion in accordance with Subsection 4.3.9.

(8) Existing underground **storage tanks** that do not comply with Sentence (1), (3) or (7) shall be refurbished in conformance with Article 4.3.1.10. or be replaced.

(9) Existing aboveground **atmospheric storage tanks** that comply with ULC/ORD-C142.16-1994, "Protected Aboveground Tank Assemblies for Flammable and Combustible Liquids", are deemed to comply with Clause (1)(l).

(10) In-service **atmospheric storage tanks** that were installed on or before December 31, 2014 and that do not comply with Sentence (1) may remain in-service if they do not leak and if the tanks met the requirements of this Code on December 31, 2014, as it read on that day.

Low pressure storage tanks and pressure vessels

4.3.1.3. (1) **Low pressure storage tanks** shall be constructed in conformance with

(a) API 620, "Design and Construction of Large, Welded, Low-Pressure Storage Tanks", or

(b) ASME BPVC, "Boiler and Pressure Vessel Code".

(2) **Pressure vessels** shall be constructed in conformance with CSA-B51, "Boiler, Pressure Vessel, and Pressure Piping Code".

(3) **Low pressure storage tanks** and **pressure vessels** are permitted to be used as **atmospheric storage tanks**.

Operating pressure

4.3.1.4. The normal operating pressure of a **storage tank** shall not exceed its design pressure.

Corrosion protection

4.3.1.5. The exposed surface of every aboveground **storage tank** for **flammable liquids** or **combustible liquids** which is fabricated of any ferrous substance shall be thoroughly coated with rust-resisting material compatible with the tank.

Floating roofs

4.3.1.6. Except for perimeter sealing material, floating roof assemblies or internal floating covers installed in **storage tanks** shall be constructed of metal, or other materials and design conforming to one of the tank construction standards set out in this Subsection.

Identification

4.3.1.7. A **storage tank** and its filling and emptying connections shall be identified in conformance with CPPI, "Using the CPPI Colour-Symbol System to Mark Equipment and Vehicles for Product Identification" or to CAN/CGSB-24.3, "Identification of Piping Systems".

Overfill protection

4.3.1.8. (1) A **storage tank** that is not a tight-filled **storage tank** shall be prevented from being overfilled by

(a) continuous supervision of the filling operations by personnel qualified to supervise the filling operations, or

(b) an overfill protection device that complies with ULC/ORD-C58.15, "Overfill Protection Devices for Flammable Liquid Storage Tanks".

(2) A tight-filled **storage tank** shall be prevented from being overfilled with a positive shut-off device that complies with CAN/ULC-S661, "Standard for Overfill Protection Devices for Flammable and Combustible Liquid Storage Tanks".

(3) Sentence (2) does not apply to tight-filled **storage tanks** that were installed on or before December 31, 2014 and that meet the requirements of this Code as it read on December 31, 2014.

Installation and use

4.3.1.9. Unless otherwise specified in this Code, a **storage tank** shall be installed and used in conformance with the applicable installation and use provisions of the design document to which the **storage tank** was built as required by this Section.

Reuse

4.3.1.10. (1) A **storage tank** that has been taken out of service shall not be reused for the storage of **flammable liquids** or **combustible liquids** unless it has been

(a) refurbished so as to conform to one of the standards set out in Sentence 4.3.1.2.(1), or

(b) refurbished in conformance with Sentence (2) or (3).

(2) A **storage tank** is permitted to be refurbished for aboveground use in conformance with one of the following standards:

(a) ULC-S601(A), "Refurbishing of Steel Aboveground Horizontal Tanks for Flammable and Combustible Liquids",

(b) ULC-S630(A), "Refurbishing of Steel Aboveground Vertical Tanks for Flammable and Combustible Liquids".

(3) A **storage tank** is permitted to be refurbished for underground use in conformance with one of the following standards:

(a) ULC-S603(A), "Refurbishing of Steel Underground Tanks for Flammable and Combustible Liquids",

(b) ULC-S615(A), "Refurbishing of Reinforced Plastic Underground Tanks for Flammable and Combustible Liquids".

(4) A riveted **storage tank** shall not be relocated.

Subsection 4.3.2. Installation of Outside Aboveground Storage Tanks

Location

4.3.2.1. (1) Every outside aboveground **storage tank** for the storage of **flammable liquids** or **combustible liquids** shall be located in conformance with Sentences (2) to (5) with respect to the property line and any **building** on the same property.

(2) Except as provided in Sentences (6) and (7), every aboveground **storage tank** containing stable liquids and having a working pressure of not more than 17 kPa (gauge) shall be separated from a property line and any **building** on the same property by distances

(a) half those in Table 4.3.2.A. where protection is provided against fire or explosion in the tank in conformance with Sentence 4.3.2.5.(2), or

(b) equal to those in Table 4.3.2.A. where protection referred to in Clause (a) is not provided.

(3) Every aboveground **storage tank** containing **unstable liquids** and having a working pressure of not more than 17 kPa (gauge) shall be separated from a property line and any **building** on the same property by distances

(a) equal to those in Table 4.3.2.A., but not less than 7.5 m, where protection is provided against fire or explosion in the tank in conformance with Sentence 4.3.2.5.(2), or

(b) three times those in Table 4.3.2.A., but not less than 15 m, where protection referred to in Clause (a) is not provided.

(4) Every aboveground **storage tank** containing boil-over liquids shall be separated from a property line and any **building** on the same property by distances

(a) 0.75 times those in Table 4.3.2.A. where protection is provided against fire or explosion in the tank in conformance with Sentence 4.3.2.5.(2), or

(b) equal to those in Table 4.3.2.A. where protection referred to in Clause (a) is not provided.

(5) Where a **storage tank** containing stable liquids or **unstable liquids** has a working pressure greater than 17 kPa (gauge), the distances from a property line and any **building** on the same property shall be those specified in Sentences (2) and (3) multiplied by 1.5, but shall be not less than 7.5 m.

(6) The minimum distance required in Sentence (2) from a **storage tank** containing only Class II or IIIA liquids to a **building** on the same property is permitted to be reduced to

(a) 1.5 m provided the tank capacity is not more than 50000 L, or

(b) zero provided the tank capacity is not more than 2500 L.

(7) The minimum distance required in Sentence (2) is permitted to be waived provided the **storage tank**

(a) is in conformance with ULC-S655, “Aboveground Protected Tank Assemblies for Flammable and Combustible Liquids”, and

(b) has a capacity of not more than 50000 L.

(8) Where end failure of horizontal **storage tanks** may endanger adjacent property, the tanks shall be placed with the longitudinal axis parallel to such property.

TABLE 4.3.2.A.

Location of Aboveground Storage Tanks Forming Part of Article 4.3.2.1.

Maximum Tank Capacity, L	Minimum Distance to a Property Line or to a **Building** on the Same Property, m
250000	3
500000	4.5
2500000	9
5000000	12
over 5000000	15

Spacing between storage tanks

4.3.2.2. (1) Except as required in Sentences (2) and (3) and in Article 4.3.2.3., the minimum distance between every combination of two aboveground **storage tanks** shall be 0.25 times the sum of their diameters, but shall be not less than 1 m.

(2) The minimum distance between any two **storage tanks**, neither of which has a capacity of more than 250000 L, shall be 1 m.

(3) Where either of the two aboveground **storage tanks** contains **unstable liquids**, the distance required in Sentences (1) and (2) shall be doubled.

Clearances from liquefied petroleum gas cylinders and tanks

4.3.2.3. (1) The minimum separation between a **flammable liquid** or **combustible liquid storage tank** and a liquefied petroleum gas cylinder or tank shall be 6 m.

(2) Secondary containments for **flammable liquid** or **combustible liquid storage tanks** shall not contain any liquefied petroleum gas cylinder or tank, and the centre line of the secondary containment wall shall be not less than

(a) 3 m away from a liquefied petroleum gas cylinder, and

(b) 7 m away from a liquefied petroleum gas **storage tank**.

Fire department access

4.3.2.4. (1) Except as provided in Sentences (2) and (3), **storage tanks** for **flammable liquids** or **combustible liquids** shall be spaced so that each **storage tank** is accessible for fire fighting purposes.

(2) An access route constructed in conformance with Subsection 3.2.5. in Division B of the **Building Code** shall be provided in outdoor storage areas to permit the approach of **fire department** vehicles to within 60 m of any **storage tank**.

(3) Where fire fighting access to **storage tanks** containing Class I or II liquids is not provided, fire extinguishing measures conforming to Sentence 4.3.2.5.(2) shall be provided.

Fire protection systems

4.3.2.5. (1) Where the diameter of a **storage tank** exceeds 45 m, the **storage tank** shall be provided with protection against fire or explosion in conformance with Sentence (2).

(2) Protection against fire or explosion required for a **storage tank** shall consist of fixed protection systems designed in conformance with good engineering practice such as described in

(a) NFPA 11, “Standard for Low-, Medium-, and High-Expansion Foam”,

(b) NFPA 15, “Standard for Water Spray Fixed Systems for Fire Protection”, and

(c) NFPA 69, “Standard on Explosion Prevention Systems”.

Leakage testing

4.3.2.6. At the time of installation, aboveground **storage tanks** and associated piping shall be **tested** for leakage in conformance with Subsections 4.3.15. and 4.4.6.

Subsection 4.3.3. Supports, Foundations and Anchorage for Aboveground Storage Tanks

Foundations and supports

4.3.3.1. (1) **Storage tanks** shall rest on the ground or on foundations, supports or piling made of concrete, masonry or steel.

(2) Tank supports shall be installed on firm foundations designed to minimize uneven settling of the tank and to minimize corrosion of the part of the tank resting on the foundation.

(3) If the clearance below the base of a **storage tank** exceeds 300 mm, the supports for the **storage tank** shall have a **fire-resistance rating** not less than 2 h.

(4) Every aboveground **storage tank** shall be supported in a manner that will prevent the allowable design stress of the tank from being exceeded.

Earthquake protection

4.3.3.2. (1) In areas subject to earthquake forces, **storage tanks**, supports and connections shall be designed to resist such forces in conformance with

(a) Part 4 in Division B of the **Building Code**, and

(b) Appendix A2 of CAN/ULC-S601, "Standard for Shop Fabricated Steel Aboveground Tanks for Flammable and Combustible Liquids".

Protection against flooding

4.3.3.3. Aboveground **storage tanks** located in an area that may be subject to flooding shall be securely anchored.

Subsection 4.3.4. Normal and Emergency Venting for Aboveground Storage Tanks

Design and installation

4.3.4.1. (1) **Atmospheric** and **low pressure storage tanks** shall be provided with normal and emergency venting in conformance with

(a) API 2000, "Venting Atmospheric and Low-Pressure Storage Tanks", or

(b) the appropriate tank design standard set out in Sentence 4.3.1.2.(1).

Unstable liquids

4.3.4.2. When **unstable liquids** are stored, the effects of heat or gas resulting from polymerization, decomposition, condensation or self-reactivity shall be included in the determination of the total venting capacity.

Subsection 4.3.5. Vent Piping for Aboveground Storage Tanks

Materials and construction

4.3.5.1. Except at **distilleries** covered in Section 4.9., vent piping materials and construction shall conform to Subsections 4.4.2., 4.4.3. and 4.4.5.

Location of vent pipe outlets

4.3.5.2. (1) Normal vent pipe outlets for **storage tanks** of Class I liquids

(a) shall be located outside **buildings**, not less than

(i) 3.5 m above the adjacent ground level, and

(ii) 1.5 m from any **building** opening, and

(b) shall discharge so that flammable vapours will not enter the **building** or be trapped near any part of the **building**.

(2) Normal vent pipe outlets for **storage tanks** of Class II or IIIA liquids shall discharge outside **buildings**, not less than

(a) 2 m above the adjacent ground level, and

(b) 1.5 m from any **building** opening.

(3) Emergency vent outlets for **storage tanks** shall discharge outside **buildings** not less than 1.5 m from any **building** opening and from any combustible component of a **building** exterior wall.

Interconnection of vent piping

4.3.5.3. (1) Except as provided in Sentence (2), two or more **storage tanks** are permitted to be connected to a common vent pipe for normal relief venting provided the vent pipe size is designed to vent the combined vapours produced in the connected tanks without exceeding the allowable stresses of the tanks.

(2) Vent piping for **storage tanks** for Class I liquids shall not be connected to vent piping for **storage tanks** for Class II or IIIA liquids unless an effective arrangement is provided to prevent the vapours from the Class I liquids from entering the other tanks.

Subsection 4.3.6. Openings Other than Vents in Aboveground Storage Tanks

Provision of valves

4.3.6.1. (1) Each connection to an aboveground **storage tank** through which liquid can normally flow shall be provided with an internal or external shut-off valve located as close as practical to the shell of the tank.

(2) Each connection that is located below the liquid level of the aboveground **storage tank** and through which liquid does not normally flow shall be provided with a liquid-tight closing device.

Materials

4.3.6.2. (1) Valves and their connections to a **storage tank** shall be made of steel, except that when the chemical characteristics of the liquid stored are incompatible with steel, materials other than steel shall be used.

(2) Materials for valves and their connections to a **storage tank** shall be suitable for the pressures, stresses and temperatures that may be expected, including those of possible fire exposure.

Openings for liquid level measurements

4.3.6.3. Openings for measuring liquid levels in **storage tanks** for Class I liquids shall be equipped with caps or covers which shall be opened only when measuring the liquid level.

Connections for filling and emptying

4.3.6.4. (1) Except as provided in Sentence (3), connections used as part of normal operating conditions for filling or emptying **storage tanks** for **flammable liquids** and **combustible liquids** shall be located

(a) outside **buildings**,

(b) at a location free of sources of ignition, and

(c) not less than 1.5 m from **building** openings.

(2) Connections for filling or emptying **storage tanks** shall be kept closed to prevent leakage when not in use.

(3) A filling connection described in Sentence (1) is permitted to be located inside a **building** where

(a) made necessary

(i) by a process or activity located indoors and to which the tank is directly associated, or

(ii) for the collection of used liquids, and

(b) the fill piping is provided with means to prevent flammable vapours from returning to the **building**.

Subsection 4.3.7. Secondary Containment for Aboveground Storage Tanks

General

4.3.7.1. (1) The area surrounding a **storage tank** or group of **storage tanks** shall be designed to accommodate accidental spillage in conformance with Subsection 4.1.6.

(2) Where barriers described in Sentence 4.1.6.1.(1) are provided to contain accidental spillage from above-ground **storage tanks**, they shall conform to the requirements for secondary containment in this Subsection.

(3) A **storage tank** conforming to Sentence 4.3.7.4.(2) shall be considered as conforming to this Subsection provided it is used and maintained in conformance with Articles 4.3.7.8. and 4.3.7.9.

Construction

4.3.7.2. (1) Except as provided in Sentence (2), the base and walls of a secondary containment shall be made of noncombustible materials, and shall be designed, constructed and maintained to

(a) withstand full hydrostatic head, and

(b) provide a permeability of not more than 10^{-6} cm/s to the **flammable liquids** or **combustible liquids** contained in the **storage tanks**.

(2) Where a membrane provides the level of impermeability required in Sentence (1), the membrane shall

(a) conform to ULC/ORD-C58.9, "Secondary Containment Liners for Underground and Aboveground Flammable and Combustible Liquid Tanks", and

(b) if combustible, be covered with a noncombustible material of such nature and thickness that the membrane will not fail when the secondary containment is exposed to fire.

(3) Subject to Sentence (4), there shall be no openings in a secondary containment.

(4) Where piping passes through a secondary containment, such passages shall conform to Sentences (1) and (2).

Capacity

4.3.7.3. (1) Except as permitted in Sentence (3), a secondary containment for a single **storage tank** shall have a volumetric capacity of not less than 110% of the capacity of the tank.

(2) Except as permitted in Sentence (3), a secondary containment for more than one **storage tank** shall have a volumetric capacity of not less than the sum of

(a) the capacity of the largest **storage tank** located in the contained space, and

(b) 10% of the greater of

(i) the capacity specified in Clause (a), or

(ii) the aggregate capacity of all other **storage tanks** located in the contained space.

(3) When the secondary containment is designed to prevent the entry of precipitation and water used for fire fighting purposes into the contained space, it shall have a volumetric capacity of not less than the capacity of the largest **storage tank** located in the contained space.

Clearances

4.3.7.4. (1) Except as provided in Sentence (2), no part of a secondary containment wall shall be less than 1.5 m from a **storage tank** shell.

(2) It is permitted to waive the distance required in Sentence (1) provided the **storage tank**

(a) is constructed in accordance with

(i) Clause 4.3.1.2.(1)(j), (k), (l) or (m), incorporating secondary containment, or

(ii) Clause 4.3.1.2.(1)(e) for double-walled **storage tanks**,

(b) has a capacity of not more than 50000 L, and

(c) is protected by posts or guardrails when exposed to collision damage.

Access to storage tanks and ancillary equipment

4.3.7.5. (1) A secondary containment shall be constructed so that it does not interfere with

(a) access to **storage tanks**, valves and ancillary equipment,

(b) egress from the contained space, and

(c) access for fire fighting as specified in Article 4.3.2.4.

(2) Where a **storage tank** contains Class I liquids, provision shall be made for the normal operation of valves and for access to the **storage tank** roof without entering the contained space created by the secondary containment when

(a) the average height of the secondary containment exceeds 3.5 m, measured from the ground level of the interior of the contained area, or

(b) the distance between the tank shell and the top inside edge of the secondary containment wall is less than the height of this wall.

Emergency venting

4.3.7.6. Where the secondary containment is not open to the atmosphere, emergency venting shall be provided to relieve any buildup of internal pressure in the contained space when exposed to heat or fire.

Leak detection

4.3.7.7. (1) The secondary containment shall be equipped with a monitoring device that activates a visual or audible alarm in an attended area in the event of a loss of integrity of the secondary containment unless

(a) the contained space created by the secondary containment is accessible for an internal visual examination, and

(b) the secondary containment is sloped so that liquid would flow to a specific location that can be monitored.

Drainage

4.3.7.8. (1) Liquids, debris and precipitation shall not be accumulated in the contained space created by the secondary containment.

(2) Provisions shall be made for removing liquid from the secondary containment in conformance with Subsection 4.1.6.

(3) Controls for the liquid removal system required in Sentence (2) shall be

(a) normally closed,

(b) accessible under fire exposure conditions, and

(c) located so they can be operated from outside the contained space.

Use of secondary containment

4.3.7.9. The contained space created by a secondary containment shall not be used for storage purposes.

Subsection 4.3.8. Installation of Underground Storage Tanks

Location

4.3.8.1. (1) Subject to Sentence (2), underground **storage tanks** shall be double-walled and shall be built in accordance with the underground **storage tank** standards in Sentence 4.3.1.2.(1).

(2) In-service underground **storage tanks** that do not comply with Sentence (1) may remain in-service if the tanks are not leaking and if the tanks met the requirements of this Code on December 31, 2014, as it read on that day.

(3) Underground **storage tanks** shall be located so that

(a) the foundations of **buildings** will not be undermined during excavation, and

(b) loads from **building** foundations and supports are not transmitted to the tank.

(4) Underground **storage tanks** shall be separated by a horizontal distance of not less than

(a) 600 mm from adjacent underground tanks or structures,

(b) 1 m from a **building** foundation or a **street** line, and

(c) 1.5 m from other property lines.

Ground cover

4.3.8.2. (1) Subject to Sentences (2) to (4), underground **storage tanks** shall be installed with not less than 600 mm of ground cover over the tank.

(2) Subject to Sentence (3), underground **storage tanks** subject to vehicular traffic shall be installed not less than 1 m below finished ground level.

(3) An underground **storage tank** subject to vehicular traffic may be installed under a 150 mm reinforced concrete slab or a 200 mm unreinforced concrete slab over not less than 450 mm of sand if the slab extends at least 300 mm beyond the underground **storage tank**.

(4) If it is not practical to install an underground **storage tank** completely below adjacent ground level due to subsurface conditions, an underground **storage tank** shall be built so that at least

(a) 75% of its mass is below adjacent ground level, provided there is not less than 600 mm of ground cover over the portion of the tank above adjacent ground level, or

(b) 50% of its mass is below adjacent ground level, provided there is not less than 1 m of ground cover over the portion of the tank above adjacent ground level.

Damage repair

4.3.8.3. (1) Underground **storage tanks** that are in the process of being installed shall be **inspected**, and any damage to the tank shell, protective coating, fittings or anodes shall be repaired before they are lowered into the excavation.

(2) Damage to underground **storage tank** shells shall not be repaired on site.

Damage prevention

4.3.8.4. (1) Underground **storage tanks** shall be lowered into the excavation by the use of lifting lugs and hooks and, where necessary, spreader bars to prevent damage to the tank shell, protective coating, fittings or anodes.

(2) Any method of handling that may result in damage to the protective coating of the tank shall not be used.

Installation

4.3.8.5. (1) Underground steel **storage tanks** shall be installed in conformance with Appendix B of CAN/ULC-S603.1, "External Corrosion Protection Systems for Steel Underground Tanks for Flammable and Combustible Liquids".

(2) Underground reinforced plastic **storage tanks** shall be installed in conformance with Appendix A of ULC-S615, "Standard for Reinforced Plastic Underground Tanks for Flammable and Combustible Liquids".

(3) Underground **storage tanks** shall not be placed in direct contact with reinforced concrete slabs but shall be separated by not less than 150 mm of sand or other suitable material to distribute evenly the weight of the tank on the supporting base.

Leakage testing

4.3.8.6. (1) At the time of installation, underground **storage tanks** and associated piping shall be **tested** for leakage in conformance with Subsections 4.3.15. and 4.4.6.

Filling

4.3.8.7. (1) **Flammable liquids** or **combustible liquids** shall not be placed in an underground **storage tank** until

(a) the fill pipe and vent line have been installed in the tank, and

(b) all other openings have been sealed.

Spillage

4.3.8.8. If a spillage occurs involving an underground **storage tank**, the escaped liquid and all soil contaminated by the spill shall be removed in accordance with Subsection 4.1.6.

Anchorage

4.3.8.9. (1) Underground **storage tanks** shall be protected against hydrostatic forces which can cause uplift of the tanks when they are empty.

(2) Where anchors and ground straps are used to resist the uplift forces referred to in Sentence (1), they shall be

(a) electrically isolated from the tank, and

(b) installed in such a manner that they do not damage the tank shell, protective coating, fittings or anodes.

Subsection 4.3.9. Corrosion Protection of Underground Steel Storage Tanks

Corrosion protection

4.3.9.1. (1) Underground steel **storage tanks** and integral fittings subject to corrosion shall be protected

(a) in accordance with CAN/ULC-S603.1, "External Corrosion Protection Systems for Steel Underground Tanks for Flammable and Combustible Liquids", or

(b) by impressed current in accordance with NACE RP0285, "Corrosion Control of Underground Storage Tank Systems by Cathodic Protection".

Subsection 4.3.10. Vents for Underground Storage Tanks

Vent design

4.3.10.1. Underground **storage tanks** shall be provided with vent openings and piping of sufficient cross-sectional area designed to vent the tanks during the maximum filling or withdrawal rate without causing the allowable stress for the tank to be exceeded.

Materials and construction

4.3.10.2. Except at **distilleries** as provided in Section 4.9., vent piping materials and construction shall conform to Subsections 4.4.2., 4.4.3. and 4.4.5.

Installation

4.3.10.3. (1) Vent pipe outlets from underground **storage tanks** for Class I liquids shall

(a) be located outside **buildings** higher than the fill pipe openings but not less than

(i) 3.5 m above the adjacent ground level,

(ii) 1.5 m from any **building** opening, and

(iii) 7.5 m from any dispenser, and

(b) discharge so that flammable vapours will not enter **building** openings or be trapped near any part of the **building**.

(2) Vent pipes from underground **storage tanks** for Class II or IIIA liquids shall be located outside **buildings** at a height that is above the fill pipe opening but not less than 2 m above finished ground level.

(3) Vent pipes from underground **storage tanks** for **flammable liquids** or **combustible liquids** shall not be obstructed by any device that may cause excessive back pressure, except that vent pipes from underground **storage tanks** for Class II or Class IIIA liquids may be fitted with return bends, coarse screens or other devices to minimize the entry of foreign material.

(4) Vent piping shall enter an underground **storage tank** through the top of the tank and shall not extend more than 25 mm into the tank.

(5) Vent piping shall be

(a) installed so that any nominally horizontal run shall slope towards the underground **storage tank**,

(b) constructed without traps,

(c) adequately supported to prevent sagging, and

(d) where necessary, protected against mechanical damage.

(6) The requirements of Sentence (4) do not apply to vent piping with an operational vent alarm if the vent piping met the requirements of this Code on December 31, 2014, as it read on that day.

Interconnection of vent pipes

4.3.10.4. (1) Subject to Sentence (2), if vent piping connects two or more underground **storage tanks**, pipe sizes shall be designed to vent the combined vapours produced in the connected underground **storage tanks** without exceeding the allowable stresses of the tanks when being filled simultaneously.

(2) If it is not possible to fill the connected underground **storage tanks** referred to in Sentence (1) simultaneously, or if the connected vents have a vapour recovery system, the vent piping shall be sized to accommodate the maximum vapour flow possible in the system.

(3) Vent piping for an underground **storage tank** containing a Class I liquid shall not be connected to the vent piping for an underground **storage tank** containing a Class II or IIIA liquid unless an effective

method is provided to prevent the vapours from the Class I liquid **storage tank** from entering the other tank.

Subsection 4.3.11. Openings Other than Vents in Underground Storage Tanks

Connections

4.3.11.1. Connections for all openings in underground **storage tanks** shall be liquid and vapour tight.

Openings for measuring liquid level

4.3.11.2. Openings for measuring liquid levels in underground **storage tanks** if independent of the fill pipe shall be equipped with a vapour-tight cap or cover which shall be opened only when measuring the liquid level.

Fill piping and discharge piping

4.3.11.3. (1) Fill piping and discharge piping shall enter underground **storage tanks** only through the top of the tank and discharge piping used in suction systems shall be sloped toward the **storage tanks**.

(2) The fill point of an underground **storage tank** shall not be located higher than the discharge point of the tank's vent.

(3) Subject to Sentence (5), connections used as part of normal operating conditions for filling or emptying underground **storage tanks** shall be located

(a) outside **buildings**,

(b) at a location free of sources of ignition, and

(c) not less than 1.5 m away from **building** openings.

(4) Connections for filling or emptying **storage tanks** described in Sentence (3) shall be kept closed to prevent leakage when not in use.

(5) A filling connection described in Sentence (3) may be located inside a **building** if

(a) made necessary

(i) by a process or activity located indoors and to which the tank is directly associated, or

(ii) for the collection of used liquids, and

(b) the fill piping is provided with means to prevent flammable vapours from returning to the **building**.

(6) If a fill piping system has an offset component from the fill point on the underground **storage tank**, fill pipes shall be

(a) double-walled,

(b) sloped to the **storage tank**, and

(c) electronically monitored for leak detection.

(7) If the fill point is below the normal liquid level in the underground **storage tank**,

(a) the fill line shall be equipped with a manual or automatic valve located at the fill point to prevent spillage when the fill cap is removed, and

(b) the fill line drop tube shall be equipped with a method to prevent siphoning of the tank's contents should a leak occur in the fill line.

(8) In-service fill piping systems that do not comply with Sentences (6) and (7) may remain in-service if the piping does not leak and if the fill piping system met the requirements of this Code on December 31, 2014, as it read on that day.

Subsection 4.3.12. Installation of Storage Tanks Inside Buildings

Application

4.3.12.1. This Subsection applies to the installation of **storage tanks** in **buildings**.

Occupancy

4.3.12.2. (1) Subject to Sentence (2), **storage tanks** in **buildings** shall only be located in **industrial occupancies**.

(2) A **storage tank** containing a Class I liquid fuel that is connected to a stationary engine may be installed in any **occupancy** of a **building** if the installation complies with NFPA 37, "Standard for the Installation and Use of Stationary Combustion Engines and Gas Turbines".

Maximum static head

4.3.12.3. The static head imposed on a **storage tank** inside a **building** shall not exceed 70 kPa (gauge) at the bottom of the tank when the vent or fill pipe is filled with liquid unless the tank is designed for greater pressures.

Maximum quantities and location

4.3.12.4. (1) Except as provided in Subsection 4.2.8. and in Sentence (2), **storage tanks** for **flammable liquids** or **combustible liquids** shall be

(a) located in dedicated rooms conforming to Subsection 4.3.13., and

(b) located in conformance with Table 4.3.12.A.

(2) When quantities greater than are permitted for incidental use in Subsection 4.2.8. are required for special process operations, **storage tanks** for **flammable liquids** or **combustible liquids** are permitted to be located outside of a storage room referred to in Sentence (1), provided that

(a) total quantities per **fire compartment** are not more than one-half the quantities permitted in Table 4.3.12.A.,

(b) they are located on the **first storey**, and

(c) the installation conforms to Articles 4.3.12.7. to 4.3.12.10. and Article 4.3.13.4.

(3) Table 4.3.12.A. does not apply to the storage of **distilled beverage alcohol**.

TABLE 4.3.12.A.

Indoor Tank Storage in **Industrial Occupancies** Forming Part of Article 4.3.12.4. and 4.3.12.6.

Class of Liquid	Storage Level	Maximum Quantity per Storage Room[1], L, One or More Tanks, Protected Storage[2]	Maximum Quantity per Storage Room[1], L, One or More Tanks, Unprotected Storage
Class I	**First Storey**	40000	25000
Class I	**Storeys** above the **first storey**	7500	Not permitted
Class I	**Basement**	Not permitted	Not permitted
Class II and IIIA	**First Storey**	200000	100000

Class II and IIIA	**Storeys** above the **first storey**	20000	Not permitted
Class II and IIIA	**Basement**	20000	Not permitted

Notes to Table 4.3.12.A.:

(1) See Subsection 4.3.13.

(2) See Article 4.2.7.7.

Fire compartments

4.3.12.5. **Fire compartments** referred to in this Subsection shall have a **fire-resistance rating** not less than 2 h.

Mixed storage

4.3.12.6. (1) When two or more classes of liquids are stored in a single storage room referred to in Sentence 4.3.12.4.(1), the total quantities of stored liquids shall meet the requirements of the following equation:

$$qI/QI + qII+IIIA/QII+IIIA \leq 1$$

where

qI = the actual quantity of Class I liquid present,

qII+IIIA = the actual quantity of Class II and IIIA liquid present,

QI = the maximum quantity of Class I liquid permitted in Table 4.3.12.A., and

QII+IIIA = the maximum quantity of Class II and IIIA liquid permitted in Table 4.3.12.A.

Storage tanks outside storage rooms

4.3.12.7. (1) Where **storage tanks** for **flammable liquids** or **combustible liquids** are located outside of storage rooms conforming to Subsection 4.3.13.,

(a) provision shall be made, in conformance with Subsection 4.1.6., to contain a spill equal to at least 100% of the volume of the largest **storage tank** or to drain away spilled **flammable liquids** or **combustible liquids**,

(b) all electrical equipment and wiring in the vicinity of the **storage tank** and the exterior vent shall be installed in conformance with Subsection 4.1.4., and

(c) the area in which the **storage tank** is located shall be ventilated in conformance with Subsection 4.1.7., where designated a Class 1, Zone 0, 1 or 2 hazardous location under the **Electrical Safety Code** made under the **Electricity Act, 1998**.

Vents

4.3.12.8. (1) Except as provided in Sentence (2), normal and emergency vents for **storage tanks** in **buildings** shall be provided in conformance with Subsections 4.3.4. and 4.3.5.

(2) Weak roof-to-side shell seams that are designed to rupture before the allowable design stress of the **storage tank** is reached shall not be used as a means of emergency venting of **storage tanks** inside **buildings**.

Supports, foundations and anchorage

4.3.12.9. (1) Except as provided in Sentence (2), where **storage tanks** for **flammable liquids** or **combustible liquids** are installed inside **buildings**, the supports, foundations and anchorage for such **storage tanks** shall be in conformance with Subsection 4.3.3.

(2) Where a **storage tank** is suspended, rather than supported on a foundation, supports shall be designed and installed in conformance with good engineering practice.

Bonding and grounding

4.3.12.10. (1) Where **storage tanks** for **flammable liquids** or **combustible liquids** are installed inside **buildings**, tanks, piping and discharge equipment shall be bonded and grounded.

Subsection 4.3.13. Rooms for Storage Tanks

Design and construction

4.3.13.1. (1) Rooms for **storage tanks** inside **buildings** shall be

(a) separated from the rest of the **building** by a **fire separation** having a **fire-resistance rating** of not less than 2 h,

(b) designed to contain a spill equal to at least 100% of the volume of the largest **storage tank**, or to drain away spilled **flammable liquids** or **combustible liquids** in conformance with Subsection 4.1.6.,

(c) made liquid-tight where the walls join the floor,

(d) provided with natural or mechanical ventilation in conformance with Subsection 4.1.7., and

(e) used for no other purposes than the storage and handling of **flammable liquids** or **combustible liquids**.

Clearances

4.3.13.2. A minimum clear space of 550 mm shall be maintained between the walls of a room described in Article 4.3.13.1. and the sides of any **storage tanks** within the room.

Explosion venting

4.3.13.3. Where Class IA or IB liquids are dispensed within a storage room, the room shall be designed to prevent critical structural and mechanical damage from an internal explosion in conformance with NFPA 68, “Standard on Explosion Protection by Deflagration Venting”.

Hose stations and portable extinguishers

4.3.13.4. (1) In **buildings** not required to be equipped with a standpipe system by the **Building Code**, hose stations conforming to Articles 3.2.9.2. to 3.2.9.7. of the **Building Code**, as it read on August 21, 2000, shall be provided in the vicinity of the storage room, such that all parts of the room are within reach of a hose stream.

(2) Portable extinguishers for **Class B fires** shall be provided in conformance with Section 6.2.

Placards

4.3.13.5. (1) Placards conforming to the **Transportation of Dangerous Goods Regulations** made under the **Transportation of Dangerous Goods Act, 1992 (Canada)** shall be posted in a conspicuous location outside the room containing **storage tanks**.

(2) Placards required in Sentence (1) shall identify the

(a) liquids stored as **flammable liquids** or **combustible liquids**, and

(b) capacities of the **storage tanks**.

(3) Despite Clause (2)(a), where storage consists of a single product, placards that identify the liquid using the UN Product Identification Number (PIN) shall be acceptable.

(4) Despite Clause (2)(a), where storage consists of multiple products within the same class, placards that identify the class of liquids shall be acceptable.

(5) Despite Clause 2(a), where storage consists of more than one class of liquid, placards that indicate the danger symbol or individual placards for each class of liquid shall be acceptable.

(6) Rooms for **storage tanks** and the information described in Sentence (2) shall be identified in the fire safety plan required in Article 4.1.5.6.

Subsection 4.3.14. Openings Other than Vents in Storage Tanks in Buildings

Connections

4.3.14.1. (1) Connections for all openings in **storage tanks** in **buildings** shall be liquid and vapour tight.

(2) Connections to **storage tanks** through which liquid can flow shall be provided with valves located as close as practical to the tank.

Openings for liquid level measurement

4.3.14.2. (1) Openings that are independent of the fill pipe and are used for measuring the liquid level in **storage tanks** containing Class I or II liquids shall be equipped with a vapour-tight cap which shall be opened only when measuring the liquid level.

(2) Openings referred to in Sentence (1) shall be protected against overflow and **vapour pressure** by means of a spring-loaded check valve.

Subsection 4.3.15. Leakage Testing of Storage Tanks

Leakage testing

4.3.15.1. (1) Every **storage tank** shall be **tested** for leakage in conformance with Sentences (2) to (4)

(a) whenever a leak is suspected, and

(b) at the time of installation

(i) before backfilling in the case of an underground tank, or

(ii) before filling or putting into service in the case of an aboveground tank.

(2) When a leakage **test** is required by Sentence (1) on an aboveground **storage tank**, it is permitted to determine the source of leakage

(a) by a visual examination of the tank shell, and

(b) where the bottom is not amenable to such examination, by **testing** the bottom of the tank in conformance with Sentence (3).

(3) Except as provided in Articles 4.3.15.4. and 4.3.15.5., when a leakage **test** is required by Sentence (1) on an underground **storage tank**, it shall be done by qualified personnel using equipment conforming to

(a) ULC/ORD-C58.12, “Leak Detection Devices or (Volumetric Type) for Underground Flammable Liquid Storage Tanks”, or

(b) ULC/ORD-C58.14, “Nonvolumetric Leak Detection Devices for Underground Flammable Liquid Storage Tanks”.

(4) Where field **test** methods are included in the tank construction standards referred to in Articles 4.3.1.2. and 4.3.1.3., such **tests** shall be permitted for **storage tanks** conforming to those standards.

Retention of records

4.3.15.2. Records of **tests** referred to in Article 4.3.15.1. shall be retained for examination by the **Chief Fire Official**, in conformance with Article 1.1.2.1.

Remedial action

4.3.15.3. (1) When a leak is detected in a **storage tank** by a leakage **test** required in this Subsection or by a leakage detection measure required in Subsection 4.3.16.,

(a) the **storage tank** shall

(i) be replaced, in the case of an underground tank, or

(ii) be repaired or replaced in the case of an aboveground tank, and

(b) the escaped liquid shall be removed in conformance with Article 4.1.6.3.

(2) The **Chief Fire Official** shall be notified within 24 h of detection of a leak referred to in Sentence (1).

Pneumatic leakage tests

4.3.15.4. (1) Pneumatic leakage **tests** shall not be performed on field-erected aboveground **storage tanks**.

(2) Pneumatic leakage **tests** shall not be performed on **storage tanks** with **flammable liquids** or **combustible liquids** in the tanks.

(3) Where a pneumatic leakage **test** is performed on an underground **storage tank**, the tank shall be considered to be leaking when the **test** indicates a pressure drop within a 2 h period after steady temperature conditions have been established and the source of pressure has been removed.

(4) Pneumatic **test** pressures applied to underground **storage tanks** shall be measured by an instrument calibrated in increments of not more than 1 kPa.

(5) If a pneumatic leakage **test** is conducted before an underground tank is backfilled in the case of a new tank, or after the tank is uncovered in the case of a previously installed tank, the **test** pressure shall comply with the production **testing** requirements of

(a) ULC-S603, “Standard for Steel Underground Tanks for Flammable and Combustible Liquids”, or

(b) ULC-S615, “Standard for Reinforced Plastic Underground Tanks for Flammable and Combustible Liquids”.

(6) Where a pneumatic leakage **test** is performed on a completely buried **storage tank**, the **test** pressure shall be not less than 35 and not more than 70 kPa (gauge).

(7) Measures shall be taken to guard against the hazards associated with pneumatic leakage **testing** where explosive mixtures of vapours from **flammable liquids** or **combustible liquids** and air may be present in the area of a tank that has been in use.

Liquid media leakage tests

4.3.15.5. (1) Where a leakage **test** incorporating a liquid **test** medium, including a **flammable liquid** or **combustible liquid**, is performed on an underground **storage tank**, the tank shall be considered to be

leaking when, with compensation for volume differentials caused by effects of temperature and tank shell distortion, the **test** indicates a liquid loss.

(2) The pressure at the bottom of a **storage tank** shall not exceed 70 kPa (gauge) during the leakage **test** referred to in Sentence (1).

Subsection 4.3.16. Leakage Detection of Storage Tanks

Liquid level measurements

4.3.16.1. (1) Except as provided in Article 4.3.16.2., the liquid level in any **storage tank** shall be measured at intervals not greater than seven days in conformance with Sentences (2) to (4), except that at **fuel dispensing stations**, the measurements shall be taken each day the station is in operation.

(2) The level of water at the bottom of an underground **storage tank** shall be measured at intervals not greater than seven days, except that at **fuel dispensing stations**, the measurement shall be taken each day the station is in operation.

(3) A comparison of the measurements described in Sentences (1) and (2) with meter readings and a computation of any gain or loss of liquid shall be done each time a required measurement is taken.

(4) A record for each **storage tank** showing the measurements and computations described in Sentence (3) shall be retained for examination by the **Chief Fire Official**, in conformance with Article 1.1.2.1.

Continuous leakage detection

4.3.16.2. (1) The measurements described in Article 4.3.16.1. are not required for an underground **storage tank** when

(a) it is provided with a continuous leakage detection device conforming to

(i) ULC/ORD-C58.12, “Leak Detection Devices (Volumetric Type) for Underground Flammable Liquid Storage Tanks”, or

(ii) ULC/ORD-C58.14, “Nonvolumetric Leak Detection Devices for Underground Flammable Liquid Storage Tanks”, and

(b) its associated underground piping is provided with continuous leakage detection conforming to Article 4.4.6.7.

Corrective action

4.3.16.3. (1) Immediate corrective action shall be taken in conformance with Subsection 4.3.15. when

(a) a loss of liquid or a gain of water is indicated by any of the leakage detection measures described in Articles 4.3.16.1. and 4.3.16.2., or

(b) the level of water at the bottom of an underground **storage tank** exceeds 50 mm.

Subsection 4.3.17. Out of Service

Underground storage tanks

4.3.17.1. (1) When underground **storage tanks** will be out of service for a period not exceeding 180 days,

(a) the liquid level in the **storage tank** shall be measured at intervals not greater than one month and a record of such measurements shall be retained for **inspection**,

(b) fill pipe covers and covers over openings to measure liquid levels, dispensers and power controls shall be kept locked when not in use, and

(c) vent piping shall be kept open.

(2) Except as provided in Sentence (3), when underground **storage tanks** will be out of service for a period exceeding 180 days,

(a) the **storage tanks**, connected piping and dispensers shall be emptied of Class I liquid,

(b) the **storage tanks**, piping and dispensers shall be refilled with a Class II or IIIA liquid, or not less than 1 kg of dry ice for each 500 L of tank capacity shall be added to the **storage tank**,

(c) measurements of the liquid level of each **storage tank** containing a Class II or IIIA liquid shall be made at intervals not greater than one month, and a record of such measurements shall be retained for **inspection**, and

(d) fill pipe covers and covers over openings to measure liquid levels, dispensers and power controls shall be locked.

(3) Where underground **storage tank** facilities are operated on a seasonal basis,

(a) at the close of each season of operation,

(i) the liquid level of each **storage tank** shall be measured,

(ii) a record of such measurements shall be retained for **inspection**, and

(iii) all fill pipe covers and covers over openings for measuring liquid levels, dispensers and power controls shall be locked, and

(b) prior to the start of an operating season,

(i) the liquid level in each **storage tank** shall be measured,

(ii) the measurements shall be compared with those recorded at the close of the previous season, and

(iii) when a loss of liquid or water intrusion is apparent, immediate action shall be taken to determine and correct the condition.

(4) Where a **storage tank** has been out of service for more than 12 months, the tank and piping shall be **tested** for leakage in conformance with Subsections 4.3.15. and 4.4.6.

Aboveground storage tanks

4.3.17.2. (1) When an aboveground **storage tank** will be out of service or unsupervised for a period not exceeding 180 days, the piping from the tank shall be capped or the valves necessary to achieve similar isolation of the tank shall be closed and securely locked.

(2) When a **storage tank** referred to in Sentence (1) contains **flammable liquids** or **combustible liquids**, the liquid level in the tank shall be measured and the readings compared at intervals not greater than one month.

(3) Where an aboveground **storage tank** will be out of service or unsupervised for a period exceeding 180 days,

(a) all liquid and vapours shall be removed from the **storage tank** and its connected piping, and

(b) the **storage tank** markings shall clearly indicate that the tank is empty.

Disposal

4.3.17.3. Where a **storage tank** is to be permanently disposed of, sufficient openings shall be cut in the tank to render it unfit for further use.

Removal

4.3.17.4. (1) When underground **storage tanks** have no further use or have been out of service for two years or longer, such tanks, together with connected piping and dispensers, shall

(a) have all **flammable liquids** and **combustible liquids** removed from them,

(b) be purged of vapours, and

(c) except as permitted in Article 4.3.17.5., be removed from the ground.

(2) If contaminated, soil surrounding the **storage tanks** described in Sentence (1) shall be replaced with clean fill.

Abandonment in place

4.3.17.5. (1) Where the **Chief Fire Official** determines that it is impractical to remove an underground **storage tank** described in Sentence 4.3.17.4.(1), such tank shall be filled with an inert material.

(2) Where the **Chief Fire Official** determines that it is impractical to remove underground piping described in Sentence 4.3.17.4.(1), such piping shall have the ends permanently sealed by capping or plugging.

Corrosion protection

4.3.17.6. Corrosion protection systems shall be maintained in operating condition when a **storage tank** is temporarily out of service and during seasonal shutdowns.

SECTION 4.4 PIPING AND TRANSFER SYSTEMS

Subsection 4.4.1. Application

Application

4.4.1.1. (1) This Section applies to piping and transfer systems for **flammable liquids** and **combustible liquids**.

(2) Except where otherwise stated in this Part, this Section shall not apply to the following:

(a) tubing or casings and piping for oil or gas wells,

(b) transmission pipelines,

(c) piping for vehicles, aircraft, watercraft and portable or stationary engines,

(d) piping systems in **fuel dispensing stations** and **distilleries**, and

(e) piping within the scope of the applicable provincial **boiler** and **pressure vessel** codes.

Subsection 4.4.2. Materials for Piping, Valves and Fittings

Materials

4.4.2.1. (1) Piping systems that contain **flammable liquids** or **combustible liquids** shall be made of materials that are suitable for the maximum anticipated working pressures and operating temperatures and for the chemical properties of the contained liquid.

(2) Subject to Sentence (3), piping systems shall not be made of materials that

(a) are subject to failure from internal stress or rupture by mechanical damage, or

(b) are subject to failure in fires because they are combustible or have a low melting point.

(3) Non-metallic piping systems may be used for underground installations if they comply with CAN/ULC-S660, "Standard for Nonmetallic Underground Piping for Flammable and Combustible Liquids".

(4) If steel piping is used, it shall comply with

(a) API 5L, "Line Pipe",

(b) ASTM A53/A53M, "Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless", or

(c) CSA Z245.1, "Steel Pipe".

(5) If service pressures exceeding 875 kPa (gauge) may occur, piping and fittings shall be designed in accordance with ASME B31.3, "Process Piping".

(6) Underground piping systems shall include piping in tank sumps, transition sumps and dispenser sumps.

Special materials

4.4.2.2. Where problems of corrosion, contamination or sanitation or standards of purity require special materials, it is permitted to use non-metallic materials for piping, valves and fittings in conformance with Article 4.1.1.4.

Underground piping system construction

4.4.2.3. (1) Underground piping systems shall be of double-walled construction.

(2) Sentence (1) does not apply to vent risers and vertical fill piping systems.

(3) In-service underground piping systems that do not comply with Sentence (1) may remain in-service if the piping does not leak and if the piping system met the requirements of this Code on December 31, 2014, as it read on that day.

Subsection 4.4.3. Corrosion Protection of Piping Systems

Corrosion protection

4.4.3.1. (1) Except as provided in Sentence (2), all exposed or underground piping, valves, couplings, flanges and bolts that are fabricated of any ferrous substance shall be thoroughly coated with a rust-resistant compatible material.

(2) Underground metallic piping systems in contact with the soil or groundwater shall be protected against corrosion in accordance with

(a) CAN/ULC-S603.1, "External Corrosion Protection Systems for Steel Underground Tanks for Flammable and Combustible Liquids", or

(b) NACE SP0169, "Control of External Corrosion on Underground or Submerged Metallic Piping Systems".

Subsection 4.4.4. Identification of Piping Systems

Identification

4.4.4.1. (1) Pipelines for **flammable liquids** or **combustible liquids** shall be marked with the contents of the line, and these markings shall be maintained in a clearly legible form.

(2) Piping for **flammable liquids** or **combustible liquids** shall not be painted red.

(3) Transfer points in piping systems for **flammable liquids** and **combustible liquids** shall be identified in conformance with CPPI, "Using the CPPI Colour-Symbol System to Mark Equipment and Vehicles for Product Identification", or to CAN/CGSB-24.3, "Identification of Piping Systems".

Documentation

4.4.4.2. (1) Documentation on piping systems for **flammable liquids** or **combustible liquids**, including tank and pumping arrangements, shall be made available to the **fire department** upon request.

(2) Documents referred to in Sentence (1) shall be kept at two separate locations so that one copy remains readily available in the event the other is inaccessible due to fire.

Subsection 4.4.5. Joints in Piping Systems

Threaded joints

4.4.5.1. Threaded joints in piping systems for **flammable liquids** or **combustible liquids** shall be made using joint compound or polytetrafluoroethylene tape conforming to CAN/ULC-S642, "Standard for Compounds and Tapes for Threaded Pipe Joints".

Welded piping

4.4.5.2. (1) Welding of piping for **flammable liquids** or **combustible liquids** shall comply with Section 5.17 and

(a) API 1104, "Welding of Pipelines and Related Facilities", or

(b) API RP 1107, "Recommended Pipeline Maintenance Welding Practices".

(2) Flanged joints for piping shall be provided in welded systems at intervals that will facilitate dismantling and avoid subsequent in place hot work operations.

Flanged joints

4.4.5.3. (1) Subject to Sentence (2), flanged joints for piping shall be made with forged or cast steel flanges designed, constructed and installed in accordance with ASME B16.5, "Pipe Flanges and Flanged Fittings NPS ½ Through NPS 24 Metric/Inch Standard".

(2) Bronze flanges for 50 mm diameter or smaller size piping referred to in Article 4.4.5.2. are permitted to be used where copper and brass piping is permitted.

Bolting materials

4.4.5.4. Bolting materials for flanged connections in steel piping systems for **flammable liquids** or **combustible liquids** shall be of alloy steel equivalent to "ASTM A193/A193M, "Alloy-Steel and Stainless Steel Bolting for High Temperature or High Pressure Service and Other Special Purpose Applications", Grade B-7.

Gaskets

4.4.5.5. Gaskets in flanged connections shall be of a material resistant to the liquid being carried and capable of withstanding temperatures of at least 650°C without damage that would impair its function.

Mechanical connections

4.4.5.6. (1) Where underground piping systems have no secondary containment, mechanical connections shall

(a) be readily accessible for **inspection** and maintenance, and

(b) not be in direct contact with the soil.

Subsection 4.4.6. Leakage Testing of Piping Systems

Leakage testing

4.4.6.1. (1) Piping systems including those at **fuel dispensing stations** shall be **tested** for leakage in conformance with Sentences (2) and (3)

(a) whenever a leak is suspected, and

(b) at the time of installation

(i) before backfilling in the case of underground piping, or

(ii) before putting into service in the case of exposed piping.

(2) In-service exposed piping systems may be visually **inspected** for leakage in accordance with Article 4.4.11.5.

(3) When exposed piping systems are subjected to a pneumatic leakage **test**,

(a) it shall be in conformance with Article 4.4.6.4., and

(b) the piping, including the joints, shall be soaped to assist in the detection of leaks.

Retention of records

4.4.6.2. Records of the pressure **tests** on piping systems shall be retained for examination by the **Chief Fire Official**, in conformance with Article 1.1.2.1.

Remedial action

4.4.6.3. If a leak is detected in a piping system during the leakage **test**, the piping system shall be repaired or replaced and the escaped liquid shall be removed in conformance with Subsection 4.1.6.

Pneumatic leakage tests

4.4.6.4. (1) Piping systems referred to in Sentence 4.4.6.1.(3) shall be considered to be leaking when the **test** indicates a pressure drop or a volume loss within a 2 h period after steady temperature conditions have been established and the source of pressure had been removed.

(2) Pressure measurements referred to in Sentence (1) shall be obtained by using instruments calibrated in increments of not more than

(a) 4 kPa for **test** pressures up to 700 kPa (gauge), and

(b) 1% of the **test** pressure where it exceeds 700 kPa (gauge).

Test pressures

4.4.6.5. (1) Except as provided in Sentences (2) and (3) and Article 4.4.6.6., piping systems shall be pressure **tested** at pressures of not less than 350 kPa (gauge) or 1.5 times the maximum operating pressure, whichever is greater.

(2) **Test** pressures exceeding 700 kPa (gauge) shall not be used except when the piping system is designed for such pressures.

(3) Where **test** pressures exceed the design pressures for pumps or similar components included in the piping system being **tested**, such pumps or components shall be isolated from the remainder of the system.

Class I liquids as a test medium

4.4.6.6. Class I liquids shall not be used for pressure **testing** of piping systems, except that piping normally containing Class I liquids under pressure is permitted to be **tested** with such liquids at pressures not exceeding their maximum operating pressures.

Leakage detection

4.4.6.7. When an underground piping system is provided with continuous leakage detection, it shall be in conformance with ULC/ORD-C107.12, “Line Leak Detection Devices for Flammable Liquid Piping”.

Subsection 4.4.7. Location and Arrangement of Piping

Location

4.4.7.1. (1) Piping shall be installed outdoors whenever possible and located so it will not create a hazard to **buildings** or equipment.

(2) Where piping for **flammable liquids** or **combustible liquids** is installed within a **building**, the length of piping shall be as direct and as short as practicable.

(3) No portion of a piping system shall be used in a manner that could cause damage to the piping system.

(4) Piping systems shall be used only for the transfer of products.

Supports for aboveground outdoor piping

4.4.7.2. (1) Aboveground outdoor piping shall be supported and arranged to prevent excessive vibration and stress on equipment connected to it.

(2) When vehicular impact or physical damage is possible, protective guarding devices shall be provided for piping referred to in Sentence (1) and for fill pipes for **storage tanks**.

(3) Aboveground piping systems shall be supported such that they are not in direct contact with the surface of the ground.

Arrangement of aboveground outdoor piping

4.4.7.3. (1) Aboveground outdoor piping shall not be located

(a) on the exterior of walls except on those of **noncombustible construction**, or

(b) above windows and doors.

(2) Aboveground outdoor piping shall not be located above roofs except above roofs of impermeable and **noncombustible construction**, with provision for accidental spillage provided in conformance with Subsection 4.1.6.

(3) Where aboveground piping crosses roadways or railway sidings, ample overhead clearance and warning signs indicating the clearance height shall be provided.

(4) Piping passing through secondary containment walls shall be designed to prevent excessive stress resulting from settlement or fire exposure.

Underground piping

4.4.7.4. (1) Underground piping shall be located so it will not be damaged as a result of vibrations or settling of an adjacent **building** or structure.

(2) Underground piping shall be located not less than 300 mm away from the foundations of any **building** or structure, except where such piping enters the **building** as permitted in Article 4.4.7.7.

(3) Piping passing under railway tracks shall be installed in conformance with TC, “Standards Respecting Pipeline Crossings Under Railways”.

(4) Piping adjacent to railway tracks shall be installed in conformance with **Flammable Liquids Bulk Storage Regulations** made under the **Canada Transportation Act**.

Installation of underground piping

4.4.7.5. (1) Underground piping shall be

(a) supported on undisturbed or compacted soil, and

(b) backfilled on the top and sides with not less than

(i) 300 mm of pea gravel or clean crushed stone, or

(ii) 300 mm of clean sand, free of cinders and stones and compacted in layers not more than 300 mm thick.

(2) Where it is not practicable to support piping as required in Sentence (1) on undisturbed soil, it shall be supported on not less than 150 mm of clean sand, pea gravel or washed, crushed stone.

Piping in service tunnels

4.4.7.6. Piping for **flammable liquids** or **combustible liquids** shall not be located in service tunnels that are used for pedestrian traffic other than for maintenance purposes.

Piping at entrances to buildings

4.4.7.7. (1) Piping for **flammable liquids** or **combustible liquids** shall be located aboveground where the piping enters a **building**.

(2) Piping referred to in Sentence (1) shall be provided with inside and outside shut-off valves.

(3) Where piping referred to in Sentence (1) passes through a wall which would restrict the expansion or contraction of the piping, pipe sleeves shall be provided at the wall penetration to facilitate such movement.

Indoor piping

4.4.7.8. (1) Indoor piping for **flammable liquids** or **combustible liquids** shall either be supported overhead or be located in trenches conforming to Article 4.4.7.9.

(2) Piping referred to in Sentence (1) shall not be installed under combustible flooring.

Piping in trenches

4.4.7.9. (1) Where indoor piping for **flammable liquids** or **combustible liquids** is installed in trenches, a trapped drainage system conforming to Subsection 4.1.6. shall be provided.

(2) When piping referred to in Sentence (1) contains Class I liquids, the trench shall be

(a) provided with positive ventilation to the outdoors, or

(b) designed to prevent the accumulation of flammable vapours.

(3) Noncombustible material shall be used to cover piping referred to in Sentence (1).

Overhead piping

4.4.7.10. (1) Overhead piping for **flammable liquids** or **combustible liquids** shall be installed close to the ceiling or beams or along walls not less than 1.8 m above the floor to protect it against mechanical damage.

(2) Where practical, overhead piping referred to in Sentence (1) shall be supported from **building** framing members.

(3) In **buildings** of steel frame construction, piping referred to in Sentence (1) shall be fastened to steel beams or columns by pipe hangers attached to the flanges.

(4) Piping under concrete ceilings shall be suspended with the use of through bolts or expansion shields.

Supports for overhead piping

4.4.7.11. (1) Piping shall be supported on pipe hangers or other supports so that allowable stresses in the pipe are not exceeded.

(2) Anchors of the expansion shield type used to suspend piping shall not be used to suspend piping from unsound or lightweight concrete or from gypsum assemblies.

Protection of pipe risers

4.4.7.12. (1) Exposed pipe risers shall be protected against mechanical damage by

(a) installing such risers

(i) adjacent to walls or pilasters,

(ii) between flanges of steel columns, or

(iii) within securely anchored larger perforated pipe, and

(b) providing mechanical guards where the risers are exposed to mobile equipment.

Provision for expansion and contraction

4.4.7.13. (1) In the design of piping systems for **flammable liquids** or **combustible liquids**, provision shall be made for the expansion and contraction of the piping system and of the product it conveys.

(2) To prevent excessive stresses resulting from vibration, settling or temperature changes

(a) flexible non-metallic hose connectors conforming to CAN/ULC-S633, "Standard for Flexible Underground Hose Connectors for Flammable and Combustible Liquids" are permitted to be used where necessary in underground piping systems carrying **flammable liquids** or **combustible liquids**,

(b) flexible non-metallic pipe and fittings conforming to CAN/ULC-S660, "Standard for Nonmetallic Underground Piping for Flammable and Combustible Liquids", are permitted to be used where necessary in underground piping systems carrying **flammable liquids** or **combustible liquids**, or

(c) flexible metallic hose connectors conforming to ULC/ORD-C536, "Flexible Metallic Hose", are permitted to be used where necessary in aboveground and underground piping systems carrying **flammable liquids** or **combustible liquids**.

Subsection 4.4.8. Valves in Piping Systems

Design

4.4.8.1. (1) Except as provided in Sentences (2), (3) and (4), valves in piping systems for **flammable liquids** or **combustible liquids** shall be designed to accommodate the temperatures and pressures of those systems and shall conform to ULC-C842, "Valves for Flammable and Combustible Liquids".

(2) Every hose nozzle valve shall conform to CAN/ULC-S620, "Standard for Hose Nozzle Valves for Flammable and Combustible Liquids".

(3) Every emergency valve shall conform to CAN/ULC-S651, "Standard for Emergency Valves for Flammable and Combustible Liquids".

(4) Existing valves are deemed to comply with Sentences (1), (2) and (3), provided they are

(a) not leaking, and

(b) constructed of material that is in conformance with Article 4.4.2.1.

Shut-off valves

4.4.8.2. (1) Shut-off valves shall be provided in all **flammable liquid** or **combustible liquid** piping and pumping systems.

(2) Where practical, valves referred to in Sentence (1) shall be located outdoors or be immediately accessible from outdoors.

(3) Except as permitted in Sentence (4), steel shut-off valves shall be provided

(a) at connections to all aboveground **storage tanks**,

(b) on supply piping where it enters **buildings** or structures,

(c) on branch lines from the main supply line,

(d) on supply lines at dispensing locations,

(e) to isolate one part of a piping system from another, and

(f) to isolate meters and air eliminators.

(4) Stainless steel, monel metal or lined steel bodied valves are permitted to be used when special conditions warrant their use.

Diaphragm valves

4.4.8.3. Diaphragm valves shall have no direct connections between the liquid and air sections that might permit leakage of the liquid past the packing into the air lines.

Globe valves

4.4.8.4. Globe valves shall be arranged so that the packing is on the low pressure side.

Indicating valves

4.4.8.5. Rising stem or other indicating valves shall be used where necessary to determine whether the valves are open or shut.

Identification

4.4.8.6. (1) All valves shall be identified in conformance with CPPI, “Using the CPPI Colour-Symbol System to Mark Equipment and Vehicles for Product Identification”, or to CAN/CGSB-24.3-92, “Identification of Piping Systems”.

(2) Every identification tag shall be kept clean so that its colour and inscription are easily recognizable.

Subsection 4.4.9. Heating of Piping Systems

Design

4.4.9.1. Heating equipment for piping systems containing **flammable liquids** or **combustible liquids** shall be designed not to overheat or create an ignition source for the liquids being heated.

Steam heating

4.4.9.2. (1) **Flammable liquids** and **combustible liquid** piping is permitted to be heated by steam lines provided the minimum steam temperature and pressure to make the liquid fluid are used and Sentences (2) and (3) are complied with.

(2) A pressure regulator shall be provided in the steam line with a relief valve on the downstream side of the regulator.

(3) Piping and steam lines shall be enclosed in insulation conforming to the **Building Code**.

Electrical heating cables

4.4.9.3. Electrical heating cables including electrical induction heating, shall conform to Subsection 4.1.4.

Thermal electrical conduction heating

4.4.9.4. (1) Thermal electrical conduction heating conforming to Sentence (2) is permitted to be used by passing a low-voltage alternating current through the pipe.

(2) Systems permitted in Sentence (1) shall be installed and **tested** as complete units and

(a) unheated sections of piping shall be isolated from heated sections by means of nonconductive fittings,

(b) thermostatic controls, high temperature limit controls and fuses shall have the lowest practical rating to ensure satisfactory operation,

(c) all parts of the piping and fittings shall be enclosed by insulated coverings of a type which will prevent accidental grounding of the systems, and

(d) switches, transformers, contactors and other spark-producing equipment shall be located in an area not subject to flammable vapours.

(3) Upon completion of the installation, systems permitted in Sentence (1) shall be **tested** to ensure that all components are functioning as intended.

Open flames

4.4.9.5. (1) Subject to Sentence (2), open flames shall not be used as a heat source to heat piping for **flammable liquids** or **combustible liquids**.

(2) Open flames may be used to heat piping for **flammable liquids** or **combustible liquids** if the heating is carried out in **furnaces** or ovens that comply with NFPA 86, "Standard for Ovens and Furnaces".

Subsection 4.4.10. Methods of Transfer in Piping Systems

Location of outdoor pumps

4.4.10.1. (1) Pumps for **flammable liquid** or **combustible liquid** piping systems installed aboveground and outside of **buildings** shall be located not less than

(a) 3 m from the property line, and

(b) 1.5 m from **building** openings.

Pump houses and pump rooms

4.4.10.2. (1) Pumps located indoors shall be in rooms built in conformance with Subsection 4.2.9.

(2) Pump houses and pump rooms shall not be used for any purpose other than to serve the pumping equipment.

Pits

4.4.10.3. (1) Pits for subsurface pumps for piping systems or for piping connected to submersible pumps shall be designed to withstand the forces to which they may be subjected without causing damage to the system.

(2) Pits provided in conformance with Sentence (1) shall not be larger than necessary for **inspection** and maintenance and shall be provided with a cover.

Control switches

4.4.10.4. Pumps for piping systems shall be provided with duplicate control switches to shut down the pumps in case of emergency, with one located in the operating area and the other at a remote location.

Hydraulic transfer systems

4.4.10.5. (1) Where **flammable liquids** or **combustible liquids** are transferred by water pressure as a result of displacement, such system shall not be used for liquids that are miscible in water.

(2) All **pressure vessels** for hydraulic transfer systems referred to in Sentence (1) shall be constructed, installed and **tested** in conformance with ASME BPVC, "Boiler and Pressure Vessel Code".

(3) Hydraulic transfer systems referred to in Sentence (1) shall be designed to prevent water pressure in excess of the design pressure of the tank or piping.

(4) Operating pressures shall be controlled by a constant-level float valve or a pressure-regulating valve on the water supply side of the hydraulic transfer system referred to in Sentence (1).

(5) Hydraulic transfer systems referred to in Sentence (1) shall be arranged so that there is no water pressure on the system except when liquid is being discharged.

(6) Check valves shall be provided for both water and **flammable liquid** or **combustible liquid** piping to prevent back-flow in hydraulic transfer systems referred to in Sentence (1).

Inert gas transfer systems

4.4.10.6. (1) Where **flammable liquids** or **combustible liquids** are transferred as a result of displacement by the expansion of nitrogen, carbon dioxide or other inert gases, all **pressure vessels** involved shall be constructed, installed and **tested** in conformance with ASME BPVC, "Boiler and Pressure Vessel Code".

(2) Pressure regulators for inert gas transfer systems referred to in Sentence (1) shall be provided in the gas line to control the pressure of the gas at the minimum pressure required to force the liquid through the piping system at the required rate.

(3) A relief valve with a slightly higher setting than the pressure required in Sentence (2) shall be provided on the downstream side of the regulator or on the tank.

(4) Means of automatically shutting off the gas supply and bleeding the gas pressure in the event of fire shall be provided on all inert gas transfer systems referred to in Sentence (1).

Non-inert gas transfer

4.4.10.7. (1) Subject to Sentence (2), compressed air or other non-inert gas pressure shall not be used in the transfer of **flammable liquids** or **combustible liquids** in a closed piping system.

(2) A non-inert gas pressure is permitted to be used in a closed piping system referred to in Sentence (1) provided

(a) it is the vapour or gas of the **flammable liquid** or **combustible liquid** being transferred, or

(b) it is a vapour or gas that will not support combustion reaction and is non-reactive with the **flammable liquid** or **combustible liquid** being transferred.

Subsection 4.4.11. Operating Procedures for Piping Systems

Procedures

4.4.11.1. Standard procedures for normal operations and for emergencies shall be given in printed form to all employees engaged in the operation of equipment for the transfer of **flammable liquids** and **combustible liquids** and shall be posted or readily available for convenient reference.

Training

4.4.11.2. (1) All employees participating in transfer operations involving **flammable liquids** or **combustible liquids** shall be trained in

(a) the procedures referred to in Article 4.4.11.1.,

(b) the importance of constant attendance during all loading or unloading operations,

(c) extinguishing procedures for fires involving **flammable liquids** and **combustible liquids**, and

(d) the **flammable liquids** and **combustible liquid** colour-coding and identification system required in Article 4.4.8.6.

(2) Employees engaged in the operation of equipment for the transfer of **flammable liquids** or **combustible liquids** shall be trained in the location, function and operation of valves used for the operation of fire protection equipment and manual emergency shut-off valves.

Emergency valves

4.4.11.3. Signs indicating the location of valves used for the operation of fire protection equipment and manual emergency shut-off valves shall be posted in conspicuous locations.

Portable extinguishers

4.4.11.4. At least one portable extinguisher having a rating of 80B:C shall be provided in the vicinity of pumps and ancillary equipment used for the transfer of **flammable liquids** or **combustible liquids**.

Visual inspections

4.4.11.5. (1) A visual **inspection** routine for the prompt detection of obviously abnormal conditions shall be established and shall be performed at least once each shift.

(2) A visual **inspection** shall be made at least once during each day of operation of all aboveground piping systems, pumps and other ancillary equipment, to detect leakage, and any such leakage shall be repaired as quickly as practical.

(3) Where necessary, flammable vapour indicators shall be used to detect leakage.

(4) Open flames and spark-producing devices shall not be used for leakage detection referred to in Sentence (2).

Operational tests

4.4.11.6. To ensure proper operation, frequent **inspections** and **tests** shall be made of all safety shut-off valves and other fire safety devices, with particular attention directed to normally open, fusible-link operated valves, float valves and automatic controls.

Maintenance

4.4.11.7. (1) Except as provided in Sentence (6), maintenance shall not be carried out on piping systems while they are under pressure.

(2) If connections or piping are to be opened, the system shall be drained of **flammable liquids** and **combustible liquids**.

(3) Where equipment for handling **flammable liquids** or **combustible liquids** has to be repaired, it shall be removed and taken to maintenance areas when possible.

(4) Tags shall be attached to all valves on piping systems that are shut off for maintenance purposes to indicate that such valves are not to be opened.

(5) Piping that has been used for the transfer of **flammable liquids** or **combustible liquids** shall be removed or capped when it is no longer intended to be used.

(6) Connections to pressurized piping systems shall be made in accordance with good engineering practice such as described in

(a) API RP 1107, "Recommended Pipeline Maintenance Welding Practices",

(b) API 2200, "Repairing Crude Oil, Liquefied Petroleum Gas and Product Pipelines", or

(c) API RP 2201, "Safe Hot Tapping Practices in the Petroleum and Petrochemical Industries".

Removal of piping

4.4.11.8. The removal, abandonment in place, disposal or temporary taking out of service of an underground piping system shall be performed in accordance with good engineering practice.

SECTION 4.5 FUEL DISPENSING STATIONS

Subsection 4.5.1. Storage, handling and use of flammable liquids and combustible liquids

Storage, handling and use

4.5.1.1. The storage, handling and use of **flammable liquids** and **combustible liquids** at **fuel dispensing stations** shall comply with Section 4.6 of Division B of NRC, "National Fire Code of Canada".

SECTION 4.6 BULK PLANTS

Subsection 4.6.1. Application

Application

4.6.1.1. This Section applies to that portion of a property where **flammable liquids** or **combustible liquids** are received in bulk quantities and are stored or handled for the purpose of being distributed.

Subsection 4.6.2. Storage

Storage

4.6.2.1. (1) **Flammable liquids** and **combustible liquids** shall be stored in

(a) **closed containers** in conformance with Article 4.6.2.4., or

(b) **storage tanks** in conformance with Section 4.3.

Storage tanks

4.6.2.2. At bulk plant rail loading and unloading facilities, the minimum distance from a **storage tank** to a railway line shall be in conformance with **Flammable Liquids Bulk Storage Regulations** made under the **Canada Transportation Act**.

Hydraulic pressure shock

4.6.2.3. Bulk **storage tanks**, piping, pumps, valves and associated components shall be designed, installed and maintained to accommodate hydraulic pressure shock on the system.

Container storage

4.6.2.4. (1) Containers for **flammable liquids** or **combustible liquids** stored indoors shall be stored in conformance with Subsection 4.2.7.

(2) Containers for **flammable liquids** or **combustible liquids** stored outdoors shall be stored in conformance with Subsection 4.2.11., except that the distance between the piles and property lines and the distance between piles need not apply when the containers are stored in an area that does not present a hazard to neighbouring property.

Spill control

4.6.2.5. An outdoor storage area shall be designed to accommodate accidental spillage in conformance with Subsection 4.1.6.

Fencing

4.6.2.6. (1) An outdoor area used for aboveground **storage tanks**, container storage, ancillary equipment and unloading facilities for **flammable liquids** or **combustible liquids** shall be surrounded by a firmly anchored fence that is

(a) substantially constructed to discourage climbing and unauthorized entry,

(b) not less than 1.8 m high, and

(c) provided with gates that shall be locked when the storage area is not staffed.

Subsection 4.6.3. Dispensing

Interconnection

4.6.3.1. Dispensing systems for Class I liquids shall not be interconnected with dispensing systems for Class II and IIIA liquids.

Dispensing into vehicles

4.6.3.2. (1) Dispensers serving the general public for dispensing **flammable liquids** or **combustible liquids** into fuel tanks of vehicles shall not be located at a bulk plant unless separated by a fence or equivalent barrier from the area in which the bulk storage operations are conducted.

(2) Where a dispenser referred to in Sentence (1) is supplied from an aboveground **storage tank**,

(a) an automatically operated valve, that is designed to open only when the dispenser is being operated, shall be provided at the tank outlet, and

(b) an emergency valve that complies with CAN/ULC-S651, “Standard for Emergency Valves for Flammable and Combustible Liquids” shall be installed in the supply line so that the shear point of the valve is not higher than the base of the dispenser and not lower than 25 mm below the base of the dispenser.

Dispensing and transfer inside buildings

4.6.3.3. Class I liquids shall be dispensed or transferred inside **buildings** only in conformance with Subsections 4.1.7. and 4.1.8.

Dispensing into metal containers or tanks

4.6.3.4. Class I liquids shall not be dispensed into a metal container or **storage tank** unless it is electrically connected in conformance with Article 4.1.8.2.

Subsection 4.6.4. Loading and Unloading Facilities

Clearances

4.6.4.1. (1) At a loading or unloading facility for **tank vehicles** or tank cars, the horizontal distance from the fill stem to an aboveground **storage tank**, a **building** or a property line shall be not less than

(a) 7.5 m for Class I liquids, and

(b) 4.5 m for Class II and IIIA liquids.

(2) At bulk plant rail loading and unloading facilities, the minimum distance from a loading structure to a railway line shall be in conformance with **Flammable Liquids Bulk Storage Regulations** made under the **Canada Transportation Act**.

(3) **Buildings** for the shelter of personnel or pumps shall be considered a part of the loading or unloading facility.

Multi-purpose facilities

4.6.4.2. When piping and pumping systems have been used for the transfer of either **flammable liquids** or **combustible liquids** at loading or unloading facilities, the system shall be cleaned of vapours before the other class of liquid is introduced.

Backflow preventers

4.6.4.3. (1) Systems through which tank cars or **tank vehicles** discharge into **storage tanks** by means of a pump shall be provided with backflow preventers located to prevent spills and inadvertent mixing of liquids.

(2) Systems referred to in Sentence (1) shall be designed, installed and maintained to prevent leakage or spillage.

Control valves

4.6.4.4. (1) Valves installed to control the filling of **tank vehicles** or tank cars shall be of the self-closing type.

(2) Control valves referred to in Sentence (1) shall be held open manually, except where automatic devices are provided for shutting off the flow in order to prevent the overfilling of **tank vehicle** or tank car compartments.

Bonding and grounding

4.6.4.5. (1) Bonding, grounding and isolation components for protection against static charges during the loading of **tank vehicles** or tank cars shall be provided when transferring **flammable liquids** or **combustible liquids**.

(2) Where **flammable liquids** or **combustible liquids** are transferred into railway tank cars, railway tracks shall be bonded throughout their length and permanently grounded in conformance with **Railway Prevention of Electric Sparks Regulations** made under the **Canada Transportation Act**.

(3) Bonding required in Sentence (1) shall consist of a metallic bond wire connected to the fill stem or to some part of the loading structure in electrical contact with the fill stem in conformance with Subsection 4.1.4.

(4) Bonding wires for **tank vehicles** shall be provided with a pull-off connector attached so as to be in electrical contact with the cargo tank of the **tank vehicle**.

(5) The bonding connection required in Sentence (1) shall be fixed to the **tank vehicle** or **storage tank** before dome covers are raised and shall remain in place until filling is completed and all dome covers have been closed and secured.

Downspouts

4.6.4.6. Except as provided in Sentence 4.1.8.2.(2), when **tank vehicles** or tank cars are filled with Class I or II liquids through the top of the tank, the fill pipe shall terminate within 150 mm of the bottom of the tank.

Subsection 4.6.5. Fire Protection

Portable extinguishers

4.6.5.1. At least two portable extinguishers, each having a rating of not less than 80B:C, shall be provided at hazardous locations in bulk storage plants for **flammable liquids** and **combustible liquids**.

Subsection 4.6.6. Spill Control

Spill control

4.6.6.1. Facilities to control possible spills of **flammable liquids** or **combustible liquids** shall be provided at loading and unloading points in conformance with Subsection 4.1.6.

SECTION 4.7 PIERS AND WHARVES

Subsection 4.7.1. Application

Application

4.7.1.1. This Section applies to **flammable liquid** and **combustible liquid** installations on piers and wharves, but does not include **marine fuel dispensing stations**.

Subsection 4.7.2. General

Clearances

4.7.2.1. (1) Piers and wharves where cargos of **flammable liquids** or **combustible liquids** are transferred in bulk quantities to or from tanks of marine vessels shall be not less than 30 m from

(a) any bridge over a navigable waterway, and

(b) an entrance to a superstructure of any vehicular or railroad tunnel under a waterway.

(2) The termination of fixed piping for loading and unloading **flammable liquids** or **combustible liquids** shall be not less than 60 m from a bridge or from an entrance to a tunnel.

Construction

4.7.2.2. The substructure and deck of a pier or wharf shall be designed for its intended use and shall be of **heavy timber construction** or other material that will provide adequate flexibility, resistance to shock, durability, strength and fire resistance.

Subsection 4.7.3. Storage Tanks

Installation

4.7.3.1. (1) Except as permitted in Sentences (2) and (3), **storage tanks** shall be installed on shore in conformance with Subsections 4.3.2. to 4.3.7.

(2) **Storage tanks** are permitted to be located in **buildings** on piers and wharves of solid-fill or **noncombustible construction** provided they conform to Subsections 4.3.12. to 4.3.14.

(3) **Storage tanks** are permitted to be buried in piers and wharves of the solid-fill type provided they conform to Subsections 4.3.8. to 4.3.11.

Subsection 4.7.4. Piping, Valves and Fittings

Installation and materials

4.7.4.1. The method of installation and materials used for piping, valves and fittings shall conform to Section 4.4.

Pipe supports

4.7.4.2. (1) Piping shall be properly supported and arranged to prevent excessive vibration or strain on equipment connected to it.

(2) Piping supports shall consist of

(a) wood having no dimension less than 150 mm,

(b) steel, or

(c) concrete.

(3) Where pipe is supported more than 1.2 m above the pier deck, piping supports shall have a **fire-resistance rating** not less than 2 h.

Guards

4.7.4.3. In areas where general cargo is handled or where piping might be subject to physical damage from vehicles, watercraft or floatplanes, the piping shall be protected by means of guarding devices.

Flexible connections

4.7.4.4. Piping between the shore and piers or wharves shall be provided with swing joints or flexible connections designed in conformance with good engineering practice to permit the independent movement of the pier or wharf and shore piping without strain on the pipe.

Shut-off valves

4.7.4.5. A readily accessible valve to shut off the supply from shore shall be provided in each pipeline within 7.5 m of piers and wharves.

Access openings for inspection

4.7.4.6. (1) Access openings for **inspection** purposes below deck shall be provided for valves required in Article 4.7.4.5. and for connections to pipelines, and suitable signs shall be posted indicating their locations.

(2) No freight or materials shall be placed on piers and wharves in such a manner as to obstruct the access openings required in Sentence (1).

Identification

4.7.4.7. Identification tags or labels of metal or other material impervious to water and to the **flammable liquids** or **combustible liquids** being transferred shall be attached to and maintained on all pipelines and control valves to designate their use.

Leakage testing

4.7.4.8. (1) Piping systems shall be **tested** for leakage in conformance with Subsection 4.4.6. before being put into service and before reactivation when used on a seasonal basis.

(2) Underground piping systems referred to in Sentence (1) shall be **tested** at intervals not greater than 12 months.

Subsection 4.7.5. Bonding and Grounding

Bonding and grounding

4.7.5.1. (1) Railway tracks on piers and wharves shall be bonded throughout their length and permanently grounded in conformance with **Railway Prevention of Electric Sparks Regulations** made under the **Canada Transportation Act**.

(2) Insulating joints shall be placed in all rails where entering upon the pier or wharf.

Subsection 4.7.6. Fire Protection

Portable extinguishers

4.7.6.1. (1) Portable extinguishers having a rating of 40B:C shall be provided in the vicinity of Class I liquid pumps and fuel dispensers in conformance with Section 6.2.

(2) Portable extinguishers shall be kept in the pump house or other suitable location where they will be accessible in the event of an emergency, but not accessible to the public.

(3) Where marine vessels are loading or unloading **flammable liquids** or **combustible liquids** or are being refuelled, portable extinguishers with a rating of not less than 40B:C shall be placed on the pier or wharf in the vicinity of loading or unloading operations, so that they are accessible in the event of a fire emergency.

(4) Portable extinguishers provided in conformance with Sentence (3) shall be in addition to those provided on board the marine vessels.

Training

4.7.6.2. Operating personnel shall be trained in how to summon the nearest **fire department** in the event of fire.

Subsection 4.7.7. Bulk Transfer Stations

Location

4.7.7.1. (1) Except as permitted in Sentence (2), the bulk transfer of **flammable liquids** or **combustible liquids** shall take place only on piers and wharves used exclusively for that purpose.

(2) Where it is not practical to locate bulk transfer stations on separate piers and wharves, such stations may be located on general purpose piers and wharves provided that guards or fences are installed around valves or pumping equipment to prevent entry of unauthorized personnel.

Leakage and spill control

4.7.7.2. (1) Measures to accommodate possible leakage or spillage from hose couplings shall be provided in conformance with Subsection 4.1.6.

(2) Provision shall be made to prevent spillage resulting from the disconnection of hoses.

Hose connections

4.7.7.3. (1) Except as provided in Sentence (2), hose connections on piping shall be of the bolted flange type, and all such connections shall be provided with shut-off valves.

(2) The use of cam-locking connections up to 100 mm in size shall be permitted.

(3) Hose connections shall not project beyond the face of piers and wharves.

Subsection 4.7.8. Cargo Hose

Cargo hose

4.7.8.1. (1) The transfer of **flammable liquids** or **combustible liquids** between tanks of marine vessels and piers or wharves shall be through

(a) flexible cargo hose designed in conformance with good engineering practice, or

(b) jointed tubing or piping

(i) suitable for the cargo to be transferred, and

(ii) designed to withstand the maximum design working pressure.

Maintenance and testing

4.7.8.2. Cargo hose shall be maintained in satisfactory operating condition and be pressure **tested**, at intervals not greater than 12 months, to 1.5 times the maximum working pressure but not less than 350 kPa (gauge).

Supports

4.7.8.3. Cargo hose shall be supported where it is not run on a solid foundation.

Subsection 4.7.9. Cargo Pumps

Design and installation

4.7.9.1. Cargo pumps shall be designed and installed in conformance with Subsection 4.4.10.

Pressure relief

4.7.9.2. Cargo pumps capable of producing pressures in excess of the safe working pressure of the cargo hose shall be provided with pressure relief devices such as return lines or relief valves.

Location

4.7.9.3. (1) Except as permitted in Sentence (2), cargo pumps shall be located

(a) on shore or on piers and wharves either of **noncombustible construction** or of the solid-fill type, and

(b) not less than 3 m from other **buildings** or structures.

(2) Where it is not practicable to install cargo pumps as required in Sentence (1), they are permitted to be installed on piers and wharves of **combustible construction** if located in pump houses

(a) conforming to Subsection 4.7.10., and

(b) located not less than 3 m from other **buildings**.

Subsection 4.7.10. Pump Houses

Construction

4.7.10.1. Pump houses shall be of **noncombustible construction** with floors that are chemically resistant to the liquid being handled, liquid-tight and equipped with curbs or flashings around the base of the wall not less than 100 mm in height to contain any spilled liquid.

Ventilation

4.7.10.2. Ventilation shall be provided in pump houses in conformance with Subsection 4.1.7.

Subsection 4.7.11. Transfer Operations

Supervision

4.7.11.1. (1) Transfer operations shall be carried out only under the continuous supervision of a person qualified to supervise such operations.

(2) Cargo shall not be transferred to or from the tank of a marine vessel unless sufficient personnel are on board to control the operation.

(3) The person responsible for directing the operations shall

(a) prior to the transfer of cargo, ascertain that no unauthorized repair work is being carried out on the pier or wharf and that there are no open flames in the vicinity,

(b) during the transfer of cargo, monitor the progress of the loading and unloading to prevent overflow, and

(c) **inspect** the hose and connections for leakage and, if leakage occurs, stop the operations.

Bonding and grounding

4.7.11.2. (1) Tanks of marine vessels shall be electrically connected to the shore piping prior to the connection of cargo hose, except when cathodic protection facilities are operating.

(2) Electrical connections to tanks of marine vessels shall be maintained until the cargo hose has been disconnected and any spillage has been removed.

Equipment

4.7.11.3. (1) Cargo hose shall be of adequate length to allow for the movement of the marine vessel.

(2) Gaskets shall be used in all hose joints and pipe couplings to prevent leakage.

(3) Flanged joints shall be tightly bolted to prevent leakage.

(4) Drip pans shall be placed under hose connections on piers and wharves, except where a sump pit or settling basin is provided.

Spill control

4.7.11.4. (1) When transfer operations are completed,

(a) the valves on the hose connections shall be closed, and

(b) unless the cargo hose is equipped with a device that automatically prevents liquid from draining from the hose upon disconnection of the hose, the hose shall be drained so as to not create a fire or explosion hazard.

(2) Care shall be taken that no liquid is discharged on a pier or wharf or overboard during draining and emptying operations.

SECTION 4.8 PROCESS PLANTS

Subsection 4.8.1. Application

Application

4.8.1.1. (1) Except as provided in Sentence (2), this Section applies to those **process plants**, including **refineries**, which contain industrial processes involving **flammable liquids** or **combustible liquids**.

(2) This Section does not apply to **distilleries** covered in Section 4.9.

Subsection 4.8.2. Outdoor Processing Equipment

Location

4.8.2.1. (1) The location of outdoor processing equipment in **process plants** shall be based on its **flammable liquid** and **combustible liquid** capacity as described in Sentences (2) to (4).

(2) Except as provided in Sentence (4), outdoor processing equipment having emergency relief venting and a working pressure of not more than 17 kPa (gauge) shall be separated from property lines and **buildings** on the same property by distances

(a) equal to those in Table 4.3.2.A. for stable liquids, and

(b) 2.5 times those in Table 4.3.2.A. for **unstable liquids**.

(3) Except as provided in Sentence (4), outdoor processing equipment having emergency relief venting and a working pressure more than 17 kPa (gauge) shall be separated from property lines and **buildings** on the same property by distances

(a) 1.5 times those in Table 4.3.2.A. for stable liquids, and

(b) four times those in Table 4.3.2.A. for **unstable liquids**.

(4) Where protection is not provided against fires or explosions in processing equipment, the distances in Sentences (2) and (3) shall be doubled.

Subsection 4.8.3. Processing Buildings

Explosion venting

4.8.3.1. Except as provided in Article 4.8.4.2., where Class IA liquids or **unstable liquids** are processed within a room or a **building**, the room or **building** shall be designed to prevent critical structural and mechanical damage from an internal explosion in conformance with NFPA 68, “Standard on Explosion Protection by Deflagration Venting”.

Fire separations

4.8.3.2. Areas where **unstable liquids** are handled or where small-scale unit chemical processes are carried out shall be separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 2 h.

Basements and pits

4.8.3.3. (1) Except as permitted in Article 4.1.5.9., Class I liquids shall not be handled or used in **basements**.

(2) Where Class I liquids are handled or used above **grade** within existing **buildings** that have **basements** or covered pits into which flammable vapours can travel and accumulate, such below **grade** areas shall be provided with mechanical ventilation designed to prevent the accumulation of flammable vapours.

(3) The mechanical ventilation required in Sentence (2) shall be capable of exhausting at least 18 m^3/h per square metre of the room area.

Ventilation

4.8.3.4. (1) Enclosed processing **buildings** handling **flammable liquids** or **combustible liquids** shall be ventilated as specified in Subsection 4.1.7.

(2) Equipment used in a **building** and the ventilation of the **building** shall be designed so as to limit flammable vapour-air mixtures under normal operating conditions to the interior of equipment, and to not more than 1.5 m from such equipment.

Subsection 4.8.4. Fire Prevention and Protection

Spill and vapour control

4.8.4.1. (1) Processing equipment shall be designed and arranged to

(a) prevent the unintentional escape of liquids and vapours, and

(b) minimize the quantity escaping in the event of accidental release.

(2) Measures to control spilled **flammable liquids** and **combustible liquids** shall be provided in conformance with Subsection 4.1.6.

Explosion protection

4.8.4.2. (1) Processing equipment where an explosion hazard is present shall be

(a) designed to withstand the explosion pressure without damage to the equipment,

(b) provided with explosion venting in conformance with NFPA 68, "Standard on Explosion Protection by Deflagration Venting", or

(c) provided with an explosion prevention system in conformance with NFPA 69, "Standard on Explosion Prevention Systems".

Fire prevention and protection

4.8.4.3. (1) An evaluation of the fire and explosion risks shall be undertaken to consider the material properties, quantities, operating conditions, storage arrangement, transportation, process design, operating and maintenance procedures.

(2) The evaluation in Sentence (1) shall result in the identification of measures that will minimize fires and explosions from occurring and mitigate the effects of a fire or explosion should it occur.

(3) Measures identified in Sentence (2) shall be implemented in conformance with good engineering practices to prevent fires and explosions from occurring.

(4) Measures identified in Sentence (2) may include but are not limited to

(a) fire detection and alarm,

(b) special fire suppression systems conforming to the standards identified in Sentences 6.8.1.1.(3) and (4),

(c) sprinkler system conforming to NFPA 13, "Standard for Installation of Sprinkler Systems",

(d) a reliable water supply with pressure and flow rates capable of meeting the fire demands,

(e) standpipe and hose systems connected to a reliable water supply located such that vessels, pumps and other equipment containing **flammable liquids** or **combustible liquids** can be reached with at least one hose stream,

(f) combination nozzles capable of discharging a straight steam, water spray or fog,

(g) hydrants or monitor nozzles installed in accordance with NFPA 24, "Standard for the Installation of Private Fire Service Mains and their Appurtenances",

(h) fire-proofing to protect essential equipment and controls,

(i) methods to effect an emergency shutdown of systems, and

(j) methods to protect equipment and structures from fire exposure.

(5) The evaluation and measures shall be put in writing and kept in the **building** for review by the **Chief Fire Official**.

SECTION 4.9 DISTILLERIES

Subsection 4.9.1. Application

Application

4.9.1.1. (1) This Section applies to those areas or **buildings** in **distilleries** where **distilled beverage alcohols** are concentrated, blended, mixed, stored or packaged.

(2) The storage, handling and use of **flammable liquids** or **combustible liquids**, other than **distilled beverage alcohols**, in a **distillery** shall conform to this Part.

(3) If there is a conflict between the requirements of this Section and any other requirement in this Part, other than a requirement of Section 4.12, this Section shall prevail.

(4) Where there are conflicts between this Part and the regulations made under the **Excise Act (Canada)** with regard to security of the product and measurement methods, the **Excise Act (Canada)** shall prevail.

Subsection 4.9.2. General

Building classification

4.9.2.1. (1) Except as provided in Sentence (2), **buildings** or parts thereof in which **distilled beverage alcohol** is distilled, processed or stored in bulk shall be classified as **high hazard industrial occupancies**.

(2) **Buildings** or parts thereof used for storage of **closed containers** of **distilled beverage alcohols** shall be classified as **medium hazard industrial occupancies**.

Subsection 4.9.3. Storage Tanks and Containers

Design, fabrication and testing

4.9.3.1. **Storage tanks**, wooden vats, barrels, drums or containers used for the storage or processing of **distilled beverage alcohols** shall be designed, fabricated and **tested** for the anticipated maximum working pressure, operating temperature, internal corrosion conditions and structural stresses to which they could be subjected.

Supports, foundations and anchorage

4.9.3.2. (1) Supports, foundations and anchorage of **storage tanks** shall comply with Subsection 4.3.3., except that timber supports shall be permitted.

(2) **Storage tank** supports having less than a 2 h **fire-resistance rating** shall be protected by an automatic fire suppression system conforming to an applicable standard set out in Article 6.8.1.1.

(3) The area underneath any **storage tank** greater than 1.2 m in diameter shall be protected by an automatic special fire suppression system conforming to an applicable standard set out in Article 6.8.1.1.

Storage tank vents

4.9.3.3. Normal and emergency vents shall be provided on **storage tanks** in conformance with good engineering practice.

Subsection 4.9.4. Storage

Storage tanks, drums and barrels

4.9.4.1. (1) Where more than 25000 L of **distilled beverage alcohol** in **storage tanks**, drums or barrels are stored inside **buildings**, such **buildings** shall be **sprinklered**.

(2) For **storage tank buildings** protected by automatic sprinklers in conformance with NFPA 13, “Standard for the Installation of Sprinkler Systems”, storage capacities shall not be limited.

Closed containers and storage aids

4.9.4.2. Storage of **closed containers** of **distilled beverage alcohols**, packaging materials and empty bottles, drums, barrels and pallets shall be in conformance with Part 3 of Division B of NRC, "National Fire Code of Canada".

Subsection 4.9.5. Piping and Pumping Systems

Design and installation

4.9.5.1. The design, fabrication, assembly and **inspection** of piping and pumping systems containing **distilled beverage alcohols** shall be suitable for the anticipated maximum working pressures, operating temperatures, internal corrosion conditions and structural stresses to which they could be subjected.

Subsection 4.9.6. Ventilation

Ventilation

4.9.6.1. (1) Natural or mechanical ventilation shall be provided for all areas where alcohol vapours are released from **storage tanks** or process equipment under normal operating conditions, to prevent the concentration of vapours from exceeding 25% of the **lower explosive limit**, measured 1.5 m from any equipment or from any opening subject to vapour release.

(2) Explosion venting as outlined in Sentence 4.2.9.6.(1) is only required in the distillation areas of a **distillery**.

Subsection 4.9.7. Spill Control

Spill control

4.9.7.1. Emergency drainage systems shall be provided to direct any spilled or leaked **distilled beverage alcohol** to a safe location.

Subsection 4.9.8. Fire Protection

Portable extinguishers

4.9.8.1. (1) Except as provided in Sentences (2) to (4), portable extinguishers shall be provided in conformance with Section 6.2.

(2) Except as permitted in Sentence (3), in maturing warehouses, at least one 4A:30B:C rated portable extinguisher shall be located adjacent to each **exit**.

(3) Hose stations complying with Article 6.2.6.6. are permitted to be installed in lieu of portable extinguishers at locations required in Sentence (2), and spaced so that the distance travelled to the nearest hose is not greater than 25 m.

(4) At least one portable extinguisher having a rating of 30B:C shall be located on each industrial lift truck.

Standpipe and hose systems

4.9.8.2. (1) Except as provided in Sentence (2), standpipe and hose systems shall be provided and installed in **distilleries** in accordance with the **Building Code**.

(2) Where a **building** is **sprinklered** in conformance with the **Building Code**, small hose (38 mm) stations are permitted to be supplied from interior sprinkler piping.

SECTION 4.10 RESERVED

SECTION 4.11 TANK VEHICLES

Subsection 4.11.1. Application

Application

4.11.1.1. This Section applies to **tank vehicles** when located on a property to which this Code applies.

Subsection 4.11.2. General

Portable extinguishers

4.11.2.1. (1) A **tank vehicle** shall be provided with at least one portable extinguisher having a minimum rating of 80B:C.

(2) Portable extinguishers on a **tank vehicle** shall be readily accessible.

Hot works

4.11.2.2. Hot works performed on or in close proximity to a **tank vehicle** shall conform to Section 5.17.

Parking inside buildings

4.11.2.3. (1) A **tank vehicle** shall not be parked inside a **building** unless

(a) the **building** is specifically designed for that purpose,

(b) there is sufficient space in the **tank vehicle** compartment to accommodate the thermal expansion of the **flammable liquid** or **combustible liquid**, and

(c) the **tank vehicle** has no leaks of **flammable liquid** or **combustible liquid**.

Parking outside buildings

4.11.2.4. (1) Subject to Sentence (2), a **tank vehicle** shall not be left unattended by the vehicle operator outside a **building** for more than 1 h.

(2) A **tank vehicle** is permitted to be left unattended by the vehicle operator outside a **building** for more than 1 h, but only in a parking space

(a) that is located not less than 15 m from a **building**, and

(b) where the **tank vehicle** is not exposed to undue hazard from accident or collision.

Subsection 4.11.3. Loading, Unloading and Dispensing from Tank Vehicles

Loading and unloading

4.11.3.1. Unless otherwise stated in this Subsection, the loading and unloading of **tank vehicles** shall be conducted in conformance with the applicable provisions in Subsection 4.6.4.

Ignition sources

4.11.3.2. During loading and unloading operations, a **tank vehicle** and its delivery equipment shall be separated from other ignition sources by not less than 6 m.

Static electric charges

4.11.3.3. During loading and unloading of a **tank vehicle**, measures shall be taken against static electric charges in conformance with Articles 4.1.8.2. and 4.6.4.5.

Supervision

4.11.3.4. During loading and unloading of a **tank vehicle**, trained personnel shall be in a position to shut off the flow of liquid in an emergency.

Multi-use compartments

4.11.3.5. When a compartment of a **tank vehicle** has been used to carry a Class I liquid, the compartment, piping and accessory delivery equipment shall be drained of liquid before a Class II or IIIA liquid is loaded.

Engine

4.11.3.6. When loading or unloading of Class I liquids is done without the use of the engine of the **tank vehicle**, the engine ignition shall be shut off during the transfer operations.

Unloading

4.11.3.7. (1) Before a **tank vehicle** is unloaded, the volume of liquid in the receiving tank shall be measured to ensure that the tank can accept the volume to be unloaded.

(2) If the vents of the receiving or delivery tank are obstructed, the transfer of liquid shall be stopped.

(3) A **tank vehicle** shall not be parked on a **street**, shoulder or sidewalk while unloading at a **fuel dispensing station**.

Dispensing into vehicles

4.11.3.8. The dispensing of fuel from a **tank vehicle** directly into the fuel tank of a vehicle shall comply with Article 4.11.3.8. of Division B of NRC, “National Fire Code of Canada”.

SECTION 4.12 LABORATORIES

Subsection 4.12.1. Application

Application

4.12.1.1. This Section applies to laboratories where **flammable liquids** and **combustible liquids** are used or handled.

4.12.1.2. If there is a conflict between the requirements in this Section and other requirements in this Part, the requirements in this Section shall prevail.

Subsection 4.12.2. Separation

Separation

4.12.2.1. (1) A laboratory shall be separated from other parts of the **building** by a **fire separation** having a **fire-resistance rating** of not less than 1 h.

(2) Despite Sentence (1), an existing laboratory that has **fire separations** consisting of membranes of lath and plaster or gypsum board is deemed to be in compliance with Sentence (1).

Subsection 4.12.3. Maximum Quantities

Maximum quantities

4.12.3.1. (1) Containers used for the storage of **flammable liquids** or **combustible liquids** shall

(a) if not more than 5 L in capacity, comply with Subsection 4.2.3., or

(b) if more than 5 L in capacity,

(i) comply with the safety container standards of ULC/ORD-C30, “Safety Containers”, and

(ii) have a capacity of not more than 25 L.

(2) Subject to Sentence (3) and Subsection 4.12.10., no more than 300 L of **flammable liquids** and **combustible liquids**, of which no more than 50 L may be **flammable liquids**, shall be kept in the open area of a laboratory.

(3) Quantities in excess of those permitted in Sentence (2) shall be stored in cabinets conforming to Subsection 4.2.10. or in a room conforming to Subsection 4.2.9.

(4) Containers of **flammable liquids** or **combustible liquids** shall be kept closed when not in use.

Subsection 4.12.4. Emergency Planning

Fire safety plan

4.12.4.1. (1) Except as provided in Sentences (2) to (4), a laboratory shall conform with the requirements of Section 2.8.

(2) Fire drills required in Subsection 2.8.3. shall be held at intervals not greater than six months in laboratories.

(3) Personnel working in laboratories shall be trained in the safe handling of **flammable liquids** and **combustible liquids**.

(4) Measures shall be taken to prevent access to laboratories by unauthorized persons.

Subsection 4.12.5. Spill Control

Spill control

4.12.5.1. A written spill procedure shall be provided for laboratories in conformance with Article 4.1.6.4.

Subsection 4.12.6. Electrical Equipment

Electrical equipment

4.12.6.1. Electrical equipment shall conform with Subsection 4.1.4.

Subsection 4.12.7. Inspection and Maintenance

Inspection and maintenance

4.12.7.1. (1) Electrical equipment, mechanical systems, piping, valves and automatic and manual control and safety devices shall be **inspected** annually and maintained in good operating condition at all times.

(2) The ventilation systems serving a laboratory shall be **inspected** and cleaned as required to prevent the accumulation of combustible or reactive deposits, and the intervals between **inspections** shall be not greater than

(a) 12 months for the ventilation systems of the open laboratory areas, and

(b) six months for the ventilation system of a power-ventilated enclosure required in Article 4.12.8.2.

Subsection 4.12.8. Ventilation

Scope and application

4.12.8.1. (1) Ventilation systems shall conform to Subsection 4.1.7. and Articles 4.12.8.2. to 4.12.8.5.

(2) Despite Sentence (1), existing ventilation systems need not conform with Articles 4.1.7.3., 4.1.7.4. and 4.12.8.2. to 4.12.8.5.

(3) Existing ventilation systems where make-up air is provided are deemed to be in compliance with Article 4.1.7.5.

(4) Existing ventilation systems that maintain a negative pressure within the ventilation system with respect to the surroundings are deemed to be in compliance with Article 4.1.7.7.

Ventilation

4.12.8.2. (1) A laboratory shall be provided with continuous mechanical ventilation designed and maintained to ensure that flammable vapours

(a) do not accumulate in the laboratory,

(b) are prevented from migrating to other parts of the **building**,

(c) do not accumulate in the ventilation system,

(d) are exhausted to the outdoors, and

(e) are not returned to the **building**.

(2) A ventilation system required in Sentence (1) shall be provided with monitoring devices to

(a) indicate that the ventilation system is in operation, and

(b) sound an alarm if the ventilation system malfunctions.

Power-ventilated enclosure

4.12.8.3. (1) The use and handling of **flammable liquids** or **combustible liquids** in a laboratory shall be confined inside a power-ventilated enclosure conforming to Articles 4.12.8.4. and 4.12.8.5. when

(a) their use releases flammable vapours which could be potentially explosive,

(b) liquids are heated to a temperature equal to or greater than their **flash point**, or

(c) **unstable liquids** are used.

Enclosure exhaust ventilation

4.12.8.4. (1) The ventilation system for a power-ventilated enclosure required in Article 4.12.8.3. shall

(a) conform to NFPA 91, “Standard for Exhaust Systems for Air Conveying of Vapors, Gases, Mists, and Noncombustible Particulate Solids”,

(b) provide continuous exhaust ventilation at an air velocity sufficient to prevent the accumulation of explosive vapours or of combustible or reactive deposits in the power-ventilated enclosure and its exhaust duct system,

(c) confine flammable vapours to the area where they are generated and exhaust them to the outdoors,

(d) not return the exhausted air to the **building**, and

(e) be provided with well identified control switches that are

(i) located outside of the power-ventilated enclosure, and

(ii) readily accessible in case of an emergency.

(2) Where deposits referred to in Clause (1)(b) can accumulate in the power-ventilated exhaust duct system and create a fire or explosion hazard,

(a) provisions shall be made to remove such deposits so they do not create a fire or explosion hazard, or

(b) an automatic special fire suppression system shall be provided in conformance with an applicable standard set out in Article 6.8.1.1.

Enclosure construction

4.12.8.5. (1) The power-ventilated enclosure required in Article 4.12.8.3. and its exhaust system shall

(a) except as provided in Sentences (2) and (3), be constructed of noncombustible materials compatible with and chemically resistant to vapours being exhausted,

(b) be provided with access doors to permit **inspection** and maintenance of the fan assembly and exhaust ducts,

(c) be provided with instructions for its use and the operation of the ventilation system, and

(d) be provided with means to control accidental spillage in conformance with Subsection 4.1.6.

(2) Combustible materials are permitted in systems described in Clause (1)(a) where

(a) such materials are required by the corrosive or reactive properties of chemicals or liquids being used, and

(b) their **flame-spread rating** is not more than 25.

(3) The **flame-spread rating** required in Sentence (2) is permitted to be greater than 25 if an automatic special fire suppression system conforming to an applicable standard set out in Article 6.8.1.1. is provided inside the power-ventilated enclosure and its exhaust duct system.

Subsection 4.12.9. Refrigerated Storage

Refrigerated storage

4.12.9.1. (1) Refrigerators described in Sentence 4.1.4.1.(2) shall be identified as containing **flammable liquids** or **combustible liquids**.

(2) Class I liquids stored in refrigerators shall be kept in **closed containers**.

Subsection 4.12.10. Existing Laboratories in Basements

Existing laboratories in basements

4.12.10.1. (1) Existing laboratories in **basements** may store, handle or use **flammable liquids** and **combustible liquids** if

(a) the quantity of **flammable liquids** and **combustible liquids** that are stored, handled or used does not exceed 300 L, of which not more than 250 L are **flammable liquids**,

(b) continuous mechanical ventilation to the outdoors is provided to ensure that flammable vapour concentrations do not exceed 25% of the **lower explosive limit**,

(c) an audible alarm is provided that will be sounded in an attended area upon shutdown of the mechanical ventilation system,

(d) the **building** has a fire safety plan in accordance with Section 2.8,

(e) Class IA liquids are not stored in containers greater than 4 L in capacity,

(f) all sources of ignition within 0.9 m from the floor are eliminated or the room is equipped with a flammable vapour detection system that will alarm in an attended location upon detection of vapour concentrations exceeding 10% of the **lower explosive limit**, and

(g) the laboratory is designed to prevent critical structural and mechanical damage from an internal explosion in accordance with NFPA 68, “Standard on Explosion Protection by Deflagration Venting”, unless

(i) all dispensing of **flammable liquids** is carried out in a power-ventilated enclosure in accordance with Articles 4.12.8.3. to 4.12.8.5., and

(ii) Class IA liquids are stored in cabinets in accordance with Article 4.2.10.5.

O. Reg. 213/07, Division B, Part 4; O. Reg. 150/13, ss. 13-15; O. Reg. 194/14, s. 7; O. Reg. 256/14, ss. 78-195.

PART 5
HAZARDOUS MATERIALS, PROCESSES AND OPERATIONS

SECTION 5.1 GENERAL

Subsection 5.1.1. Application

Application

5.1.1.1. This Part applies to materials, processes and operations that involve a risk from explosion or high flammability, or otherwise create a hazard to life safety or health.

Subsection 5.1.2. Means of Egress

Means of egress

5.1.2.1. Hazardous materials, processes and operations shall be located and the premises maintained so that the **means of egress** will not be obstructed in any manner that would interfere with evacuation of the **floor area** in the event of a fire.

Subsection 5.1.3. Electrical Installations

Electrical installations

5.1.3.1. Electrical installations shall conform to the **Electrical Safety Code** made under the **Electricity Act, 1998**.

Subsection 5.1.4. Ventilation

Ventilation requirements

5.1.4.1. Ventilation shall be provided for hazardous locations and processes in conformance with the **Building Code** and the requirements of this Part.

SECTION 5.2 EXPLOSIVES, FIREWORKS AND PYROTECHNICS

Subsection 5.2.1. General

Interpretation

5.2.1.1. In this Subsection,

"**Act**" means the **Explosives Act (Canada)**;

"**Regulations**" means the **Explosives Regulations** made under the **Explosives Act (Canada)**.

Manufacture, storage, handling, transportation, sale and use

5.2.1.2. The manufacture, storage, handling, transportation, sale and use of explosives shall meet the requirements of the **Act** and the **Regulations**.

Fire emergency procedures

5.2.1.3. (1) Subject to Sentence (2), no explosives shall be manufactured, stored, handled, transported, sold or used unless fire emergency procedures are established in accordance with Section 2.8 and such procedures specify

(a) the location and identification of storage and handling areas,

(b) the methods to control a fire emergency safely and efficiently, and

(c) the names, addresses and telephone numbers of persons to be contacted in case of fire during non-operating hours.

(2) Sentence (1) does not apply to

(a) the use of consumer fireworks (type F.1, as designated by the **Act** and **Regulations)**,

(b) the use of small arms cartridges (type C.1, as designated by the **Act** and the **Regulations**),

(c) the storage of consumer fireworks (type F.1, as designated by the **Act** and the **Regulations**) in **dwelling units**, or

(d) the storage of small arms cartridges (type C.1, as designated by the **Act** and the **Regulations)** in **dwelling units**.

Handling and discharge of fireworks and pyrotechnics

5.2.1.4. The handling and discharge of fireworks and pyrotechnics shall comply with NRCan, "Display Fireworks Manual" and NRCan, "Pyrotechnics Special Effects Manual".

Subsection 5.2.2. REVOKED: O. Reg. 256/14, s. 196.

SECTION 5.3 RESERVED

SECTION 5.4 CELLULOSE NITRATE PLASTICS

Subsection 5.4.1. Displays

Advertising displays

5.4.1.1. Displays of cellulose nitrate plastic articles in stores that are not in showcases or show windows shall be displayed only when placed on tables or counters not more than 1 m wide and 3 m long, and the spaces underneath the tables or counters shall be kept free of combustible materials.

Lighting fixtures

5.4.1.2. Lighting fixtures shall not be located adjacent to any cellulose nitrate plastic material so as to create a possible ignition hazard.

Subsection 5.4.2. Manufacture

Storage of raw materials

5.4.2.1. Raw materials used in the manufacture of cellulose nitrate plastics shall be stored only in areas reserved for that purpose.

Storage in cabinets

5.4.2.2. Not more than 450 kg of raw material used for the manufacture of finished cellulose nitrate plastic goods shall be stored in cabinets in any one workroom, not more than 225 kg stored in any one cabinet and not more than 112 kg in any one compartment of the cabinet.

Storage in vented vaults

5.4.2.3. Raw material in excess of that permitted in Article 5.4.2.2. shall be kept in vented vaults not exceeding 40 m^3 capacity and protected with an automatic sprinkler system installed in conformance with NFPA 13, "Standard for the Installation of Sprinkler Systems".

Accumulation of materials in workrooms

5.4.2.4. In factories manufacturing articles of cellulose nitrate plastics, **sprinklered** and vented cabinets, vaults or storage rooms shall be provided to prevent the accumulation of excessive quantities of such material in workrooms.

Stationing of operators

5.4.2.5. In the workrooms of factories where cellulose nitrate plastics are being processed, operators shall be stationed not closer than 1 m apart.

Storage in work areas

5.4.2.6. Material for the manufacture of cellulose nitrate plastic articles that is not kept in containers may be placed on tables, workbenches or at machines provided the quantity does not exceed one day's supply.

Storage limitations in workrooms

5.4.2.7. The total amount of cellulose nitrate plastic materials, including the material in containers and on tables, in any one workroom shall not exceed 70 kg.

Waste material storage

5.4.2.8. Waste cellulose nitrate plastic materials such as shavings, chips, turnings, sawdust edgings and trimmings shall be kept under water in metal receptacles until removed from the premises.

Subsection 5.4.3. Storage of Finished Products

Ventilation

5.4.3.1. Areas where cellulose nitrate plastic finished products are stored shall be ventilated so that any decomposition gases produced by the plastics will be vented outdoors to an area where they will not re-enter the **building**.

Heating appliance restrictions

5.4.3.2. (1) Cellulose nitrate plastics shall not be stored

(a) in rooms containing fuel-burning **appliances** or electrical heating elements, or

(b) within 600 mm of any steam pipe, radiator or **chimney**.

Storage vaults

5.4.3.3. (1) Where cellulose nitrate plastics in excess of 11 kg are stored in any **fire compartment** in a **building**, a vented cabinet or vault constructed in conformance with NFPA 40E, "Code for the Storage of Pyroxylin Plastic", and Articles 5.4.3.4. and 5.4.3.5. shall be provided for its storage.

(2) Not more than 9000 kg of cellulose nitrate plastics shall be stored in any vault.

Storage up to 3400 kg

5.4.3.4. (1) Where quantities do not exceed 3400 kg, cellulose nitrate plastics shall be stored in a vault that

(a) has a **fire-resistance rating** not less than 1.5 h,

(b) is designed to resist an internal pressure of 3.5 kPa,

(c) is not greater than 40 m^3 in volume,

(d) has explosion venting of 0.1 m^2 of venting area to the exterior for every cubic metre of vault volume, and

(e) is ventilated to the exterior to provide 200 cm^2 of ventilating area for each cubic metre of vault volume.

Storage in excess of 3400 kg

5.4.3.5. (1) Where quantities exceed 3400 kg but do not exceed 9000 kg, cellulose nitrate plastics shall be stored in a vault that

(a) has a **fire-resistance rating** not less than 4 h,

(b) is designed to resist an internal pressure of 28 kPa,

(c) has explosion venting of 650 cm^2 of venting area to the exterior for every cubic metre of vault volume, and

(d) is ventilated to the exterior to provide 200 cm^2 of ventilating area for each cubic metre of vault volume.

Subsection 5.4.4. Cellulose Nitrate Motion Picture Film

Restricted use

5.4.4.1. Cellulose nitrate motion picture film shall not be used, stored or handled in a place of public assembly.

Storage and handling

5.4.4.2. Cellulose nitrate motion picture film shall be stored and handled in conformance with NFPA 40, "Standard for the Storage and Handling of Cellulose Nitrate Motion Picture Film".

Storage when not in use

5.4.4.3. When not in use, cellulose nitrate motion picture film shall be kept in closed, single-roll containers.

Subsection 5.4.5. Fire Protection

Sprinkler systems

5.4.5.1. The manufacture and storage of articles of cellulose nitrate plastic in quantities exceeding 45 kg shall be only in **buildings** equipped with a system of automatic sprinklers installed in conformance with NFPA 13, "Standard for the Installation of Sprinkler Systems".

SECTION 5.5 RESERVED

SECTION 5.6 COMPRESSED GAS CYLINDERS

Subsection 5.6.1. General

Alternative protection measures

5.6.1.1. (1) A requirement of this Section is deemed to be complied with if alternative protection measures are **approved** that, in the opinion of the **Chief Fire Official**, will provide protection for life safety and health similar to the protection provided by compliance with the requirement.

(2) A proposal for alternative protection measures referred to in Sentence (1) shall bear the signature and seal of a **Professional Engineer** or **Architect**, or both.

(3) This Section does not apply to facilities at which **compressed gases** are manufactured or cylinders are filled or distributed if the storage and handling of the **compressed gases** is in conformance with

(a) CGA P-1, "Safe Handling of Compressed Gases in Containers",

(b) NFPA 55, "Standard for the Storage, Use and Handling of Compressed Gases and Cryogenic Fluids in Portable and Stationary Containers, Cylinders and Tanks", or

(c) a procedure that bears the signature and seal of a **Professional Engineer**.

(4) Articles 5.6.2.1. to 5.6.2.4. do not apply to **compressed gas** stored outdoors or in a **fire compartment** if the amount stored in each outdoor location or **fire compartment** does not exceed

(a) 25 kg of flammable **compressed gas**, or

(b) 150 kg of non-flammable **compressed gas**.

(5) Despite Sentence (4), Articles 5.6.2.1. to 5.6.2.4. apply to any amount of poisonous or corrosive **compressed gas**.

(6) Subject to Sentence (7), **fire compartments** referred to in Sentence (4) shall have a **fire-resistance rating** not less than 45 min.

(7) Existing **fire compartments** that are **approved** may have a **fire-resistance rating** less than 45 min.

(8) **Compressed gas** stored in accordance with NFPA 55, "Standard for the Storage, Use and Handling of Compressed Gases and Cryogenic Fluids in Portable and Stationary Containers, Cylinders and Tanks", is deemed to comply with Subsection 5.6.2.

Protection against mechanical damage

5.6.1.2. (1) Cylinders containing **compressed gas** shall be protected against mechanical damage.

(2) Cylinders containing **compressed gas** shall be stored to hold them securely in place

(a) on **racks**,

(b) by nesting, or

(c) by **approved** methods or devices.

Acetylene cylinders

5.6.1.3. Except when being transported, acetylene cylinders shall be kept in an upright position.

Valve damage

5.6.1.4. Cylinders containing **compressed gas** which are in storage shall be protected against valve damage.

Temperature limitations

5.6.1.5. Cylinders containing **compressed gas** shall be stored in areas where the ambient air temperature does not exceed 52°C.

Indoor storage

5.6.1.6. If cylinders containing **compressed gas** are stored indoors, the cylinders shall be stored in a storage area or room that is dry and ventilated.

Oxygen cylinders

5.6.1.7. Oil or grease shall not be used for the lubrication of valves or fittings on oxygen cylinders.

Subsection 5.6.2. Storage

Outdoor storage of cylinders

5.6.2.1. (1) Cylinders containing **compressed gases** stored outdoors shall be

(a) supported on raised concrete or other noncombustible platforms,

(b) located in an enclosure used for the sole purpose of such storage, and

(c) surrounded by a fence in conformance with Sentence 5.6.2.2.(1).

(2) Where a canopy is provided to protect outdoor storage in Sentence (1), the canopy shall be of **noncombustible construction**.

Fencing

5.6.2.2. (1) Fencing required in Article 5.6.2.1. shall be

(a) firmly anchored and substantially constructed,

(b) designed to discourage climbing,

(c) not less than 1.8 m high,

(d) provided with gates that shall be locked when the storage area is not staffed, and

(e) kept clear of obstructions so that gates may be fully opened at all times.

(2) An outdoor storage area that exceeds 100 m^2 and is used for storage of cylinders containing **compressed gas** shall be arranged such that there is a clear space of not less than

(a) 30 m between stored products and brush or forested areas, and

(b) 6 m between stored products and uncontrolled grass or weeds.

Clearances from building openings

5.6.2.3. (1) Cylinders containing **compressed gas** and located outdoors shall be

(a) at least 1.5 m from any **building** opening if the aggregate capacity of expanded gas is not more than 170 m^3,

(b) at least 7.5 m from any **building** opening if the aggregate capacity of expanded gas is over 170 m^3 but not more than 500 m^3, or

(c) at least 15 m from any **building** opening if the aggregate capacity of expanded gas is over 500 m^3.

(2) Sentence (1) does not apply if the **building** opening is into a room that conforms to Sentence 5.6.2.4.(1).

Indoor storage of flammable compressed gases

5.6.2.4. (1) Except as provided in Sentences (2), (3) and (5), cylinders containing flammable **compressed gas** stored indoors shall be located in a room that

(a) is separated from the remainder of the **building** by a gas-tight **fire separation** having a **fire-resistance rating** not less than 2 h,

(b) is located on an exterior wall of the **building**,

(c) can be entered from the exterior,

(d) has all **closures** that lead into the interior of the **building**

(i) equipped with self-closing devices in such a manner that the **closures** are kept closed when not in use, and

(ii) constructed so as to prevent migration of gases from the room into other parts of the **building**,

(e) is constructed so that an exterior wall provides explosion venting

(i) in the ratio of 0.2 m^2 for each cubic metre of room volume, or

(ii) in the ratio computed in accordance with NFPA 68, "Standard on Explosion Protection by Deflagration Venting", except in no case less than 650 cm^2 of vent area for each cubic metre of room volume,

(f) has ventilation that complies with Sentence (4),

(g) does not contain fuel-fired equipment or high temperature heating elements, and

(h) is used for no purpose other than the storage of **compressed gas**.

(2) Cylinders of flammable, lighter than air **compressed gas** are permitted to be stored outside of a room described in Sentence (1) provided that the aggregate capacity per **fire compartment** of expanded gas outside of the room is not more than,

(a) 60 m^3 in a **building** of **combustible construction** that is not **sprinklered**, and

(b) 170 m^3 in a **sprinklered building** or in a **building** of **noncombustible construction**.

(3) Cylinders of flammable **compressed gas** which are heavier than air may be stored in rooms other than those described in Sentence (1) if they are stored in a **fire compartment** having a **fire-resistance rating** of at least 45 min and

(a) the aggregate capacity does not exceed 100 kg,

(b) the number of cylinders does not exceed three,

(c) the cylinders are not located in the **basement** or other areas below **grade**, and

(d) the **fire compartment** has ventilation conforming to Sentence (4).

(4) The ventilation required by Clauses (1)(f) and (3)(d) shall be

(a) mechanical ventilation to the outside that ensures at least one air change per hour, or

(b) natural ventilation to the outside through non-closeable louvred openings with

(i) at least one opening no more than 0.3 m from the ceiling and one opening no more than 0.3 m from the floor,

(ii) all openings at ceiling level having an aggregate free opening area of at least 0.2 m^2 per 100 m^2 of the **floor area**,

(iii) all openings at floor level having an aggregate free opening area of at least 0.2 m^2 per 100 m^2 of the **floor area**, and

(iv) the openings located to ensure cross ventilation.

(5) "Single trip" non-refillable cylinders with water capacities of more than 375 g and less than 1.13 kg located within **mercantile occupancies** shall conform to the provisions stipulated in **Ontario Regulation 211/01 (Propane Storage and Handling)** made under the **Technical Standards and Safety Act, 2000**.

5.6.2.5. RESERVED

Poisonous compressed gas

5.6.2.6. Cylinders containing poisonous **compressed gas** shall not be stored in a room containing combustible or flammable material.

Reactive gases

5.6.2.7. (1) Subject to Sentences (2) and (3), cylinders containing **compressed gases** that may react with one another shall be stored in separate **fire compartments** having a **fire-resistance rating** not less than 1 h.

(2) Cylinders containing **compressed gases** that are lighter than air and that may react with each other may be stored in the same **fire compartment** if they are separated

(a) by a distance of at least 7.5 m, or

(b) by a concrete or masonry wall having a height of at least 2.0 m and projecting at least 1.0 m beyond the cylinders.

(3) Cylinders containing **compressed gases** that may react with each other and are heavier than air may be stored in the same **fire compartment** if they are separated

(a) by a distance of at least 15 m, or

(b) by a concrete or masonry wall having a height of at least 1.5 m, and projecting such that the minimum distance that vapour can travel between two cylinders of gases that may react with each other is not less than 15 m, measured horizontally.

Signs

5.6.2.8. Storage rooms shall have exterior signs with minimum 50 mm high letters indicating the nature of the **compressed gases**.

SECTION 5.7 RESERVED

SECTION 5.8 RESERVED

SECTION 5.9 RESERVED

SECTION 5.10 COMBUSTIBLE DUST PRODUCING PROCESSES

Subsection 5.10.1. Dust Collection

Application

5.10.1.1. This Section applies to **buildings**, parts of **buildings** or equipment where **combustible dusts** are produced in quantities or concentrations that create an explosion or fire hazard.

Accumulations of combustible dusts

5.10.1.2. (1) **Building** and machinery surfaces shall be kept clean of accumulations of **combustible dusts** using cleaning equipment that

(a) is made of materials that will not create electrostatic charges or sparks,

(b) is electrically conductive and bonded to ground, and

(c) except as permitted in Sentence (3), removes the dust to a safe location by vacuum.

(2) When used in atmospheres containing **combustible dusts**, the cleaning equipment required in Sentence (1) shall be **listed** and labelled for use in atmospheres containing **combustible dusts**.

(3) Where it is not possible to effectively remove dust by vacuum, it is permitted to use compressed air or other means which cause dust to be suspended in air during removal if, in the dust removal area,

(a) all sources of ignition are eliminated, and

(b) all machinery and equipment is de-energized, unless such equipment is **listed** and labelled for use in atmospheres containing **combustible dusts**.

Dust containment

5.10.1.3. (1) Machinery that produces, agitates or conveys **combustible dusts** shall

(a) have dust-tight casings or enclosures, and

(b) be connected to a dust-collecting system that exhausts to the outside, subject to Sentence 5.10.1.5.(3).

Construction of dust-collecting equipment

5.10.1.4. (1) Dust-collecting systems shall be made of noncombustible material.

(2) Dust-collecting systems shall be of a design which will prevent sparks due to physical contact in the fan assembly.

Location

5.10.1.5. (1) Except as provided in Sentences (2) and (5), a dust collector shall be located outside of a **building**.

(2) A dust collector is permitted to be located inside a **building** if it is

(a) provided with explosion venting to the outdoors in conformance with NFPA 68, "Standard on Explosion Protection by Deflagration Venting",

(b) equipped with an automatic explosion prevention system, or

(c) located in a room

(i) with **fire separations** having a **fire-resistance rating** not less than 1 h,

(ii) provided with explosion venting to the outdoors, and

(iii) used solely for the housing of dust-collecting equipment.

(3) Except for dust collectors described in Sentence (5), when air exhausted by a dust collector is returned to a **building**, the dust-collecting system shall be designed so that

(a) returned air will not create an explosion hazard inside the **building**, and

(b) the exhaust fan and ancillary equipment are automatically shut down in the event of a fire or an explosion inside the dust collector.

(4) Explosion venting to the outdoors is deemed to comply with Clause (2)(a) if the venting

(a) was installed on or before November 21, 2007, and

(b) provides not less than 0.1 m^2 of vent area for each cubic metre of dust collector enclosure volume.

(5) Sentences (1) and (2) do not apply to dust collectors having a capacity of less than 0.47 m^3/s and used on wood working operations, except for wood flour manufacturing.

Grounding

5.10.1.6. Electrically-conducting parts of duct systems, dust collectors and the machines they serve shall be grounded.

Explosion venting

5.10.1.7. (1) Except as provided in Article 5.10.1.8., an activity that creates an explosive atmosphere of **combustible dusts** shall be located only in a **building** provided with explosion venting to the outdoors.

(2) When explosion venting is required in this Section, it shall be designed to prevent critical structural and mechanical damage to the **building** in conformance with NFPA 68, "Standard on Explosion Protection by Deflagration Venting".

Explosion prevention system

5.10.1.8. (1) In processes where an explosion hazard is present and conditions exist that prevent adequate explosion venting as required in this Section, an explosion prevention system shall be provided.

(2) When an explosion prevention system is required in this Section, it shall be designed in conformance with NFPA 69, "Standard on Explosion Prevention Systems".

Interlocks

5.10.1.9. Equipment required to have a dust-collecting system shall be interlocked to prevent it from operating if the dust-collecting system is not in operation.

Air velocity

5.10.1.10. Dust-collecting systems shall be designed for an air velocity in the ducts of at least 1068 m/min.

Vent stacks

5.10.1.11. (1) Permanently open vent stacks may be used to ventilate storage containers where mechanical dust-collecting systems are not practical, provided that the vent stacks

(a) have a cross-sectional area not less than twice that of spouts discharging into the container,

(b) are installed not more than 30 degrees from the vertical,

(c) extend from the top of the container to a point not less than 1.2 m above the roof, and

(d) are designed to prevent the entry of snow and rain.

Separators

5.10.1.12. Magnetic or pneumatic separators shall be installed to prevent the entrance of foreign materials that may cause sparks in equipment such as shellers, crackers, crushers, grinding machines, pulverizers or similar machines that produce **combustible dusts**.

Grounding

5.10.1.13. Machinery and metal parts of the equipment in Article 5.10.1.12. and related conveying systems shall be electrically grounded.

Ignition sources prohibited

5.10.1.14. Smoking shall not take place and open flame and spark-producing equipment shall not be used in areas containing **combustible dust** producing operations.

Subsection 5.10.2. Woodworking Operations

Exhaust systems

5.10.2.1. Every machine that produces sawdust, particles or shavings shall be provided with a blower and exhaust system installed in accordance with NFPA 91, "Standard for Exhaust Systems for Air Conveying of Vapors, Gases, Mists, and Noncombustible Particulate Solids".

Operations that produce sparks or combustible vapours

5.10.2.2. (1) A machine that produces sawdust, particles or shavings shall not be used in an operation that generates sparks or combustible vapours.

(2) An exhaust system shall not serve an operation that generates sparks or combustible vapours.

Disposal

5.10.2.3. Loose sawdust, particles or shavings shall be swept up at frequent intervals and deposited in receptacles described in Sentence 2.4.1.3.(3).

Portable extinguishers

5.10.2.4. A portable extinguisher that complies with Subsection 6.2.6. or a garden-type hose shall be provided within 7.5 m of any machine that produces sawdust, particles or shavings.

SECTION 5.11 HOT SURFACE APPLICATIONS

Subsection 5.11.1. Application

Application

5.11.1.1. This Section applies to hot surface applications, in or on **buildings**, that use open flame torches, bitumen kettles or other heat-producing devices.

Subsection 5.11.2. General

Exposed combustible materials

5.11.2.1. (1) If there is a possibility of sparks, flames or heat igniting combustible materials as a result of hot surface applications

(a) combustibles within 5 m of the hot surface application shall be protected against ignition, and

(b) openings in roofs, parapets or other **building** structures within 5 m of hot surface applications shall be covered or closed to prevent the passage of sparks or flames to adjacent areas.

(2) If it is not possible to cover or close openings described in Clause (1)(b), combustibles in the area exposed by the opening shall be protected against ignition.

Open flame torches

5.11.2.2. (1) An open flame torch shall only be applied to materials intended for hot surface applications and shall not directly expose

(a) combustible materials, such as wood roof decks, cant strips, insulation and flashing,

(b) voids, holes and skylights in the roof or roof deck, or

(c) gas lines and electrical cables.

Bitumen kettles

5.11.2.3. (1) Bitumen kettles shall

(a) not be located in a **building** or on a roof of a **building**,

(b) not be located in a fire access route,

(c) not be located within 3 m of a **building exit** or **means of egress**,

(d) be provided with metal lids that are close-fitting and constructed of steel having a thickness of not less than No. 14 sheet metal gauge (2 mm),

(e) be maintained free of excessive residue, and

(f) when in operation

(i) be level, with most of the weight off the tires and legs,

(ii) not be heated above 260ºC,

(iii) be kept clear of combustible debris or materials, and

(iv) be under constant supervision by a person who is knowledgeable of operations and hazards and trained in the use of portable extinguishers.

(2) Despite Sentence (1), bitumen kettles may be located on concrete roofs if roof openings within 15 m are diked to prevent spilled asphalt run-off.

5.11.2.4. (1) After each daily use, mops that have been used for spreading bitumen shall be kept in a safe location

(a) at least 3 m away from **buildings**, and

(b) isolated from other combustibles.

Firewatch

5.11.2.5. (1) A firewatch shall be provided whenever an open flame torch or other ignition source is used for hot surface applications in or on a **building** and shall include

(a) any area where combustible materials used in **building** construction or contents are located within 5 m of persons using an open flame torch or other ignition source,

(b) any area of the **building** exposed as a result of unprotected roof or wall openings located within 5 m of persons using an open flame torch or other ignition source, and

(c) any area where combustibles on the underside of roofs or the opposite side of walls might be ignited as a result of persons using an open flame torch or other ignition source.

(2) If a firewatch is required, the areas shall be toured by firewatch personnel at least once each hour.

(3) Facilities shall be provided to enable the firewatch personnel to

(a) ensure that a fire warning is sounded to notify occupants, and

(b) communicate with the **fire department**.

(4) The firewatch personnel shall be equipped with portable illumination and protective equipment.

(5) A firewatch shall be conducted from the beginning of a hot surface application until

(a) at least 3 hours after the application ceases, or

(b) at least 2 hours after the application ceases if a hand-held thermal scanner is used to assist in detecting hidden hot spots.

Portable extinguishers

5.11.2.6. (1) Portable extinguishers with a minimum rating of 4A:40B:C shall be

(a) located within 6 m of persons using an open flame torch or other ignition source, and

(b) readily available to all other persons in the area of hot surface applications and firewatch personnel.

(2) Portable extinguishers with a minimum rating of 4A:40B:C shall be located no further than 7.6 m and no closer than 1.5 m from a bitumen kettle.

SECTION 5.12 SPRAY APPLICATIONS USING FLAMMABLE AND COMBUSTIBLE MATERIALS

Subsection 5.12.1. Application and Separation

Application

5.12.1.1. (1) This Section applies to spray operations involving the use of **flammable liquids**, **combustible liquids** or combustible dry powders.

(2) Despite Sentence (1), this Section does not apply to spray operations that comply with Articles 5.1.3.1. and 5.12.1.2. and the design, operation and maintenance requirements in NFPA 33, "Standard for Spray Application Using Flammable or Combustible Materials".

Separation for spray operations

5.12.1.2. If a spray operation is a **major occupancy** in a **building**, the spray operation shall be separated from the remainder of the **building** in accordance with Article 3.1.3.1. of Division B of the **Building Code**.

Subsection 5.12.2. Construction

General

5.12.2.1. (1) **Spray booths** and **spray rooms** shall have walls and ceilings that consist of steel frames covered with sheet steel having a minimum thickness of 1.14 mm or be of equivalent **noncombustible construction**.

(2) Walls and ceilings of **spray rooms** that are susceptible to paint residue accumulations and interior surfaces of **spray booths** shall be smooth and continuous.

(3) Floors of **spray booths** and **spray rooms** and the operator's working area shall be of noncombustible materials.

Baffle plates

5.12.2.2. (1) **Spray booth** baffle plates shall be of noncombustible material and be removable or arranged to facilitate cleaning.

(2) **Spray booth** baffle plates shall not be located in exhaust ducts.

Overspray collection

5.12.2.3. (1) **Spray booths** and **spray rooms** shall be provided with overspray collection, such as filters or water wash, to prevent the build-up of combustible deposits on the exhaust fan and ductwork.

(2) Where filters are used as for overspray collection, supports and holders for the filters shall be constructed of noncombustible materials.

(3) Overspray collection filters shall be readily removable or accessible for cleaning or replacement.

(4) Filters shall not be alternately used for different types of coating materials if the combination of materials might result in spontaneous heating or ignition.

(5) Maintenance procedures shall be established to ensure that overspray collection filters are replaced before excessive restriction to airflow occurs.

(6) Overspray collectors shall be inspected after each period of use and clogged filters shall be discarded and replaced.

(7) A water-wash filtration system shall be used when applying materials known to be highly susceptible to spontaneous heating or spontaneous ignition.

Fan blades and casings

5.12.2.4. Fan blades and casings in exhaust blowers for **spray booths** and **spray rooms** shall be non-ferrous, or the fan shall be constructed so that a movement of the wheel or shaft will not cause two ferrous parts of the fan to rub or strike together.

Subsection 5.12.3. Ventilation

Ventilation

5.12.3.1. (1) Ventilation shall be provided in all **spraying areas** to maintain

(a) the concentration of flammable vapours at or below 25% of their **lower explosive limit**, and

(b) the concentration of **combustible dusts** at or below 50% of their **minimum explosible concentration** or 15g/m^3 when the **minimum explosible concentration** cannot be established.

Exhaust for spray booths

5.12.3.2. Subject to Article 5.12.3.3., the exhaust air velocity at any opening in a **spray booth** shall be at least 30 m/min.

Exhaust for electrostatic spraying

5.12.3.3. Electrostatic spraying shall have an exhaust air velocity of at least 18 m/min at any opening in a **spray booth**.

Combined ducting

5.12.3.4. A separate exhaust duct shall be provided for each **spray booth**, except that a common duct may be used if it serves **spray booths** having a combined open frontal area of not more than 1.8 m^2.

Exhaust air

5.12.3.5. Air exhausted from spray operations shall not be recirculated, except where recirculation is acceptable, as described in NFPA 33, “Standard for Spray Application Using Flammable or Combustible Materials”.

Monitoring air velocity

5.12.3.6. (1) Gauges or alarms that indicate when the air velocity is less than the air velocity required by Article 5.12.3.2. or 5.12.3.3. shall be installed for **spray booths**.

(2) When the gauge or alarm indicates that the air velocity is less than that required by Article 5.12.3.2. or 5.12.3.3., immediate corrective action shall be taken to remedy the condition that has resulted in the reduction of the ventilation.

Subsection 5.12.4. Exhaust Ducts

Duct support and construction

5.12.4.1. Exhaust ducts for **spray booths** and **spray rooms** shall be securely supported and constructed of sheet steel in accordance with Table 5.12.4.A.

TABLE 5.12.4.A.

Forming Part of Article 5.12.4.1.

Maximum Dimension of Duct	Minimum Thickness of Sheet Steel, mm
Up to 200 mm incl.	0.56
Over 200 mm to 450	0.69

mm incl.	
Over 450 mm to 750 mm incl.	0.86
Over 750 mm	1.14

Clearances

5.12.4.2. Subject to Article 5.12.4.3., a clearance of 457 mm shall be maintained between unprotected combustible materials and ducts venting **spray booths** and **spray rooms**.

Collars

5.12.4.3. (1) Where exhaust ducts pass through combustible roofs or **partitions**, metal collars shall provide not less than a 100 mm clearance between the duct and combustible material.

(2) The space between the duct and combustible material shall be sealed with noncombustible insulating material.

Access doors

5.12.4.4. Exhaust ducts for **spray booths** and **spray rooms** shall be provided with access doors for cleaning purposes.

Exhaust outlet locations

5.12.4.5. (1) Except for water-wash filtration systems, the exhaust outlet to atmosphere from **spray booths** and **spray rooms** shall

(a) be 1.8 m from any combustible exterior wall or roof, and

(b) be located so that the air does not discharge toward any combustible surface or unprotected opening within 7.5 m.

Subsection 5.12.5. Electrical Equipment

Electrical equipment

5.12.5.1. Electrical equipment within the **spraying area**, including lighting fixtures, shall conform to Part 1, Sections 18 and 20 of the **Electrical Safety Code** made under the **Electricity Act, 1998**.

Motors for exhaust fans

5.12.5.2. Electric motors for exhaust fans shall not be placed inside **spray booths**, **spray rooms** or ducts.

Grounding

5.12.5.3. Metal parts of **spray booths**, exhaust ducts and piping systems conveying **flammable liquids** or **combustible liquids** shall be electrically grounded.

Subsection 5.12.6. Flammable Liquids and Combustible Liquids

Storage and handling

5.12.6.1. **Flammable liquids** and **combustible liquids** for use in **spraying areas** shall be stored and handled in conformance with Part 4, and at no time shall the amount of **flammable liquids** and **combustible liquids** in the **spraying areas** exceed one day's supply.

Paint storage

5.12.6.2. **Flammable liquids** and **combustible liquids** shall be kept in **closed containers** when not in use.

Thinners and solvents

5.12.6.3. Thinners and solvents shall be dispensed only from **listed** and labelled safety cans.

Pump discharge relief valves

5.12.6.4. Where **flammable liquids** are supplied to spray nozzles by positive displacement pumps, the pump discharge line shall be provided with a suitable relief valve discharging to the pump suction or to a safe remote location.

Subsection 5.12.7. Control of Fire Hazards

Interlocks

5.12.7.1. (1) The spraying equipment for **spray booths** and **spray rooms** shall be interlocked to shut down in the event of

(a) a failure of the ventilation system,

(b) a failure of the circulating water pump of a water-wash filtration system, or

(c) a failure of the filter roll-down mechanism of an overspray collection system.

Cleaning and residue disposal

5.12.7.2. (1) The inner surfaces of **spray booths** and **spray rooms** shall be cleaned of combustible residue as often as necessary to prevent a fire hazard.

(2) Combustible residue from cleaning operations shall, on the same day as the cleaning operations, be removed from the premises or placed in receptacles conforming to Sentence 2.4.1.3.(3).

(3) Strippable coatings or removable combustible coverings, such as thin paper and static dissipative plastic sheets, may be used on walls and floors in **spray booths** and **spray rooms** to facilitate cleaning operations.

Filter pads and rolls

5.12.7.3. Discarded filter pads and filter rolls shall be removed to a safe location or placed in a water-filled metal container and disposed of after each day's operation.

5.12.7.4. RESERVED

Heating equipment

5.12.7.5. **Space-heating appliances**, steam pipes and other hot surfaces shall not be located in an area subject to accumulation of deposits of combustible residue from spray operations.

Ignition sources

5.12.7.6. Open flame or spark producing devices shall not be used within a **spraying area**, unless separated from the area by a vapour-tight **fire separation** having a **fire-resistance rating** not less than 1 h.

Subsection 5.12.8. Fire Protection Equipment

Portable extinguishers

5.12.8.1. Portable extinguishers shall be installed near **spraying areas** in conformance with Section 6.2.

Sprinkler installations

5.12.8.2. (1) Except as permitted in Sentences (2) and (3), automatic sprinkler protection shall be provided in each **spraying area**, **spray booth** and **spray room** in conformance with NFPA 13, "Standard for the Installation of Sprinkler Systems".

(2) Where spraying operations are confined within a **spray booth**, fire protection may be provided for the **spray booth** only, in conformance with NFPA 33, "Standard for Spray Application Using Flammable or Combustible Materials".

(3) This Article does not apply where the existing situation is **approved** and does not endanger life safety, or **approved** alternative measures to the requirements set out in this Article are taken to provide life safety.

Sprinkler head protection

5.12.8.3. (1) Sprinkler heads in **spray booths** and **spray rooms** shall be protected with lightweight paper bags or cellophane bags having a thickness of not more than 0.08 mm.

(2) Bags protecting sprinkler heads shall be replaced before they have accumulated deposits that impair the timely operation of the sprinkler head.

Subsection 5.12.9. Drying Operations

Spray booths used for drying

5.12.9.1. Except as permitted in Article 5.12.9.4., **spray booths**, **spray rooms** or other enclosures used for spraying operations shall not be used for drying by any arrangement that could cause an increase in the surface temperatures of the **spray booths**, **spray rooms** or other enclosures.

Location of equipment

5.12.9.2. Except as provided in Articles 5.12.9.3. and 5.12.9.4., drying or curing equipment that utilizes components capable of producing ignition, such as an open flame, a spark, or a hot surface, shall not be installed in or near a **spraying area**.

Location near spraying area

5.12.9.3. (1) Equipment described in Article 5.12.9.2. may be installed in an area adjacent to the **spraying area** provided the adjacent area is equipped with a ventilating system arranged to

(a) purge the drying space before the heating system can be started,

(b) maintain the atmosphere at any source of ignition at or below 25% of the **lower explosive limit** of any combustible or flammable materials in use, and

(c) automatically shut down the heating system in the event of failure of the ventilating system.

Spray booths used for drying

5.12.9.4. (1) **Spray booths** may be used for drying operations where

(a) the **spray booth** conforms to the appropriate requirements for drying ovens in Section 5.18,

(b) the interior of the enclosure is kept reasonably free of overspray deposits,

(c) portable drying apparatus, if used, is of the infrared type, and such apparatus, wiring and connections are removed from the enclosure during spraying operations, and

(d) interlocks are installed to

(i) prevent the use of spraying apparatus while the drying operation is taking place,

(ii) provide for the purging of the enclosure of spray vapours for a minimum of 3 min before the drying apparatus can be energized,

(iii) ensure that the ventilating system maintains the concentration of flammable vapours at or below 25% of the **lower explosive limit** within the enclosure during the drying process, and

(iv) ensure that the drying apparatus will automatically shut off in the event of failure of the ventilating system.

Subsection 5.12.10. Electrostatic Spraying

Application

5.12.10.1. This Subsection applies to electrostatic spray-coating processes involving the use of **flammable liquids** or **combustible liquids.**

Equipment location

5.12.10.2. (1) Electrical components, including transformers, power packs and control equipment for electrostatic spray applications, shall be located in an area where the vapour concentration of **flammable liquids** or **combustible liquids** cannot exceed 25% of the **lower explosive limit.**

(2) Sentence (1) does not apply to high voltage grids and their connections.

Interlocks

5.12.10.3 (1) Electrostatic spraying equipment shall be provided with automatic controls that will operate without a time delay to disconnect power to high voltage transformers and to signal the operator of the equipment if

(a) the air supply system, the ventilating fan or the conveyor system stops,

(b) a ground occurs at any point on the high voltage system, or

(c) any clearances are reduced below those required by Article 5.12.10.5.

Insulators

5.12.10.4. Insulators shall be kept clean and dry.

Clearances

5.12.10.5. A clearance space that is equivalent to twice the sparking distance shall be maintained between the articles being painted and any electrodes or conductors.

Drip plates and screens

5.12.10.6. Drip plates and screens subject to paint deposits shall be removable for cleaning.

Insulating and grounding

5.12.10.7. High voltage components, including atomizing heads, shall be insulated and protected against mechanical damage and accidental contact or grounding.

Automatic grounding

5.12.10.8. An automatic means shall be provided for grounding the electrode system when it is de-energized.

Operating distances

5.12.10.9. Items being electrostatically sprayed shall be neither held by hand nor suspended in such a manner as to reduce the proper operating distance from the atomizing heads.

Distance to processing areas

5.12.10.10. Electrostatic spraying equipment shall be located 1.5 m from processing equipment and isolated from other areas by grounded guards and fences of conducting material.

Surface temperatures

5.12.10.11. The surface temperature of equipment in a **spraying area** shall not exceed 66°C.

Precautions against shock

5.12.10.12. High voltage circuits shall be designed so that any discharge will not ignite vapour-air mixtures or create a shock hazard.

Spray gun energy supply

5.12.10.13. The energy supply to hand-held spray guns shall be controlled by a switch that also controls the coating material supply.

Spray gun operation

5.12.10.14. Spray gun handles shall be grounded and have a metallic connection that is in direct contact with the operator's hand during spraying.

Grounding

5.12.10.15. All electrically conductive objects in a **spraying area** shall be grounded.

Paint accumulations

5.12.10.16. Hooks and other supports for sprayed items shall be kept clean and free of paint.

Warning signs

5.12.10.17. (1) Signs shall be conspicuously posted near a **spraying area** that

(a) indicate the minimum clearance space required by Article 5.12.10.5.,

(b) indicate the need for grounding of all electrically conductive objects in the **spraying area**, and

(c) contain the phrase "DANGER - Electrostatic Spray Coating Area", or otherwise identify the **spraying area** as dangerous.

Fixed extinguishing equipment

5.12.10.18. **Spraying areas** shall be located in rooms protected by **listed** and labelled automatic fixed extinguishing equipment.

Subsection 5.12.11. Dry Powder-Coating Using Spray Guns

Application and location

5.12.11.1. (1) This Subsection applies to coating operations involving the use of combustible dry powders applied by powder spray guns or electrostatic powder spray guns.

(2) Coating operations referred to in Sentence (1) shall be performed in

(a) ventilated and enclosed powder-coating rooms of **noncombustible construction**, or

(b) **spray booths**.

Location of electrical equipment

5.12.11.2. With the exception of charging electrodes and their connections, transformers, power packs, control apparatus and all other electrical components shall be located outside the powder-coating area.

Working temperatures

5.12.11.3. If a part to be coated is preheated prior to the application of the powder, the temperature of the part shall not exceed the ignition temperature of the powder being used.

Grounding

5.12.11.4. (1) Powder transport, application and recovery equipment shall be grounded.

(2) A sign shall be conspicuously posted indicating the necessity of grounding the equipment and objects identified in Sentence (1).

Separators

5.12.11.5. Separators shall be used to prevent tramp iron or other spark-producing materials from being introduced into the powders being applied.

Recovery systems

5.12.11.6. Waste air-suspended powders shall be removed by exhaust ducts to a powder recovery system and shall not be released to the outside atmosphere.

Vacuum cleaning

5.12.11.7. Accumulations of waste dust from dry powder finishes shall be removed by vacuum cleaning equipment.

Contact points

5.12.11.8. Objects being coated shall be maintained in contact with the conveyor or other support.

Hangers

5.12.11.9. Hangers for objects being coated shall be kept clean and have sharp points or edges at areas of contact.

Smoking prohibited

5.12.11.10. (1) Smoking shall not take place in powder-coating areas and in powder storage rooms.

(2) Signs prohibiting smoking that meet the requirements of Article 2.4.3.2. shall be conspicuously posted in all powder-coating areas and powder storage rooms.

SECTION 5.13 DIP TANKS

Subsection 5.13.1. Location

Room design

5.13.1.1. (1) If a dip tank operation involves **flammable liquids** or **combustible liquids** and the quantity of liquids exceeds 45 L or the liquid surface area exceeds 0.42 m^2, the operation shall be

(a) conducted in a room designed for that purpose, and

(b) separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 2 h.

Prohibition for basements

5.13.1.2. Dip tanks shall not be located in **basements**.

Subsection 5.13.2. Construction

Floors

5.13.2.1. The floor of any room where dip tanks are located shall be made liquid-tight with material that is impervious to the liquid in the tank, have permanent curbs and be drained to a place of safe discharge.

Materials

5.13.2.2. (1) Dip tanks and drain boards shall be constructed of noncombustible material with steel, reinforced concrete or masonry supports.

(2) Drain boards shall be arranged to drain back to the dip tank.

Height above floor

5.13.2.3. The top of a dip tank shall not be less than 150 mm above the floor of the room in which it is located.

Cover construction

5.13.2.4. Dip tank covers as required in Articles 5.13.6.2. and 5.13.6.3. shall be of noncombustible materials.

Cover design

5.13.2.5. Dip tank covers shall overlap the sides of the tank by 25 mm and shall have a recess or flange extending down around the tank.

Cover maintenance

5.13.2.6. Dip tank covers shall be maintained in good operating condition.

Subsection 5.13.3. Overflow and Drain Pipes

Liquid levels

5.13.3.1. The liquid level in a dip tank shall be kept not less than 150 mm below the top of the tank.

Overflow pipes

5.13.3.2. Dip tanks having a capacity in excess of 550 L or having a liquid surface area in excess of 1 m^2 shall be equipped with a properly trapped overflow pipe that leads to a safe location outside the **building** or to a closed, vented salvage tank conforming to Subsection 5.13.4.

Location of overflow

5.13.3.3. The centre line of the overflow connection to a dip tank shall be 150 mm below the top of the tank.

Overflow size

5.13.3.4. Overflow pipe sizes for dip tanks shall conform to Table 5.13.3.A.

TABLE 5.13.3.A.

Forming Part of Article 5.13.3.4.

Size of Tank, L	Overflow Pipe Size Required, mm
0 - 46	50

47 - 160	65
161 - 350	75
351 - 700	100
701 - 1025	125
1026 - 1500	150
1501 and over	200

Overflow connection

5.13.3.5. Overflow pipes shall be connected to dip tanks by a flared outlet.

Piping connections

5.13.3.6. Piping connections for drains and overflow lines shall be designed so as to allow for easy access to their interiors for cleaning purposes.

Bottom drains

5.13.3.7. Dip tanks of over 2300 L liquid capacity shall be equipped with bottom drains capable of being operated both automatically and manually to drain the tank quickly in the event of fire.

Salvage tank

5.13.3.8. Bottom drains from dip tanks shall be trapped and shall discharge to a closed, vented salvage tank.

Drain size

5.13.3.9. Bottom drain sizes for dip tanks shall conform to Table 5.13.3.B.

TABLE 5.13.3.B.

Forming Part of Article 5.13.3.9.

Capacity of Dip Tank, L	Diameter of Bottom Drain Pipe, mm
2300 - 3425	75
3426 - 4550	100
4551 - 11500	125
11501 - 18250	150
18251 and over	200

Manual operation of bottom drains

5.13.3.10. Manual operation of bottom drains shall be from an accessible location not affected by a fire in or around the dip tank.

Automatic pumps

5.13.3.11. Where gravity flow is not practical, automatic pumps shall be installed on drain lines from dip tanks.

Pump for salvage tank

5.13.3.12. Where salvage tanks are used, pumping arrangements shall be provided for the transfer of their contents for disposal.

Subsection 5.13.4. Salvage Tanks

Use

5.13.4.1. Salvage tanks shall be used only for temporary storage purposes.

Capacity

5.13.4.2. The capacity of a salvage tank shall be 20% greater than the capacity of the dip tank or tanks to which it is connected.

Location

5.13.4.3. Salvage tanks shall be located underground outside the **building**, or inside a **building** in an enclosure separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** of not less than 2 h.

Vent pipes

5.13.4.4. Salvage tanks shall be provided with vent pipes that meet the requirements of Subsection 4.3.5. for aboveground **storage tanks** or Subsection 4.3.10. for underground **storage tanks**.

Subsection 5.13.5. Control of Fire Hazards

Ventilation

5.13.5.1. Ventilation shall be provided to confine all flammable vapour concentrations exceeding 25% of the **lower explosive limit** to within 600 mm of the dip tank, drain board and freshly coated work.

Interlock for dipping conveyor

5.13.5.2. Ventilating systems shall be arranged so that the failure of any ventilation fan as sensed by air flow will automatically stop the dipping conveyor systems and sound an alarm.

Interlock for heating

5.13.5.3. The heating system used in drying operations shall be interlocked so that it cannot be started until the associated ventilation system is in operation.

Conveyor systems

5.13.5.4. Conveyor systems utilized in conjunction with dip tanks shall be designed to stop automatically with the actuation of an automatic fixed extinguishing system or a manual fire alarm.

Purging interlocks

5.13.5.5. Where there is a possible source of ignition in a drying operation, interlocks shall be installed to provide for purging before the heating system can be started and for automatic shutdown if the ventilation system should fail.

Electrical installations

5.13.5.6. Where **flammable liquids** and **combustible liquids** contained in dip tanks are heated or have a **flash point** below 43°C, the electrical installation shall conform to the **Electrical Safety Code** made under the **Electricity Act, 1998**.

Flammable and combustible liquids

5.13.5.7. (1) The storage and handling of **flammable liquids** and **combustible liquids** shall be in conformance with Part 4.

(2) The total number of containers for **flammable liquids** and **combustible liquids** in a dip tank area shall not exceed that required for one day’s operations.

Smoking and ignition sources prohibited

5.13.5.8. Smoking shall not take place and open flames, spark-producing devices and heated surfaces having a temperature sufficient to ignite vapours shall not be used in the vapour area of a dip tank.

Signs prohibiting smoking

5.13.5.9. Signs that prohibit smoking and that conform to Article 2.4.3.2. shall be posted conspicuously in the vicinity of dip tanks.

Subsection 5.13.6. Fire Protection

Automatic sprinklers

5.13.6.1. Dip tanks shall be located only in rooms protected by an automatic sprinkler system installed in conformance with NFPA 13, "Standard for the Installation of Sprinkler Systems".

Tank covers and extinguishing systems

5.13.6.2. (1) Dip tanks with over 550 L capacity or with over 1 m^2 liquid surface area shall be protected by

(a) a cover actuated by a device that

(i) automatically closes the cover in the event of a fire, and

(ii) permits manual operation of the cover, or

(b) an **approved** automatic extinguishing system of a water spray, foam, carbon dioxide or dry chemical type.

Flammable liquids or combustible liquids

5.13.6.3. Dip tanks containing either a **flammable liquid** or **combustible liquid** with a **flash point** less than 43°C or a heated **combustible liquid** giving off flammable vapours shall conform to Article 5.13.6.2. when the capacity exceeds 45 L or when the liquid surface area exceeds 0.4 m^2.

Portable extinguishers

5.13.6.4. Areas in the vicinity of dip tanks shall be provided with portable extinguishers in conformance with Section 6.2.

SECTION 5.14 SPECIAL PROCESSES INVOLVING FLAMMABLE AND COMBUSTIBLE MATERIALS

Subsection 5.14.1. Quench Tanks

Location

5.14.1.1. (1) Quench tanks shall be located as far as practical from annealing, hardening and tempering **furnaces**.

(2) Quench tanks shall not be located on or near combustible floors.

Hoods and vents

5.14.1.2. Quench tanks shall be provided with a noncombustible hood and vent exhausting to the outside to prevent the accumulation and condensation of vapours from the process.

Vent design

5.14.1.3. Vents for quench tanks shall conform to the requirements for **flue pipes** in Section 2.6.

High temperature limit switches

5.14.1.4. (1) A high temperature limit switch shall be provided to sound an alarm, shut off heat and stop conveyors when a **flammable liquid** or **combustible liquid** reaches 28°C below its **flash point** in a quench tank.

(2) The temperature-sensing element for the high temperature limit switch in Sentence (1) shall be located close to the surface of the liquid and be protected from damage.

Electrical installations

5.14.1.5. Electrical installations conforming to the requirements for dip tanks in Article 5.13.5.6. shall be provided for quench tanks of over 1900 L capacity whose liquid surface area exceeds 2.5 m^2.

Air pressure

5.14.1.6. Air under pressure shall not be used to fill or agitate oil in quench tanks.

Working temperatures

5.14.1.7. A quench tank shall be designed so that the maximum workload is incapable of raising the working temperature of the cooling medium to within 28°C of its **flash point**.

Subsection 5.14.2. Flow-Coating Operations

Application

5.14.2.1. (1) This Subsection applies to flow-coating operations using **flammable liquids** or **combustible liquids**.

(2) The requirements in Section 5.13 for dip tanks shall also apply to flow-coating operations described in Sentence (1).

(3) The sump area and any area on which coating liquid flows shall be considered as the dip tank area.

Supply

5.14.2.2. (1) **Flammable liquids** and **combustible liquids** shall be supplied by

(a) direct low pressure pumping arranged to shut down automatically by means of **listed** and labelled devices in the event of fire, or

(b) a gravity tank not exceeding 45 L in capacity.

Subsection 5.14.3. Roll Coating Processes

Application

5.14.3.1. (1) This Subsection applies to roll-coating processes in which **flammable liquids** or **combustible liquids** are applied to products or materials by bringing them into contact with a roller that is coated with the coating liquid.

(2) The requirements in Section 5.13 for dip tanks shall also apply to roll-coating processes described in Sentence (1).

Grounding

5.14.3.2. (1) Rotating parts shall be grounded.

(2) Static collectors shall be installed where the material being coated leaves each rotating part.

Location

5.14.3.3. Operations involving materials that have been freshly coated with a liquid containing solvents having a **flash point** of less than 43°C shall be located in **sprinklered** rooms that are separated from other **occupancies** by **fire separations** having a **fire-resistance rating** not less than 2 h.

Subsection 5.14.4. Electrostatic Detearing Processes

Application

5.14.4.1. (1) This Subsection applies to electrostatic detearing processes involving the use of **flammable liquids** or **combustible liquids**.

(2) Protective finishing systems are deemed to satisfy the requirements of this Subsection if they comply with Article 5.1.3.1. and the design, operation and maintenance requirements in NFPA 33, "Standard for Spray Application Using Flammable or Combustible Materials".

Equipment location

5.14.4.2. (1) Electrical components, including transformers, power packs and control equipment for the electrostatic removal of excess coating material (detearing), shall be located in an area where the vapour concentration of **flammable liquids** or **combustible liquids** cannot exceed 25% of the **lower explosive limit**.

(2) Sentence (1) does not apply to high voltage grids and their connections.

Interlocks

5.14.4.3. (1) Electrostatic detearing equipment shall be provided with automatic controls that will operate without a time delay to disconnect power to high voltage transformers and to signal the operator of the equipment if

(a) the air supply system, the ventilating fan or the conveyor system stops,

(b) a ground occurs at any point on the high voltage system, or

(c) any clearances are reduced below those required by Article 5.14.4.5.

Insulators

5.14.4.4. Insulators shall be kept clean and dry.

Clearances

5.14.4.5. (1) A clearance space that is equivalent to twice the sparking distance shall be maintained between articles being deteared and electrodes or conductors.

(2) A sign shall be conspicuously posted near the detearing area indicating the minimum clearance space required.

Drip plates and screens

5.14.4.6. Drip plates and screens subject to paint deposits shall be removable for cleaning.

Insulating and grounding

5.14.4.7. High voltage components shall be insulated and protected against mechanical damage and accidental contact or grounding.

Automatic grounding

5.14.4.8. An automatic means shall be provided for grounding the electrode system when it is de-energized.

Precautions against shock

5.14.4.9. High voltage circuits shall be designed so that any discharge will not ignite vapour-air mixtures or create a shock hazard.

Subsection 5.14.5. Automobile Undercoating

Spray operations

5.14.5.1. Automobile undercoating spray operations shall conform to the requirements of Section 5.12 or to the requirements in this Subsection.

Undercoating materials

5.14.5.2. (1) Automobile undercoating materials shall have a **flash point** of not less than 37.8°C.

(2) Where the **flash point** of an automobile undercoating is less than 60°C, it shall be applied in a work area where

(a) there are no work pits,

(b) there is a fan, that provides mechanical ventilation during the application, cleaning and drying cycles,

(i) with nonferrous blades, or so constructed that a movement of the wheel or shaft will not permit two ferrous parts of the fan to rub or strike, and

(ii) that ensures that the concentration of vapour does not exceed 25% of the **lower explosive limit**,

(c) air movement from the air intake and exhaust system is along the length of the vehicle being undercoated, and

(d) air is exhausted at a level approximately 1 m above the floor.

Ignition sources

5.14.5.3. (1) Work stations in Article 5.14.5.2. shall have no source of ignition located within 6 m horizontally of the work area or in the area above it.

(2) Signs prohibiting smoking that conform to Article 2.4.3.2. shall be posted at the outer limits of the work area.

Electrical installations

5.14.5.4. Except for overhead lighting that is totally enclosed and sealed with gaskets, electrical wiring and equipment within the area of hazard described in Article 5.14.5.3. shall conform to Article 5.1.3.1.

Storage and handling

5.14.5.5. The storage and handling of **flammable liquids** and **combustible liquids** shall be in conformance with Part 4.

Portable extinguishers

5.14.5.6. Portable extinguishers shall be located so that there is one portable extinguisher having a 20B:C rating immediately accessible to each work station described in Article 5.14.5.2.

Refuse disposal

5.14.5.7. All areas where automobile undercoating is used shall be kept clean of undercoating deposits and refuse, which shall be placed in covered metal receptacles.

Subsection 5.14.6. Dry Powder-Coating Using Fluidized Beds

Application and location

5.14.6.1. (1) This Subsection applies to coating operations involving the use of combustible dry powders applied by fluidized beds or electrostatic fluidized beds.

(2) Coating operations referred to in Sentence (1) shall be performed in

(a) ventilated and enclosed powder-coating rooms of **noncombustible construction**, or

(b) ventilated and enclosed powder-coating enclosures of **noncombustible construction**.

(3) Protective finishing systems are deemed to satisfy the requirements of this Subsection if they comply with Article 5.1.3.1. and the design, operation and maintenance requirements in NFPA 33, "Standard for Spray Application Using Flammable or Combustible Materials".

Location of electrical equipment

5.14.6.2. With the exception of charging electrodes and their connections, transformers, power packs, control apparatus and all other electrical components shall be located outside the powder-coating area.

Working temperatures

5.14.6.3. (1) Where a part to be coated is preheated prior to the application of the powder, the temperature of the part shall not exceed the ignition temperature of the powder being used.

(2) The surface temperature of electrostatic fluidized bed coating areas shall not exceed 66°C.

Grounding

5.14.6.4. (1) Powder transport, application and recovery equipment shall be grounded.

(2) Electrically conductive objects within the charging influence of the electrodes of electrostatic fluidized beds shall be grounded.

(3) A sign shall be posted indicating the necessity of grounding equipment and objects identified in Sentences (1) and (2).

Electrical discharges

5.14.6.5. High voltage circuits in electrostatic fluidized beds shall be designed so that any discharge produced when the charging electrodes of the bed are approached or contacted by a grounded object will not be of sufficient intensity to ignite any powder-air mixture likely to be encountered or result in any appreciable shock hazard.

Handling of spark-producing materials

5.14.6.6. Means shall be provided to prevent tramp iron or other spark-producing materials from being introduced into the powders being applied.

Recovery systems

5.14.6.7. All waste air-suspended powders shall be removed by exhaust ducts to a powder recovery system and shall not be released to the outside atmosphere.

Waste dust removal

5.14.6.8. Accumulations of waste dust from dry powder finishes shall be removed using the methods set out in Article 5.5.1.2.

Contact points

5.14.6.9. Objects being coated shall be maintained in contact with the conveyor or other support.

Hangers

5.14.6.10. Hangers for objects being coated shall be kept clean and have sharp points or edges at areas of contact.

Smoking prohibited

5.14.6.11. (1) Smoking shall not take place in powder-coating areas and in powder storage rooms.

(2) Signs prohibiting smoking that conform to Article 2.4.3.2. shall be conspicuously posted at all powder-coating areas and powder storage rooms.

Subsection 5.14.7. Organic Peroxides and Dual Component Coatings

Location of spraying operations

5.14.7.1. Spraying operations involving the use of organic peroxides and other dual component coatings shall be conducted in **sprinklered spray booths** as described in Sentence 5.12.8.2.(1).

Initiator storage

5.14.7.2. Organic peroxide initiators shall be stored so that they will be kept away from contact with other stored materials.

Handling equipment

5.14.7.3. Handling equipment, including spray guns, which is specifically designed for use with organic peroxides shall be used to apply such coatings.

Containers

5.14.7.4. Separate containers shall be used exclusively for the storage of resin and organic peroxide.

Pressure tank inserts

5.14.7.5. Organic peroxide pressure tank inserts shall be constructed of stainless steel, polyethylene or a material that is equally inert to organic peroxide.

Elimination of foreign materials

5.14.7.6. Precautions shall be taken to prevent any mixing of foreign materials with dusts or overspray residues resulting from the sanding or spraying of finishing materials containing organic peroxides.

Subsection 5.14.8. Floor Finishing

Application

5.14.8.1. Floor finishing operations involving the use of **flammable liquids** or **combustible liquids** shall conform to Part 4 and this Subsection.

Operations below grade

5.14.8.2. Floor finishing operations involving the use of **flammable liquids** shall not be performed below **grade**.

Public access

5.14.8.3. Any part of a **building** where floor finishing operations are done shall not be open to the public.

Ventilation

5.14.8.4. (1) Ventilation shall be provided in areas where floor finishing operations are done to prevent the accumulation of flammable vapours.

(2) Ventilation required in Sentence (1) is permitted to be provided by mechanical systems if their use does not constitute a source of ignition.

Prohibited activities during flammable liquid application

5.14.8.5. (1) During the application of **flammable liquids** and for at least 1 h after such application

(a) all mechanical systems, electric motors, and other equipment that might be a source of ignition shall be shut down,

(b) smoking shall not take place, and

(c) open flames shall not be used.

Waste receptacles

5.14.8.6. A receptacle conforming to Sentence 2.4.1.3.(3) shall be provided for all waste rags and materials used in operations involving **flammable liquids** or **combustible liquids**, and the contents shall be removed daily and disposed of in a manner that will not create a fire hazard.

Subsection 5.14.9. Bowling Alleys

Application

5.14.9.1. This Subsection applies to bowling alleys.

Notification

5.14.9.2. The **Chief Fire Official** shall be notified when bowling alleys are to be resurfaced.

Floor finishing

5.14.9.3. Floor finishing operations shall be carried out in accordance with Subsection 5.14.8.

Pin refinishing

5.14.9.4. (1) Pin refinishing shall be carried out

(a) in a **building** provided for that purpose, or

(b) in a room at or above **grade** separated from the **building** it is located in by a **fire separation** having a **fire-resistance rating** not less than 1 h.

Smoking prohibited

5.14.9.5. (1) Smoking shall not take place in a room where pin refinishing occurs.

(2) Signs prohibiting smoking that meet the requirements of Article 2.4.3.2. shall be conspicuously posted in any place where pin refinishing occurs.

Flammable and combustible liquids

5.14.9.6. The storage, handling and use of **flammable liquids** and **combustible liquids** shall meet the requirements of Part 4.

5.14.9.7. (1) During the pin refinishing process, a receptacle that complies with Sentence 2.4.1.3.(3) shall be provided for waste rags and materials used in operations involving flammable finishes or solvents.

(2) The contents of each receptacle referred to in Sentence (1) shall be removed daily and disposed of in an **approved** manner.

Subsection 5.14.10. Drycleaning and Dyeing Plants

Application

5.14.10.1. (1) Drycleaning plants shall comply with NFPA 32, “Standard for Drycleaning Plants”.

(2) Despite Sentence (1) and subject to Article 5.14.10.2., **flammable liquids** shall not be used for any purpose in drycleaning and dyeing plants.

Use and storage of flammable liquids

5.14.10.2. (1) **Flammable liquids** may be used as a local application to remove spots and stains if the liquids

(a) are stored in containers that have a capacity of not more than 1 L,

(b) do not exceed more than 25 L in aggregate quantity, and

(c) are dispensed from plastic containers that have a capacity of not more than 0.5 L.

(2) Despite Sentence (1), existing drycleaning plants and dyeing plants may be **approved** if the **Chief Fire Official** is satisfied that the level of fire safety specified in Sentence (1) is provided.

SECTION 5.15 RADIOACTIVE NUCLEAR SUBSTANCES

Subsection 5.15.1. Application

Application

5.15.1.1. This Section applies to the storage and handling of any radioactive nuclear substance that is present in a quantity that exceeds the exemption quantity as defined in Section 1 of the **Nuclear Substances and Radiation Devices Regulations** made under the **Nuclear Safety and Control Act (Canada)**.

Subsection 5.15.2. Storage

5.15.2.1. Radioactive nuclear substances and equipment shall be returned to storage after use.

Storage

5.15.2.2. Radioactive nuclear substances shall be stored in accordance with the licence requirements and regulations of the Canadian Nuclear Safety Commission.

Prohibited combination

5.15.2.3. Radioactive nuclear substances and equipment shall not be stored with flammable or corrosive materials.

Subsection 5.15.3. Emergency Procedures

Fire emergency procedures

5.15.3.1. (1) Persons using or storing radioactive nuclear substances shall establish fire emergency procedures in consultation with the **fire department**, including

(a) the location and identification of storage and use areas,

(b) methods to control a fire emergency and to recover radioactive nuclear substances and equipment containing radioactive nuclear substances safely and efficiently,

(c) the names, addresses and telephone numbers of primary and alternative sources of expert radiation safety advice and assistance, and

(d) the location of primary and alternative sources of radiation survey instruments.

SECTION 5.16 FUMIGATION AND THERMAL INSECTICIDAL FOGGING

Subsection 5.16.1. Application

Application

5.16.1.1. (1) This Section applies to the fumigation or thermal fogging of **buildings** where this activity creates a fire or explosion hazard, including the fumigation of equipment or commodities within structures, tanks or bins or under tarpaulins.

(2) Articles 5.16.2.1. and 5.16.2.2. do not apply to industries that conduct frequent fumigation operations on a routine basis where **approved** prior to the conducting of the operations.

Subsection 5.16.2. Safety Precautions

Notification of fire department

5.16.2.1. (1) Except as permitted in Sentence 5.16.1.1.(2), the **fire department** shall

(a) be notified in writing at least 24 h before any **building** is to be closed for fumigation, and

(b) be advised of the chemicals to be used, the proposed date and time of use, the types of respiratory protective devices required and the degree of flammability of the fumigant or fog being used.

Notification of adjacent premises

5.16.2.2. Except as permitted in Sentence 5.16.1.1.(2), prior notice shall be given to the occupants of any premises adjacent to that in which fumigation or thermal insecticidal fogging is to take place.

Ignition sources

5.16.2.3. Flames and other sources of ignition shall be eliminated in a **building** undergoing fumigation or thermal insecticidal fogging.

Power supply

5.16.2.4. Electric power supply shall be shut off to the premises undergoing fumigation or thermal insecticidal fogging.

Air temperature

5.16.2.5. The air temperature in a **building** undergoing fumigation or thermal insecticidal fogging shall be kept sufficiently low to prevent the actuation of any sprinkler system.

Breathing apparatus

5.16.2.6. Protective breathing apparatus shall be made available at the premises undergoing fumigation or thermal insecticidal fogging for all persons in case of emergency.

Restricted entrance

5.16.2.7. (1) No unauthorized person shall be permitted to enter a premises undergoing fumigation or thermal insecticidal fogging until the premises has been ventilated and is safe.

(2) Warning signs shall be posted in a conspicuous location near every entrance to the premises being fumigated.

(3) One person shall be on duty at each entrance to the premises undergoing fumigation or thermal insecticidal fogging to prevent any unauthorized person from entering until such premises have been ventilated.

SECTION 5.17 HOT WORKS

Subsection 5.17.1. Application

Application

5.17.1.1. This Section applies to hot works that use open flames or produce heat or sparks, including cutting, welding, soldering, brazing, grinding, adhesive bonding, thermal spraying and thawing pipes.

Same

5.17.1.2. The installation, operation and maintenance of hot work equipment shall comply with CAN/CSA-W117.2, "Safety in Welding, Cutting and Allied Processes" and meet the requirements of this Section.

Subsection 5.17.2. Use and Maintenance of Equipment

Fuel gases

5.17.2.1. The operation of acetylene generating systems and the storage and generation of hot work fuel gases shall comply with NFPA 51, "Standard for Design and Installation of Oxygen-Fuel Gas Systems for Welding, Cutting and Allied Processes".

Piping

5.17.2.2. Acetylene gas shall not be piped through copper or high copper content alloy, tubing, piping or fittings.

Cylinder storage

5.17.2.3. Cylinders stored inside **buildings** shall conform to the requirements in Section 5.6.

Cylinder caps and valves

5.17.2.4. Gas fuel cylinders, whether full or empty, whose valves are not in a recessed or protected location shall have their caps in place and their valves tightly closed when not in actual use.

Damaged equipment

5.17.2.5. Torches, regulators, hoses and other oxyacetylene hot work equipment which have been damaged shall not be used.

Equipment inspection

5.17.2.6. (1) Hot work equipment shall be **inspected** daily or prior to use for defects by personnel in charge of the equipment.

(2) Hot work equipment shall be **tested** monthly for leaks with a leak **test** solution.

(3) Leaks or defects found in hot work equipment shall be repaired prior to use.

Equipment not in use

5.17.2.7. Valves shall be closed and lines bled when equipment is not in actual use.

Lubrication

5.17.2.8. Oil or grease shall not be used for lubrication of hot work equipment.

Subsection 5.17.3. Prevention of Fires

Location of operations

5.17.3.1. (1) Hot work operations in **buildings** shall be carried out in areas that

(a) are free of combustible and flammable contents, and

(b) have walls, ceilings and floors of **noncombustible construction** or that are lined with noncombustible materials.

(2) When it is not practical to undertake hot work operations in areas described in Sentence (1), combustible and flammable materials shall either be kept at least 11 m from the work area or otherwise protected against ignition by sheet metal, asbestos blankets or other noncombustible material.

(3) Any process or activity that produces flammable gases or vapours, **combustible dusts** or **combustible fibres** in quantities sufficient to create a fire or explosion hazard shall be interrupted and the hazardous conditions shall be removed before any hot work is carried out.

Work adjacent to piping

5.17.3.2. When hot work is to be carried out near piping containing flammable gas, the section of the piping located within 1 m of the torch shall be covered with wet noncombustible insulating material 6 mm thick.

Work on containers

5.17.3.3. (1) Hot work shall not be performed on containers, equipment, or piping containing **flammable liquids**, **combustible liquids** or flammable gases unless

(a) they have been cleaned and **tested** with a **listed** gas detector, such as one conforming to CSA C22.2 No. 152, "Combustible Gas Detection Instruments", to ascertain that they are free of explosive vapours, or

(b) safety measures are taken in conformance with good engineering practice.

(2) Hot work operations shall not be undertaken on a totally enclosed container.

(3) At least one portable extinguisher conforming to Section 6.2 shall be provided in the hot work area.

SECTION 5.18 INDUSTRIAL OVENS FOR BAKING AND DRYING PROCESSES

Subsection 5.18.1. Application

Application

5.18.1.1. This Section applies to industrial baking and drying ovens which during operation contain flammable vapours given off by the products being baked or dried.

Subsection 5.18.2. Location

Prohibited location

5.18.2.1. Ovens shall not be located in any **storey** below **grade**.

Subsection 5.18.3. Construction

Oven materials

5.18.3.1. Industrial ovens shall be constructed of noncombustible materials with smooth interior surfaces to permit cleaning.

Limiting temperature on combustible construction

5.18.3.2. The roof and floor of ovens and heaters and associated ductwork shall have sufficient clearance or be insulated where necessary to prevent the temperature from exceeding 90°C at any combustible part of the **building** assembly.

Explosion vents

5.18.3.3. (1) Explosion vents shall be provided for ovens where fuel or vapour hazards are present.

(2) Explosion vents shall be designed in accordance with NFPA 68, "Standard on Explosion Protection by Deflagration Venting".

(3) Existing explosion vents that provide a vent ratio of 0.2 m^2 of vent area for each cubic metre of oven volume are deemed to satisfy the vent ratio for the purposes of NFPA 68 in Sentence (1).

(4) Openings or access doors equipped with explosion release hardware shall be acceptable as explosion vents.

Duct and stack restrictions

5.18.3.4. (1) Ducts, stacks and associated insulation in systems for the removal of flammable vapours shall

(a) be constructed of noncombustible materials,

(b) not pass through **firewalls**, and

(c) discharge outdoors not less than

(i) 1.5 m from unprotected **building** openings, and

(ii) 6 m from air intake openings.

Subsection 5.18.4. Ventilation

Oven ventilation

5.18.4.1. Ovens in which flammable vapours may be present or through which products of combustion are circulated shall be ventilated in accordance with NFPA 86, "Standard for Ovens and Furnaces".

Fan interlocks

5.18.4.2. (1) In ovens where flammable vapours may be present, interlocks shall be provided to ensure that energy sources and ignition devices are de-activated when

(a) the ventilating fans stop, or

(b) the excess temperature controls are activated.

Continuous-process oven interlocks

5.18.4.3. (1) In continuous-process ovens where flammable vapours may be present, interlocks shall be provided to ensure

(a) that ventilating fans are operating before conveyors can be started, and

(b) that the conveyors are stopped when

(i) the ventilating fans stop, or

(ii) the excess temperature controls are activated.

Subsection 5.18.5. Maintenance

Cleaning of ovens and ductwork

5.18.5.1. (1) Ovens and associated ductwork shall be **inspected**, cleaned and maintained internally and externally at intervals sufficient to prevent the accumulation of combustible deposits.

(2) Access doors or panels shall be provided to permit **inspection**, cleaning and maintenance of ovens and associated ductwork.

(3) Fixed noncombustible ladders, steps or grab rails shall be provided to permit access to the doors or panels required in Sentence (2).

Subsection 5.18.6. Fire Protection

Portable extinguishers

5.18.6.1. Portable extinguishers shall be provided in conformance with Section 6.2.

Standpipe and hose systems

5.18.6.2. A standpipe and hose system shall be installed in conformance with the **Building Code** and equipped with spray nozzles so that all parts of an oven structure can be reached by a hose stream.

Fire access doors

5.18.6.3. Doors or other means of access shall be provided in ovens and associated ductwork so that portable extinguishers or hose streams may be used in all parts of the equipment.

Automatic fire protection

5.18.6.4. Ovens containing or processing sufficient combustible materials to sustain a fire shall be protected by an automatic sprinkler system or other fixed extinguishing systems.

O. Reg. 213/07, Division B, Part 5; O. Reg. 256/14, ss. 196-255.

PART 6
FIRE PROTECTION EQUIPMENT

SECTION 6.1 GENERAL

Subsection 6.1.1. Application

Application

6.1.1.1. This Part applies to installation, **checking**, **inspection**, **testing**, maintenance and operation of fire protection equipment and life safety systems.

Exception

6.1.1.2. Section 6.2 does not apply to **dwelling units**.

SECTION 6.2 PORTABLE EXTINGUISHERS

Subsection 6.2.1. General

6.2.1.1. **Listed** portable extinguishers shall be installed when replacing or adding new extinguishers.

Maintenance

6.2.1.2. Portable extinguishers shall be kept operable and fully charged.

Location

6.2.1.3. (1) Portable extinguishers shall be located so that they are easily seen and shall be accessible at all times, except as permitted in Sentences (2) and (3).

(2) A lockable, break-front glazed cabinet may be used for security purposes to store portable extinguishers and where portable extinguishers are located in a fire hose cabinet, an **approved** lockable, scored glass break-front cabinet may be used.

(3) In a **detention occupancy**, portable extinguishers are permitted to be located in secure areas, or in lockable cabinets provided

(a) identical keys for all cabinets are located at all supervisory or security stations, or

(b) electrical remote release devices that are designed to open upon power failure are provided for the cabinets.

6.2.1.4. Portable extinguishers shall be located in or adjacent to corridors or aisles that provide **access to exits**.

Signs

6.2.1.5. The location of portable extinguishers shall be prominently indicated by signs or markings in large **floor areas** and in locations where visual obstructions cannot be avoided.

Proximity to fire hazards

6.2.1.6. Portable extinguishers in proximity to a fire hazard shall be located so as to be accessible without exposing the operator to undue risk.

Corrosive atmosphere

6.2.1.7. Portable extinguishers that are subject to corrosion shall not be installed in a corrosive environment unless they are provided with appropriate corrosion protection.

Temperature range requirements

6.2.1.8. (1) Where a portable extinguisher is to be located in an area subject to temperatures outside the range 4°C to 49°C, it shall be

(a) placed in an enclosure where the temperature is maintained within this range, or

(b) of a type labelled for the temperatures to which it will be exposed.

Mounting brackets

6.2.1.9. When portable extinguishers are located on vehicles or in areas where they are subject to jarring or vibration, brackets designed to accommodate these effects shall be used.

Subsection 6.2.2. Classification

Rating of portable extinguishers

6.2.2.1. Portable extinguishers shall be rated and identified in conformance with CAN/ULC-S508, "Standard for the Rating and Fire Testing of Fire Extinguishers".

Subsection 6.2.3. Selection Requirements

Multiple ratings

6.2.3.1. Where portable extinguishers have been **tested** and are rated as being acceptable for fighting more than one class of fire, each class of fire for which they are acceptable shall be designated on each extinguisher.

Subsection 6.2.4. Installation Requirements

Where portable extinguishers required

6.2.4.1. Portable extinguishers shall be provided to protect every **building**, each hazardous **occupancy** inside the **building** and each hazardous process or operation located outside.

Distance above floor

6.2.4.2. Portable extinguishers with a gross weight greater than 18 kg shall be installed so that the top of the extinguisher is not more than 1.1 m above the floor when the extinguisher is not equipped with wheels.

6.2.4.3. Portable extinguishers having a gross weight of 18 kg or less shall be installed so that the top of the extinguisher is not more than 1.5 m above the floor.

Operating instructions

6.2.4.4. The operating instructions of portable extinguishers shall face outward when the extinguishers are located in cabinets, in wall recesses or on shelves.

Subsection 6.2.5. Grading of Hazards

Light hazard occupancy

6.2.5.1. Where the quantity of combustible material present is such that fires of small size may be expected, such as in offices, schoolrooms, churches, assembly halls and telephone exchanges, the **occupancy** shall be graded as light hazard.

Ordinary hazard occupancy

6.2.5.2. Where the quantity of combustible material present is such that fires of moderate size may be expected, such as in **mercantile occupancies**, display rooms, auto showrooms, parking garages, light manufacturing, warehouses not classified as extra hazard and school shop areas, the **occupancy** shall be graded as ordinary hazard.

Extra hazard occupancy

6.2.5.3. Where the quantity of combustible material present is such that fires of severe magnitude may be expected, such as in woodworking, auto repair, aircraft servicing, mercantile storage areas, warehouses with high-piled combustibles and processes incorporating **flammable liquids** or **combustible liquids**, the **occupancy** shall be graded as extra hazard.

Subsection 6.2.6. Distribution

6.2.6.1. (1) Portable extinguishers required in Article 6.2.4.1. shall be located in conformance with this Subsection.

(2) Despite Sentence (1), in an unoccupied warehouse equipped with a fixed fire protection system, provision shall be made for portable extinguishers to be available for use by responding personnel.

(3) The location and number of portable extinguishers required under Sentence (2) shall be **approved**.

Building protection

6.2.6.2. Portable extinguishers that are provided to protect a **building** shall be suitable for fighting **Class A fires** and be available for use at all times.

Occupancy protection

6.2.6.3. Portable extinguishers that are provided to protect a hazardous **occupancy** shall be those required in this Section for fighting **Class A fires**, **Class B fires**, **Class C fires**, **Class D fires** or **Class K fires**.

Extinguishers for Class A fires

6.2.6.4. Except as required in Article 6.2.6.5., portable extinguishers for **Class A fires** shall be provided in conformance with Table 6.2.6.A.

6.2.6.5. Where a **floor area** is less than that shown in Table 6.2.6.A., one portable extinguisher not less than the minimum size permitted shall be provided.

TABLE 6.2.6.A.

Forming Part of Article 6.2.6.4.

Basic Minimum Extinguisher Rating for Area Specified	Maximum Travel Distance to Extinguisher, m	Maximum Area to be Protected per Extinguisher for **Class A Fires**, m^2		
		Light Hazard **Occupancy**	Ordinary Hazard **Occupancy**	Extra Hazard **Occupancy**
2A	25	600	300	Not Acceptable
3A	25	900	400	300
4A	25	1100	600	400
6A	25	1100	900	600
10A	25	1100	1100	900
20A	25	1100	1100	1100
40A	25	1100	1100	1100

Hose stations in lieu of extinguishers

6.2.6.6. Up to one half of the number of portable extinguishers required in Table 6.2.6.A. may be replaced by hose stations.

Extinguishers for Class B fires

6.2.6.7. Except as required by Article 6.2.6.9., portable extinguishers for **Class B fires** shall be provided as required in Table 6.2.6.B.

6.2.6.8. (1) Where up to three portable extinguishers rated for **Class B fires** are used to satisfy the extinguisher rating specified in Table 6.2.6.B., the sum of the basic extinguisher ratings shall satisfy the requirements in Table 6.2.6.B.

(2) No more than three portable extinguishers shall be used to satisfy the requirements of Table 6.2.6.B.

TABLE 6.2.6.B.

Forming Part of Article 6.2.6.7.

Grade of Hazard	Basic Minimum Extinguisher Rating per Unit	Maximum Travel Distance to Extinguishers, m
Light	5B 10B	9 15
Ordinary	10B 20B	9 15
Extra	20B 40B	9 15

Extinguishers for flammable and combustible liquids

6.2.6.9. (1) Portable extinguishers for **Class B fires** shall be provided for **flammable liquid** and **combustible liquid** hazards when **flammable liquids** or **combustible liquids** are stored in open containers to a depth greater than 6 mm.

(2) The portable extinguishers shall provide at least one numerical unit of extinguishing potential for **Class B fires** per 0.1 m^2 of surface area of the largest open container within the area, but in no case shall the extinguisher rating be less than that required by Table 6.2.6.B.

(3) The distance travelled to reach a portable extinguisher required by Sentence (1) shall not exceed 15 m.

6.2.6.10. (1) Where up to three foam-type portable extinguishers rated for **Class B fires** are used to satisfy the requirements of Article 6.2.6.9., the sum of the basic extinguisher ratings shall satisfy the requirements in Table 6.2.6.B.

(2) No more than three portable extinguishers shall be used to satisfy the requirements of Table 6.2.6.B.

Supplementary protection

6.2.6.11. Portable extinguishers shall supplement fixed fire protection in Part 5 in accordance with Article 6.2.6.9. where a **flammable liquid** or **combustible liquid** is stored in an open container and where the liquid surface area exceeds 0.4 m^2.

Extinguishers for commercial cooking equipment

6.2.6.12. (1) Portable extinguishers suitable for **Class K fires** shall be provided to protect cooking operations.

(2) Sentence (1) does not apply to cooking operations protected by wet chemical or dry chemical extinguishers not **listed** for **Class K fires** that met the requirements of this Code on December 31, 2014, as it read on that day, unless the extinguishers

(a) become due for an internal examination or hydrostatic **test** under Subsection 6.2.7.,

(b) require recharging due to use, or

(c) become damaged.

Extinguishers for Class C fires

6.2.6.13. Portable extinguishers suitable for **Class C fires** shall be provided in or near **service rooms** containing electrical equipment.

Distribution

6.2.6.14. Distribution of portable extinguishers for **Class C fires** shall conform to the applicable provisions for the distribution of extinguishers for **Class A fires** or **Class B fires** in the vicinity of the electrical equipment.

6.2.6.15. Reference shall be made to Parts 2, 3, 4 and 5 for requirements of portable extinguishers for **flammable liquids** and **combustible liquids**, hazardous materials, processes and operations.

Extinguishers for combustible metal fires

6.2.6.16. (1) For fires involving combustible metals, extinguishers or extinguishing agents with **Class D fire** ratings suitable for the combustible metal shall be provided.

(2) Extinguishing equipment shall be located not more than 25 m from the **Class D fire** hazard.

Subsection 6.2.7. Inspection, Testing and Maintenance

6.2.7.1. (1) Maintenance and **testing** of portable extinguishers shall be in conformance with NFPA 10, “Portable Fire Extinguishers”.

(2) Portable extinguishers that are **inspected** in conformance with NFPA 10, “Portable Fire Extinguishers”, are deemed to satisfy the **inspection** requirements of this Subsection.

Examination

6.2.7.2. Portable extinguishers shall be **inspected** monthly.

Defective extinguishers

6.2.7.3. Portable extinguishers having defects shall be repaired and, if necessary, recharged to ensure the extinguishers will operate effectively and safely.

Tags

6.2.7.4. (1) Each portable extinguisher shall have a tag securely attached to it showing the maintenance or recharge date, the servicing agency and the signature of the person who performed the service.

(2) Sentence (1) does not apply where other **approved** records are maintained that show the maintenance or recharge date, the servicing agency and the signature of the person who performed the service.

Maintenance records

6.2.7.5. A permanent record containing the maintenance date, the examiner's name and a description of any maintenance work or hydrostatic **testing** carried out shall be prepared and maintained for each portable extinguisher.

Maintenance after use

6.2.7.6. Portable extinguishers shall be replaced or recharged after use in conformance with instructions given on the extinguisher nameplate.

6.2.7.7. Extinguisher shells, cartridges or cylinders that show leakage or permanent distortion in excess of specified limits or that rupture shall be removed from service.

6.2.7.8. Hydrostatic pressure **tests** shall be conducted at the original **test** pressure as stated on the nameplate.

Test labels

6.2.7.9. (1) Where a portable extinguisher is **tested**, a label shall be fixed to the extinguisher after **testing** that indicates the month and year the hydrostatic pressure **test** was performed, the **test** pressure used and the name of the person or agency performing the **test**.

(2) Sentence (1) does not apply where a permanent record of the **test** is kept and is available to the **fire department**.

SECTION 6.3 ALARM AND VOICE COMMUNICATION SYSTEMS FOR LIFE SAFETY

Subsection 6.3.1. General

Access

6.3.1.1. Access to fire alarm and voice communication system components requiring **inspection** or servicing shall be kept unobstructed.

Monitoring

6.3.1.2. (1) Where the **Building Code** or this Code require a fire alarm system to be monitored to transmit a signal to the **fire department**, the building **owner** shall ensure the continuation of the monitoring.

(2) Where the fire alarm system monitoring referred to in Sentence (1) is provided by a central station, the **building owner** shall obtain written documentation from the central station operator that the monitoring service complies with

(a) NFPA 71, "Standard for the Installation, Maintenance, and Use of Signaling Systems for Central Station Service", or

(b) CAN/ULC-S561, "Installation and Services for Fire Signal Receiving Centres and Systems".

(3) Where a fire alarm system is monitored by a central station to meet the requirements of the **Building Code** or this Code, the operator of the central station shall provide, upon request by the **owner** or **Chief Fire Official**, a document attesting that the monitoring service is in compliance with one of the standards identified in Sentence (2).

(4) Despite Article 1.2.1.1. of Division A, where the **Building Code** or this Code requires a fire alarm system to be monitored and the monitoring is provided by a central station, the operator of the central station shall be responsible for maintaining the monitoring service and associated monitoring equipment in accordance with one of the standards identified in Sentence (2).

(5) Where the fire alarm system is monitored by a proprietary signalling system, such system shall be maintained in accordance with Chapter 4 of NFPA 72, "Standard for the Installation, Maintenance, and Use of Protective Signaling Systems".

6.3.1.3. (1) If a fire alarm or voice communication system or any part thereof is shut down

(a) the **fire department** and **building** occupants shall be notified in accordance with Article 1.1.1.1., and

(b) the **supervisory staff** shall be notified.

6.3.1.4. Fire alarm and voice communication systems shall be maintained in operating condition.

Signal silencing

6.3.1.5. (1) Once activated, a fire alarm system shall not be manually silenced unless it has been confirmed by **supervisory staff**, in accordance with **approved** procedures as detailed in the fire safety plan, that no fire emergency exists.

(2) Sentence (1) does not apply where a silencing switch is part of an **approved** integrated voice communication system and signal silencing takes place to allow fire emergency instructions to be heard.

Disconnect switches

6.3.1.6. Disconnect switches for power supplies which serve only fire alarm systems or interconnected **smoke alarms** shall be in a locked secure area or otherwise secured in an **approved** manner.

Relocating manual pull stations

6.3.1.7. (1) Where **approved**, manual pull stations for a fire alarm system in a **building** may be relocated if there is a high incidence of false alarms in the **building**.

(2) Where the manual pull stations are relocated, alternate **approved** measures shall be used to maintain the level of life safety.

Repairs and alterations to fire alarm systems

6.3.1.8. Repair, replacement and alterations of fire alarm system components shall be in accordance with CAN/ULC-S524, "Standard for the Installation of Fire Alarm Systems".

Subsection 6.3.2. Check, Inspect and Test

Obligation to ensure compliance

6.3.2.1. (1) The **owner** shall ensure that any person performing the annual **tests** or annual **inspections** required by this Subsection for fire alarm systems or performing the repairs, replacements or alterations of fire alarm systems referred to in Article 6.3.1.8. is in compliance with the requirements of

(a) Clause 1.2.1.2.(1)(a) of Division C, or

(b) Sentence 1.2.1.2.(2) of Division C.

(2) The **owner** shall ensure that any person performing the annual **tests** or annual **inspections** required by this Subsection for interconnected **smoke alarm** systems or performing the **tests** or maintenance for interconnected **smoke alarm** systems referred to in Article 6.3.2.6. is in compliance with the requirements of

(a) Clause 1.2.2.2.(1)(a) of Division C, or

(b) Sentence 1.2.2.2.(2) of Division C.

Fire alarm systems

6.3.2.2. (1) Except as provided in Sentence (2), a fire alarm system, with or without voice communication capability, shall be **inspected** and **tested** in conformance with CAN/ULC-S536, "Inspection and Testing of Fire Alarm Systems".

(2) Despite Clause 5.7.4.1.6. of CAN/ULC-S536, "Inspection and Testing of Fire Alarm Systems", a UL **listed smoke detector** sensitivity instrument may be used to conduct annual sensitivity **testing** of **smoke detectors**.

(3) A description of the fire alarm system as required in Clause 3.6 of CAN/ULC-S536, "Inspection and Testing of Fire Alarm Systems", shall be kept current and maintained in the **building** at an **approved** location.

(4) A record of each device, component and circuit of the fire alarm system that is **inspected** and **tested** in accordance with Sentence (1) shall

(a) indicate whether the device, component or circuit is in proper working order, and

(b) be kept in accordance with Article 1.1.2.1.

(5) Where a fire alarm system is monitored to transmit a signal to the **fire department**, the **owner** shall record whether all signals from the **tests** conducted in Sentence (1), or other events, are received by the monitoring station, and records shall be kept in accordance with Article 1.1.2.1.

Central alarm and control facilities

6.3.2.3. The central alarm and control facility shall be **checked** daily for indication of trouble in the system.

Voice communication systems

6.3.2.4. Voice communication systems that are integrated with a fire alarm system shall be **tested** in conformance with CAN/ULC-S536, "Inspection and Testing of Fire Alarm Systems".

6.3.2.5. (1) Voice communication systems that are not integrated with a fire alarm system shall be **tested** monthly in compliance with Sentences (2) and (3).

(2) Loudspeakers described in Sentence (1) shall be **tested** monthly as an all-call signal to ensure they function as intended.

(3) Communication from at least one remote firefighter emergency telephone location to the control unit shall be **tested** monthly on a rotational basis so that communication from all remote firefighter emergency telephone locations are **tested** at least once per year.

(4) Voice communication systems are not required to be **tested** in conformance with Sentences (1) and (2) where the systems are regularly used as part of a paging system.

Interconnected smoke alarms

6.3.2.6. (1) This Article applies to interconnected **smoke alarm** systems in all **residential occupancies** and **care occupancies**, except in individual **dwelling units** and in **buildings** regulated by Section 9.8.

(2) Interconnected **smoke alarms** shall be **tested** and maintained in operating condition in conformance with CAN/ULC-S552, "Standard for the Maintenance and Testing of Smoke Alarms", and as required by this Article.

(3) The power supply shall be **checked** weekly.

(4) The operability of the interconnected system shall be confirmed monthly, by **testing** at least one **smoke alarm** using its **test** function, on a rotational basis.

(5) Where installed, each manual pull station shall be **tested** to ensure activation of the interconnected **smoke alarms** on an annual basis.

(6) Written records shall be kept of weekly **checks** of the power supply for at least six months after they are made, and be available upon request to the **Chief Fire Official**.

(7) Monthly and annual **tests** shall be recorded and kept in accordance with Article 1.1.2.1.

Subsection 6.3.3. Smoke Alarms — Maintenance and Testing

Application

6.3.3.1. (1) This Subsection applies to **smoke alarms** in

(a) **suites** of **residential occupancy**,

(b) **guest suites**,

(c) sleeping rooms not within a **dwelling unit**, and

(d) other **occupancies** in which **smoke alarms** are required by the **Building Code**.

Landlord is responsible

6.3.3.2. Despite the definition of **owner** in Article 1.4.1.2. of Division A, in the case of a rental **suite**, only the landlord shall be considered to be the **owner** for the purpose of applying Article 1.2.1.1. of Division A to this Subsection.

Duty to maintain in operating condition

6.3.3.3. (1) **Smoke alarms** shall be maintained in operating condition.

(2) Primary and secondary power supplies that serve **smoke alarms** shall be maintained in operating condition.

(3) If the **Building Code** requires a visual signalling component that is integral with or connected to a **smoke alarm**, the visual signalling component shall be maintained in operating condition.

Maintenance instructions to be given to tenant

6.3.3.4. The landlord of each rental **suite** shall give the tenant a copy of the **smoke alarm** manufacturer's maintenance instructions or **approved** alternative maintenance instructions.

Tenant to notify landlord

6.3.3.5. (1) A tenant of a rental **suite** shall notify the landlord as soon as the tenant becomes aware that

(a) a **smoke alarm** in the unit is disconnected,

(b) a **smoke alarm** in the unit is not operating, or

(c) the operation of a **smoke alarm** in the unit is impaired.

Disabling prohibited

6.3.3.6. No person shall disable a **smoke alarm**.

Replacement

6.3.3.7. (1) A **smoke alarm** shall be replaced within the time frame indicated in the manufacturer's instructions.

(2) When a **smoke alarm** is replaced

(a) in the case of a **suite** subject to Part 9, the replacement shall not provide a lower level or type of protection than that required by Part 9,

(b) in the case of a **suite** not subject to Part 9 that was constructed on or after April 6, 1998, the replacement shall not provide a lower level or type of protection than that required by the **Building Code** in effect at the time of construction of the **suite**, and

(c) in the case of a **suite** not subject to Part 9 that was constructed before April 6, 1998, the replacement shall not provide a lower level or type of protection than that required by Article 2.13.2.1.

(3) The **Chief Fire Official** may **approve** an alternative to a requirement of Sentence (2) if, in the opinion of the **Chief Fire Official**, the alternative provides fire safety protection equivalent to or greater than the fire safety protection that would be provided by the requirement.

Testing

6.3.3.8. (1) This Article applies to rental **suites**.

(2) The landlord shall **test smoke alarms** annually and after every change in tenancy.

(3) The landlord shall **test** battery-operated **smoke alarms** after the battery is replaced.

(4) The landlord shall **test smoke alarms** that are connected to an electrical circuit after any change is made to the electrical circuit.

(5) For the purposes of Sentences (2), (3) and (4), **smoke alarms** shall be **tested** by activating the **smoke alarm** test feature.

(6) If the **Building Code** requires a visual signalling component that is integral with or connected to a **smoke alarm**, the landlord shall ensure that any **test** of the **smoke alarm** required by Sentences (2) to (4) activates the visible signalling component.

Subsection 6.3.4. Carbon Monoxide Alarms — Maintenance and Testing

Application

6.3.4.1. This Subsection applies to carbon monoxide alarms in **buildings** containing a **residential occupancy**.

Landlord is responsible

6.3.4.2. Despite the definition of **owner** in Article 1.4.1.2. of Division A, in the case of a rental **suite** of **residential occupancy**, only the landlord shall be considered to be the **owner** for the purpose of applying Article 1.2.1.1. of Division A to this Subsection.

Duty to maintain in operating condition

6.3.4.3. (1) Carbon monoxide alarms shall be maintained in operating condition.

(2) Primary and secondary power supplies that serve carbon monoxide alarms shall be maintained in operating condition.

Maintenance instructions to be given to tenant

6.3.4.4. The landlord of each rental **suite** of **residential occupancy** shall give the tenant a copy of the carbon monoxide alarm manufacturer's maintenance instructions or **approved** alternative maintenance instructions.

Tenant to notify landlord

6.3.4.5. (1) A tenant of a rental **suite** of **residential occupancy** shall notify the landlord as soon as the tenant becomes aware that

(a) a carbon monoxide alarm in the unit is disconnected,

(b) a carbon monoxide alarm in the unit is not operating, or

(c) the operation of a carbon monoxide alarm in the unit is impaired.

Disabling prohibited

6.3.4.6. No person shall disable a carbon monoxide alarm.

Replacement in certain buildings

6.3.4.7. (1) Subject to Sentence (2), this Article applies to every **building** that contains a **residential occupancy** and

(a) a fuel-burning **appliance**,

(b) a fireplace, or

(c) a **storage garage**.

(2) This Article applies

(a) as of April 15, 2015, in the case of **buildings** that contain no more than six **suites** of **residential occupancy**, and

(b) as of October 15, 2015, in the case of **buildings** that contain more than six **suites** of **residential occupancy**.

(3) A carbon monoxide alarm shall be replaced within the time frame indicated in the manufacturer's instructions.

(4) Despite Section 2.16, when a carbon monoxide alarm is replaced in a **suite** of **residential occupancy** constructed on or after August 6, 2001, the replacement

(a) shall not provide a lower level or type of carbon monoxide protection than that required by the **Building Code** as it read on the day the **suite** was constructed, and

(b) shall comply with CSA-6.19, "Residential Carbon Monoxide Alarming Devices" or UL 2034, "Single and Multiple Station Carbon Monoxide Alarms".

(5) When a carbon monoxide alarm is replaced in a **suite** of **residential occupancy** constructed before August 6, 2001, the replacement carbon monoxide alarm shall meet the requirements of Article 2.16.2.1.

(6) The **Chief Fire Official** may **approve** an alternative to a requirement of Sentence (4) or (5) if, in the opinion of the **Chief Fire Official**, the alternative provides life safety protection equivalent to or greater than the life safety protection that would be provided by the requirement.

Testing

6.3.4.8. (1) This Article applies to rental **suites** of **residential occupancy**.

(2) The landlord shall **test** carbon monoxide alarms annually and after every change in tenancy.

(3) The landlord shall **test** battery-operated carbon monoxide alarms after the battery is replaced.

(4) The landlord shall **test** carbon monoxide alarms that are connected to an electrical circuit after any change is made to the electrical circuit.

(5) For the purposes of Sentences (2), (3) and (4), carbon monoxide alarms shall be **tested** by activating the carbon monoxide alarm test feature.

SECTION 6.4 STANDPIPE AND HOSE SYSTEMS

Subsection 6.4.1. General

6.4.1.1. During alteration of a **building** required to have a standpipe and hose system, the system shall be installed or dismantled progressively so as to provide protection to all **floor areas**.

6.4.1.2. Standpipe and hose systems shall be maintained in operating condition.

Fire department connections

6.4.1.3. (1) Except when in use or being **inspected** in accordance with Sentence (2), **fire department** connections shall be equipped with plugs or caps that are secured wrench-tight.

(2) Plugs or caps shall be removed annually and the **fire department** connections **inspected** for wear, rust or obstruction and corrective action shall be taken as needed.

(3) If plugs or caps are missing, the **fire department** connections shall be examined for obstructions, back-flushed when conditions warrant and the plugs or caps replaced.

Out of service requirements

6.4.1.4. (1) If a standpipe system or any part thereof is shut down

(a) the **fire department** and **building** occupants shall be notified in accordance with Article 1.1.1.1., and

(b) the **supervisory staff** shall be notified.

Hotels

6.4.1.5. In **buildings** containing a **hotel**, a standpipe and hose system shall not be shut down, disconnected or otherwise impaired without notifying the **Chief Fire Official** in accordance with a schedule identified in the **approved** fire safety plan.

Inspection, testing and maintenance

6.4.1.6. Compliance with the **inspection**, **testing** and maintenance provisions of NFPA 25, “Standard for the Inspection, Testing and Maintenance of Water-Based Fire Protection Systems”, for standpipe and hose systems is deemed to satisfy the requirements of Articles 6.4.2.1. to 6.4.2.5. and Subsection 6.4.3.

Subsection 6.4.2. Maintenance and Inspection of Hose Stations and Equipment

Hose stations

6.4.2.1. Hose stations shall be **inspected** monthly to ensure that the hose is in proper position and that all of the equipment is in place and in operable condition.

6.4.2.2. Standpipe and hose system equipment shall be used for fire protection only.

6.4.2.3. Standpipe hose stations shall be conspicuously identified and unobstructed.

Hose valves

6.4.2.4. Hose valves shall be **inspected** annually to ensure that they are tight so that there is no water leakage into the hose.

Hose

6.4.2.5. (1) Standpipe hose shall be unracked, unreeled or unrolled and **inspected** at least annually and after use, and any worn hose or gaskets in the couplings at the hose valves and at the nozzle replaced.

(2) If the hose is replaced on the rack, reel or storage area, it shall be reracked, rereeled or rerolled so that any folds do not occur at the same position they were previously on the hose.

Standpipe identification

6.4.2.6. (1) Except as required in Sentence (2), each hose connection in a standpipe system shall be provided with a legible sign reading: “FIRE HOSE FOR USE BY TRAINED PERSONS ONLY”.

(2) Each hose connection in a dry standpipe system with no permanent water supply shall be provided with a legible weatherproof sign reading: “DRY STANDPIPE FOR FIRE DEPARTMENT USE ONLY”.

Hose cabinets

6.4.2.7. (1) If a fire hose station is located in a cabinet, an **approved** lockable, scored glass break-front cabinet may be used.

(2) Hose stations in a **major occupancy** consisting of **detention occupancy** may be located in secure areas, or in lockable cabinets where

(a) identical keys for all cabinets are located at all guard stations, or

(b) electrical remote release devices are provided and are connected to an emergency power supply.

Subsection 6.4.3. Checking and Testing

Standpipe systems

6.4.3.1. (1) Standpipe systems that have been modified, extended or are being restored to service after a period of disuse exceeding one year shall be **tested** in conformance with Articles 6.4.3.2. to 6.4.3.5.

(2) Where standpipe connections are built in walls or **partitions**, the **tests** shall be made before the standpipes are concealed.

Hydrostatic test

6.4.3.2. Standpipe system piping shall be hydrostatically **tested** at a pressure of not less than 1400 kPa (gauge) for 2 h, or at 350 kPa (gauge) in excess of the normal hydrostatic pressure when the normal hydrostatic pressure is in excess of 1050 kPa (gauge).

Fire department connections

6.4.3.3. Piping between the **fire department** connection and the check valve in the inlet pipe to the standpipe shall be **tested** in the same manner as the remainder of the system.

Underground mains

6.4.3.4. (1) Underground mains and connections shall be **tested** for 2 h at a hydrostatic pressure of 350 kPa (gauge) in excess of the maximum hydrostatic pressure in service, but not less than 1400 kPa (gauge).

(2) Leakage during the **test** shall not exceed 2 L/h per 100 joints for pipe laid with rubber gasketted joints, and 30 mL/h per 25 mm of pipe diameter per joint for pipe laid with caulked lead or lead substitute joints.

Flow and pressure tests

6.4.3.5. Flow and pressure **tests** shall be conducted at the highest and most remote hose valve or hose connection to ensure that the water supply for standpipes is provided as originally designed.

Dry standpipes

6.4.3.6. (1) Standpipe system piping which normally remains dry shall be **tested** in accordance with Article 6.4.3.2. at intervals of not more than five years.

(2) Water supply pressure and system air pressure for automatic dry standpipe systems shall be **checked** weekly by using gauges to ensure that the system is maintained at the required operating pressure.

Hotels

6.4.3.7. In **buildings** containing a **hotel**, flow and pressure **tests** shall be conducted annually at the highest and most remote hose valve or hose connection to verify that the water supply for the standpipe system is provided as originally designed.

SECTION 6.5 SPRINKLER SYSTEMS

Subsection 6.5.1. General

Repair, replacement, alterations, inspection, testing and maintenance

6.5.1.1. (1) Repair, replacement and alterations of sprinkler system components shall be in accordance with NFPA 13, "Standard for the Installation of Sprinkler Systems", NFPA 13D, "Standard for the Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes" or NFPA 13R, "Standard for the Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height", as applicable.

(2) Compliance with the **inspection**, **testing** and maintenance provisions of NFPA 25, "Standard for the Inspection, Testing and Maintenance of Water-Based Fire Protection Systems", for sprinkler systems is deemed to satisfy the requirements of Subsections 6.5.4. to 6.5.6.

6.5.1.2. Sprinkler systems shall be maintained in operating condition.

Closing sprinkler control valves

6.5.1.3. (1) Sprinkler control valves shall not be closed in the event of a fire until the fire is

(a) extinguished, or

(b) considered by the **fire department**, or by an industrial fire brigade established by the **owner** in consultation with the **fire department**, to be under control by other means.

Changes in equipment or occupancy

6.5.1.4. Changes in equipment or **occupancy** that might result in temperatures at sprinklers being more than 38°C or less than 4°C with wet pipe systems shall not be made without previously making provisions to alter the sprinkler system to prevent premature operation or freezing.

Obstructions

6.5.1.5. (1) No obstructions shall be placed so as to interfere with the effectiveness of water discharge from sprinklers.

(2) Sprinkler systems shall not be used to support anything that will interfere with effective sprinkler system performance.

6.5.1.6. (1) Where alterations or repairs are made to feed mains, cross mains, or risers in sprinkler systems, the systems shall be **tested** in conformance with Sentences (2) to (8).

(2) Except as permitted in Sentence (4), the sprinkler system shall be subjected to a hydrostatic pressure **test** of a minimum of 1400 kPa (gauge), or 350 kPa (gauge) in excess of the maximum static pressure to which the system may be subjected, for a period of 2 h without loss of pressure.

(3) For dry-pipe systems, the clapper of the differential type dry-pipe valve shall be held off its seat, and the ball drip in the intermediate chamber shall be replaced by a plug during the **test**.

(4) The **tests** described in Sentence (2) shall be performed when hydrostatic pressure **testing** can be performed without danger of freezing, and when there is danger of freezing, the sprinkler system shall be pressure **tested** with air at 350 kPa (gauge) for 2 h without loss of pressure.

(5) Sprinkler system water supply pressure shall be **tested** with the main drain valve fully open to ensure that there are no obstructions in the water supply piping to the sprinkler system.

(6) Drainage facilities shall be **tested** to ensure that the drains are capable of taking the full flow from the main drain pipe without overflowing.

(7) Dry-pipe valves shall be **tested** to ensure that they are in operating condition.

(8) Mechanical and electrical alarms shall be **tested** to ensure that they are in operating condition.

Testing of underground mains

6.5.1.7. (1) When alterations or additions are made to underground mains and lead-in connections of a sprinkler system, the mains and lead-in connections shall be **tested** by

(a) flushing for sufficient time to remove foreign material at a minimum water flow as specified in Table 6.5.1.A., and

(b) a 2 h hydrostatic pressure **test** of 350 kPa (gauge) in excess of the maximum static pressure, but not less than 1400 kPa (gauge) and leakage shall not exceed 2 L/h per 100 joints for pipe laid with rubber gasketted joints, and 30 mL/h per 25 mm of pipe diameter per joint for pipe laid with caulked lead or lead substitute joints.

TABLE 6.5.1.A.

Forming Part of Article 6.5.1.7.

Size of Pipe, mm	Minimum Flow, L/min
100	1500
150	3250
200	5800
250	9000
300	13000

(2) At seasons of the year that will not permit hydrostatic pressure **testing**, the procedure outlined in Sentence 6.5.1.6.(4) may be followed.

Records

6.5.1.8. (1) An **approved** record shall be kept of **inspections** of each system.

(2) The record required in Sentence (1) shall be available for examination by the **Chief Fire Official**.

Subsection 6.5.2. Sprinkler System Shutdowns

Notification

6.5.2.1. When any alterations, additions or repairs are to be made involving interruption to a sprinkler system or part thereof, the **Chief Fire Official** shall be notified.

Sprinkler control valves and water supplies

6.5.2.2. (1) Sprinkler control valves and sprinkler water supplies shall not be shut down, disconnected or otherwise impaired for more than 24 h without notifying the **Chief Fire Official**.

(2) In **buildings** containing a **hotel**, sprinkler control valves and sprinkler water supplies shall not be shut down, disconnected or otherwise impaired

(a) for 24 h or less without notifying the **Chief Fire Official** in accordance with a schedule identified in the **approved** fire safety plan, or

(b) for more than 24 h without notifying the **Chief Fire Official**.

Schedule of temporary shutdowns

6.5.2.3. Where it is required to temporarily shut down a sprinkler system or part thereof, the work shall be programmed by the contractor working on the system to enable the sprinkler system to be operational as quickly as possible in the circumstances.

Programmed repairs

6.5.2.4. (1) If a sprinkler system or any part thereof is shut down

(a) the **fire department** and **building** occupants shall be notified in accordance with Article 1.1.1.1., and

(b) the **supervisory staff** shall be notified.

Additional protection during shutdowns

6.5.2.5. Full sprinkler protection shall be restored or the provisions of Article 6.5.2.6. maintained when work on the system is discontinued.

Identification of closed valves

6.5.2.6. Closed sprinkler control valves and closed valves controlling fire protection water supplies for sprinkler systems shall be tagged or identified in an **approved** manner.

Subsection 6.5.3. Checking

Pipe hangers

6.5.3.1. Exposed sprinkler piping hangers shall be **checked** yearly to ensure that they are kept in good repair.

Pressure maintenance

6.5.3.2. Water supply pressure and system air or water pressure shall be **checked** weekly by using gauges to ensure that the system is maintained at the required operating pressure.

Protection against freezing

6.5.3.3. Dry-pipe valve rooms or enclosures in unheated **buildings** shall be **checked** as often as necessary when the outside temperature falls below 0°C to ensure that the system does not freeze.

Sprinkler heads

6.5.3.4. Sprinkler heads shall be **checked** at least once per year to ensure that they are free from damage, corrosion, grease, dust, paint or whitewash.

Subsection 6.5.4. Inspection

Winter damage

6.5.4.1. Auxiliary drains shall be **inspected** to prevent freezing.

Test flushing

6.5.4.2. Dry-pipe systems shall be **inspected** every 15 years for obstructions in the sprinkler piping and, if necessary, the entire system flushed of foreign material.

Priming water level

6.5.4.3. The priming water for dry-pipe systems shall be **inspected** at least every three months to ensure that the proper level above the dry-pipe valve is maintained.

Fire department connections

6.5.4.4. (1) Except when in use or being **inspected** in accordance with Sentence (2), **fire department** connections shall be equipped with plugs or caps that are secured wrench-tight.

(2) Plugs or caps shall be removed annually and the **fire department** connections **inspected** for wear, rust or obstruction and corrective action shall be taken as needed.

(3) If plugs or caps are missing, the **fire department** connections shall be examined for obstructions, back-flushed when conditions warrant and the plugs or caps replaced.

Sprinkler control valves

6.5.4.5. (1) Subject to Sentences (2) and (3), valves controlling sprinkler water supplies or alarms shall be sealed in the open position and **inspected** weekly.

(2) Valves which are locked open or valves which are electrically supervised shall be **inspected** monthly.

(3) After any alterations or repairs, valves shall be **inspected** to ensure they are in the fully open position and are sealed, locked or electrically supervised.

Subsection 6.5.5. Testing

Notification

6.5.5.1. Prior notification of water flow or other **tests** to be made to a sprinkler system shall be given to parties who could be affected by an alarm.

Alarm testing

6.5.5.2. (1) Except as provided in Article 6.5.5.7., the alarm on all sprinkler systems shall be **tested** monthly by flowing water through the **test** connection located at the sprinkler valve.

(2) An alarm line subject to freezing shall be cleared of all obstructions susceptible to freezing after the **test** specified in Sentence (1).

Water flow alarm tests

6.5.5.3. Water flow alarm **tests** using the most hydraulically remote **test** connection shall be performed annually on wet sprinkler systems.

Trip testing valves

6.5.5.4. (1) Dry-pipe valves shall be trip **tested** by means of the inspector's **test** valve in accordance with Sentences (2) and (3) to ensure that they operate satisfactorily and that the sprinkler alarms are in operating condition.

(2) Dry-pipe valves shall be trip **tested** annually.

(3) During the **test** referred to in Sentence (2), the control valve is not required to be in the fully open position.

(4) Dry-pipe valves shall be trip **tested** at least once every three years with the control valve fully open.

(5) The trip time for the **tests** described in Sentences (2) and (4) may exceed the acceptance trip time by not more than 10%.

Water supply

6.5.5.5. Sprinkler system water supply pressure shall be **tested** annually with the main drain valve fully open to ensure that there are no obstructions or deterioration of the main water supply.

6.5.5.6. The **test** prescribed in Article 6.5.5.5. shall be conducted after any sprinkler system control valve has been operated.

Electrical supervision signal testing

6.5.5.7. (1) If electrical supervision is provided for a sprinkler system, it shall be **tested** by operating the supervisory signal devices in conformance with Sentences (2) and (3).

(2) Transmitters and water-flow-actuated devices shall be **tested** every two months.

(3) Valve supervisory switches, tank water level devices, **building** and tank water temperature supervisory devices and other sprinkler system supervisory devices shall be **tested** at least every six months.

Subsection 6.5.6. Maintenance

Sprinkler guards

6.5.6.1. Sprinklers shall be protected by sprinkler guards where there is the possibility of mechanical damage.

Valve access

6.5.6.2. Sprinkler control valves shall be accessible and maintained in operable condition at all times.

Valve pits

6.5.6.3. Pits containing sprinkler control valves shall be kept free of water and protected against freezing.

Precautions against freezing

6.5.6.4. (1) Except as permitted in Sentence (2), sections of sprinkler systems subject to freezing shall be converted to a dry-pipe or antifreeze system with a separate control valve for that part of the system.

(2) Alternative methods to prevent freezing of sprinkler piping may be used where **approved**.

Spare sprinkler heads

6.5.6.5. (1) Where sprinkler systems are installed, a supply of spare sprinkler heads and equipment shall be maintained in conformance with Sentences (2) to (5).

(2) Spare sprinkler heads shall be kept in a cabinet where the temperature does not exceed 38°C.

(3) The minimum stock of spare sprinkler heads to be kept on hand shall be

(a) 6 sprinkler heads for installations containing not more than 300 sprinklers,

(b) 12 sprinkler heads for installations containing from 301 to 1000 sprinklers, and

(c) 24 sprinkler heads for installations containing more than 1000 sprinklers.

(4) Spare sprinkler heads shall correspond to the types and temperature ratings of the sprinklers installed on the system.

(5) A wrench suitable for replacing sprinkler heads shall be kept in the cabinet where the spare sprinkler heads are stored.

Protection for combustible sprinkler piping

6.5.6.6. Materials installed to protect combustible sprinkler piping, as required by the **Building Code** current at the time of installation, shall be maintained in accordance with the provisions of the same edition of the **Building Code** used for their installation.

SECTION 6.6 WATER SUPPLIES FOR FIRE PROTECTION

Subsection 6.6.1. General

6.6.1.1. Private and public water supplies for fire protection installations shall be maintained to provide the required flow under fire conditions.

Valve inspections

6.6.1.2. (1) Except as permitted in Sentences (2) and (3), valves controlling water supplies used exclusively for fire protection systems or combined domestic water supplies and fire protection systems shall be sealed in the open position and **inspected** weekly.

(2) Valves which are locked open or valves which are electrically supervised shall be **inspected** monthly.

(3) After any alterations or repairs, an **inspection** shall be made to ensure valves are returned to the fully open position and are sealed, locked or electrically supervised.

Ice accumulations

6.6.1.3. Water supply systems used for fire protection shall be kept free of ice accumulations that may interfere with flow.

Antifreeze pumping systems

6.6.1.4. Where antifreeze solutions are used to maintain pumping systems operable under freezing conditions, the specific gravity shall be such that the solution will remain unfrozen at a temperature of 8°C below the expected minimum temperature of the surrounding atmosphere.

Inspection, testing and maintenance

6.6.1.5. (1) Compliance with the **inspection**, **testing** and maintenance provisions of NFPA 25, “Standard for the Inspection, Testing and Maintenance of Water-Based Fire Protection Systems”, for tanks is deemed to satisfy the requirements of Subsection 6.6.2.

(2) Compliance with the **inspection**, **testing** and maintenance provisions of NFPA 25, “Standard for the Inspection, Testing and Maintenance of Water-Based Fire Protection Systems”, for fire pumps is deemed to satisfy the requirements of Subsection 6.6.3.

(3) Compliance with the **inspection**, **testing** and maintenance provisions of NFPA 25, “Standard for the Inspection, Testing and Maintenance of Water-Based Fire Protection Systems”, for hydrants is deemed to satisfy the requirements of Subsection 6.6.5.

Subsection 6.6.2. Tanks

Tank inspections

6.6.2.1. An annual **inspection** shall be made of tanks for fire protection, tank supporting structures and water supply systems, including piping, control valves, check valves, heating systems, mercury gauges and expansion joints, to ensure that they are in operating condition.

Tank heating equipment

6.6.2.2. Tank heating equipment and accessories shall be **checked** daily during freezing weather to ensure that they are in operating condition and that heater valves are open.

Water temperature checks

6.6.2.3. A daily **check** of the temperature of the water contained in tanks shall be carried out during freezing weather to ensure that it does not fall below the freezing temperature.

Tank enclosure temperature checks

6.6.2.4. A daily **check** of the temperature of the tank enclosure for tanks in **buildings** shall be carried out during freezing weather to ensure that the temperature of the tank enclosure does not fall below 0°C.

Check for corrosion

6.6.2.5. Steel and iron work, including the inside and outside of steel tanks and hoops and grillages for wooden tanks, shall be **checked** for corrosion at intervals not exceeding two years and scraped and repainted as required.

Inspection for sediment

6.6.2.6. (1) Tanks, other than tanks supplied by a potable water supply, shall be **inspected** for accumulations of sediment at least every two years and cleaned as required.

(2) Tanks supplied by a potable water supply shall be **inspected** every five years and scraped and repainted as required.

Inspection of cathodic protection

6.6.2.7. Where cathodic protection equipment is installed to prevent corrosion of steel tanks, the equipment shall be **inspected** annually.

Water level in gravity tanks

6.6.2.8. The water level in gravity tanks shall be **inspected** monthly.

Gravity tanks

6.6.2.9. Gravity tanks shall be **inspected** annually to ensure that the tank roof is tight and in good repair, that hatches or doors are kept closed and properly secured and that the frost-proof casing of the tank riser makes a tight joint with the bottom of the tank.

6.6.2.10. The space between overflow pipes and the tops of gravity tanks, the valve pits at the bottoms of the risers and the entire area around the bases of the columns of tanks shall be kept free of rubbish and waste materials.

6.6.2.11. Gravity tank expansion joints shall be repacked and adjusted if binding or leaks develop.

Pressure tanks

6.6.2.12. (1) Pressure tanks shall be **checked** weekly during which the water level shall be observed and the air pressure shall be read.

(2) Corrective action shall be taken immediately if the observed water level or air pressure is outside the designed operating range for the tank.

6.6.2.13. Relief valves on the air and water supply lines of pressure tanks shall be **inspected** weekly.

Subsection 6.6.3. Fire Pumps and Reservoirs

Fire pump reservoirs

6.6.3.1. The water level in the fire pump reservoir shall be **checked** weekly.

Pump room temperature

6.6.3.2. The temperature of pump rooms shall be **checked** daily during freezing weather.

Inspection of fire pumps

6.6.3.3. (1) Fire pumps shall be operated at least once per week at rated speed.

(2) The fire pump discharge pressure, suction pressure, lubricating oil level, operative condition of relief valves, priming water level and general operating conditions shall be **inspected** during the weekly operation of fire pumps.

Internal combustion engine inspection

6.6.3.4. (1) Internal combustion engine fire pumps shall be operated once a week for a sufficient time to bring the engine up to normal operating temperature.

(2) The storage batteries, lubrication systems, oil and fuel supplies shall be **inspected** once a week.

Fire pump flow tests

6.6.3.5. Fire pumps shall be **tested** annually at full rated capacity to ensure that they are capable of delivering the rated flow.

Hotels

6.6.3.6. In **buildings** containing a **hotel**, the intervals referred to in Articles 6.6.3.3. and 6.6.3.4. are permitted to be once per month.

Subsection 6.6.4. Hydrants

Hydrants

6.6.4.1. Municipal and private hydrants shall be maintained in operating condition.

6.6.4.2. Hydrants shall be maintained free of snow and ice accumulations.

6.6.4.3. Hydrants shall be readily available and unobstructed for use at all times.

Subsection 6.6.5. Inspection of Hydrants

6.6.5.1. Hydrants shall be **inspected** annually and after each use in accordance with Articles 6.6.5.2. to 6.6.5.5.

6.6.5.2. (1) Except when in use or being **inspected** in accordance with Sentence (2), hydrants shall be equipped with port caps that are secured wrench-tight.

(2) The port caps shall be removed and the connections **inspected** for wear, rust or obstructions that in any way hamper easy removal and corrective action shall be taken as needed.

(3) If the caps are missing, the hydrant shall be examined for obstructions or accumulated refuse and flushed in accordance with Article 6.6.5.7. and the port caps shall be re-installed.

6.6.5.3. The hydrant barrel shall be **inspected** to ensure that no water has accumulated within the barrel when the main valve is in the closed position.

6.6.5.4. Where the hydrant barrel is found to contain water under Article 6.6.5.3., the drain valve shall be **inspected** for operation.

6.6.5.5. If the hydrant barrel is found to contain water because of poor drainage that is impractical to correct, **approved** measures shall be taken to prevent freezing during winter conditions.

Hydrant water flow

6.6.5.6. Hydrant water flow shall be **inspected** annually in accordance with Article 6.6.5.7.

6.6.5.7. The main valve of the hydrant shall be fully opened and the hydrant operated with one port open and the water flow **checked**.

6.6.5.8. A record of the hydrant operation as described in Article 6.6.5.7. shall be kept in conformance with Article 1.1.2.1.

Subsection 6.6.6. Uniform Marking of Hydrants

Hydrant marking

6.6.6.1. Hydrants shall be colour-coded in accordance with NFPA 291, "Recommended Practice for Fire Flow Testing and Marking of Hydrants".

SECTION 6.7 EMERGENCY POWER SYSTEMS

Subsection 6.7.1. General

6.7.1.1. (1) Except as provided in Sentence (2), and Articles 6.7.1.2. to 6.7.1.5., emergency power systems shall be **inspected**, **tested** and maintained in conformance with CSA-C282, "Emergency Electrical Power Supply for Buildings".

(2) An emergency electrical power supply system for emergency equipment in hospitals shall be **inspected**, **tested** and maintained in conformance with CSA-Z32, "Electrical Safety and Essential Electrical Systems in Health Care Facilities".

(3) If an emergency power system or any part thereof is shut down

(a) the **fire department** and **building** occupants shall be notified in accordance with Article 1.1.1.1., and

(b) the **supervisory staff** shall be notified.

Instructions for switching and starting

6.7.1.2. Where an emergency power system is installed, instructions shall be provided for switching on essential loads and for starting the generator when this is not done automatically.

Inspection and testing

6.7.1.3. Despite the requirements of Article 1.1.2.1., written records shall be maintained as required in CSA-C282, "Emergency Electrical Power Supply for Buildings".

Fuel supply

6.7.1.4. The amount of fuel stored and connected to the emergency power system shall be sufficient to operate the engine for at least 2 h.

6.7.1.5. (1) Liquid fuel **storage tanks** shall be drained and refilled with fresh fuel at intervals not greater than 12 months.

(2) The requirements of Sentence (1) may be achieved by replenishment as the result of the normal **test** program required in Article 6.7.1.1.

SECTION 6.8 SPECIAL FIRE SUPPRESSION SYSTEMS

Subsection 6.8.1. Installation

6.8.1.1. (1) Where a special fire suppression system is installed after November 21, 2007 to comply with this Code, the system shall conform to one of the standards set out in Sentences (3) and (4).

(2) If a water-based fire suppression system is not compatible with fire suppression for specific types of hazards, a special fire suppression system conforming to one of the standards set out in Sentence (3) is permitted to be installed in lieu of a water-based system.

(3) The design and installation of a special fire suppression system that is not water-based shall conform to one of the following standards:

(a) NFPA 11, “Standard for Low-, Medium-, and High-Expansion Foam”,

(b) NFPA 12, “Standard on Carbon Dioxide Extinguishing Systems”,

(c) NFPA 12A, “Standard on Halon 1301 Fire Extinguishing Systems”,

(d) NFPA 12B, “Standard on Halon 1211 Fire Extinguishing Systems”,

(e) NFPA 17, “Standard for Dry Chemical Extinguishing Systems”,

(f) NFPA 17A, “Standard for Wet Chemical Extinguishing Systems”, or

(g) NFPA 2001, “Standard on Clean Agent Fire Extinguishing Systems”.

(4) The design and installation of a water-based special fire suppression system shall conform to one of the following standards:

(a) NFPA 15, “Standard for Water Spray Fixed Systems for Fire Protection”, or

(b) NFPA 16, “Standard for the Installation of Foam-Water Sprinkler and Foam-Water Spray Systems”.

(5) Wetting agents used in conjunction with water-based fire suppressions systems shall conform to NFPA 18, “Standard on Wetting Agents”.

(6) A hazard for which a fire suppression system has been designed shall not be increased unless the level of fire protection is also commensurately increased.

(7) Operating and maintenance instructions for a special fire suppression system shall be posted in proximity to the equipment and, if manual controls are provided, shall also be posted near the manual controls.

(8) Valves and controls for a special fire suppression system shall be clearly marked to indicate their function and shall be accessible at all times.

Subsection 6.8.2. Inspection and Maintenance

6.8.2.1. (1) Except as otherwise provided in this Section, where special fire suppression systems have been installed, **inspection** and maintenance shall be provided in conformance with the appropriate standards set out in Sentences 6.8.1.1. (3), (4) and (5).

(2) Where a special fire suppression system of a type has been installed in accordance with a standard not referred to in Article 6.8.1.1., **inspection** and maintenance shall be provided in conformance with the specified standard and in the absence of a standard, to the manufacturer’s recommended maintenance instructions.

(3) If a special fire suppression system or any part thereof is shut down

(a) the **fire department** and **building** occupants shall be notified in accordance with Article 1.1.1.1., and

(b) the **supervisory staff** shall be notified.

Test records

6.8.2.2. Written records shall be kept of **inspections**, maintenance and **testing** in conformance with Article 1.1.2.1.

Container maintenance

6.8.2.3. Extinguishing agent containers provided for special fire suppression systems shall be fully charged with the proper quantity of extinguishing agent and the necessary operating pressure maintained.

Discharge outlets

6.8.2.4. Discharge outlets for special fire suppression systems shall be kept free of dirt and residue.

Piping

6.8.2.5. Piping and equipment shall be mechanically secure and accessible for cleaning and maintenance.

Replacement equipment

6.8.2.6. No replacement equipment and devices provided for special fire suppression systems shall be used unless suitable for the installation in which they are to be placed.

SECTION 6.9 DECOMMISSIONING

Subsection 6.9.1. General

6.9.1.1. Except as otherwise provided in this Part, fire protection equipment and life safety systems shall not be decommissioned or permanently taken out of service without **approval**.

O. Reg. 213/07, Division B, Part 6; O. Reg. 194/14, ss. 8-10; O. Reg. 256/14, ss. 256-290.

PART 7
CHECKING, INSPECTION, TESTING AND MAINTENANCE OF FIRE EMERGENCY SYSTEMS IN HIGH BUILDINGS

SECTION 7.1 GENERAL

Subsection 7.1.1. General

Application

7.1.1.1. This Part applies to high **buildings** as described in Article 3.2.6.1. of Division B of the **Building Code**.

Requirements

7.1.1.2. The fire emergency systems required by this Code and the **Building Code** shall be **checked**, **inspected**, **tested** and maintained in accordance with Sections 7.2 and 7.3.

7.1.1.3. REVOKED: O. Reg. 256/14, s. 294.

SECTION 7.2 CHECKING, INSPECTION, TESTING AND MAINTENANCE OF CERTAIN FIRE EMERGENCY SYSTEMS

Subsection 7.2.1. Intervals Between Tests

Intervals between tests

7.2.1.1. Unless otherwise prescribed in this Part, **tests** shall be carried out at intervals of not more than three months.

Subsection 7.2.2. Elevators

Testing

7.2.2.1. (1) Elevator door-opening devices operated by means of photo-electric cells shall be **tested** to ensure that the devices become inoperative after the door has been held open for more than 20 s with the photo-electric cell covered.

(2) Key-operated switches located outside an elevator shaft shall be **tested** to ensure that actuation of the switch will render the emergency stop switch in each car inoperative and bring all cars to the **street** floor or transfer lobby by cancelling all other calls after the car has stopped at the next floor at which it can make a normal stop.

(3) Key-operated switches in each elevator car shall be **tested** to ensure that actuation of the switch will

(a) enable the elevator to operate independently of other elevators,

(b) allow operation of the elevator without interference from floor call buttons,

(c) render door protective devices inoperative, and

(d) control the opening of power-operated doors only by continuous pressure on the door-opening buttons or switches, to ensure that if the “OPEN” button or switch is released while the door is opening, the doors will automatically close.

Subsection 7.2.3. Venting to Aid Fire Fighting

Inspection

7.2.3.1. (1) **Closures** in vent openings into smoke shafts from each **floor area** shall be **inspected** sequentially over a period not to exceed five years.

(2) Every **closure** in an opening to the outdoors at the top of a smoke shaft shall be **inspected** annually to ensure that it will open

(a) manually from outside the **building**,

(b) on a signal from the smoke or heat actuated device in the smoke shaft, and

(c) when a **closure** in an opening between a **floor area** and the smoke shaft opens.

(3) In addition to the procedures described in Sentences (1) and (2), elevators in an elevator shaft that is intended for use as a smoke shaft shall be **inspected** semi-annually to ensure that on activation of the fire alarm system they will return to the **street** floor and remain inoperative.

(4) Where an air-handling system is used for venting **floor areas** in the event of a fire to comply with the requirements of the **Building Code**, the system shall be **inspected** annually to ensure that air is exhausted to the outdoors.

Subsection 7.2.4. Central Alarm and Control Facilities and Voice Communication Systems for Life Safety

7.2.4.1. The **checking**, **inspecting** and **testing** of central alarm and control facilities and voice communication systems for life safety shall be carried out in accordance with the requirements of Section 6.3.

Subsection 7.2.5. Maintenance

Maintenance of certain fire emergency systems

7.2.5.1. (1) In addition to the requirements of Part 6, components of fire emergency systems shall be maintained in accordance with Sentences (2) to (7).

(2) The keys required to recall elevators and to permit independent operation of each elevator shall be kept in the location required by the **Building Code**.

(3) Firefighters' elevators shall be maintained in operable condition.

(4) The firefighters' elevator symbol shall be maintained in identifiable condition.

(5) Access to windows and panels required to vent **floor areas** and vents to vestibules that are permitted to be manually openable shall be kept free of obstructions.

(6) Windows and panels provided for venting **floor areas** shall be maintained so as to be openable without the use of keys.

(7) Vents to vestibules that are permitted to be manually openable shall be maintained in operable condition.

SECTION 7.3 INSPECTION, TESTING AND MAINTENANCE OF SMOKE CONTROL EQUIPMENT

Subsection 7.3.1. General

7.3.1.1. Smoke control equipment shall be maintained in a manner that ensures that it is fully operational.

7.3.1.2. Where smoke control measures contained in Commentary C of NRC, User's Guide –NBC 1995, "Fire Protection, Occupant Safety and Accessibility (Part 3)" are used, the **inspections** and **tests** shall be carried out as outlined in Section 7.3 of Division B of NRC, "National Fire Code of Canada".

7.3.1.3. (1) Subject to Sentences (2) to (5), where a smoke control system is designed to meet the requirements of the **Building Code**, the **inspections** and **tests** for equipment shall be carried out in accordance with procedures established by the designer of the system.

(2) Where procedures described in Sentence (1) are not available, smoke control systems shall be assessed to ensure satisfactory operation using techniques described in MAH Supplementary Standard SB-4, “Measures for Fire Safety in High Buildings”.

(3) Upon completion of the assessment described in Sentence (2), written procedures for periodic **inspections** and **tests** shall be established.

(4) The procedures described in Sentence (3) shall bear the signature and seal of a **Professional Engineer** or **Architect**.

(5) The **inspections** and **tests** established under Sentence (3) shall be implemented.

(6) Despite Sentences (1) and (3), other **inspection** and **test** procedures may be **approved**.

O. Reg. 213/07, Division B, Part 7; O. Reg. 256/14, ss. 291-301.

PART 8
DEMOLITION

SECTION 8.1 GENERAL

Subsection 8.1.1. Application

Application

8.1.1.1. This Part applies to the prevention or control of fire during any **demolition** and the protection from fire of neighbouring occupied spaces and neighbouring properties.

Subsection 8.1.2. Requirements

Building services

8.1.2.1. (1) Subject to Sentence (2), before **demolition** of a **building** or part of a **building** is commenced, **building** services other than water supply for fire fighting shall be terminated at a point located outside the **building** or part under **demolition**.

(2) Instead of being terminated under Sentence (1), a service provider's connection shall be relocated and protected from damage if it is determined that

(a) terminating the service at a point outside the **building** or part under **demolition** would interfere with service to a part of the **building** that is not under **demolition** or service to another **building** that is not under **demolition**, or

(b) maintaining the service is necessary for **demolition** purposes.

(3) No steps shall be taken under Sentence (1) or (2) in respect of a service provider's connection unless that service provider and all other service providers whose connections will be affected by the termination or relocation of that connection have been notified.

Firewatch

8.1.2.2. (1) During periods when **demolition** operations create a fire hazard to parts of the **building** not under **demolition** or to neighbouring occupied spaces or neighbouring properties, a firewatch shall be conducted.

(2) If a firewatch is required, the **demolition** site shall be toured by firewatch personnel at least once each hour.

(3) Facilities shall be provided to enable firewatch personnel to

(a) ensure that a fire warning is sounded to notify occupants, and

(b) communicate with the **fire department**.

(4) Firewatch personnel shall be equipped with portable illumination and protective equipment.

(5) Before **demolition** of a **building** or part of a **building** is commenced, a safety plan for the **demolition** site shall be prepared and implemented.

(6) The **demolition** safety plan shall include

(a) the designation and organization of site personnel to carry out fire safety duties, including a firewatch when required,

(b) the emergency procedures to be followed in case of fire, including

(i) ensuring that a fire warning is sounded to notify occupants,

(ii) notifying the **fire department**, and

(iii) confining, controlling and extinguishing the fire,

(c) the requirement to train site personnel to carry out fire safety duties, including a firewatch and the emergency procedures referred to in Clause (b),

(d) the procedures to control fire hazards in and around the **demolition** site, including procedures to mitigate risks to parts of the **building** not under **demolition** or to neighbouring occupied spaces or neighbouring properties, and

(e) the maintenance of fire fighting facilities.

(7) If a **demolition** involves a **building** that is required to have a fire safety plan that complies with Section 2.8, the fire safety plan shall take into account changes to the **building** arising from the **demolition** in accordance with Sentences 2.8.2.1.(4) and (5).

Storage of combustibles

8.1.2.3. (1) Combustible salvage, waste material and rubbish shall not be accumulated on site in such quantity or such location as to cause a fire hazard.

(2) If temporary chutes are installed on the exterior of a **building**, the chutes shall

(a) be of noncombustible material, or

(b) be installed a distance of at least 3 m from any opening in the **building** face.

Burning of rubbish

8.1.2.4. Rubbish shall not be burned on the premises unless permitted in accordance with Article 2.4.4.4.

Hot work equipment

8.1.2.5. The installation, operation and maintenance of hot work equipment shall be carried out in accordance with Section 5.11.

Standpipe systems

8.1.2.6. (1) Where a **building** being **demolished** floor by floor is equipped with a standpipe system, the system, together with **fire department** connections, valves, couplings and hose, shall be maintained in operable condition on all **storeys** below the one being demolished, except for the **storey** immediately below it.

(2) If no **fire department** standpipe connection exists in a **building** under **demolition** that is 4 **storeys** or more in **building height**, a temporary standpipe connection shall be provided.

(3) If no standpipe system exists in a **building** under **demolition** that is 8 **storeys** or more in **building height**, a temporary standpipe shall be provided.

(4) Standpipe systems shall be kept in such condition that they may be connected near **street** level, to a **fire department** pump, so as to supply water to every outlet on each floor.

(5) In a **building** under **demolition** that is over 84 m in height, the primary water supply serving the standpipe system, including fire pumps, shall be maintained in operating condition.

Access for fire fighting

8.1.2.7. (1) During **demolition**, fire fighting access routes shall be maintained in accordance with Section 2.5.

(2) Unobstructed access to fire hydrants, portable extinguishers and **fire department** connections for standpipe and sprinkler systems shall be maintained during **demolition**.

(3) If a **demolition** site is fenced so as to prevent general entry, provision shall be made for access by **fire department** equipment and personnel.

(4) Elevating devices shall be accessible for the use of firefighters for **buildings** under **demolition** that are more than 36 m in **building height**, measured between **grade** and the floor level of the top **storey**.

Portable extinguishers

8.1.2.8. (1) Portable extinguishers shall be provided in **buildings** under **demolition** in accordance with Subsection 6.2.6. as if the **buildings** were graded for ordinary hazard under Subsection 6.2.5.

(2) In addition to the other requirements of this Code, if a **building** is under **demolition**, portable extinguishers shall be provided

(a) adjacent to hot work operations,

(b) in areas where combustibles are stored,

(c) near or on any internal combustion engines,

(d) adjacent to areas where **flammable liquids, combustible liquids** or gases are stored or handled,

(e) adjacent to temporary oil-fired or gas-fired equipment, and

(f) adjacent to bitumen heating equipment.

(3) The extinguishers required by Sentence (2) shall have a minimum rating of

(a) 2A:10B:C on moveable equipment, and

(b) 4A:40B:C in all other locations.

(4) Portable extinguishers required in Sentences (1), (2) and (3) shall be maintained in conformance with Section 6.2.

Smoking prohibited

8.1.2.9. Smoking shall not take place in, on or near a **building** under **demolition**, except as provided in Subsection 2.4.3.

Ignition sources

8.1.2.10. (1) Internal combustion engines, other devices capable of producing ignition and devices associated with either of the foregoing shall be kept at sufficient distance from combustible material so as to prevent ignition.

(2) The clearance between combustible material and temporary heating equipment, including **flues**, shall comply with

(a) the minimum clearance, if any, shown on certified heating equipment, or

(b) the minimum clearance specified in the **Building Code**, if no minimum clearance is shown on the heating equipment.

Temporary enclosures

8.1.2.11. Fabrics and films used to temporarily enclose **buildings** shall be securely fastened to prevent them from being blown against heaters or other ignition sources.

Provisions for egress

8.1.2.12. Unless otherwise **approved**, at least two **exits** shall be accessible and usable at all times.

Fire warning

8.1.2.13. A means shall be provided that is capable of alerting persons throughout a **building** under **demolition** and the property on which the **building** is located of a fire emergency.

Safety of tanks, piping and machinery reservoirs at demolition sites

8.1.2.14. (1) Tanks, piping and machinery reservoirs at a **demolition** site that contain **flammable liquids** or **combustible liquids** or that are likely to contain flammable vapours shall be drained, purged with inert materials and then removed before **demolition** is commenced.

(2) Despite Sentence (1), if it is impracticable to remove any tank, piping or machinery reservoir described in Sentence (1) from the **building** before **demolition** is commenced, such equipment shall be

(a) drained and purged with inert materials before **demolition** is commenced,

(b) clearly identified before **demolition** is commenced, and

(c) removed from the **building** as soon as conditions permit.

O. Reg. 213/07, Division B, Part 8; O. Reg. 256/14, ss. 302-313.

PART 9
RETROFIT

SECTION 9.1 GENERAL

Subsection 9.1.1. General

Scope

9.1.1.1. This Part provides for the upgrading of existing **buildings** through **retrofit**.

Compliance

9.1.1.2. (1) The requirements of this Part shall be satisfied

(a) by implementing the requirements of the applicable Section, or

(b) by implementing an **approved** Life Safety Study in accordance with Subsection 9.1.4.

Approved alternatives

9.1.1.3. A requirement of this Part is deemed to be complied with if materials, equipment or systems are **approved** that, in the opinion of the **Chief Fire Official**, will provide protection for life safety similar to the protection provided by compliance with the requirement.

Subsection 9.1.2. Application

Application

9.1.2.1. The requirements for **buildings** that are covered by this Part shall be determined by their **occupancies** as regulated in the appropriate Sections in this Part.

Exemptions

9.1.2.2. (1) This Part does not apply to a **building** that contains a **residential occupancy**, consisting of no more than one **dwelling unit**, and no other **major occupancy**.

(2) Except for Article 9.4.5.5. and Sections 9.7 and 9.9, this Part does not apply to a **building** or part of a **building** that satisfies the requirements of the **Building Code**.

(3) Section 9.7 does not apply to a **building** or part of a **building** that contains a **care occupancy**, if the **building** or part of the **building** satisfies the requirements for a **care occupancy** contained in the **Building Code** as it read at any time on or after April 6, 1998.

(4) Section 9.7 does not apply to a **building** or part of a **building** that contains a **retirement home**, if the **building** or part of the **building** satisfies the requirements for a **retirement home** contained in the **Building Code** as it read at any time on or after January 1, 2014.

(5) Section 9.9 does not apply to a **building** or part of a **building** that satisfies the requirements of the **Building Code** as it read at any time on or after July 1, 1993.

(6) Sections 9.2 to 9.9 do not apply to a **building** with respect to which the **Chief Fire Official** has granted an exemption under a predecessor of this Regulation during such period as the exemption is valid.

Subsection 9.1.3. Schedule of Compliance

Compliance time for health care facilities, care occupancies and retirement homes

9.1.3.1. (1) It is the responsibility of the **owner** of a **building** containing a home or hospital described in Section 9.4 to comply with Article 9.4.5.5. as of January 1, 2025.

(2) It is the responsibility of the **owner** of a **building** to which Section 9.7 applies to comply with

(a) Article 9.7.4.3. as of March 1, 2014,

(b) Articles 9.7.3.1., 9.7.4.1. and 9.7.4.2. as of January 1, 2015,

(c) Articles 9.7.2.1. and 9.7.4.4. as of January 1, 2016, and

(d) Article 9.7.5.1. as of January 1, 2019.

Extension of time

9.1.3.2. If compliance is not possible by the date required under Article 9.1.3.1. because of a strike, material shortage or other circumstances beyond an **owner's** control, the **Chief Fire Official** may grant an extension of the time for compliance.

Subsection 9.1.4. Life Safety Study

Life Safety Study

9.1.4.1. (1) A Life Safety Study is a proposal to the **Chief Fire Official** that consists of

(a) a detailed assessment of the life safety performance requirements, clearly identifying items not meeting the requirements of this Part,

(b) a detailed description of how an acceptable level of life safety can be achieved, and

(c) a detailed time schedule to implement the provisions of Clause (b).

Contents

9.1.4.2. (1) A Life Safety Study shall deal with, but is not limited to

(a) containment, including

(i) **fire separations**,

(ii) **firewalls**,

(iii) construction assemblies,

(iv) **occupancy** separations, and

(v) interior finishes,

(b) detection, including

(i) alarm and detection systems, and

(ii) voice communication systems,

(c) suppression, including

(i) **fire department** access,

(ii) standpipe and hose systems,

(iii) sprinkler or special fire suppression systems, and

(iv) firefighters' elevators, and

(d) egress, including

(i) the number, type, **access to**, direction to, lighting for and identification of **exits**,

(ii) fire escapes,

(iii) **occupant load**, and

(iv) emergency lighting.

Signature and seal

9.1.4.3. A Life Safety Study shall bear the signature and seal of a **Professional Engineer** or **Architect**, or both.

Time schedule

9.1.4.4. The time schedule referred to in Clause 9.1.4.1.(1)(c) may provide for a compliance date after the compliance date required by Article 9.1.3.1.

Extension of time

9.1.4.5. An **owner** or the **owner's** agent may apply to the **Chief Fire Official** for an extension of the compliance date to permit time for a Life Safety Study to be submitted.

Extension following Order

9.1.4.6. (1) Where an **owner** or the **owner's** agent has received an **Order** that requires compliance with this Part, the **owner** or the **owner's** agent may apply within five days of receipt of the **Order** to the **Chief Fire Official** to extend the time for compliance pending submission of a Life Safety Study.

(2) Upon receipt of the application referred to in Sentence (1), the **Chief Fire Official** shall, within 10 days, review the application and either grant or refuse an extension of the time for compliance to permit submission of a Life Safety Study.

(3) The **Chief Fire Official** shall notify the **owner** or the **owner's** agent of the **Chief Fire Official's** decision in writing.

(4) Notification shall be served either personally or by mail.

(5) Where notification is by mail, it is deemed to have been served on the fifth day after the date of mailing.

(6) An **owner** or the **owner's** agent, within five days of being notified of a refusal to grant an extension of the time to submit a Life Safety Study, may request the reasons for the refusal in writing.

(7) The **Chief Fire Official** shall comply with the request referred to in Sentence (6) within 10 days after receipt thereof.

(8) An **owner** or the **owner's** agent who feels aggrieved by a decision to refuse an extension of time to submit a Life Safety Study may, within 30 days of the refusal, appeal the refusal in the same manner as though it were an **Order**.

Review

9.1.4.7. (1) Despite any other **Order** that requires compliance with this Part, the **Chief Fire Official** shall, within 30 days after receiving a Life Safety Study, review the Life Safety Study for implementation.

(2) Where a Life Safety Study is **approved** for implementation, the **Chief Fire Official** shall notify the **owner** or the **owner's** agent of the decision in writing.

(3) Where a Life Safety Study is not **approved**, the **Chief Fire Official** shall advise the **owner** or the **owner's** agent of the decision and the reasons therefor in writing.

(4) Notification shall be served either personally or by mail.

(5) Where notification is by mail, it is deemed to have been served on the fifth day after the date of mailing.

(6) An **owner** or the **owner's** agent who feels aggrieved by a decision not to **approve** a Life Safety Study may, within 30 days of the refusal, appeal the decision in the same manner as though it were an **Order**.

(7) Despite any other provision of this Part, a Life Safety Study that has been **approved** and implemented is deemed to satisfy an **Order** requiring compliance with this Part and made with respect to the same premises before the Life Safety Study was accepted.

Records

9.1.4.8. A copy of an **approved** Life Safety Study shall be kept on the premises to which it relates and be made available to the **Chief Fire Official** upon request.

SECTION 9.2 ASSEMBLY OCCUPANCIES

Subsection 9.2.1. Application and General

Assembly occupancies

9.2.1.1. (1) This Section applies to

(a) art galleries,

(b) auditoria,

(c) beverage establishments,

(d) bingo halls,

(e) clubs,

(f) community halls,

(g) dance halls,

(h) enclosed arenas,

(i) exhibition halls,

(j) gymnasia,

(k) halls in religious establishments (excluding areas of worship),

(l) lecture halls,

(m) lodge rooms,

(n) movie theatres,

(o) museums,

(p) opera houses,

(q) restaurants,

(r) television studios, and

(s) theatres.

(2) Revoked: O. Reg. 256/14, s. 317.

Exemption for educational facilities and hotels

9.2.1.2. (1) This Section does not apply to **assembly occupancies** in **buildings** that are regulated under the **Education Act** or the **Ministry of Training, Colleges and Universities Act**.

(2) This Section does not apply to a **building** or part of a **building** regulated under Section 9.9.

Definitions

9.2.1.3. For the purposes of this Section,

"**1986 Building Code**" means Ontario Regulation 419/86, as it read on February 11, 1987;

"existing" means in existence on February 11, 1987.

Subsection 9.2.2. Containment

Fire separations between major occupancies

9.2.2.1. (1) **Fire separations** shall be provided between **assembly occupancies** described in Subsection 9.2.1. and other **major occupancies** in compliance with Article 3.1.3.2. of the **1986 Building Code**.

(2) If Sentence (1) requires a **fire separation** having a 2 h **fire-resistance rating**, a **fire separation** having a **fire-resistance rating** not less than 1 h is deemed to comply with Sentence (1) if

(a) the **building** is **sprinklered** with a sprinkler system that complies with Article 9.2.5.2., or

(b) the **building** has a detection system that is connected to the **building** fire alarm system.

(3) If Sentence (1) requires a **fire separation** having a 1 h **fire-resistance rating**, a **fire separation** having a **fire-resistance rating** not less than 30 minutes is deemed to comply with Sentence (1) if

(a) the **building** is **sprinklered** with a sprinkler system that complies with Article 9.2.5.2., or

(b) the **building** has a detection system that is connected to the **building** fire alarm system.

Protection of openings in fire separations

9.2.2.2. (1) **Closures** that are in compliance with Sentences 3.1.6.4.(2) and 3.1.6.7.(1) of the **1986 Building Code** shall be provided in **fire separations**.

(2) Where Sentence (1) requires

(a) a 1 h or a 45 min **fire-protection rating**, existing hollow metal or kalamein doors, with or without wired glass and equipped with self-closing devices, and existing hollow metal frames are deemed to be in compliance,

(b) a 1 h or a 45 min **fire-protection rating**, existing wired glass screens set in fixed steel frames are deemed to be in compliance, or

(c) a 20 min **fire-protection rating**, existing 45 mm solid core wood doors and existing solid wood frames are deemed to be in compliance.

(3) Despite the requirements referred to in Sentence (1), **fire dampers** or **fire-stop flaps** are not required to be installed in existing noncombustible ducts at penetrations of a **fire separation**.

Fire separations for hazardous areas

9.2.2.3. (1) In high **buildings** classified in the **1986 Building Code** under Subsection 3.2.6., **fire separations** that are in compliance with Subsection 3.5.2. of the **1986 Building Code** shall be provided between **service rooms** and **assembly occupancies**.

(2) In **buildings** not referred to in Sentence (1), **fire separations** that are in compliance with Subsection 3.5.2. of the **1986 Building Code** shall be provided between **service rooms** and **assembly occupancies**.

(3) A **fire separation** having a **fire-resistance rating** not less than 30 minutes is deemed to comply with Sentence (2) if

(a) the **service room** is **sprinklered**, or

(b) a detection system is provided and connected to the **building** fire alarm system.

(4) **Fire separations** shall be provided between theatrical stages and **assembly occupancies** in compliance with Sentences 3.3.2.14.(3) to (5) of the **1986 Building Code**.

(5) Despite Sentence (4), existing **fire separations** may be **approved**.

Interior finishes

9.2.2.4. (1) Interior finishes shall comply with the **flame-spread rating** requirements under Clauses 3.1.4.5.(3)(g) and (h) and Subsection 3.1.11. of the **1986 Building Code**.

(2) Where

(a) the finish is not an exposed expanded plastic, the assembly area is **sprinklered** and the sprinkler system complies with Article 9.2.5.2., the existing interior finish is deemed to be in compliance with Sentence (1), or

(b) the finish is treated with a fire retardant surface coating **listed** by a recognized **testing** laboratory and applied in accordance with the listing conditions, the finish is deemed to be in compliance with Sentence (1).

(3) Despite Sentence (1), existing interior finishes may be **approved**.

Subsection 9.2.3. Means of Egress

Occupant load determination

9.2.3.1. The **occupant load** for calculation of number and width of **exits** referred to in Articles 9.2.3.6. and 9.2.3.7. shall be in accordance with Article 2.7.1.4.

Access to exits; number and location

9.2.3.2. (1) Where the **occupant load** of a room exceeds 60 persons, at least two egress doorways shall be provided in such a manner that one doorway can provide egress if the other doorway becomes inaccessible to the occupants.

(2) An existing room with one doorway is deemed to be in compliance with Sentence (1) where

(a) the **occupant load** does not exceed 100 persons,

(b) the **floor area** is **sprinklered** and the sprinkler system complies with Article 9.2.5.2., and

(c) the **travel distance** does not exceed 23 m.

Access to exits

9.2.3.3. (1) **Access to exits** shall comply with Article 3.3.2.7. of the **1986 Building Code**.

(2) Existing **access to exits** through dead end corridors are deemed to be in compliance with Sentence (1) where

(a) the **occupant load** does not exceed 20 persons, and

(b) the travel distance does not exceed 6 m plus the width of the dead end corridor to a point where a choice of two directions of **exit** travel are available.

Minimum number of exits

9.2.3.4. (1) Each **floor area** shall be served by at least two **exits**.

(2) Despite Sentence (1), **floor areas** in **buildings** not exceeding 2 **storeys** in **building height** may be served by one **exit** where

(a) the **occupant load** for the **floor area** does not exceed 60 persons,

(b) the **floor area** does not exceed 200 m^2, and

(c) the **travel distance** from any point on the **floor area** does not exceed 15 m.

Door swing

9.2.3.5. Each door serving as an **access to exit** from a room serving more than 60 persons shall open in the direction of **exit** travel and shall swing on its vertical axis.

Number of exits

9.2.3.6. (1) The minimum number of **exits** from a **floor area** shall be,

(a) for an **occupant load** of 61 up to and including 600 persons, not less than two **exits**,

(b) for an **occupant load** of 601 up to and including 1000 persons, not less than three **exits**, or

(c) for an **occupant load** of more than 1000 persons, not less than four **exits**.

Total width

9.2.3.7. (1) The aggregate required width of **exits** shall be determined by multiplying the **occupant load** of the area served by

(a) 6.1 mm (1/4 in) per person for ramps with a gradient of not more than 1 in 8, doorways, corridors and passageways, or

(b) 9.2 mm (3/8 in) per person for ramps with a gradient of more than 1 in 8 and stairs.

9.2.3.8. The width of an **exit** stair or of a corridor used as an **access to exit** or as an **exit** shall not be less than 900 mm.

9.2.3.9. Where the total number of **exits** and the total width of **exits** comply with Articles 9.2.3.6. and 9.2.3.7., existing corridor and stair widths are deemed to be in compliance with Article 9.2.3.8.

Fire escapes permitted

9.2.3.10. A fire escape may be erected on an existing **building** to provide one or more of the **exit** facilities described in Article 3.4.1.2. of the **1986 Building Code**, provided that the fire escape does not serve **floor areas** above the fifth floor.

Fire escape construction

9.2.3.11. (1) Each fire escape shall be constructed to comply with Article 3.4.7.13. of the **1986 Building Code**, except as permitted in Article 9.2.3.18.

(2) Despite Sentence (1), an existing fire escape may be **approved**.

Emergency lighting

9.2.3.12. Emergency lighting shall comply with Article 3.2.7.3. of the **1986 Building Code**.

Exit signs

9.2.3.13. (1) Markings and signs for **exits** and **access to exits** shall comply with Subsection 3.4.5. of the **1986 Building Code**.

(2) Despite Sentence (1), existing markings and signs may be **approved**.

9.2.3.14. In **buildings** over 2 **storeys** in **building height**, any part of an **exit** ramp or stair that continues past the **exit** door at ground level to a **basement** shall be clearly marked by a sign indicating that it does not lead to an **exit**.

Separation of exits

9.2.3.15. (1) Where an **exit** stairway, an escalator or a moving walkway serves as a required **exit**, it shall be separated from the remainder of the **building** in accordance with Sentence 3.4.4.1.(1) of the **1986 Building Code**.

(2) Doors in **fire separations** required in Sentence (1) shall be equipped with self-closing devices.

(3) An existing **fire separation** having a **fire-resistance rating** not less than 45 min with **closures** having a **fire-protection rating** not less than 45 min is deemed to comply with Sentence (1).

(4) Existing wired glass screens set in fixed steel frames are acceptable in **fire separations** required by this Article.

Exits through lobbies

9.2.3.16. (1) **Exits** through a lobby area shall comply with the requirements of Clauses 3.4.4.1.(7)(c) to (f) of the **1986 Building Code**.

(2) Despite Sentence (1), there may be more than one **exit** through a lobby area if there is at least one alternate **exit** not through the lobby or an occupied space that is capable of serving at least 50% of the **occupant load** and that leads directly to the outside.

Ancillary rooms

9.2.3.17. (1) Storage rooms, **refuse storage rooms** and laundry rooms that open directly into an **exit** stairway shall be **sprinklered** and separated from the **exit** stairway by a **fire separation** having a **fire-resistance rating** not less than 45 min.

(2) Other rooms that open directly into an **exit** stairway shall be separated from the **exit** stairway by a **fire separation** having a **fire-resistance rating** not less than 45 min.

(3) Despite Sentences (1) and (2), existing rooms opening directly into an **exit** stairway may be **approved**.

9.2.3.18. (1) Openings adjacent to fire escapes shall comply with Sentence 3.4.7.13.(5) of the **1986 Building Code**.

(2) Existing openings are deemed to comply with Sentence (1) if each opening is **sprinklered** and the sprinkler system complies with Article 9.2.5.2.

(3) Despite Sentences (1) and (2), existing openings may be **approved**.

Subsection 9.2.4. Fire Alarm and Detection

Fire alarm systems

9.2.4.1. (1) Fire alarm and detection systems shall be installed in compliance with Subsection 3.2.4., excluding Article 3.2.4.7., of the **1986 Building Code**.

(2) Despite Sentence (1), existing fire alarm systems may be **approved** where the system reliability and performance will not increase the risk of life safety.

Subsection 9.2.5. Suppression

Access for fire fighting

9.2.5.1. (1) Access routes for fire fighting shall comply with Sentence 3.2.5.2.(1) of the **1986 Building Code**.

(2) Sentence (1) does not apply where the **building** is **sprinklered**.

(3) Access routes that do not comply with Sentence (1) may be **approved** where available **fire department** equipment has access to the **building** or alternative provisions are made under Subsection 2.8.2. for such access.

Sprinkler systems

9.2.5.2. (1) Except as permitted in Sentence (3), sprinkler systems shall comply with Article 3.2.5.5. of the **1986 Building Code**.

(2) An existing sprinkler system is deemed to be in compliance with Sentence (1) where the average sprinkler discharge density over the design area is at least equal to the minimum density corresponding to the area for the hazard classification as defined in Table 9.2.5.A.

(3) Where **buildings** with a ceiling height in excess of 9 m are required to be **sprinklered**, the design of the system shall be **approved** prior to installation.

(4) The water supply requirements for an existing sprinkler system shall be based on

(a) the hazard classification, as determined in Table 9.2.5.A., and

(b) the minimum sprinkler discharge density, area of application and sprinkler spacing, as determined in NFPA 13, “Standard for the Installation of Sprinkler Systems”, that corresponds to the hazard classification determined under Clause (a).

(5) Clause (4)(b) does not apply to the water supply requirements for an existing sprinkler system in an arena or an exhibition hall.

(6) The water supply requirements for an existing sprinkler system in an arena or an exhibition hall shall be based on the lesser area of

(a) 100% of the display area, or

(b) 280 m^2.

TABLE 9.2.5.A.

Forming Part of Article 9.2.5.2.

Hazard Classification*	**Occupancy**
Light Hazard	Art galleries Beverage establishments Gymnasia Halls in religious establishments (excluding areas of worship) Lecture halls Museums
Ordinary Hazard Group 1	Auditoria (excluding stages) Bingo halls

	Clubs Community halls Dance halls Lodge rooms Motion picture theatres Opera houses (excluding stages) Restaurants Television studios Theatres (excluding stages)
Ordinary Hazard Group 3	Enclosed arenas Exhibition halls Stages excluded in Ordinary Hazard Group 1

*Hazard Classification is defined as per NFPA 13, “Standard for the Installation of Sprinkler Systems”.

SECTION 9.3 BOARDING, LODGING AND ROOMING HOUSES

Subsection 9.3.1. Application and General

Application

9.3.1.1. (1) This Section applies to boarding houses, lodging houses, rooming houses and private rest homes in which residents do not require care or treatment because of age, mental or physical limitations, where

(a) the **building height** does not exceed 3 **storeys** and the **building area** does not exceed 600 m^2,

(b) lodging is provided for more than four persons in return for remuneration or the provision of services or both, and

(c) lodging rooms do not have both bathrooms and kitchen facilities for the exclusive use of individual occupants.

(2) This Section applies to homes for special care within the meaning of the **Homes for Special Care Act**, where

(a) the **building height** does not exceed 3 **storeys** and the **building area** does not exceed 600 m^2,

(b) sleeping accommodation is provided for more than three but not more than 10 residents, and

(c) residents do not require nursing care.

(3) REVOKED: O. Reg. 256/14, s. 327.

Exemption for MCSS residences and hotels

9.3.1.2. (1) Subject to Sentence 9.3.1.1.(2), this Section does not apply to **residential occupancies** that are regulated under the **Ministry of Community and Social Services Act**.

(2) This Section does not apply to a **building** or part of a **building** regulated under Section 9.9.

Definitions

9.3.1.3. For the purposes of this Section,

"**1986 Building Code**" means Ontario Regulation 419/86, as it read on February 11, 1987;

"existing" means in existence on February 11, 1987.

Subsection 9.3.2. Containment

9.3.2.1. **Fire separations** required by this Section to have a **fire-resistance rating** shall comply with Subsection 9.10.3. of the **1986 Building Code**.

Floor assemblies

9.3.2.2. (1) Floor assemblies shall

(a) be constructed as **fire separations**, and

(b) have a **fire-resistance rating** not less than 30 min.

(2) Existing floor assemblies with ceilings consisting of lath and plaster, gypsum board or noncombustible materials are deemed to be in compliance with Sentence (1).

Basement fire separations

9.3.2.3. Where a **basement** does not contain a bedroom, recreation room, meeting room or hobby room, a **fire separation** having no **fire-resistance rating** between the **basement** and **first storey** is deemed to be in compliance with Clause 9.3.2.2.(1)(b).

Walls separating bedrooms

9.3.2.4. (1) Each guest room or **suite** of rooms shall have interior walls having a **fire-resistance rating** not less than 30 min.

(2) Existing wall assemblies consisting of membranes of lath and plaster or gypsum wallboard are deemed to be in compliance with Sentence (1).

Furnace room separations

9.3.2.5. (1) In a **building** where the **building height** is greater than 2 **storeys** or the **building area** is greater than 400 m^2, a **furnace** room that is located on a **floor area** that contains a bedroom, recreation room, meeting room or hobby room shall be separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 45 min.

(2) Existing **fire separations** consisting of membranes of lath and plaster or gypsum board are deemed to be in compliance with Sentence (1).

(3) Where the required vertical **fire separation** in a **furnace** room is maintained and it is not practical in the circumstances to construct the ceiling as a **fire separation** having a **fire-resistance rating** not less than 45 min, the **furnace** room area shall be **sprinklered** with a spacing that does not exceed 9.5 m^2 per sprinkler head.

(4) **Closures** in **fire separations** for a **furnace** room shall have a **fire-protection rating** not less than 45 min.

(5) A hollow metal or kalamein door and frame are deemed to be in compliance with Sentence (4).

(6) **Closures** referred to in Sentences (4) and (5) shall be equipped with latches and self-closing devices.

(7) Despite Sentence (1), **fire dampers** or **fire-stop flaps** are not required in ducts at penetrations of a **fire separation**.

Combustion air

9.3.2.6. Where a **furnace** room is separated to comply with the requirements of Article 9.3.2.5., sufficient combustion air shall be brought directly from the exterior for the proper combustion and safe operation of the **appliance**.

Subsection 9.3.3. Means of Egress

Number of exits

9.3.3.1. (1) Each **floor area** shall be served by at least two **exits**.

(2) Where sleeping accommodation is not provided for more than 10 persons, one **exit** from each of the first and second floor **floor areas** is deemed to be in compliance with Sentence (1).

(3) Where sleeping accommodation is not provided in the **basement**, one **exit** from the **basement** is deemed to be in compliance with Sentence (1).

Acceptable exits

9.3.3.2. (1) **Exits** required by Article 9.3.3.1. shall comply with the requirements of Articles 9.9.2.2. and 9.9.2.3. of the **1986 Building Code**.

(2) Despite Sentence 9.3.3.5.(1), not more than one required **exit** from the **basement** may lead through the first floor **floor area**.

(3) Where sleeping accommodation is not provided for more than 10 persons, corridors that are contiguous to a stairway may form part of the stairway enclosure.

(4) Only one stairway enclosure described in Sentence (3) may be used as an **exit**.

(5) Where a fire escape of the type referred to in Article 9.3.3.4. is used as an **exit**, it is deemed to comply with the requirements of Articles 9.9.2.2. and 9.9.2.3. of the **1986 Building Code**.

9.3.3.3. Despite Articles 9.3.3.1. and 9.3.3.2., alternative measures may be **approved** where, in the opinion of the **Chief Fire Official**, they will provide protection for life safety similar to the protection provided by compliance with Articles 9.3.3.1. and 9.3.3.2.

Fire escapes

9.3.3.4. (1) Each fire escape used as an **exit** shall be constructed in compliance with Article 3.4.7.13., excluding Sentences (4) and (5), of the **1986 Building Code**.

(2) Despite Sentence (1), existing fire escapes may be **approved**.

(3) Access to fire escapes shall be from corridors.

Protection of exits

9.3.3.5. (1) Each **exit** other than a doorway opening directly onto a fire escape or to the outdoors at ground level shall be separated from the remainder of the **building** or from another **exit** by a **fire separation** having a **fire-resistance rating** not less than 30 min.

(2) Existing **exit** stairways separated from the remainder of the **building** by walls consisting of lath and plaster or gypsum wallboard are deemed to be in compliance with Sentence (1).

(3) Despite Sentence (1), an existing separation of noncombustible material may be **approved**.

Interior stairways

9.3.3.6. (1) Floor separations shall be maintained at interior stairways that are not required **exits**.

(2) The floor separation shall be maintained at an **exit** permitted in Sentence 9.3.3.2.(2).

9.3.3.7. Floor separations required in Article 9.3.3.6. shall be rated in accordance with Articles 9.3.2.2. and 9.3.3.5.

Protection of openings in fire separations

9.3.3.8. (1) **Closures** in **fire separations** required under Article 9.3.3.5. and in floor separations required under Article 9.3.3.6. shall

(a) be constructed in accordance with Article 9.10.3.1. of the **1986 Building Code**,

(b) have a **fire-protection rating** not less than 20 min, and

(c) if the **closure** is openable, be equipped with self-closing and latching devices.

(2) **Closures** located along contiguous corridors permitted in Sentence 9.3.3.2.(3) shall comply with Sentence (1).

(3) A 45 mm solid core wood, hollow metal or kalamein door, equipped with self-closing and latching devices, is deemed to comply with Sentences (1) and (2).

(4) Despite Sentences (1) and (2), frames for doors described in Sentence (3) may be of wood, hollow metal or kalamein construction.

(5) Despite Sentences (1) and (2), **fire dampers** or **fire-stop flaps** are not required in ducts at penetrations of a **fire separation**.

9.3.3.9. Existing wired glass **closures** set in fixed steel frames in a **fire separation** are deemed to be in compliance with Article 9.3.3.8.

Exit signs

9.3.3.10. (1) **Exit** signs shall be located along a **means of egress** so that directions of **exit** travel are apparent to the occupants.

(2) **Exit** signs required by Sentence (1) shall have the word “EXIT” in block letters and such letters shall be

(a) internally or externally illuminated,

(b) coloured red on an opaque or contrasting field, and

(c) at least 115 mm high with a 19 mm stroke.

Interior finishes

9.3.3.11. The **flame-spread rating** of interior finishes on walls and ceilings within a **means of egress** shall not exceed 200.

Illumination of egress

9.3.3.12. Corridors and stairways shall be lighted to the intensity of 50 lx measured at the floor level, or 5 watts/m^2 of **floor area**.

Emergency lighting

9.3.3.13. Where sleeping accommodation is provided for more than 10 persons, emergency lighting shall be provided to corridors and stairways in accordance with Articles 9.9.11.4. and 9.9.11.5. of the **1986 Building Code**.

Subsection 9.3.4. Fire Alarm and Detection

Fire alarm requirements

9.3.4.1. (1) A **building** to which this Section applies that does not have floor assemblies having a minimum 45 min **fire-resistance rating** and **public corridors** or corridors serving sleeping rooms not within a **dwelling unit** that are not fire-separated from the remainder of the **building** by a minimum 30 min **fire-resistance rating** shall have a fire alarm system that complies with Articles 9.10.17.5. and 9.10.17.11. of the **1986 Building Code**, and shall have

(a) **smoke alarms** that comply with Sentence (2) and that are installed and interconnected so that the activation of any **smoke alarm** will sound a similar signal in each of the interconnected devices, or

(b) fire alarm system **smoke detectors** installed on the ceiling of each floor adjacent to each stairway, and on the ceiling in the **basement** adjacent to each stairway.

(2) **Smoke alarms** referred to in Clause (1)(a) shall

(a) be installed on the ceiling in the corridor of each floor adjacent to each stairway and on the ceiling in the **basement** adjacent to each stairway,

(b) be on a separate circuit with no disconnect switch between the overcurrent device and the **smoke alarms**, and

(c) employ devices and an interconnected installation that are **listed**.

9.3.4.2. (1) A fire alarm system complying with Articles 9.10.17.4., 9.10.17.5., 9.10.17.11. and Subsection 9.10.18. of the **1986 Building Code** shall be installed where

(a) sleeping accommodation is provided for more than 10 persons, and

(b) the floor assemblies have a **fire-resistance rating** not less than 45 min and **public corridors** or corridors serving sleeping rooms not within a **dwelling unit** are separated from the remainder of the **building** by **fire separations** having a **fire-resistance rating** not less than 30 min.

9.3.4.3. Where a fire alarm system is required and sleeping accommodation is not provided for more than 14 persons, an interconnected **smoke alarm** system in accordance with Clause 9.3.4.1.(1)(a) is deemed to be in compliance with Article 9.3.4.2.

9.3.4.4. Despite Articles 9.3.4.1. and 9.3.4.2., existing fire alarm systems may be **approved** where the system reliability and performance will not increase the risk of life safety.

Subsection 9.3.5. Suppression

Portable extinguishers

9.3.5.1. (1) Despite the provisions of Subsection 6.2.6., at least one 2A rated portable extinguisher shall be provided on each floor.

(2) At least one 5B:C rated portable extinguisher shall be installed in each kitchen where shared cooking facilities exist.

SECTION 9.4 HEALTH CARE FACILITIES

Subsection 9.4.1. Application and General

Application

9.4.1.1. (1) This Section applies to

(a) homes for special care regulated under the **Homes for Special Care Act** in which sleeping accommodation is provided for more than 10 residents,

(b) long-term care homes regulated under the **Long-Term Care Homes Act, 2007**,

(c) private hospitals regulated under the **Private Hospitals Act**, or

(d) public hospitals regulated under the **Public Hospitals Act**.

(2) REVOKED: O. Reg. 256/14, s. 337.

Definitions

9.4.1.2. For the purposes of this Section,

"**1986 Building Code**" means Ontario Regulation 419/86, as it read on February 11, 1987;

"existing" means in existence on February 11, 1987.

Subsection 9.4.2. Containment

Construction

9.4.2.1. (1) **Fire separations** required under this Section to have a **fire-resistance rating** shall comply with Subsection 3.1.5. and Articles 3.1.6.1., 3.1.6.2. and 3.1.6.3. of the **1986 Building Code**.

(2) If a **fire-resistance rating** of 1 h or less is required, existing wall assemblies, floor assemblies and ceilings and their supporting assemblies are deemed to comply with Sentence (1) if they consist of lath and plaster or gypsum board.

(3) **Heavy timber construction** that complies with Article 3.1.4.4. of the **1986 Building Code** is deemed to have a 45 min **fire-resistance rating**.

(4) **Buildings** with limited combustible components may be **approved** as **noncombustible construction**.

(5) Floor assemblies shall be constructed as **fire separations** with **fire-resistance ratings** in accordance with this Subsection.

Combustible construction up to 2 storeys

9.4.2.2. (1) **Buildings** of **combustible construction** shall comply with the provisions of Sentence (2) where the **building** is

(a) 1 **storey** in **building height** and not greater than 1000 m^2 in **building area**, or

(b) 2 **storeys** in **building height** and not greater than 500 m^2 in **building area**.

(2) Floor assemblies and walls, columns and arches supporting floor assemblies shall have a **fire-resistance rating** not less than 45 min.

(3) Despite Sentence (2), where the **building** is **sprinklered**, a **fire-resistance rating** is not required for floor assemblies or for walls, columns and arches supporting floor assemblies.

Combustible construction up to 4 storeys

9.4.2.3. (1) **Buildings** of **combustible construction** shall comply with the provisions of Sentences (2) and (3) where the **building** is

(a) not more than 1 **storey** in **building height** and not greater than 2400 m^2 in **building area**,

(b) not more than 2 **storeys** in **building height** and not greater than 1600 m^2 in **building area**, or

(c) not more than 4 **storeys** in **building height** and not greater than 500 m^2 in **building area**.

(2) Floor assemblies and walls, columns and arches supporting floor assemblies shall have a **fire-resistance rating** not less than 45 min.

(3) Despite Sentence 9.4.4.2.(2), **smoke detectors** shall be provided in bedrooms, corridors, lounges and sitting areas.

(4) A **building** that is **sprinklered** is deemed to be in compliance with Sentences (2) and (3).

All other buildings

9.4.2.4. (1) **Buildings** not described in Articles 9.4.2.2. and 9.4.2.3. shall

(a) have a **fire-resistance rating** not less than 45 min for floor assemblies and walls, columns and arches supporting floor assemblies, and

(b) be **sprinklered**, where the **building** is of **combustible construction**.

(2) If only the roof assembly of a **building** is of **combustible construction**, the **building** is deemed to comply with Clause (1)(b) if

(a) the top **storey** and **attic space** are **sprinklered**, or

(b) the ceiling membrane has a **fire-resistance rating** not less than 45 min and the **attic space** is **fire stopped** in accordance with Article 3.1.9.3. of the **1986 Building Code**.

Fire separations between occupancies

9.4.2.5. (1) **Fire separations** having a **fire-resistance rating** not less than 1 h shall be provided between **occupancies** regulated under this Section and other **major occupancies**.

(2) **Fire separations** having a **fire-resistance rating** not less than 30 min are deemed to comply with Sentence (1) if

(a) the **building** is **sprinklered** and the sprinkler system complies with Article 9.4.5.2., or

(b) the part of the **building** containing the other **major occupancy** is equipped with **heat detectors** and connecting corridors are equipped with **smoke detectors** as part of the fire alarm system of the **building**.

(3) Existing wall or floor assemblies consisting of masonry or membranes of lath and plaster or gypsum board are deemed to be in compliance with Sentence (1).

Fire separations between bedrooms and corridors

9.4.2.6. (1) Bedrooms or compartments containing related rooms shall be separated from adjacent rooms by **fire separations** having a **fire-resistance rating** not less than 45 min.

(2) Corridors serving bedrooms shall be separated from adjacent rooms, except sitting areas, lounges, nurses stations and washrooms, by **fire separations** having a **fire-resistance rating** not less than 45 min.

(3) Where the **floor area** is **sprinklered**, an existing **fire separation** is deemed to be in compliance with Sentences (1) and (2).

(4) A **fire separation** having a **fire-resistance rating** not less than 30 min is deemed to comply with Sentences (1) and (2) if

(a) **smoke detectors** are installed in bedrooms, sitting areas, lounges and corridors serving bedrooms on the **floor area**, and

(b) **heat detectors** are installed in other rooms opening onto corridors serving bedrooms.

Safe areas of refuge

9.4.2.7. (1) **Floor areas** containing rooms or areas used by the residents shall be separated into at least two zones by **fire separations** having a **fire-resistance rating** not less than 45 min.

(2) Each zone required in Sentence (1) shall

(a) contain at least one acceptable **exit**, and

(b) be able to accommodate, in addition to its own occupants, the occupants of the adjacent zone, based on the requirements of 0.5 m^2 of clear floor space per person, 1.6 m^2 per person in a wheelchair, and 2.4 m^2 for each bedridden patient as the **occupancy** requires.

(3) A **fire separation** is not required under Sentence (1) where

(a) the travel distance between **exits** does not exceed 9 m and the number of occupants on the **floor area** is not more than 10 persons, or

(b) the **floor area** is served by exterior **exit** doors leading directly to the outside.

Protection of openings in fire separations

9.4.2.8. (1) **Closures** in **fire separations** shall comply with the requirements of Sentences 3.1.6.4.(2), 3.1.6.7.(1) and 3.1.6.8.(1) and Article 3.1.6.9. of the **1986 Building Code**.

(2) Openings in a **fire separation** that is required to have a 30 min **fire-resistance rating** shall be protected with **closures** that have a **fire-protection rating** not less than 20 min.

(3) Where Sentences (1) and (2) require

(a) a 1.5 h **fire-protection rating**, existing hollow metal doors, with or without wired glass panels not exceeding 645 cm^2, equipped with self-closing devices and existing hollow metal frames are deemed to be in compliance,

(b) a 45 min **fire-protection rating**, existing hollow metal or kalamein doors, with or without wired glass, equipped with self-closing devices and existing hollow metal frames are deemed to be in compliance,

(c) a 45 min **fire-protection rating**, existing wired glass screens set in fixed steel frames are deemed to be in compliance, or

(d) a 20 min **fire-protection rating**, existing 45 mm solid core wood doors equipped with self-closing devices and existing solid wood frames are deemed to be in compliance.

(4) Existing doors to bedrooms not conforming to Sentences (1) to (3) may be **approved**.

(5) Despite Sentence (1), and except as permitted in Article 9.4.2.9., door assemblies required to have a 20 min **fire-protection rating** shall be equipped with self-closing devices.

(6) Despite Sentences (1) and (2), **fire dampers** or **fire-stop flaps** are not required in ducts at penetrations of an existing **fire separation**.

Latches on bedroom doors

9.4.2.9. Where a door to a bedroom is not equipped with a self-closing device, a latch that can hold the door in the closed position shall be installed.

Fuel-fired appliance service rooms

9.4.2.10. (1) Fuel-fired **appliances** shall be enclosed in a **service room** separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 45 min.

(2) Sentence (1) does not apply to a fuel-fired **appliance** that serves only one bedroom.

(3) Despite Sentence (1), if the required vertical **fire separation** to a **service room** is provided and it is not practical in the circumstances to install a **fire separation** having a **fire-resistance rating** not less than 45 min above the **service room**, the **service room** area shall be **sprinklered** with a spacing not exceeding 9.5 m^2 per sprinkler head.

Combustion air

9.4.2.11. Where a **furnace** room is separated to comply with the requirements of Article 9.4.2.10., sufficient combustion air shall be brought directly from the exterior for the proper combustion and safe operation of the **appliance**.

Transformer vaults

9.4.2.12. A transformer vault shall be separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 2 h.

Vertical service spaces

9.4.2.13. (1) **Vertical service spaces** shall be separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 45 min.

(2) Where openings in the **vertical service space**, including the top and bottom, are sealed with noncombustible materials having the same **fire-resistance rating** as the existing construction, the **vertical service space** is deemed to be in compliance with Sentence (1).

Refuse and linen chutes

9.4.2.14. (1) Automatic sprinklers shall be installed at the top and at alternate floor levels in each linen or refuse chute and in the room or bin into which the chute discharges.

(2) An existing linen chute installation is deemed to be in compliance with Sentence (1) where the room into which the linen chute discharges is **sprinklered** and at least one sprinkler head is installed at the top of the linen chute.

(3) Each room into which a linen or refuse chute discharges shall be separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 1 h.

Incinerator rooms

9.4.2.15. Incinerators shall be enclosed in a **service room** separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 2 h.

Subsection 9.4.3. Means of Egress

Access to exits

9.4.3.1. (1) Bedrooms or compartments containing related rooms on a **floor area** shall have a doorway leading to an interior corridor where it shall be possible to go in opposite directions to each of two separate **exits**.

(2) **Access to exits** through a dead end corridor is deemed to be in compliance with Sentence (1) where

(a) the number of persons served does not exceed 10 persons, and

(b) the travel distance does not exceed 6 m plus the width of the dead end corridor, to a point where a choice of two directions of **exit** travel is available.

(3) Where a bedroom or a compartment containing related rooms is served by an **exit** door leading directly to the outside or to an exterior passageway, a doorway leading to an interior corridor served by one **exit** is deemed to be in compliance with Sentences (1) and (2).

(4) Where a dead end corridor does not satisfy the travel distance as described in Sentence (2), the existing corridor is deemed to be in compliance where additional fire protection measures are provided that are **approved**.

Number of exits

9.4.3.2. Each **floor area** used by patients or residents shall be served by not fewer than two **exits**.

Stairway separations

9.4.3.3. (1) Each **exit** stairway shall be separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 45 min.

(2) **Closures** in stairway **fire separations** shall conform to Article 9.4.2.8.

Door swing

9.4.3.4. (1) Each **exit** door shall open in the direction of **exit** travel and swing on its vertical axis.

(2) Existing door swing arrangements not in conformance with Sentence (1) may be **approved**.

Exit signs

9.4.3.5. (1) Signs for **exits** and **access to exits** shall comply with the requirements of Article 3.4.5.1. of the **1986 Building Code**.

(2) Despite Sentence (1), existing signs may be **approved**.

Fire escapes

9.4.3.6. (1) A fire escape shall not be erected on an existing **building** unless it is not practical in the circumstances to provide one or more **exit** facilities, described under Article 3.4.1.2. of the **1986 Building Code**, and provided that the fire escape does not serve **floor areas** above the second floor.

(2) A fire escape permitted under Sentence (1) shall be constructed to comply with the requirements of Article 3.4.7.13. of the **1986 Building Code**, except that the fire escape shall not be less than 1100 mm in width when serving **floor areas** with non-ambulatory residents.

(3) Despite Sentences (1) and (2), an existing fire escape may be **approved**.

Emergency lighting

9.4.3.7. Emergency lighting shall be provided in accordance with the provisions of Article 3.2.7.3. of the **1986 Building Code**.

Subsection 9.4.4. Fire Alarm and Detection

Fire alarm requirements

9.4.4.1. A fire alarm and detection system shall be installed in each **building**.

9.4.4.2. (1) Fire alarm and detection systems shall comply with the requirements of Subsection 3.2.4. of the **1986 Building Code**.

(2) Despite Sentence (1), in **buildings** constructed prior to December 1, 1983, **heat detectors** may be installed in bedrooms, corridors and stair shafts to satisfy the **1986 Building Code**, except where other detection is required by Sentences 9.4.2.3.(3), 9.4.2.5.(2) or 9.4.2.6.(4).

(3) Despite Sentences (1) and (2), where the **Chief Fire Official** is satisfied that the performance and reliability of an existing fire alarm system will provide an adequate early warning level, the existing system may remain, be modified or be extended, provided compatibility of components is maintained.

Signals to fire department

9.4.4.3. (1) Each fire alarm system shall be connected to the **fire department** headquarters by

(a) a direct connection, provided the **fire department** has the necessary facilities to accept such a connection, or

(b) a central station or proprietary control station.

(2) Where the provisions required in Sentence (1) are not available, a procedure for notifying the **fire department** shall be **approved**.

Shutdown of air handling systems

9.4.4.4. (1) Recirculating air handling systems that serve more than 1 **storey** or more than one zone as described in Sentence 9.4.2.7.(1) shall be arranged to shut down upon actuation of the fire alarm system.

(2) In **buildings** greater than 6 **storeys** in **building height**, air handling systems serving more than 1 **storey** or more than one zone as described in Article 9.4.2.7. shall be arranged to shut down upon actuation of the fire alarm system, except where continued operation of the air handling system serves as part of a smoke control system.

Subsection 9.4.5. Suppression

Access for fire fighting

9.4.5.1. (1) Access routes for fire fighting shall be provided in accordance with the requirements of Article 3.2.5.2. of the **1986 Building Code**.

(2) Sentence (1) does not apply where the **building** is **sprinklered**.

(3) Access routes that do not comply with Sentence (1) may be **approved** where available **fire department** equipment has access to the **building** or alternative provisions are made under Subsection 2.8.2. for such access.

Sprinkler systems

9.4.5.2. (1) Sprinkler systems shall be designed in conformance with Article 3.2.5.5. of the **1986 Building Code**.

(2) Despite Sentence (1), water supply requirements for sprinkler systems required in this Section may be based on

(a) the operation of at least three sprinkler heads spaced not to exceed 14.4 m^2 per head, and

(b) a sprinkler discharge rate of not less than 100 L/min at any single operating sprinkler head for a duration of 30 min.

(3) Despite Sentences (1) and (2), existing sprinkler systems providing adequate protection may be **approved**.

Firefighters' elevators

9.4.5.3. (1) In **buildings** greater than 6 **storeys** in **building height**, at least one elevator shall be provided for use by firefighters.

(2) An elevator is deemed to be in compliance with Sentence (1) where

(a) the elevator is capable of providing transportation from the **street** floor to each floor normally served by the elevator system,

(b) the elevator is identified on the **street** floor as an elevator for use by firefighters,

(c) the elevator satisfies the requirements of Article 3.2.6.3. of the **1986 Building Code**, and

(d) other elevator cabs in the same shaft as the elevator for use by firefighters satisfy the requirements of Sentences 3.2.6.3.(1) and (2) of the **1986 Building Code**.

Voice communication systems

9.4.5.4. (1) In **buildings** greater than 6 **storeys** in **building height**, a voice communication system shall be provided in accordance with the requirements of Article 3.2.4.16. of the **1986 Building Code**.

(2) A public address system compatible with the fire safety plan required under Subsection 2.8.2. is deemed to be in compliance with Sentence (1).

Sprinkler systems

9.4.5.5. (1) **Buildings** containing a home described in Clause 9.4.1.1.(1)(a) or (b) that is a **care occupancy** or a **care and treatment occupancy** shall be **sprinklered** in conformance with Sentences (2) to (5).

(2) Except as permitted in Sentence (3), an automatic sprinkler system shall be installed in accordance with NFPA 13, "Standard for the Installation of Sprinkler Systems".

(3) In **buildings** not greater than 6 **storeys** in **building height**, sprinkler systems may be installed in accordance with NFPA 13R, "Standard for the Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height".

(4) Sprinkler systems shall be equipped with local electric waterflow alarms.

(5) If a fire pump is required by NFPA 13 or NFPA 13R, it shall be installed in accordance with NFPA 20, "Installation of Stationary Pumps for Fire Protection", if it has a rated net head pressure greater than 280 kPa.

(6) **Buildings** described in Sentence (1) that are **sprinklered** in conformance with Article 9.4.5.2. on January 1, 2014 are deemed to be in compliance with Sentence (1).

SECTION 9.5 BUILDINGS UP TO AND INCLUDING 6 STOREYS IN BUILDING HEIGHT WITH RESIDENTIAL OCCUPANCIES

Subsection 9.5.1. Application and General

Application

9.5.1.1. (1) This Section applies to **buildings** up to and including 6 **storeys** in **building height** with **residential occupancies** and containing

(a) more than two **dwelling units** where

(i) at least two **dwelling units** share common **exit** facilities and have interior access to one another,

(ii) there is at least one **dwelling unit** located above another with interior access to one another, or

(iii) there is at least one **dwelling unit** located above another and the **dwelling units** share common **exit** facilities,

(b) sleeping accommodation for more than 10 persons, in one or more dormitories,

(c) boarding, lodging or rooming accommodation for more than four persons where Sections 9.3 and 9.4. do not apply, or

(d) one or two **dwelling units** in combination with boarding, lodging or rooming accommodation for two, three or four persons, excluding the operator's residence.

(2) Despite Sentence (1), if a **building** that is governed by this Section contains, in addition to its **residential occupancies**, one or more other **occupancies** that are not governed by any other Section of this Part, this Section does not apply to the fire safety systems, devices and structural elements of the other **occupancies** that do not affect the life safety of the **residential occupancy**.

(3) If a **building** that is governed by this Section contains, in addition to its **residential occupancies**, one or more other **occupancies** that are governed by other Sections of this Part, the fire safety systems, devices and structural elements of the other **occupancies** governed by those Sections shall comply with the requirements of this Part that provide the greatest protection for life safety.

(4) REVOKED: O. Reg. 256/14, s. 354 (2).

Exemption for convents, monasteries and hotels

9.5.1.2. (1) This Section does not apply to convents and monasteries**.**

(2) This Section does not apply to a **building** or part of a **building** regulated under Section 9.9.

Definitions

9.5.1.3. For the purposes of this Section,

"**1990 Building Code**" means Ontario Regulation 413/90, as it read on October 9, 1992;

"existing" means in existence on October 9, 1992.

Subsection 9.5.2. Containment

Construction

9.5.2.1. (1) **Fire separations** required under this Section to have a **fire-resistance rating** shall comply with Subsection 3.1.7. and Articles 3.1.8.1., 3.1.8.2., 3.1.8.3. and 3.5.4.2. of the **1990 Building Code**.

(2) If a **fire-resistance rating** of 1 h or less is required, existing wall assemblies, floor assemblies, ceilings and their supporting assemblies, consisting of membranes of lath and plaster or gypsum board, are deemed to comply with Sentence (1).

(3) **Heavy timber construction** that complies with Article 3.1.4.6. of the **1990 Building Code** is deemed to have a 45 min **fire-resistance rating**.

(4) **Buildings** with limited combustible components may be **approved** as **noncombustible construction**.

(5) Floor assemblies shall be constructed as **fire separations** with **fire-resistance ratings** that comply with Articles 9.5.2.2. to 9.5.2.5.

(6) Sentence (5) does not apply to floor assemblies between different levels of the same multi-level **dwelling unit**.

Buildings up to 3 storeys

9.5.2.2. (1) **Buildings** shall comply with the requirements of Sentence (2) where the **building** is

(a) not more than 1 **storey** in **building height** and not greater than 1200 m^2 in **building area**,

(b) not more than 2 **storeys** in **building height** and not greater than 900 m^2 in **building area**, or

(c) not more than 3 **storeys** in **building height** and not greater than 600 m^2 in **building area**.

(2) Floor assemblies and walls, columns and arches supporting floor assemblies shall have a **fire-resistance rating** not less than 30 min.

(3) Where sleeping accommodation, recreation rooms, meeting rooms or hobby rooms are not provided in the **basement**, an existing **fire separation** between the **first storey** and **basement** is deemed to be in compliance with Sentence (2) where

(a) the **basement** is **sprinklered**, or

(b) the **building** contains not more than four **dwelling units** and provides sleeping accommodation for not more than 10 persons, and

(i) interconnected **smoke alarms** are installed in accordance with Article 9.5.4.4.,

(ii) doors connecting the **basement** and **first storey** are in compliance with Sentence 9.5.2.8.(4), and

(iii) **fire stopping** of the wall space at the **basement** level is in accordance with Article 9.10.15.3. of the **1990 Building Code**.

(4) The water supply for the sprinklers referred to in Clause (3)(a) may be taken from the domestic supply where the supply provides sufficient density for the largest **fire compartment** and where the supply is **approved**.

Deemed compliance

9.5.2.3. (1) **Buildings** are deemed to be in compliance with Sentence 9.5.2.2.(2) where

(a) the **building** is **sprinklered**, or

(b) the **building** is 1 **storey** in **building height** and is not greater than 600 m^2 in **building area**.

Buildings up to 4 storeys

9.5.2.4. (1) **Buildings** to which Sentence 9.5.2.2.(1) does not apply and which are not more than 4 **storeys** in **building height** shall comply with Sentences (2) and (3).

(2) Floor assemblies and walls, columns and arches supporting floor assemblies shall have a **fire-resistance rating** not less than 45 min.

(3) **Smoke detectors** shall be provided as **fire detectors** in **public corridors** serving **dwelling units** in **buildings** of **combustible construction**.

(4) A **building** that is **sprinklered** is deemed to be in compliance with Sentences (2) and (3).

Buildings over 4 storeys

9.5.2.5. (1) **Buildings** that are more than 4 **storeys** in **building height** shall

(a) have a **fire-resistance rating** not less than 45 min for floor assemblies and walls, columns and arches supporting floor assemblies, and

(b) be **sprinklered**, where the **building** is of **combustible construction**.

(2) Where only the roof assembly is of **combustible construction**, the **building** is deemed to be in compliance with Clause (1)(b) where

(a) the ceiling membrane has a **fire-resistance rating** not less than 45 min and the **attic space** is **fire stopped** in accordance with Article 3.1.11.5. of the **1990 Building Code**,

(b) the roof assembly is of **heavy timber construction** in accordance with Article 3.1.4.6. of the **1990 Building Code**, or

(c) the top **storey** and **attic space** are **sprinklered**.

(3) Where **smoke detectors** are provided in **public corridors**, a **building** of **heavy timber construction** conforming to Article 3.1.4.6. of the **1990 Building Code** is deemed to be in compliance with Sentence (1).

Fire separation between occupancies

9.5.2.6. (1) **Fire separations** having a **fire-resistance rating** not less than 1 h shall be provided between **residential occupancies** and other **major occupancies**.

(2) Existing **fire separations** having a **fire-resistance rating** not less than 30 min are deemed to comply with Sentence (1) if

(a) the **building** is **sprinklered** and the sprinkler system complies with Article 9.5.5.3., or

(b) the part of the **building** containing the other **major occupancy** is equipped with **heat detectors** and connecting corridors are equipped with **smoke detectors** as part of the fire alarm system of the **building**.

(3) Existing **fire separations** consisting of membranes of lath and plaster or gypsum board are deemed to be in compliance with Sentence (1).

Fire separations between dwelling units and corridors

9.5.2.7. (1) Each **dwelling unit** and sleeping room not within a **dwelling unit** shall be separated from adjacent rooms and areas by **fire separations** having a **fire-resistance rating** not less than 30 min.

(2) **Public corridors** shall be separated from adjacent rooms and areas by **fire separations** having a **fire-resistance rating** not less than 30 min.

(3) If the **floor area** is **sprinklered**, existing **fire separations** are deemed to comply with Sentences (1) and (2).

Protection of openings in fire separations

9.5.2.8. (1) **Closures** in **fire separations** shall be in accordance with Sentences 3.1.8.4.(2), 3.1.8.10.(1) and 3.1.8.11.(1) and Article 3.1.8.13. of the **1990 Building Code**.

(2) Openings in a **fire separation** that is required to have a 30 min **fire-resistance rating** shall be protected with **closures** having a 20 min **fire-protection rating**.

(3) If a 45 min **fire-protection rating** is required, existing **closures** are deemed to comply with Sentence (1) if they consist of

(a) hollow metal or kalamein doors in hollow metal frames, with openings, if any, protected by wired glass, and equipped with self-closing devices, or

(b) wired glass screens set in fixed steel frames.

(4) Where a 20 min **fire-protection rating** is required, existing **closures** consisting of 45 mm solid core wood doors installed in solid wood or hollow metal frames and equipped with self-closing devices are deemed to be in compliance with Sentences (1) and (2).

(5) Existing **closures** in **fire separations** to which Article 9.5.2.7. applies are deemed to be in compliance with Sentences (1) and (2) where

(a) the **floor area** is **sprinklered**, or

(b) interconnected **smoke alarms** are installed in accordance with Article 9.5.4.4., the **building** has not more than four **dwelling units** and the **building** provides sleeping accommodation for not more than 10 persons.

(6) Despite Sentence (1), **closures** in **fire separations** to which Article 9.5.2.7. applies do not require self-closing devices, except as required in Sentences 9.5.3.1.(2) and 9.5.3.3.(3).

(7) Existing operable transoms and glass lights shall be fixed shut and shall meet the **fire-protection rating** requirements of Sentences (1) and (2).

(8) Despite Sentences (1) and (2), **fire dampers** or **fire-stop flaps** are not required in existing noncombustible ducts at penetrations of **fire separations**.

Storage rooms

9.5.2.9. (1) Storage rooms for the use of occupants, not contained within a **dwelling unit** or **suite**,

(a) shall be separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 45 min, and

(b) shall be

(i) **sprinklered**, or

(ii) subdivided into areas not exceeding 150 m^2 by **fire separations** having a **fire-resistance rating** not less than 45 min and equipped with **fire detectors** connected to the fire alarm system.

(2) Existing storage rooms are deemed to be in compliance with Clause (1)(b) where the **building** contains not more than four **dwelling units** and provides sleeping accommodation for not more than 10 persons.

(3) Existing storage rooms are deemed to be in compliance with Sentence (1) where

(a) the **building** contains not more than four **dwelling units** and provides sleeping accommodation for not more than 10 persons, and

(b) sleeping rooms are not located on the same floor as storage rooms.

Fuel-fired appliance service rooms

9.5.2.10. (1) Fuel-fired **appliances** shall be enclosed in a **service room** separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 45 min if the **building height** is greater than 2 **storeys** or the **building area** is greater than 400 m^2.

(2) Sentence (1) does not apply to a fuel-fired **appliance** that serves only one **dwelling unit** or **suite**.

(3) Despite Sentence (1), the **fire-resistance rating** of the **fire separation** above the **service room** is not required where

(a) the required vertical **fire separation** to a **service room** is provided, and

(b) the **service room** area is **sprinklered**, with a spacing not exceeding 9.5 m^2 per sprinkler head, or providing a minimum average density of 6.5 L/min/m^2 over the room area.

Combustion air

9.5.2.11. Where a **service room** is separated in accordance with Article 9.5.2.10., sufficient combustion air shall be brought directly from the outside for the proper combustion and safe operation of the **appliances**.

Incinerator and refuse storage rooms

9.5.2.12. (1) Incinerator rooms and **refuse storage rooms** shall be separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 45 min.

(2) **Refuse storage rooms** shall be **sprinklered** with a spacing that does not exceed 9.5 m^2 per sprinkler head or that provides a minimum average density of 6.5 L/min/m^2 over the room area.

Vertical service spaces

9.5.2.13. (1) **Vertical service spaces** shall be separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** equivalent to that required for the floor assemblies within the **building** in accordance with Articles 9.5.2.2. to 9.5.2.5.

(2) Where openings in the **vertical service space**, including the top and bottom, are sealed with noncombustible materials having the same **fire-resistance rating** as the existing construction, the **vertical service space** is deemed to be in compliance with Sentence (1).

Refuse and linen chutes

9.5.2.14. (1) Each room into which a linen or refuse chute discharges shall be separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 1 h.

(2) Automatic sprinklers shall be installed in each linen or refuse chute

(a) at the top,

(b) at alternate floor levels, and

(c) in the room or bin into which the chute discharges.

(3) Where the room into which the linen or refuse chute discharges is **sprinklered** and at least one sprinkler head is installed at the top of the chute, an existing chute installation is deemed to be in compliance with Sentence (2).

(4) Despite Sentence 9.5.2.1.(1), a **closure** is not required at the opening between a linen or refuse chute and the room into which it discharges.

Storage garages

9.5.2.15. A **storage garage** shall be separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 45 min.

Subsection 9.5.3. Means of Egress

Access to exits

9.5.3.1. (1) Each **dwelling unit** or **suite** in a **floor area** shall have a doorway leading to

(a) the outside at or near **grade**,

(b) an outside passageway where it is possible to go in opposite directions to separate **exits**, or

(c) a **public corridor** where it is possible to go in opposite directions to separate **exits**.

(2) **Access to exits** through a dead end **public corridor** is deemed to be in compliance with Clause (1)(c) where

(a) the distance along the dead end does not exceed 6 m plus the width of the corridor, measured from any door along the corridor to a point where a choice of two directions of **exit** travel is available, and

(b) self-closing devices are provided on **suite** entrance doors opening onto the dead end portion of the corridor.

(3) **Access to exits** through a dead end corridor in boarding, lodging or rooming accommodation is deemed to be in compliance with Clause (1)(c) where

(a) the **building** is not more than 3 **storeys** in **building height**,

(b) sleeping accommodation is provided for not more than 10 persons,

(c) not more than two persons require assistance to evacuate the **building** in a fire emergency,

(d) **smoke alarms** are installed in the **means of egress** in accordance with Sentence 9.5.4.1.(2), and

(e) the building complies with the requirements of Section 2.8.

(4) Existing dead end **public corridors** are deemed to be in compliance with Clause (2)(a) where additional fire protection measures are **approved** that, in the opinion of the **Chief Fire Official**, will provide protection for life safety similar to the protection provided by compliance with Clause (2)(a).

(5) Despite Sentence (1), if a **dwelling unit** or **suite** has access to a second and separate **exit** or the **building** complies with Sentence 9.5.3.2.(2) or (3), a doorway from the **dwelling unit** or **suite** may open onto

(a) an **exit** stairway,

(b) a fire escape,

(c) a **public corridor** served by a single **exit**, or

(d) an outside passageway served by a single **exit** stairway.

Number of exits

9.5.3.2. (1) Each **floor area** shall be served by a minimum of two **exits**.

(2) A single **exit** from a **basement**, first or second floor is deemed to be in compliance with Sentence (1) where the **exit** does not serve more than four **dwelling units**, the **exit** does not serve more than 10 persons and the **building** is not more than 3 **storeys** in **building height** and is not greater than 600 m^2 in **building area**.

(3) Where a **building** is not more than 3 **storeys** in **building height** and not greater than 600 m^2 in **building area**, alternative measures to Sentence (1) may be used if they are **approved**, and in the opinion of the **Chief Fire Official**, will provide protection for life safety similar to the protection provided by compliance with Sentence (1).

Stairway separations

9.5.3.3. (1) Each **exit** stairway shall be separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 45 min.

(2) If the **building** is 3 **storeys** or less in **building height**, a **fire separation** having a **fire-resistance rating** not less than 30 min is deemed to comply with Sentence (1).

(3) **Closures** in stairway **fire separations** referred to in Sentences (1) and (2) shall be equipped with self-closing devices.

Door swing

9.5.3.4. Where the **occupant load** in a **building** exceeds 24 persons or there are more than 10 **dwelling units**, each **exit** door, except those serving a single **dwelling unit**, shall open in the direction of **exit** travel and swing on its vertical axis.

Exit signs

9.5.3.5. (1) Each **exit** door, except for the main entrance to a **building**, **dwelling unit** or **suite**, shall have an **exit** sign when the **exit** serves

(a) a **building** exceeding 2 **storeys** in **building height**,

(b) a **building** having an **occupant load** greater than 150 persons, or

(c) a **floor area** other than a single **dwelling unit** with a fire escape as part of a **means of egress**.

(2) Where **exit** signs are not visible throughout the corridors and passageways, additional **exit** signs shall be installed in **approved** locations to indicate the direction of egress.

(3) **Exit** signs required in Sentences (1) and (2) shall have

(a) the word "EXIT" or the words "EXIT/SORTIE" in red letters on a contrasting background or white letters on a red background,

(b) letters with strokes at least 19 mm wide,

(c) letters at least 150 mm high when the signs are externally illuminated, and

(d) letters at least 114 mm high when the signs are internally illuminated.

Interior finishes

9.5.3.6. (1) **Flame-spread ratings** of interior wall and ceiling finishes within a **means of egress** shall not exceed 150.

(2) Despite Sentence (1), existing interior wall and ceiling finishes within an **access to exit** may be **approved** if, in the opinion of the **Chief Fire Official**, they will provide protection for life safety similar to the protection provided by compliance with Sentence (1).

Fire escapes

9.5.3.7. (1) Each fire escape used as an **exit** shall comply with Articles 3.4.7.2., 3.4.7.3., 3.4.7.5. and 3.4.7.6. of the **1990 Building Code**.

(2) If a fire escape serves any **storey** above the second floor, doorway openings and window openings shall be protected in accordance with Sentences (3) and (4) if located

(a) within 3 m horizontally of any balcony, platform or stairway of the fire escape,

(b) within 3 **storeys** below or 10 m below any balcony, platform or stairway of the fire escape, or

(c) within 1.8 m above any balcony, platform or stairway of the fire escape.

(3) Doorway openings referred to in Sentence (2) shall be protected with **closures** having a **fire-protection rating** not less than 20 min and equipped with self-closing devices.

(4) Window openings referred to in Sentence (2) shall be protected with

(a) **closures** having a **fire-protection rating** not less than 20 min and that are fixed shut or arranged to close automatically upon the operation of a fusible link,

(b) wired glass screens set in fixed steel frames,

(c) glass block, or

(d) **listed** steel shutters arranged to close automatically upon the operation of a fusible link.

(5) The fusible link referred to in Clauses (4)(a) and (d) shall comply with ULC-S505, "Standard for Fusible Links for Fire Protection Service".

(6) The wired glass screens and glass block referred to in Clauses (4)(b) and (c) shall be installed in accordance with Article 3.1.8.14. of the **1990 Building Code**.

Lighting

9.5.3.8. **Public corridors** and stairways that form part of a **means of egress** shall be adequately illuminated to allow for the safe evacuation of occupants.

Emergency lighting

9.5.3.9. (1) Emergency lighting shall be provided in **exit** stairways, **public corridors** and other principal **access to exits** where the **occupant load** in a **building** exceeds 24 persons or there are more than 10 **dwelling units**.

(2) Emergency lighting required in Sentence (1) shall be

(a) designed to provide illumination for a duration of at least 30 min,

(b) supplied by a source of energy separate from the primary electrical supply for the **building**, and

(c) designed to be automatically actuated when the power to the **building** is interrupted.

(3) Illumination from emergency lighting shall be an average of at least 10 lx at floor or tread level, or 1 watt/m^2 of floor space.

Subsection 9.5.4. Fire Alarm and Detection

Fire alarm requirements

9.5.4.1. (1) A fire alarm system shall be installed in accordance with Articles 3.2.4.2. to 3.2.4.6., 3.2.4.8., 3.2.4.9. and 3.2.4.17. and Sentences 3.2.7.8.(1) to (4) of the **1990 Building Code**, where

(a) the **building** is greater than 3 **storeys** in **building height**, or

(b) sleeping accommodation is provided for more than 10 persons.

(2) A **building** not greater than 3 **storeys** in **building height** that contains not more than 10 **dwelling units** and provides sleeping accommodation for not more than 24 persons is deemed to be in compliance with Sentence (1) where the **building** is equipped with

(a) **smoke alarms** in accordance with Article 9.5.4.4., installed and interconnected so that the actuation of any **smoke alarm** will sound a similar signal in each of the interconnected devices, and

(b) a manual pull station at each exterior **exit** door for the actuation of the **smoke alarms** in Clause (a).

(3) A **building** is deemed to be in compliance with Sentence (1) where

(a) each **exit** and **public corridor** is shared by not more than four **dwelling units** or not more than 10 persons in boarding, lodging, rooming or dormitory accommodation, or

(b) each **dwelling unit** and **suite** has direct access to outdoors by a door near ground level.

Non-electric fire alarm systems

9.5.4.2. (1) Existing manually operated, non-electric alarm systems employing mechanical gongs are deemed to be in compliance with Sentence 9.5.4.1.(1), where

(a) the **building** is not more than 2 **storeys** in **building height**,

(b) not more than two manual fire alarm stations are required in the **building**, and

(c) each gong is audible in every location in the **building**.

Automatic detection

9.5.4.3. (1) Automatic detection devices referred to in Sentences (2) and (3) shall be installed and connected to the fire alarm system required in Sentence 9.5.4.1.(1).

(2) **Fire detectors** shall be installed in storage rooms, locker rooms, **service rooms**, machinery rooms, heating rooms, incinerator rooms, linen and refuse chute intake compartments, janitors' closets

and **refuse storage rooms**, at the tops of elevator shafts and **exit** stair shafts and in any room or area where hazardous or combustible materials may be used or stored.

(3) Rooms or areas that are **sprinklered** in accordance with Article 3.2.4.16. of the **1990 Building Code** are deemed to be in compliance with Sentence (2).

Interconnected smoke alarms

9.5.4.4. (1) Interconnected **smoke alarms** required in Sentence 9.5.4.1.(2), Subclause 9.5.2.2.(3)(b)(i) or Clause 9.5.2.8.(5)(b) shall be

(a) installed on or near the ceiling in **public corridors** of each **floor area**, adjacent to each stairway serving the **public corridor** and on or near the ceiling in the **basement**, adjacent to each stairway,

(b) audible throughout the **suites**,

(c) connected to an electrical circuit with no disconnect switch between the overcurrent device and the **smoke alarms**, and

(d) **listed** for use in an interconnected installation.

Smoke alarms

9.5.4.5. (1) **Smoke alarms** shall be installed in each **dwelling unit** and in each sleeping room not within a **dwelling unit** in accordance with Article 3.2.4.21. of the **1990 Building Code**.

(2) Battery-operated **smoke alarms** are deemed to be in compliance with Sentence 3.2.4.21.(4) of the **1990 Building Code**.

(3) **Smoke alarms** shall meet the requirements of

(a) CAN/ULC-S531, “Standard for Smoke Alarms”, and

(b) CAN/ULC-S553, “Standard for the Installation of Smoke-Alarms”.

(4) REVOKED: O. Reg. 256/14, s. 372 (2).

Existing fire alarm systems

9.5.4.6. Despite Articles 9.5.4.1. to 9.5.4.4., where the performance and reliability of an existing fire alarm system will provide an adequate early warning level, the existing system may remain, be modified or be extended, if compatibility of the components is maintained and the system is **approved**.

Subsection 9.5.5. Suppression

Access for fire fighting

9.5.5.1. (1) Access routes for fire fighting shall be provided in accordance with the requirements of Articles 3.2.5.5. to 3.2.5.7. of the **1990 Building Code**.

(2) Sentence (1) does not apply where the **building** is **sprinklered**.

Standpipe systems

9.5.5.2. (1) A standpipe and hose system in accordance with Articles 3.2.9.1. to 3.2.9.7. of the **1990 Building Code** shall be installed in **buildings** more than 4 **storeys** in **building height** where the fifth or sixth **storey** is used for a **residential occupancy**.

(2) A wet or dry standpipe system is deemed to be in compliance with Sentence (1) where it includes

(a) a 50 mm riser and 50 mm extensions,

(b) capped 38 mm hose valves located so that any point on the **floor area** may be reached by 30 m of hose plus 3 m of hose stream from at least one hose valve,

(c) a **fire department** connection in accordance with Sentences 3.2.9.5.(2) to (9) of the **1990 Building Code**, and

(d) a water supply in accordance with Sentences 3.2.9.3.(1) to (3) of the **1990 Building Code**.

(3) Despite Sentences (1) and (2), existing standpipe systems and water supplies may be used if the systems or measures will provide sufficient fire suppression capability in the circumstances and if the systems or measures are **approved**.

Sprinkler systems

9.5.5.3. (1) Where a **building** or portion thereof is required to be **sprinklered**, the sprinkler system shall be designed and constructed in accordance with Articles 3.2.5.13. to 3.2.5.16. of the **1990 Building Code**.

(2) Existing sprinkler systems are deemed to be in compliance with Sentence (1) if the average sprinkler discharge density over the design area is at least equal to the minimum density corresponding to the area for light hazard classification as defined in NFPA 13, "Standard for the Installation of Sprinkler Systems", or NFPA 13R, "Standard for the Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height", whichever is applicable.

(3) Despite Sentences (1) and (2), existing sprinkler systems providing adequate protection that will control or extinguish fire and that are **approved** may be used.

SECTION 9.6 BUILDINGS HIGHER THAN 6 STOREYS IN BUILDING HEIGHT WITH RESIDENTIAL OCCUPANCIES

Subsection 9.6.1. Application and General

Application

9.6.1.1. (1) This Section applies to **buildings** higher than 6 **storeys** in **building height** with **residential occupancies** and containing

(a) more than two **dwelling units**,

(b) sleeping accommodation for more than 10 persons in one or more dormitories, or

(c) boarding, lodging or rooming accommodation for more than 10 persons.

(2) Despite Sentence (1), if a **building** containing a **residential occupancy** that is governed by this Section contains, in addition to its **residential occupancies**, one or more other **occupancies** that are not governed by this Part, this Section does not apply to the fire safety systems, devices or structural elements of any of the other **occupancies** that do not affect the life safety of the **residential occupancy**.

(3) If a **building** that is governed by this Section contains, in addition to its **residential occupancies**, one or more other **occupancies** that are governed by other Sections of this Part, the fire safety systems, devices and structural elements of all of the **occupancies** governed by this Part shall comply with the requirements of this Part that provide the greatest protection for life safety.

(4) REVOKED: O. Reg. 256/14, s. 375.

Exemption for convents, monasteries and hotels

9.6.1.2. (1) This Section does not apply to convents and monasteries.

(2) This Section does not apply to a **building** or part of a **building** regulated under Section 9.9.

Definitions

9.6.1.3. For the purposes of this Section,

"**1990 Building Code**" means Ontario Regulation 413/90, as it read on October 9, 1992;

"existing" means in existence on October 9, 1992.

Subsection 9.6.2. Containment

Construction

9.6.2.1. (1) **Fire separations** required under this Section to have a **fire-resistance rating** shall comply with Subsection 3.1.7. and Articles 3.1.8.1., 3.1.8.3., and 3.5.4.2. of the **1990 Building Code**.

(2) If a **fire-resistance rating** of 1 h or less is required, existing wall assemblies, floor assemblies and their supporting assemblies are deemed to comply with Sentence (1) if they consist of

(a) reinforced concrete,

(b) masonry,

(c) clay tile with plaster or gypsum board finish on both sides, or

(d) membranes of lath and plaster or gypsum board.

Floor assemblies

9.6.2.2. (1) Floor assemblies shall be **fire separations** having a **fire-resistance rating** not less than 1 h.

(2) Walls, columns and arches supporting floor assemblies shall have a **fire-resistance rating** not less than 1 h.

(3) Sentences (1) and (2) do not apply to floor assemblies between different levels of the same multi-level **dwelling unit**.

Combustible construction

9.6.2.3. (1) **Buildings** of **combustible construction** shall be **sprinklered**.

(2) Where only the roof assembly is of **combustible construction**, the **building** is deemed to be in compliance with Sentence (1) where

(a) the ceiling membrane has a **fire-resistance rating** not less than 45 min and the **attic space** is **fire stopped** in accordance with Article 3.1.11.5. of the **1990 Building Code**,

(b) the roof assembly is of **heavy timber construction** in accordance with Article 3.1.4.6. of the **1990 Building Code**, or

(c) the top **storey** and **attic space** are **sprinklered**.

Fire separations between occupancies

9.6.2.4. (1) **Fire separations** having a **fire-resistance rating** not less than 1 h shall be provided between **residential occupancies** and other **major occupancies**.

(2) Existing **fire separations** having a **fire-resistance rating** not less than 30 min are deemed to comply with Sentence (1) if the other **major occupancy** is **sprinklered**.

Fire separations between dwelling units and corridors

9.6.2.5. (1) Each **dwelling unit** and sleeping room not within a **dwelling unit** shall be separated from adjacent rooms and areas by a **fire separation** having a **fire-resistance rating** not less than 45 min.

(2) **Public corridors** shall be separated from adjacent rooms and areas by a **fire separation** having a **fire-resistance rating** not less than 45 min.

(3) Existing **fire separations** having less than a 45 min **fire-resistance rating** are deemed to be in compliance with Sentences (1) and (2) where the **floor area** is **sprinklered**.

(4) Existing **fire separations** having a **fire-resistance rating** not less than 30 min are deemed to comply with Sentences (1) and (2) if **smoke detectors** are installed in **public corridors**.

Protection of openings in fire separations

9.6.2.6. (1) **Closures** in **fire separations** shall be in accordance with Sentences 3.1.8.4.(2), 3.1.8.10.(1) and 3.1.8.11.(1) and Articles 3.1.8.13. and 3.3.4.5. of the **1990 Building Code**.

(2) Openings in **fire separations** required to have a 30 min **fire-resistance rating** shall be protected with **closures** having a 20 min **fire-protection rating**.

(3) Where a 1.5 h **fire-protection rating** is required, existing **closures** consisting of hollow metal or kalamein doors in hollow metal frames, with openings, if any, protected by wired glass panels not exceeding 645 cm^2, and equipped with self-closing and latching devices are deemed to be in compliance with Sentence (1).

(4) Where a 1 h or 45 min **fire-protection rating** is required, existing **closures** are deemed to be in compliance with Sentence (1) where they consist of

(a) hollow metal or kalamein doors in hollow metal frames, with openings, if any, protected by wired glass, and equipped with self-closing and latching devices, or

(b) wired glass screens set in fixed steel frames.

(5) Where a 20 min **fire-protection rating** is required, or in a **fire separation** required under Article 9.6.2.5., existing **closures** consisting of 45 mm solid core wood doors installed in solid wood or hollow metal frames and equipped with self-closing and latching devices are deemed to be in compliance with Sentences (1) and (2).

(6) Where the **floor area** is **sprinklered**, existing **closures** in **fire separations** to which Article 9.6.2.5. applies are deemed to be in compliance with Sentence (2) and Sentences 3.1.8.4.(2) and 3.1.8.10.(1) of the **1990 Building Code**.

(7) Despite Sentence (1), garbage intake room doors that swing inward shall be acceptable without a latching device.

(8) Existing operable transoms and glass lights shall be fixed shut and shall meet the **fire-protection rating** requirements of Sentences (1) and (2).

(9) Despite Sentences (1) and (2), **fire dampers** or **fire-stop flaps** are not required in existing noncombustible ducts at penetrations of **fire separations**.

Storage rooms

9.6.2.7. (1) Storage rooms for the use of occupants, not contained within a **dwelling unit** or **suite**, shall be

(a) separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 1 h, and

(b) **sprinklered** in accordance with Article 9.6.5.5.

(2) Despite Clause (1)(b), existing sprinkler systems or alternate fire protection systems that will control or extinguish fire and that are **approved** may be used.

Fuel-fired appliance service rooms

9.6.2.8. (1) Fuel-fired **appliances** shall be enclosed in a **service room** separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 1 h.

(2) Sentence (1) does not apply to fuel-fired **appliances** that serve only one **dwelling unit** or **suite**.

Incinerator rooms

9.6.2.9. (1) Incinerator rooms shall be separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 2 h.

(2) A **fire separation** having a **fire-resistance rating** not less than 1 h is deemed to comply with Sentence (1) if the incinerator room is **sprinklered**.

Combustion air

9.6.2.10. Where a **service room** is separated in accordance with Article 9.6.2.8., sufficient combustion air shall be brought directly from the outside for the proper combustion and safe operation of the **appliances**.

Refuse storage rooms

9.6.2.11. (1) **Refuse storage rooms** shall be

(a) separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 1 h, and

(b) **sprinklered** to provide a minimum average density of 6.5 L/m^2 over the room area.

Vertical service spaces

9.6.2.12. (1) **Vertical service spaces** shall be separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 45 min.

(2) Where openings in the **vertical service space**, including the top and bottom, are sealed with noncombustible materials having the same **fire-resistance rating** as the existing construction, the **vertical service space** is deemed to be in compliance with Sentence (1).

Refuse and linen chutes

9.6.2.13. (1) Each room into which a linen or refuse chute discharges shall be separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 1 h.

(2) Automatic sprinklers shall be installed in each linen or refuse chute

(a) at the top,

(b) at alternate floor levels, and

(c) in the room or bin into which the chute discharges.

(3) An existing chute installation is deemed to be in compliance with Sentence (2) where

(a) the chute outlet in the discharge room is protected by an automatic, self-latching **closure** held open by a fusible link,

(b) the room into which the chute discharges is **sprinklered**, and

(c) at least one sprinkler head with a minimum discharge rate of 66 L/min is located at the top of the chute.

Transformer vaults

9.6.2.14. Transformer vaults to which the **Electricity Act, 1998** applies shall be separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 2 h and shall be provided with **heat detectors** connected to the fire alarm system.

Storage garages

9.6.2.15. (1) A **storage garage** shall be separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 1.5 h.

(2) Underground **storage garages** shall be **sprinklered**.

(3) Sentence (2) does not apply to an underground **storage garage** that is equipped with **heat detectors** connected to the fire alarm system and that has vestibules located at points of access to the **residential occupancy**.

Smoke control measures

9.6.2.16. (1) **Buildings** where the vertical distance between the floor of the top **storey** and **grade** exceeds 18 m shall have smoke control measures in accordance with Article 3.2.6.2. of the **1990 Building Code**.

(2) **Buildings** are deemed to be in compliance with Sentence (1) where

(a) all **dwelling units** have access to an exterior balcony,

(b) the length of **public corridors** does not exceed 30 m between **exits**,

(c) **public corridors** on each **floor area** are equipped with **smoke detectors** connected to the fire alarm system,

(d) **public corridors** on each **floor area** are subdivided in accordance with Sentence (3), or

(e) the **building** is fully **sprinklered**.

(3) The **public corridor** subdivision referred to in Clause (2)(d) shall

(a) separate the corridor into at least two compartments by a **fire separation**,

(b) be located so that no more than one of the required **exit** stairs is located in any one compartment and the distance of travel from any **suite** entrance door to an **exit** or adjacent compartment does not exceed 25 m, and

(c) include smoke-tight doors equipped with self-closing devices that act as **closures** in the **fire separation**.

Subsection 9.6.3. Means of Egress

Access to exits

9.6.3.1. (1) Each **dwelling unit** or **suite** in a **floor area** shall have a doorway leading to

(a) the outside at or near **grade**,

(b) an outside passageway where it is possible to go in opposite directions to separate **exits**, or

(c) a **public corridor** where it is possible to go in opposite directions to separate **exits**.

(2) **Access to exits** through a dead end **public corridor** is deemed to be in compliance with Clause (1)(c) where the distance of travel, measured from any door along the corridor to a point where a choice of two directions of **exit** travel is available, does not exceed 6 m plus the width of the corridor.

(3) Existing dead end **public corridors** are deemed to be in compliance with Sentence (2) where additional fire protection measures are **approved** that, in the opinion of the **Chief Fire Official**, will provide protection for life safety similar to the protection provided by compliance with Sentence (2).

(4) Despite Sentence (1), if a **dwelling unit** or **suite** has access to a second and separate **exit**, a doorway from the **dwelling unit** or **suite** may open onto

(a) an **exit** stairway,

(b) a **public corridor** served by a single **exit**, or

(c) an outside passageway served by a single **exit** stairway.

Number of exits

9.6.3.2. (1) Each **floor area** shall be served by a minimum of two **exits**.

(2) The minimum distance between **exits** shall be 9 m or half the maximum diagonal dimension of the **floor area**, whichever is less.

Travel distance

9.6.3.3. (1) The **travel distance** to at least one **exit** shall not exceed

(a) 30 m in a **floor area** that is not **sprinklered**, or

(b) 45 m in a **sprinklered floor area**.

Stairway separations

9.6.3.4. (1) Each **exit** stairway shall be separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 1h.

(2) **Closures** in stairway **fire separations** shall be in accordance with Article 9.6.2.6.

Door swing

9.6.3.5. Each **exit** door, except those serving a single **dwelling unit**, shall open in the direction of **exit** travel and swing on its vertical axis.

Exit signs

9.6.3.6. (1) **Exit** signs shall be installed in accordance with Subsection 3.4.5. of the **1990 Building Code**.

(2) Each door opening into an **exit** stairway from a **public corridor** shall be identified on the stairway side with the number assigned to that floor in accordance with Article 3.4.6.17. of the **1990 Building Code**.

Interior finishes

9.6.3.7. (1) **Flame-spread ratings** of interior wall and ceiling finishes within a **means of egress** shall be in accordance with Article 3.1.13.7. of the **1990 Building Code**.

(2) Despite Sentence (1), existing interior wall and ceiling finishes within an **access to exit** may be **approved** if, in the opinion of the **Chief Fire Official**, they will provide protection for life safety similar to the protection provided by compliance with Sentence (1).

Lighting

9.6.3.8. **Public corridors** and stairways that form part of a **means of egress** shall be adequately illuminated to allow for the safe evacuation of occupants.

Emergency lighting

9.6.3.9. (1) Emergency lighting shall be provided in **exit** stairways, **public corridors** and other principal **access to exits**.

(2) Emergency lighting required in Sentence (1) shall be

(a) designed to provide illumination for a duration of at least

(i) 2 h in **buildings** whose highest floor level is more than 18 m above **grade**, and

(ii) 30 min in **buildings** whose highest floor level is not more than 18 m above **grade**,

(b) supplied by a source of energy separate from the primary electrical supply for the **building**, and

(c) designed to be automatically actuated when the power to the **building** is interrupted.

(3) Illumination from emergency lighting shall be an average of at least 10 lx at floor or tread level, or 1 watt/m^2 of floor space.

Subsection 9.6.4. Fire Alarm and Detection

Fire alarm requirements

9.6.4.1. (1) A fire alarm and detection system shall be installed in each **building** in accordance with Articles 3.2.4.1. to 3.2.4.14., 3.2.4.16. to 3.2.4.20., 3.2.4.22. and 3.2.7.8. of the **1990 Building Code**.

(2) An existing fire alarm system is deemed to be in compliance with Sentence (1) where the system

(a) complies with Articles 9.6.4.2. to 9.6.4.9., and

(b) operates in accordance with Article 3.2.4.4. of the **1990 Building Code**.

Automatic detection

9.6.4.2. (1) Automatic detection devices referred to in Sentences (2) and (3) shall be installed and connected to the fire alarm system required in Sentence 9.6.4.1.(2).

(2) **Fire detectors** shall be installed in storage rooms, locker rooms, **service rooms**, machinery rooms, heating rooms, incinerator rooms, linen and refuse chute intake compartments, janitors' closets and **refuse storage rooms**, at the tops of elevator shafts and **exit** stair shafts and in any room or area where hazardous or combustible materials may be used or stored.

(3) Rooms or areas that are **sprinklered** in accordance with Article 3.2.4.16. of the **1990 Building Code** are deemed to be in compliance with Sentence (2).

Manual pull stations

9.6.4.3. Manual pull stations shall be provided in accordance with Article 3.2.4.17. of the **1990 Building Code**.

Electrical supervision

9.6.4.4. (1) The fire alarm system shall be electrically supervised.

(2) Despite Sentence (1), electrical supervision of the bell circuits is not required where bells operate on more than one circuit on each floor.

Annunciator panels

9.6.4.5. (1) An annunciator panel shall

(a) be located at the main **street** entrance to the **building** or a location that is accessible to the **fire department** and that is **approved**, and

(b) indicate all floors with not more than one floor per zone indicated.

(2) Despite Clause (1)(b), existing annunciator zone indication that is compatible with the fire safety plan required under Subsection 2.8.2. and that is **approved** may be used.

Signals to the fire department

9.6.4.6. Fire alarm systems in **buildings** where the vertical distance between the floor of the top **storey** and **grade** exceeds 18 m shall have provision for notifying the **fire department** in accordance with Sentences 3.2.4.7.(1) to (4) of the **1990 Building Code** that a fire **alarm signal** or **alert signal** has been initiated.

Voice communication systems

9.6.4.7. (1) A voice communication system shall be provided where the vertical distance between the floor of the top **storey** and **grade** exceeds 36 m.

(2) The voice communication system required by Sentence (1) shall

(a) consist of loudspeakers operated from the central alarm and control facility or other location that is accessible to the **fire department** and **supervisory staff** required under Subsection 2.8.2. and that is **approved**,

(b) provide a clear verbal signal throughout the **building**, except for within elevator cars, and

(c) provide for automatic silencing of the fire alarm devices when the loudspeakers are in use.

(3) **Approved** existing public address systems compatible with the fire safety plan required under Subsection 2.8.2. and capable of communicating instructions to the **building** occupants are deemed to be in compliance with Sentences (1) and (2).

Emergency power

9.6.4.8. Fire alarm and voice communication systems shall be provided with an electrically supervised emergency power supply in accordance with Article 3.2.7.8. of the **1990 Building Code**.

Shutdown of air handling systems

9.6.4.9. Recirculating air handling systems that serve more than one **dwelling unit**, **suite** or **storey** shall be equipped with a duct-type **smoke detector** that will automatically shut down the system upon actuation of the **smoke detector**.

Smoke alarms

9.6.4.10. (1) **Smoke alarms** shall be installed in each **dwelling unit** and in each sleeping room not within a **dwelling unit** in accordance with Article 3.2.4.21. of the **1990 Building Code**.

(2) Battery-operated **smoke alarms** are deemed to be in compliance with Sentence 3.2.4.21.(4) of the **1990 Building Code**.

(3) **Smoke alarms** shall meet the requirements of

(a) CAN/ULC-S531, “Standard for Smoke Alarms”, and

(b) CAN/ULC-S553, “Standard for the Installation of Smoke-Alarms”.

(4) REVOKED: O. Reg. 256/14, s. 393 (2).

Subsection 9.6.5. Suppression

Access for fire fighting

9.6.5.1. (1) Access routes for fire fighting shall be provided in accordance with Articles 3.2.5.5. to 3.2.5.7. of the **1990 Building Code**.

(2) Sentence (1) does not apply where the **building** is **sprinklered**.

Standpipe systems

9.6.5.2. (1) A standpipe and hose system in accordance with Subsection 3.2.9. of the **1990 Building Code** shall be installed in each **building**.

(2) A wet or dry standpipe system is deemed to be in compliance with Sentence (1) where the system includes

(a) a minimum 150 mm diameter riser located in each stairwell, with 38 mm and 65 mm capped fire hose valves at each **storey**,

(b) capped 38 mm fire hose valves located in the **public corridor** so that any point on a **floor area** may be reached by 30 m of hose plus 3 m of hose stream from at least one hose valve,

(c) flow rates as required by Clauses 3.2.9.3.(4)(b) and (c) of the **1990 Building Code** for **buildings** less than 84 m in height, measured between **grade** and the ceiling level of the top **storey**,

(d) flow rates as required by Clause 3.2.9.3.(5)(b) of the **1990 Building Code** for **buildings** 84 m or more in height, measured between **grade** and the ceiling level of the top **storey**, and

(e) a water supply in accordance with Sentences 3.2.9.3.(1) and (2) of the **1990 Building Code**.

(3) An existing standpipe and hose system capable of delivering a minimum flow rate of 265 L/min for at least 30 min at a minimum discharge pressure of 345 kPa (gauge) at the two highest and most remote hose valves is deemed to be in compliance with Clauses (2) (a), (c), (d) and (e) if not less than 132 L/min can be supplied from each of the two outlets simultaneously.

(4) Emergency power shall be provided for a standpipe system that is designed with at least one pressure zone located above another, such that the water supply for the booster pump in the upper zone must be supplied from the pump in the zone below.

Fire department connections

9.6.5.3. (1) A **fire department** connection in accordance with Sentences 3.2.9.5.(2) to (9) of the **1990 Building Code** shall be provided.

(2) Despite Sentence (1), a **fire department** connection is not required where a booster pump equipped with emergency power is provided.

(3) Despite Sentence (1), existing **fire department** connections that are visible and accessible to the **fire department** and that are **approved** may be used.

Hydrants

9.6.5.4. (1) Hydrants shall be located within 90 m of the **building** face on which the principal entrance is located.

(2) A hydrant located within 45 m of a **fire department** connection, as required by Sentence 9.6.5.3.(1), is deemed to be in compliance with Sentence (1).

(3) Despite Sentence (1), existing hydrant locations that provide sufficient fire suppression capability in the circumstances and that are **approved** may be used.

Sprinkler systems

9.6.5.5. (1) Where a **building** or portion thereof is required to be **sprinklered**, the sprinkler system shall be designed and constructed in accordance with Articles 3.2.5.13. to 3.2.5.16. of the **1990 Building Code**.

(2) Existing sprinkler systems in which the average sprinkler discharge density over the design area is at least equal to the minimum density corresponding to the area for light hazard classification as defined in NFPA 13, "Standard for the Installation of Sprinkler Systems", are deemed to be in compliance with Sentence (1).

Firefighters' elevators

9.6.5.6. (1) At least one elevator shall be provided for use by firefighters in accordance with Articles 3.2.6.8. and 3.2.6.9. of the **1990 Building Code** in **buildings** where the vertical distance between the floor of the top **storey** and **grade** exceeds 18 m.

(2) An elevator is deemed to be in compliance with Sentence (1) where

(a) the elevator is capable of providing transportation from the **street** floor to every floor served by the elevator system,

(b) the elevator is identified on the **street** floor as an elevator provided for use by firefighters,

(c) the elevator satisfies the requirements of Sentences 3.2.6.8.(1) to (4) of the **1990 Building Code**, and

(d) other elevator cabs in the same shaft as the elevator for use by firefighters satisfy the requirements of Sentences 3.2.6.8.(1) and (2) of the **1990 Building Code**.

(3) An elevator system that requires transfer from one elevator to another to reach all floors above **grade** is deemed to be in compliance with Sentence (1) where

(a) the elevators are identified on the **street** floor and the transfer floor as elevators provided for firefighters' use,

(b) the elevators satisfy the requirements of Sentences 3.2.6.8.(1) to (4) of the **1990 Building Code**,

(c) emergency power is provided capable of operating one elevator car at a time, in **buildings** where the vertical distance between the floor of the top **storey** and **grade** exceeds 36 m, and

(d) other elevator cabs in the same shaft as the elevator for use by firefighters satisfy the requirements of Sentences 3.2.6.8.(1) and (2) of the **1990 Building Code**.

Emergency power supply

9.6.5.7. (1) Emergency electric power shall be provided in accordance with Articles 3.2.7.5. and 3.2.7.8. of the **1990 Building Code** if the power is provided for

(a) fire alarm and detection systems referred to in Sentence 9.6.4.1.(1) and Article 9.6.4.8.,

(b) booster pumps serving standpipe systems referred to in Sentences 9.6.5.2.(4) and 9.6.5.3.(2), and

(c) elevators referred to in Clause 9.6.5.6.(3)(c).

(2) Despite Sentence (1), existing emergency electric power generators that will provide reliable and sufficient electric power and that are **approved** may be used.

SECTION 9.7 BUILDINGS WITH A CARE OCCUPANCY OR RETIREMENT HOME

Subsection 9.7.1. Application and General

Application

9.7.1.1. (1) This Section applies to **buildings** containing a **care occupancy** or **retirement home**.

(2) Despite Sentence (1), this Section does not apply to a **building** or part of a **building** that is a home or hospital regulated by Section 9.4.

(3) Despite Sentence (1), if a **building** containing a **care occupancy** or **retirement home** also contains one or more other **occupancies** that are not governed by this Part, this Section does not apply to the fire safety systems, devices and structural elements of any of the other **occupancies** that do not affect the life safety of the **care occupancy** or **retirement home**.

Conflict

9.7.1.2. (1) In the event of a conflict between this Section and any other Section of this Part that applies to a **care occupancy** or **retirement home**, this Section prevails.

(2) If a **building** containing a **care occupancy** or **retirement home** also contains one or more other **occupancies** that are governed by other Sections of this Part, the fire safety systems, devices and structural elements of all the **occupancies** governed by this Part shall comply with the requirements that provide the greatest protection for life safety.

Additional requirements

9.7.1.3. (1) In addition to the requirements of this Section,

(a) a **building** not greater than 6 **storeys** in **building height** shall comply with Subsections 9.5.2. to 9.5.5., and

(b) a **building** greater than 6 **storeys** in **building height** shall comply with Subsections 9.6.2. to 9.6.5.

(2) Clause (1) (a) does not apply to a **building** not greater than 3 **storeys** in **building height** that provides sleeping accommodation for not more than four persons.

Definitions

9.7.1.4. For the purposes of this Section,

"**1990 Building Code**" means Ontario Regulation 413/90, as it read on October 9, 1992;

"existing" means in existence on January 1, 2014.

Subsection 9.7.2. Containment

Self-closing devices

9.7.2.1. (1) Doors opening onto corridors that are **access to exits** and that serve resident **suites,** and resident sleeping rooms not within **suites**, in **care occupancies** and **retirement homes** shall be equipped with self-closing devices.

(2) Sentence (1) does not apply

(a) in **buildings** 3 **storeys** or less in **building height** that provide sleeping accommodation for 10 or fewer persons, and

(b) in **buildings** where all of the **corridors** referred to in Sentence (1) are subdivided in accordance with Sentence (3).

(3) The corridor subdivision referred to in Clause (2)(b) shall

(a) subdivide the corridor into at least two zones using **fire separations** that contain smoke-tight doors equipped with self-closing devices that act as **closures**,

(b) be arranged so that each subdivided corridor zone is able to accommodate, in addition to its own occupants, the occupants from any single adjacent zone, based on the requirements of 1.6 m^2 per person, unless otherwise **approved**, and

(c) be arranged so that the travel distance from any point in a subdivided corridor zone to an adjacent zone is no more than 15 m.

Subsection 9.7.3. Means of Egress

Emergency lighting

9.7.3.1. (1) Emergency lighting shall be provided in **exit** stairways, **public corridors** and other principal **access to exits**.

(2) The emergency lighting shall be

(a) designed to provide illumination for a duration of at least 30 min,

(b) supplied by a source of energy that is separate from the primary electrical supply for the **building**, and

(c) designed to be automatically activated when the power to the **building** is interrupted.

(3) The emergency lighting shall provide illumination that is at least an average of 10 1x at floor or tread level or at least 1 watt / m^2 of floor space.

(4) Sentence (1) does not apply in **buildings** 3 **storeys** or less in **building height** that provide sleeping accommodation for 10 or fewer persons.

Subsection 9.7.4. Fire Alarm and Detection

Fire signal to fire department

9.7.4.1. (1) Fire alarm systems shall have provision for notifying the **fire department** in accordance with Article 3.2.4.7. of the **1990 Building Code** that a fire **alarm signal** or **alert signal** has been activated.

(2) Fire alarm systems equipped with a monitoring service that complies with CAN/ULC-S561, “Installation and Services for Fire Signal Receiving Centres and Systems” are deemed to comply with Sentence (1).

(3) Sentence (1) does not apply to **buildings** equipped with an interconnected **smoke alarm** system.

Sprinkler signal to fire department

9.7.4.2. (1) Sprinkler systems required by this Section shall have provision for notifying the **fire department** in accordance with Article 3.2.4.7. of the **1990 Building Code** that the sprinkler system has been activated.

(2) Sprinkler systems equipped with a monitoring service that complies with CAN/ULC-S561, “Installation and Services for Fire Signal Receiving Centres and Systems” are deemed to comply with Sentence (1).

(3) Sentence (1) does not apply where the fire alarm system or interconnected **smoke alarm** system has provision for notifying the **fire department** in accordance with Article 3.2.4.7. of the **1990 Building Code** that a fire **alarm signal** or **alert signal** has been activated.

Smoke alarms

9.7.4.3. (1) A **smoke alarm** shall be installed in each **suite** and in each sleeping room not within a **suite**.

(2) **Smoke alarms** shall be installed with permanent connections to an electrical circuit and shall have no disconnect switch between the overcurrent device and the **smoke alarm**.

(3) Battery-operated **smoke alarms** are deemed to be in compliance with Sentence (2).

(4) **Smoke alarms** required in Sentence (1) shall conform to CAN/ULC-S531, "Standard for Smoke Alarms".

(5) **Smoke alarms** required in Sentence (1) shall be installed in accordance with CAN/ULC-S553, "Standard for the Installation of Smoke-Alarms".

(6) REVOKED: O. Reg. 256/14, s. 399 (2).

(7) A **smoke detector** that is installed in each **suite** and in each sleeping room not within a **suite** is deemed to be in compliance with Sentence (1) if it is connected to a fire alarm system.

Voice communication systems

9.7.4.4. (1) A voice communication system conforming to Article 3.2.4.22. of the **1990 Building Code** shall be provided in every **building** where a **floor area** that is more than 18 metres above **grade** contains a **care occupancy** or a **retirement home**.

(2) A voice communication system is deemed to be in compliance with Sentence (1) if it

(a) consists of loudspeakers operated from,

(i) the central alarm and control facility, or

(ii) another location that is accessible to the **fire department** and **supervisory staff** required under Subsection 2.8.2. and that is **approved**,

(b) provides a clear verbal signal throughout the **building**, except within elevator cars, and

(c) provides for automatic silencing of the fire alarm devices when the loudspeakers are in use.

(3) A public address system capable of providing a clear verbal signal throughout the **building**, though not within elevator cars, is deemed to be in compliance with Sentence (1).

Subsection 9.7.5. Suppression

Sprinkler systems

9.7.5.1. (1) An automatic sprinkler system shall be installed in each **building** in accordance with NFPA 13, "Standard for the Installation of Sprinkler Systems".

(2) Despite Sentence (1), in a **building** not greater than 3 **storeys** in **building height** that provides sleeping accommodation for not more than 10 persons, a sprinkler system may be installed in accordance with NFPA 13D, "Standard for the Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes", except that the minimum quantity of available water shall be adequate for a demand duration of at least 20 minutes if stored water is used as the sole water supply source.

(3) Despite Sentence (1), in a **building** not greater than 6 **storeys** in **building height**, a sprinkler system may be installed in accordance with NFPA 13R, "Standard for the Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height".

(4) An existing sprinkler system that provides an average sprinkler discharge density over a design area that is equal to the minimum density corresponding to the area for light hazard classification as defined in NFPA 13, "Standard for the Installation of Sprinkler Systems", is deemed to be in compliance with Sentence (1).

(5) Sprinkler systems shall be equipped with local electric waterflow alarms.

(6) If a fire pump is required by NFPA 13 or NFPA 13R, it shall be installed in accordance with NFPA 20, "Installation of Stationary Pumps for Fire Protection", if it has a rated net head pressure greater than 280 kPa.

(7) Sentences (1) to (6) do not apply to a **building** not greater than 3 **storeys** in **building height** that provides sleeping accommodation for not more than four persons, if the **building** is equipped with **smoke alarms** that comply with Article 9.5.4.4. and that are interconnected so that the activation of any **smoke alarm** will sound a similar signal in each of the interconnected **smoke alarms**.

SECTION 9.8 TWO UNIT RESIDENTIAL OCCUPANCIES

Subsection 9.8.1. Application and General

Application

9.8.1.1. (1) This Section applies to a detached house, semi-detached house or row house containing two existing **residential units**, if

(a) the **building** is 3 **storeys** or less in **building height**,

(b) the **building area** does not exceed 600 m^2, and

(c) one **residential unit** or a portion of a **residential unit** is situated above another **residential unit**, or two **residential units** side by side share a common interior means of escape.

Definitions

9.8.1.2. (1) For the purposes of this Section,

"**1994 Building Code**" means Regulation 61 of the Revised Regulations of Ontario, 1990, as it read on July 14, 1994;

"existing" means in existence on July 14, 1994;

"row house" means a residential structure which

(a) is one of a group of three or more horizontally attached residential structures, and

(b) is separated vertically from one or two of the other structures by common walls which do not provide for internal access from the living space in one structure to another;

"semi-detached house" means a residential structure which

(a) is one of two horizontally attached residential structures, and

(b) is separated vertically from the other residential structure by a common wall which does not provide for internal access from the living space in one structure to the other.

Subsection 9.8.2. Containment

General requirements for fire separations

9.8.2.1. (1) **Fire separations** required to have a **fire-resistance rating** by this Section shall comply with Article 9.10.3.1. of the **1994 Building Code** or the corresponding compliance alternatives in Part 11 of the **1994 Building Code**.

(2) Except as permitted in Article 9.8.2.5., a wall or floor assembly required to be a **fire separation** shall be constructed as a continuous barrier against the spread of fire.

(3) Where a 30 min **fire-resistance rating** is required, existing wall assemblies and floor assemblies consisting of membranes of lath and plaster or gypsum board are deemed to be in compliance with Sentence (1).

(4) Where a 15 min **fire-resistance rating** is required, existing wall assemblies and floor assemblies consisting of membranes of plaster board with a plaster skim coat are deemed to be in compliance with Sentence (1).

Fire separations between residential units

9.8.2.2. (1) Subject to Article 9.8.2.3., each **residential unit** shall be separated from other rooms and areas by a **fire separation** having a **fire-resistance rating** not less than 30 min or shall comply with Sentence (2) or (3).

(2) Subject to Article 9.8.2.3., each **residential unit** shall be separated from other rooms and areas by a **fire separation** having a **fire-resistance rating** not less than 15 min and be equipped with interconnected **smoke alarms** that comply with Article 9.8.4.1.

(3) Existing **fire separations** are deemed to be in compliance with Sentence (1) where the detached house, semi-detached house, or row house is **sprinklered** in accordance with Article 9.8.5.1.

Alternative protection for ceilings

9.8.2.3. The **fire-resistance rating** of the **fire separation** above a room containing a fuel-fired **appliance** is not required where the room is **sprinklered**, providing a minimum average density of 6.5 L/min/m^2 over the room area.

Combustion air

9.8.2.4. Where a room containing a fuel-fired **appliance** is enclosed to satisfy other provisions of this Section in a manner that restricts the supply of combustion air, sufficient combustion air shall be brought directly from the outside for the proper combustion and safe operation of the **appliance**.

Protection of openings in fire separations

9.8.2.5. (1) Openings in **fire separation**s required by Sentences 9.8.2.2.(1) and (2) and 9.8.3.3.(1) shall be protected with **closures** conforming to Articles 9.10.13.2. and 9.10.13.10. of the **1994 Building Code**.

(2) Despite Sentence (1), existing 45 mm solid core wood, hollow metal or kalamein doors equipped with self-closing devices, installed in hollow metal or solid wood frames, are acceptable.

(3) Despite Sentence (1), **fire dampers** or **fire-stop flaps** are not required in ducts at penetrations of a **fire separation**.

Subsection 9.8.3. Means of Egress

Requirements for means of escape

9.8.3.1. Each **residential unit** shall be provided with a means of escape conforming to Article 9.8.3.2., 9.8.3.3., 9.8.3.4. or 9.8.3.5.

One means of escape

9.8.3.2. (1) Each **residential unit** shall be served by at least one means of escape consisting of a door that

(a) serves only that **residential unit**,

(b) opens directly to the exterior from that **residential unit**, and

(c) has direct access to ground level.

9.8.3.3. (1) Each **residential unit** shall have direct access to at least one means of escape that may be shared if

(a) the means of escape is separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 30 min,

(b) the **flame-spread rating** of interior wall and ceiling finishes within the means of escape does not exceed 150, and

(c) the means of escape does not involve entering another **residential unit** or other **occupancy** and leads directly to the exterior with direct access to ground level.

(2) Where a means of escape provided by Sentence (1) serves a **residential unit** situated entirely on the third **storey**, the detached house, semi-detached house or row house shall be equipped with interconnected **smoke alarms** conforming to Article 9.8.4.1.

Two means of escape

9.8.3.4. (1) Each **residential unit** shall be served by at least two means of escape arranged in such a manner that

(a) one means of escape shall be through a door which may lead through another **residential unit**, and

(b) the second means of escape shall be through a window if

(i) the window conforms to Sentence (2) or (3), and

(ii) the detached house, semi-detached house or row house is equipped with interconnected **smoke alarms** conforming to Article 9.8.4.1.

(2) A window may serve as a second means of escape if

(a) the sill is not more than 1 m above or below the adjacent ground level,

(b) the window can be opened from the inside without the use of tools,

(c) the window has an individual, unobstructed open portion having a minimum area of 0.38 m^2 with no dimension less than 460 mm,

(d) the sill height does not exceed 900 mm above the floor or fixed steps,

(e) where the window has a window-well, a clearance of at least 1 m is provided in the window-well in front of the window, and

(f) where the window has a window-well, the window opens into the **residential unit** and does not interfere with escape.

(3) A window may serve as a second means of escape if

(a) the window is of a casement type,

(b) the window is not less than 1060 mm high and 560 mm wide,

(c) the sill of the window is not more than 900 mm above the inside floor, and

(d) the sill of the window is not less than 1 m and not more than 5 m above the adjacent ground level.

Existing means of escape with sprinklers

9.8.3.5. An existing means of escape, not conforming to Article 9.8.3.2., 9.8.3.3. or 9.8.3.4., is acceptable if the detached house, semi-detached house or row house is **sprinklered** in accordance with Article 9.8.5.1.

Subsection 9.8.4. Fire Alarm and Detection

Interconnected smoke alarms

9.8.4.1. (1) Interconnected **smoke alarms** required in Sentences 9.8.2.2.(2) and 9.8.3.3.(2) and Clause 9.8.3.4.(1)(b) shall be installed on or near the ceiling in each

(a) **storey** within a **residential unit**, including every **basement**, and

(b) shared means of escape.

(2) **Smoke alarms** referred to in Sentence (1) shall be

(a) electrically interconnected so that the activation of any **smoke alarm** will sound a similar signal in each of the interconnected devices,

(b) installed in accordance with the manufacturer's instructions, and on floor levels containing bedrooms or sleeping areas, the required **smoke alarms** shall be installed between such bedrooms and the remainder of the **residential unit**, such as in a hallway or corridor serving such rooms or areas,

(c) connected to an electrical circuit with no disconnect switch between the overcurrent device and the **smoke alarms**,

(d) **listed** for use in an interconnected installation, and

(e) audible in bedrooms when the intervening doors are closed.

Smoke alarms

9.8.4.2. (1) **Smoke alarms** shall be installed in each **residential unit** in accordance with Sentences 3.2.4.21.(1) to (4) of the **1994 Building Code**.

(2) Battery-operated **smoke alarms** are deemed to be in compliance with Sentence 3.2.4.21.(4) of the **1994 Building Code**.

(3) **Smoke alarms** shall meet the requirements of

(a) CAN/ULC-S531, "Standard for Smoke Alarms", and

(b) CAN/ULC-S553, "Standard for the Installation of Smoke-Alarms".

(4) REVOKED: O. Reg. 256/14, s. 405 (2).

(5) When interconnected **smoke alarms** are installed in accordance with Article 9.8.4.1., the **smoke alarms** referred to in Sentence (1) of this Article are not required.

Subsection 9.8.5. Suppression

Sprinkler systems

9.8.5.1. Sprinkler protection required in this Section shall be designed and installed in conformance with NFPA 13D, "Standard for the Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes".

Subsection 9.8.6. Electrical

Electrical inspections required

9.8.6.1. (1) Each detached house, semi-detached house and row house regulated by this Section shall be subjected to a general **inspection** by the Electrical Safety Authority, as defined in the **Electricity Act, 1998**, and **inspection** fees shall be paid by the **owner**.

(2) Electrical hazards identified during an **inspection** required by Sentence (1) shall be repaired in accordance with the **Electrical Safety Code** made under the **Electricity Act, 1998**.

(3) The letter of compliance from the Electrical Safety Authority, as defined in the **Electricity Act, 1998**, shall be made available to the **Chief Fire Official** upon request.

SECTION 9.9 HOTELS

Subsection 9.9.1. Application and General

Application

9.9.1.1. (1) Except as provided in Sentences (2), (3) and (4), this Section applies to every **hotel establishment**.

(2) Except as required in Sentence (5), this Section does not apply to a **hotel establishment** where every **building** that contains a **hotel**

(a) is not more than 1 **storey** in **building height**, and

(b) has a **building area** of 300 m^2 or less.

(3) Except as required in Sentences (5) and (6), this Section does not apply to a **building** or part of a **building** that was regulated under Section 9.2, 9.3, 9.5 or 9.6 on December 31, 2006 if the use of the **building** is unchanged since that date.

(4) Except as required in Sentence (6), if the **building** contains **major occupancies** that operate under independent control from the **hotel establishment**, this Section does not apply to fire safety systems, devices and structural elements of those **major occupancies** that do not affect the life safety of the **hotel** occupants.

(5) Article 9.9.4.13. applies to a **building** or part of a **building** described in Sentence (2) or (3).

(6) Articles 9.9.2.9. and 9.9.2.15. apply to a **building** or part of a **building** described in Sentence (3) or (4).

(7) REVOKED: O. Reg. 256/14, s. 407 (2).

Building audit

9.9.1.2. (1) A **building** audit shall be prepared and retained by the **owner**.

(2) The **building** audit referred to in Sentence (1) shall identify and describe the existing **building** features in relation to the requirements of this Section, including

(a) containment and control of a fire, including

(i) **fire separations**,

(ii) **firewalls**,

(iii) construction assemblies,

(iv) **occupancy** separations,

(v) interior finishes,

(vi) smoke control,

(vii) heating, ventilating and air-conditioning systems, and

(viii) cooking operations,

(b) detection, including

(i) alarm and detection systems,

(ii) **smoke alarms**, and

(iii) voice communication systems,

(c) suppression, including

(i) **fire department** access,

(ii) standpipe and hose systems,

(iii) sprinkler or special fire suppression systems, and

(iv) firefighters' elevators, and

(d) egress, including

(i) the number, type, **access to**, direction to, lighting for and identification of **exits**,

(ii) fire escapes,

(iii) **occupant load**, and

(iv) emergency lighting.

Definitions

9.9.1.3. For the purposes of this Section,

"**1994 Building Code**" means Regulation 61 of the Revised Regulations of Ontario, 1990, as it read on June 23, 1994;

"existing" means in existence on January 1, 2007.

Subsection 9.9.2. Containment

Construction

9.9.2.1. (1) **Fire separations** required by this Section to have a **fire-resistance rating** shall be in conformance with Subsection 3.1.7. and Articles 3.1.8.1., 3.1.8.2., 3.1.8.3. and 3.5.4.2. of the **1994 Building Code**.

(2) If a **fire-resistance rating** of 2 h or less is required, existing wall assemblies, floor assemblies and their supporting assemblies are deemed to comply with Sentence (1) if they consist of

(a) reinforced concrete,

(b) masonry, or

(c) clay tile with plaster or gypsum board finish on both sides

(3) If a **fire-resistance rating** of 1 h or less is required, existing wall assemblies, floor assemblies, ceilings and their supporting assemblies that consist of membranes of lath and plaster or gypsum board are deemed to be comply with Sentence (1).

(4) **Heavy timber construction** conforming to Article 3.1.4.6. of the **1994 Building Code** is deemed to have a 45 min **fire-resistance rating**.

(5) **Buildings** with limited combustible components may be **approved** as **noncombustible construction**.

(6) Except as permitted in Sentences (7) and (8), floor assemblies shall be **fire separations**.

(7) Sentence (6) does not apply to floor assemblies between different levels of the same multi-level **guest suite**.

(8) A floor assembly immediately above a crawl space is not required to be constructed as a **fire separation** and is not required to have a **fire-resistance rating** provided the crawl space is not considered as a **basement** in Sentence 3.2.2.5.(1) of the **1994 Building Code**.

Buildings up to 3 storeys

9.9.2.2. (1) **Buildings** shall comply with the requirements of Sentence (2), where the **building** is

(a) not more than 1 **storey** in **building height** and not greater than 1200 m^2 in **building area**,

(b) not more than 2 **storeys** in **building height** and not greater than 900 m^2 in **building area**, or

(c) not more than 3 **storeys** in **building height** and not greater than 600 m^2 in **building area**.

(2) Floor assemblies and walls, columns and arches supporting floor assemblies shall have a **fire-resistance rating** not less than 30 min.

(3) Where sleeping accommodation or meeting rooms are not provided in the **basement**, an existing **fire separation** between the **first storey** and **basement** is deemed to be in compliance with Sentence (2) where

(a) the **basement** is **sprinklered**,

(b) the **building** contains not more than four **guest suites** and provides sleeping accommodation for not more than 10 persons, and

(i) interconnected **smoke alarms** are installed in conformance with Clause 9.9.4.1.(3)(c),

(ii) doors connecting the **basement** and **first storey** have a **fire-protection rating** not less than 20 min and are equipped with self-closing and latching devices, and

(iii) **fire stopping** of the wall space at the **basement** level is in conformance with Article 9.10.15.3. of the **1994 Building Code**, or

(c) the **building** is 1 **storey** in **building height**, not more than 600 m^2 in **building area**, and

(i) each **guest suite** has direct access to the outdoors by a door near ground level,

(ii) doors connecting the **basement** and **first storey** have a **fire-protection rating** not less than 20 min and are equipped with self-closing and latching devices,

(iii) **fire stopping** of the wall space at the **basement** level is in accordance with Article 9.10.15.3. of the **1994 Building Code**, and

(iv) an **approved** early warning system is installed consisting of **fire detectors** in the **basement** interconnected with alarm signalling devices that are audible in all **guest suites**.

(4) The water supply for the sprinklers referred to in Clause (3)(a) may be taken from the domestic supply where the supply provides sufficient density for the largest **fire compartment** and where the supply is **approved**.

(5) A **building** that is **sprinklered** is deemed to be in compliance with Sentence (2).

Buildings up to 4 storeys

9.9.2.3. (1) **Buildings** to which Sentence 9.9.2.2.(1) does not apply and that are not more than 4 **storeys** in **building height** shall comply with Sentences (2) and (3).

(2) Floor assemblies and walls, columns and arches supporting floor assemblies shall have a **fire-resistance rating** not less than 45 min.

(3) **Smoke detectors** shall be provided in corridors serving **guest suites** in **buildings** of **combustible construction**.

(4) A **building** that is **sprinklered** is deemed to be in compliance with Sentences (2) and (3).

Buildings over 4 storeys but not more than 6 storeys

9.9.2.4. (1) **Buildings** to which Articles 9.9.2.2. and 9.9.2.3. do not apply and that are not more than 6 **storeys** in **building height** shall

(a) have a **fire-resistance rating** not less than 45 min for floor assemblies and walls, columns and arches supporting floor assemblies, and

(b) be **sprinklered**, where the **building** is of **combustible construction**.

(2) Where only the roof assembly is of **combustible construction**, the **building** is deemed to be in compliance with Clause (1)(b) where

(a) the ceiling membrane has a **fire-resistance rating** not less than 45 min and the **attic space** is **fire stopped** in accordance with Article 3.1.11.5. of the **1994 Building Code**,

(b) the roof assembly is of **heavy timber construction** in conformance with Article 3.1.4.6. of the **1994 Building Code**, or

(c) the top **storey** and attic space are **sprinklered**.

(3) Where **smoke detectors** are provided in corridors serving **guest suites**, a **building** of **heavy timber construction** conforming to Article 3.1.4.6. of the **1994 Building Code** is deemed to be in compliance with Sentence (1).

Buildings over 6 storeys

9.9.2.5. (1) **Buildings** that are more than 6 **storeys** in **building height** shall

(a) have a **fire-resistance rating** not less than 1 h for floor assemblies and walls, columns and arches supporting floor assemblies, and

(b) be **sprinklered**, where the **building** is of **combustible construction**.

(2) Where only the roof assembly is of **combustible construction**, the **building** is deemed to be in compliance with Clause (1)(b) where

(a) the ceiling membrane has a **fire-resistance rating** not less than 45 min and the **attic space** is **fire stopped** in accordance with Article 3.1.11.5. of the **1994 Building Code**,

(b) the roof assembly is of **heavy timber construction** in conformance with Article 3.1.4.6. of the **1994 Building Code**, or

(c) the top **storey** and attic space are **sprinklered**.

Adjacent buildings

9.9.2.6. (1) A **building** containing a **hotel** shall be separated from a directly connected adjacent **building** that does not contain a **hotel** by a noncombustible **fire separation** having a **fire-resistance rating** not less than 2 h.

(2) An existing wall having a **fire-resistance rating** not less than 2h and constructed as a **fire separation** is deemed to comply with Sentence (1).

(3) Where the connection consists of an aboveground or underground walkway in conformance with Articles 3.2.3.20. and 3.2.3.21. of the **1994 Building Code**, the **building** is deemed to be in compliance with Sentence (1).

Interconnected floor spaces

9.9.2.7. (1) Despite Sentence 9.9.2.1.(6), a floor assembly may be penetrated by an unprotected opening between 2 contiguous **storeys** up to the fifth **storey** where

(a) the **building** is of **noncombustible construction**,

(b) the interconnected floor space does not contain sleeping accommodation, and

(c) the required **fire-resistance rating** of the floor assembly is maintained.

(2) Despite Sentence 9.9.2.1.(6), in a **building** that is not more than 3 **storeys** in **building height** and not more than 600 m^2 in **building area**, a floor assembly is not required to be constructed as a **fire separation** between 2 contiguous **storeys** where

(a) the interconnected floor space consists of the **first storey** and the **storey** next above or below, but not both,

(b) the interconnected floor space is **sprinklered**, and

(c) the sprinkler system is equipped with a water flow device and electrical supervision in conformance with Sentence 3.2.8.7.(2) of the **1994 Building Code**.

(3) Despite Sentence 9.9.2.1.(6), a floor assembly in a **storage garage** does not need to be a **fire separation**.

(4) Interconnected floor spaces in conformance with Subsection 3.2.8. of the **1994 Building Code** are deemed to be in compliance with Sentence (1).

Fire separation of guest suites

9.9.2.8. (1) **Guest suites** shall be separated from adjacent rooms and areas on the same **floor area** by

(a) a **fire separation** having a **fire-resistance rating** not less than 30 min in **buildings** that are not more than 6 **storeys** in **building height**, and

(b) a **fire separation** having a **fire-resistance rating** not less than 45 min in **buildings** that are more than 6 **storeys** in **building height**.

Fire separation of corridors

(2) Corridors serving **guest suites** shall be separated from adjacent rooms and areas on the same **floor area** by

(a) a **fire separation** having a **fire-resistance rating** not less than 30 min in **buildings** that are not more than 6 **storeys** in **building height**, and

(b) a **fire separation** having a **fire-resistance rating** not less than 45 min in **buildings** that are more than 6 **storeys** in **building height**.

(3) Existing **fire separations** are deemed to comply with Sentences (1) and (2) if the **floor area** is **sprinklered**.

Fire separations between major occupancies

9.9.2.9. (1) **Fire separations** having a **fire-resistance rating** not less than 45 min shall be provided between **major occupancies**.

(2) Existing **fire separations** having a **fire-resistance rating** not less than 30 min are deemed to comply with Sentence (1) if

(a) the **floor area** is **sprinklered**, or

(b) the part of the **building** containing the **major occupancy** is equipped with **fire detectors** and connecting corridors are equipped with **smoke detectors** as part of the fire alarm system of the **building**.

Protection of openings in fire separations

9.9.2.10. (1) **Closures** in **fire separations** shall be in conformance with

(a) Sentences 3.1.8.4.(2) and 3.1.8.10.(1) of the **1994 Building Code**, and

(b) Articles 3.1.8.11. and 3.1.8.13. of the **1994 Building Code**.

(2) Despite Sentence (1), openings in **fire separations** to which Article 9.9.2.8. or 9.9.2.11. applies may be protected with **closures** having a **fire-protection rating** not less than 20 min.

(3) If a **fire-protection rating** of 1 h or less is required, existing **closures** are deemed to comply with Sentence (1) if they consist of

(a) hollow metal or kalamein doors in hollow metal frames, with openings, if any, protected by wired glass and equipped with self-closing and latching devices, or

(b) wired glass screens set in fixed steel frames.

(4) Where a 20 min **fire-protection rating** is required, existing **closures** consisting of door assemblies of 45 mm solid core wood doors installed in solid wood or hollow metal frames and equipped with self-closing and latching devices are deemed to be in compliance with Sentences (1) and (2).

(5) Despite Sentence (1), existing **closures** in **fire separations** to which Articles 9.9.2.8. and 9.9.3.6. apply need not be equipped with latching devices in **buildings** that are not more than 6 **storeys** in **building height**.

(6) Where the **floor area** is **sprinklered**, existing **closures** in **fire separations** to which Article 9.9.2.8. applies are deemed to be in compliance with Clause (1)(a) and Sentence (2).

(7) **Fire dampers** shall be installed in **fire separations** in conformance with Article 3.1.8.7. of the **1994 Building Code**.

(8) Despite Sentence (7), **fire dampers** are not required in existing noncombustible ducts at penetrations of **fire separations**.

Laundry rooms, storage rooms and maintenance shops

9.9.2.11. Laundry rooms, storage rooms exceeding 0.6 m^2 in area and maintenance shops shall be separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 45 min.

Fuel-fired appliances

9.9.2.12. (1) Fuel-fired **appliances**, except for cooking **appliances**, shall be separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 1 h.

(2) Sentence (1) does not apply to a gas or oil-fired **appliance** installed on the roof of a **building** of **noncombustible construction**.

(3) Sentence (1) does not apply to fireplaces and **space heaters** provided the **appliance** is not located in an **exit** or in a corridor serving as an **access to exit** for **guest suites**.

(4) Despite Sentence (1), the **fire-resistance rating** of the **fire separation** above the room is not required where

(a) the required vertical **fire separation** to the room is provided, and

(b) the room area is fully **sprinklered**, with a spacing not exceeding 9.5 m^2 per sprinkler head, or providing a minimum average density of 6.5 L/min/m^2 over the room area.

(5) Where an **appliance** is separated in conformance with this Article, sufficient combustion air shall be brought directly from the outside for the safe operation of the **appliance**.

(6) If it is not practical to provide combustion air directly from the outside as required in Sentence (5), alternative means for the safe operation of the **appliance** may be **approved**.

(7) Despite Sentence (1), a **fire separation** is not required for a fuel-fired **appliance** located within a **guest suite** and serving only that **guest suite**.

Vertical service spaces

9.9.2.13. (1) **Vertical service spaces** shall be separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 45 min.

(2) Where the existing **vertical service space**, including the top and bottom, is sealed with gypsum board, lath and plaster or other similar noncombustible material, the **vertical service space** is deemed to be in compliance with Sentence (1).

Refuse and linen chutes

9.9.2.14. (1) Unless otherwise **approved**, linen and refuse chutes shall be located in a shaft separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 1 h.

(2) Linen and refuse chutes shall terminate or discharge directly into rooms that are separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 1 h.

(3) In **buildings** more than 2 **storeys** in **building height**, automatic sprinklers shall be installed in each linen or refuse chute

(a) at the top,

(b) at alternate floor levels, and

(c) in the room or bin into which the chute discharges.

(4) An existing chute installation is deemed to be in compliance with Sentence (3) where

(a) the chute outlet in the discharge room is protected by an automatic, self-latching **closure** held open by a fusible link in **buildings** greater than 6 storeys in **building height**,

(b) the room into which the chute discharges is **sprinklered**, and

(c) at least one sprinkler head with a minimum discharge rate of 66 L/min is located at the top of the chute.

Smoke control

9.9.2.15. (1) **Buildings** containing a **hotel** where the vertical distance between the floor of the top **storey** and **grade** exceeds 18 m shall have smoke control measures in conformance with Sentences (2) and (3).

(2) **Buildings** containing a **hotel** shall

(a) have smoke control measures that prevent smoke spread from **floor areas** containing other **occupancies** to upper **floor areas** that contain **guest suites**, or

(b) be **sprinklered** on all **floor areas** containing other **occupancies** that are located below floors that contain **guest suites**.

(3) **Buildings** containing a **hotel** shall have smoke control measures in conformance with Article 3.2.6.2. of the **1994 Building Code**.

(4) A **building** is deemed to be in compliance with Sentence (3) where

(a) all **guest suites** have access to an exterior balcony,

(b) the length of corridors serving **guest suites** does not exceed 30 m between **exits**,

(c) corridors serving **guest suites** are equipped with **smoke detectors** connected to the fire alarm system,

(d) corridors serving **guest suites** are subdivided in conformance with Sentence (5), or

(e) the **building** is **sprinklered**.

(5) The corridor subdivision referred to in Clause (4)(d) shall

(a) separate the corridor into at least two compartments by a **fire separation** that does not require a **fire-resistance rating**,

(b) be located so that not more than one of the required **exit** stairs is located in any one compartment and the distance of travel from any **guest suite** entrance door to an **exit** or adjacent compartment does not exceed 25 m, and

(c) include smoke-tight doors equipped with self-closing devices that act as **closures** in the **fire separation**.

Pipes, ducts and plenums

9.9.2.16. (1) Pipes, ducts, **plenums** and other equipment in heating and air handling systems shall be constructed of steel, **approved** noncombustible material or other **approved** material.

(2) Insulating materials and adhesives for pipes, ducts, **plenums** and other components of heating and air handling systems shall be noncombustible or shall have a **flame-spread rating** of 25 or less or shall be of some other **approved** composition.

(3) Where an **attic space**, a crawl space, a corridor ceiling space or any other concealed space is used as a **plenum**, the concealed space shall be lined with noncombustible material, material having a **flame-spread rating** of 25 or less or other **approved** material.

9.9.2.17. (1) A **fire separation** that separates an **exit** stairway from the remainder of the **building** shall not be breached by a duct or other part of an air handling system.

(2) Despite Sentence (1), an **exit** through a lobby or other entrance area that is within a stairway separation may be breached if the stairway is separated from the entrance area by a **fire separation** having a **fire-resistance rating** not less than 45 min.

9.9.2.18. No stairway enclosure or corridor shall be used as a **plenum** to exhaust air from other areas.

Cooking operations

9.9.2.19. (1) An existing cooking operation that complies with Sentences (2) to (6) is deemed to comply with Sentence 2.6.1.13.(1).

(2) Cooking operations shall have an existing exhaust system which, unless otherwise **approved**, shall be provided with

(a) a hood or other primary collection device to collect and confine all cooking vapours and residues emanating from the cooking equipment,

(b) a grease filter or other means of grease extraction,

(c) a duct from the hood or other primary collection device which

(i) leads as directly as possible to the outside,

(ii) is independent and not connected to any other ventilation system, and

(iii) has adequate openings for **inspection** and cleaning purposes that are equipped with tight fitting doors,

(d) a residue trap with provisions for cleanout at the base of each vertical riser, and

(e) mechanically induced air flow of sufficient velocity to confine cooking vapours and residues to the hood or other primary collection means installed at the cooking equipment.

(3) Pipes, ducts, **plenums** and other components of the exhaust system shall be constructed of steel, **approved** noncombustible material or other **approved** material.

(4) Insulating material and adhesive used in the exhaust system shall be noncombustible or shall have a **flame-spread rating** of 25 or less or shall have some other **approved** composition.

(5) The cooking operation shall be

(a) located in a kitchen that is separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 45 min, or

(b) protected by a fixed fire protection system.

(6) The **fire separation** referred to in Sentence (5) may contain an unprotected pass-through opening into the adjoining dining area if **approved** measures are provided to limit fire spread.

Subsection 9.9.3. Means of Egress

Occupant load

9.9.3.1. (1) The **occupant load** for calculation of the number and width of **access to exits** and **exits** referred to in this Section shall be determined in accordance with Subsection 3.1.16. of the **1994 Building Code**.

(2) The **occupant load** of a **floor area** may vary if it is used for different **occupancies** at different times, but the **exits** from the **floor area** shall provide the aggregate **exit** width prescribed in Article 9.9.3.2. for the greatest **occupant load**.

Access to exit

9.9.3.2. (1) Each room, **guest suite**, podium, terrace, platform, contained open space or other area intended for **occupancy** shall have egress facilities leading directly to

(a) a public thoroughfare,

(b) an **approved** open space that has access to a public thoroughfare, or

(c) a corridor where it is possible to go in opposite directions to separate **exits**, except as otherwise permitted by this Article or Article 9.9.3.3.

Dead end corridors

(2) Dead end corridors shall not be longer than 6 m plus the width of the corridor, unless otherwise **approved**.

(3) Unless otherwise **approved**, no area may be served by a dead end corridor where

(a) the area contains an **assembly occupancy** and its **occupant load** is greater than 20 persons,

(b) the area is intended for storage and exceeds 200 m^2, or

(c) the area is intended for a use other than that described in Clauses (a) and (b) and exceeds 100 m^2 in area or has an **occupant load** greater than 24 persons.

(4) If a **guest suite** has access to a second **exit** or if a **guest suite** is in a **building** that is permitted to be served by a single **exit** in compliance with Article 9.9.3.3., a doorway from the **guest suite** may open onto

(a) an **exit** stairway,

(b) a fire escape,

(c) a corridor served by a single **exit**, or

(d) an exterior passageway served by a single **exit** stairway.

Egress facilities

(5) Each room, **guest suite**, podium, terrace, platform, contained open space or other area intended for **occupancy** shall have two egress doorways placed in such a manner that one doorway could provide egress from the room or area if the other doorway becomes inaccessible to the occupants due to a fire which might originate in the room or area where

(a) the space is intended for **assembly occupancy**, and

(i) the distance of travel to an egress door from any point in the space exceeds 15 m, or

(ii) the **occupant load** exceeds 60 persons,

(b) the space is intended for storage, and

(i) exceeds 200 m^2 in area, or

(ii) the distance of travel to an egress door from any point in the space exceeds 23 m, or

(c) the space is intended for a use other than that described in Clauses (a) and (b), and

(i) exceeds 100 m^2 in area, or

(ii) the **occupant load** exceeds 60 persons.

(6) Despite Sentence (5), every room containing an **assembly occupancy** shall be provided with at least

(a) three independent well-separated egress doorways, where its **occupant load** is 600 persons or more, and

(b) four independent well-separated egress doorways where its **occupant load** is 1000 persons or more.

(7) Where a room or **floor area** is divided into individual spaces for **assembly occupancy**, egress through an adjacent **assembly occupancy** is permitted provided each space has at least one independent egress doorway in accordance with Sentence (1) and dividing walls or **partitions** are not more than 1.35 m in height.

(8) Dividing walls or **partitions** in Sentence (7) may exceed 1.35 m in height if alternative provisions are **approved** to provide safe egress.

Egress widths

(9) The aggregate width of required **means of egress** from a **floor area** or portion of a **floor area** shall be determined by multiplying the **occupant load** of the area served by

(a) 6.1 mm per person, for ramps with a gradient of not more than 1 in 8, doorways, corridors and passageways, or

(b) 9.2 mm per person, for ramps with a gradient of more than 1 in 8 and stairs.

(10) Where two or more egress doorways are required from a **floor area** or portion of a **floor area**, a sufficient aggregate width shall be provided so that the egress capacity is not reduced by more than half if any one doorway or opening is inaccessible in an emergency.

(11) Despite Sentences (9) and (10), the minimum clear width of a **means of egress** shall be not less than

(a) 1100 mm for corridors,

(b) 900 mm for stairs, and

(c) 750 mm for doorways, ramps and all other areas.

Number of exits

9.9.3.3. (1) Each **floor area** shall be served by a minimum of two **exits** where

(a) the **floor area** is intended for **assembly occupancy**, and

(i) the distance of travel to an **exit** from any point in the space exceeds 15 m, or

(ii) the **occupant load** exceeds 60 persons,

(b) the **floor area** is intended for storage, and

(i) exceeds 200 m^2 in area, or

(ii) the distance of travel to an **exit** from any point in the space exceeds 23 m,

(c) the **floor area** is a **basement**, and

(i) exceeds 200 m^2 in area, or

(ii) contains areas that are accessible to the public, or

(d) the **floor area** is intended for a use other than that described in Clauses (a), (b) and (c), and

(i) exceeds 100 m^2 in area, or

(ii) the **occupant load** exceeds 60 persons.

(2) Despite Sentence (1), each **floor area** shall be served by at least two **exits** in **buildings** that are more than 3 **storeys** in **building height**.

(3) Despite Sentence (1), where a **building** is 3 **storeys** in **building height**, the third **storey** shall be served by at least two **exits** unless **approved** alternative measures are used.

(4) Despite Sentence (3), there may be a single **exit** from the third **storey** used solely as the residence of the **hotel owner** or manager.

(5) The minimum distance between **exits** referred to in Sentences (1), (2) and (3) shall be 9 m or half the maximum diagonal dimension of the **floor area**, whichever is less.

(6) **Exits** are deemed to comply with Sentence (5) if the **floor area** is divided by a **fire separation** having a **fire-resistance rating** not less than 45 min so that it is necessary to pass through the **fire separation** to travel from one **exit** to another **exit**.

Exit widths

9.9.3.4. Except as provided in Sentence 9.9.3.7.(2), the width of **exits** shall be in conformance with Article 9.9.3.2.

Travel distance

9.9.3.5. (1) The **travel distance** to at least one **exit** shall not exceed

(a) 30 m in a **floor area** that is not **sprinklered**,

(b) 45 m in a **sprinklered floor area**, or

(c) 45 m in a **basement** that is not accessible to the public.

Stairway separations

9.9.3.6. (1) Each **exit** stairway shall be separated from the remainder of the **building** by a **fire separation** having a **fire-resistance rating** not less than 45 min.

(2) Each **exit** stairway shall lead directly to a public thoroughfare or to an **approved** open space from inside the **fire separation** described in Sentence (1).

(3) Despite Sentence (2), one **exit** from a **floor area** may lead through a lobby if

(a) the path of travel through the lobby to the outdoors at ground level is not more than 15 m,

(b) a **fire separation**, constructed in accordance with Sentence (1), is provided between the lobby and any **exit** permitted by this Sentence to lead through a lobby,

(c) the lobby is not located within an interconnected floor space described in Article 9.9.2.7.,

(d) from the interior of the **exit** stair that leads through the lobby, there is an unobstructed path of travel not leading through the lobby to an alternate **exit** such that

(i) it is not necessary to travel up or down more than 1 **storey** to reach the alternate **exit** by means of a protected **access to exit**, or

(ii) the path of travel is entirely within the same **storey** as the lobby and is separated from the lobby by a **fire separation** having a **fire-resistance rating** not less than 45 min**,** and

(e) **approved** provisions are made to direct occupants to the alternate **exit** described in Clause (d) in the event of a fire condition in the lobby.

(4) The lobby described in Sentence (3) may contain an **occupancy** if the required egress width is maintained and clearly delineated.

(5) Despite Sentence 9.9.2.12.(3), the lobby described in Sentence (3) may contain a fireplace or a **space heater**.

(6) Despite Sentence (2), an **exit** through a lobby is permitted in conformance with Article 3.4.4.2. or 9.9.8.5. of the **1994 Building Code**, as applicable for the size and height of the **building**.

Exterior stairways and fire escapes

9.9.3.7. (1) Exterior **exit** stairways and fire escapes shall not serve **floor areas** above the sixth **storey**.

(2) Unless otherwise **approved**, each fire escape used as an **exit** and each exterior **exit** stairway shall comply with Articles 3.4.7.2., 3.4.7.3., 3.4.7.5. and 3.4.7.6. of the **1994 Building Code**.

(3) Unless otherwise **approved**, exterior **exit** stairways, fire escapes and exterior **exit** passageways serving any **storey** above the second **storey** or any **basement** below the first **basement** shall be protected against fire exposure from the **building** in accordance with Sentences (4) and (5).

(4) For the purposes of Sentence (3), window openings, except **first storey** display windows, shall be protected by wired glass in fixed steel frames if located within 3 **storeys** below, within 10 m below, within 1.8 m above or within 3 m horizontally of an exterior **exit** stairway, fire escape or exterior **exit** passageway.

(5) For the purposes of Sentence (3), doorways and other openings shall be protected with **closures** having a **fire-protection rating** not less than 45 min if located within 3 **storeys** below, within 10 m below, within 1.8 m above or within 3 m horizontally of an exterior **exit** stairway, fire escape or exterior **exit** passageway.

(6) Exterior **exit** stairways leading across roofs shall be provided with handrails on both sides of the walkway leading to the stairway at the edge of the roof, unless otherwise **approved**.

(7) Exterior **exit** stairways and fire escapes below **grade** shall be

(a) enclosed by side walls and a roof, with a door to ground level at the upper landing,

(b) provided with a roof projecting horizontally for a distance of at least 1.8 m beyond any step or landing, or

(c) provided with some other **approved** construction or device to prevent snow from accumulating in the stairway or fire escape.

(8) Sentence (3) does not apply to an exterior passageway if

(a) 50% or more of the exterior side of the passageway is open to the outdoors,

(b) the exterior passageway floor assembly has a **fire-resistance rating** not less than 45 min or is of **noncombustible construction**, and

(c) an **exit** stairway is provided at each end of the passageway.

Door swing and hardware

9.9.3.8. Each **exit** door and door providing an **access to exit** shall be in conformance with Subsection 2.7.2.

Emergency access to floor areas

9.9.3.9. Doors providing access between **floor areas** and **exit** stairs shall comply with Article 3.4.6.16. of the **1994 Building Code**.

Signs

9.9.3.10. (1) **Exit** signs shall be installed in accordance with Subsection 3.4.5. of the **1994 Building Code**.

(2) Each door opening into an **exit** stairway shall be identified with the number assigned to that floor in accordance with Article 3.4.6.17. of the **1994 Building Code**.

(3) Existing doors that have the floor level identified in plain legible block letters or numbers at least 114 mm high with a 19 mm stroke on both sides of the door are deemed to be in compliance with Sentence (2).

Interior finishes

9.9.3.11. (1) Interior finish materials on the walls and ceilings of **exits** and **access to exits** shall be in accordance with Subsection 3.1.13. of the **1994 Building Code**, except as provided in Sentence (2) or otherwise **approved**.

(2) Sentence (1) does not apply to

(a) wood or other **approved** materials, treated with an **approved** fire retardant, used on the walls of lobbies, foyers, vestibules, entrance halls and other major entrance areas,

(b) combustible interior finishes, including paint, wallpaper and other interior finishes not more than 1.5 mm thick used on the walls of corridors, and

(c) combustible materials that have a **flame-spread rating** of 150 or less used on the walls and ceilings of **access to exits** if the **access to exits** are **sprinklered**.

9.9.3.12. The **flame-spread rating** of interior wall and ceiling finishes in rooms containing an **assembly occupancy** shall be not more than 150.

Lighting

9.9.3.13. Every **exit** and **access to exit** shall be equipped to provide illumination to an average level of at least 50 lx at floor level and at all points such as angles and intersections at changes of level where there are stairs and ramps.

Emergency lighting

9.9.3.14. (1) Emergency lighting shall be provided in

(a) **exits** and **access to exits** in **buildings** required to have a fire alarm system, and

(b) rooms containing an **assembly occupancy** with an **occupant load** of more than 60 persons.

(2) Emergency lighting required in Sentence (1) shall be

(a) designed to provide illumination for a duration of at least

(i) 2 h in **buildings** where the vertical distance between the floor of the top **storey** and **grade** exceeds 18 m, and

(ii) 30 min in **buildings** where the vertical distance between the floor of the top **storey** and **grade** is not more than 18 m,

(b) supplied by a source of energy separate from the primary electrical supply for the **building**, and

(c) designed to be automatically actuated when the power to the **building** is interrupted.

(3) Illumination from emergency lighting referred to in Sentence (2) shall be an average of at least 10 lx at floor or tread level, or 1 watt/m^2 of floor space.

Subsection 9.9.4. Fire Alarm and Detection

Fire alarm requirements

9.9.4.1. (1) A fire alarm system with **listed** components shall be installed in each **building** in accordance with Articles 9.9.4.2. to 9.9.4.12. where

(a) the **building area** is more than 600 m^2,

(b) the **building** is more than 1 **storey** in **building height**, or

(c) each **guest suite** is not served by an exterior **exit** facility leading to ground level.

(2) A **building** is deemed to be in compliance with Sentence (1) where

(a) the **building** is not more than 3 **storeys** in **building height**,

(b) each **guest suite** is served by an exterior **exit** facility leading to ground level,

(c) each **guest suite** is separated from adjacent rooms by a **fire separation** having a **fire-resistance rating** not less than 45 min, and

(d) each **guest suite** is equipped with a **smoke alarm**.

(3) A **building** is deemed to be in compliance with Sentence (1) where

(a) the **building** is not more than 3 **storeys** in **building height**,

(b) sleeping accommodation is provided for not more than 10 persons, and

(c) the **building** is equipped with

(i) **smoke alarms** on or near the ceiling in corridors serving **guest suites** on each **floor area**, adjacent to each stairway serving the corridors, and on or near the ceiling in the **basement**, adjacent to each stairway, and

(ii) one manual pull station in each **floor area** in an **approved** location, installed and interconnected so that the actuation of any manual pull station or **smoke alarm** will cause all **smoke alarms** to operate and be audible throughout the **building**.

Automatic detection

9.9.4.2. (1) Automatic detection devices referred to in Sentences (2), (3) and (4) shall be installed and connected to the fire alarm system required in Sentence 9.9.4.1.(1).

(2) **Fire detectors** shall be installed

(a) in every part of a **building** that requires a fire alarm system in Article 9.9.4.1., other than corridors, washrooms, closets in **guest suites**, saunas, refrigerated areas and swimming pools,

(b) at the tops of elevator shafts, and

(c) at the tops of **exit** stairs.

(3) Despite Sentence (2), **fire detectors** are not required in existing **guest suites** where **smoke detectors** are installed in every corridor serving the **guest suites**.

(4) Rooms or areas that are **sprinklered** in accordance with Article 3.2.4.16. of the **1994 Building Code** are deemed to be in compliance with Sentence (2).

Manual pull stations

9.9.4.3. (1) Unless otherwise **approved**, manual pull stations shall be installed at

(a) the main reception area, and

(b) near every **exit**.

(2) Despite Sentence (1), a manual pull station may serve two **exits** where

(a) the **exits** are not more than 9 m apart,

(b) the **exits** are located on the same **storey**, and

(c) the manual pull station is readily accessible and visible from each **exit**.

(3) A manual pull station shall be

(a) red in colour,

(b) readily accessible and unobstructed,

(c) readily visible, and

(d) unless otherwise **approved**, installed at a height not less than 1.2 m and not more than 1.5 m, measured vertically from the finished floor surface.

Alarm signalling devices

9.9.4.4. (1) Alarm signalling devices shall be

(a) installed on all **storeys**, unless otherwise **approved**,

(b) located so that the **alarm signal** and **alert signal** when sounded, may be heard throughout the **building** over all normal sounds at any time, and

(c) be distinctive in sound.

Annunciator panels

9.9.4.5. (1) In a **building** that is 4 or more **storeys** in **building height** or has a **total area** of 4000 m^2 or more, an annunciator panel shall

(a) be installed near the main entrance, in the main reception area or other **approved** location that is readily accessible to the **fire department**, and

(b) indicate all floors with not more than one floor per zone indicated.

(2) **Fire detectors** required in Clauses 9.9.4.2.(2)(b) and (c) may be considered as part of the adjoining floor for the purposes of Clause (1)(b) of this Article.

Shutdown of air handling systems

9.9.4.6. Recirculating air handling systems that serve more than one **guest suite** or **storey** shall be arranged to shut down upon actuation of the fire alarm system, except where continued operation of the air handling system serves as part of a smoke control system.

Trouble signals

9.9.4.7. (1) A trouble signal sounding device and, where the trouble signal sounding device has a silencing switch, a trouble light shall be installed in

(a) the main reception area, or

(b) a continuously supervised area.

Operation

9.9.4.8. Fire alarm systems shall operate in conformance with Article 3.2.4.4. of the **1994 Building Code**, unless otherwise **approved**.

Continuity

9.9.4.9. Each **building** shall not have more than one fire alarm system, unless otherwise **approved**.

Electrical supervision

9.9.4.10. Fire alarm systems shall be electrically supervised.

Emergency power

9.9.4.11. (1) Fire alarm systems shall be provided with an emergency power supply in conformance with Article 3.2.7.8. of the **1994 Building Code**.

(2) An existing emergency power supply that is capable of providing supervisory power for not less than 24 h and emergency power under full load for not less than 5 min at the end of the 24 h period is deemed to be in compliance with Sentence (1).

Primary power

(3) Fire alarm system connections to the primary source of power shall be on a separate circuit equipped with separate circuit breakers or fuse switches that are located in a secure area.

(4) When a **building** is not supplied with primary power from a public utility, two **approved** independent sources of power shall be provided to the fire alarm system.

Installation

9.9.4.12. (1) Where a fire alarm system is required to be installed, extended or modified by this Section, the installation, extension or modification shall be in conformance with CAN/ULC-S524, "Standard for the Installation of Fire Alarm Systems".

(2) Where a fire alarm system has been installed, extended or modified as required by this Section, the system or portion of the system shall be **tested** in conformance with CAN/ULC-S537, "Verification of Fire Alarm Systems".

(3) Sentences (1) and (2) do not apply to existing fire alarm system components.

Smoke alarms

9.9.4.13. (1) **Smoke alarms** shall be installed in each **guest suite**.

(2) **Smoke alarms** shall meet the requirements of

(a) CAN/ULC-S531, "Standard for Smoke Alarms", and

(b) CAN/ULC-S553, "Standard for the Installation of Smoke-Alarms".

(3) **Smoke alarms** shall be installed with permanent connections to an electrical circuit and shall have no disconnect switches between the overcurrent device and the **smoke alarm**.

(4) Despite Sentence (3), battery-operated **smoke alarms** may be used.

(5) Unless otherwise **approved**, at least one **smoke alarm** shall be installed on each floor of a multi-level **guest suite** and the **smoke alarms** shall be interconnected so that the actuation of one **smoke alarm** will cause all **smoke alarms** within the **guest suite** to sound.

Voice communication systems

9.9.4.14. (1) A voice communication system shall be provided in each **building** where the vertical distance between the floor of the top **storey** and **grade** exceeds 36 m.

(2) The voice communication system required by Sentence (1) shall

(a) consist of loudspeakers operated from the central alarm and control facility or other location that is accessible to the **fire department** and **supervisory staff** appointed under Section 2.8 and that is **approved**,

(b) provide a clear verbal signal throughout the **building**, except for elevator cars, and

(c) provide for automatic silencing of the fire **alarm signals** or **alert signals** when the loudspeakers are in use.

(3) **Approved** existing public address systems compatible with the fire safety plan required under Section 2.8 and capable of communicating instructions to the **building** occupants are deemed to be in compliance with Sentences (1) and (2).

Subsection 9.9.5. Suppression

Access for fire fighting

9.9.5.1. (1) Access routes for fire fighting shall be provided in conformance with the requirements of Articles 3.2.5.5. to 3.2.5.7. of the **1994 Building Code**.

(2) Sentence (1) does not apply where the **building** is **sprinklered**.

(3) In **buildings** not greater than 6 **storeys** in **building height**, existing access routes are deemed to comply with Sentence (1) if they

(a) have a clear width of at least 6 m,

(b) are capable of supporting the expected loads imposed by fire fighting equipment and surfaced with concrete, asphalt or other material that provides accessibility under all climatic conditions,

(c) are located not less than 3 m and not more than 15 m from the principal entrance, and

(d) are connected with a public thoroughfare.

(4) Despite Sentence (1), alternative methods may be **approved** where, in the opinion of the **Chief Fire Official**, they provide protection for life safety similar to the protection provided by compliance with Sentence (1).

Standpipe systems

9.9.5.2. (1) In **buildings** that are greater than 3 **storeys** in **building height**, a standpipe and hose system shall be installed in conformance with Subsection 3.2.9. of the **1994 Building Code**.

(2) A standpipe and hose system installed in conformance with Sentences (3) to (6) is deemed to be in compliance with Sentence (1).

(3) Hose stations shall

(a) be located so that all areas

(i) are protected by a hose station on the same **storey**, and

(ii) can be reached by a hose stream and are within 6 m of a hose nozzle when the hose is extended,

(b) be provided with a 38 mm hose valve, unless otherwise **approved**,

(c) be equipped with not more than 30 m of 38 mm hose on a hose **rack**, unless otherwise **approved**,

(d) have the hose attached, ready for use at all times and equipped with a shut-off combination fog and straight stream nozzle,

(e) be within easy reach of a person standing on the floor, with the hose valve connection located no more than 1.5 m from the floor, and

(f) be located

(i) in corridors where possible, and

(ii) in hose cabinets.

(4) Despite Subclause (3)(a)(i), a penthouse may be protected by a hose station located in the **storey** below.

(5) A standpipe and hose system shall

(a) have an adequate water supply capable of producing a hose stream of at least 6 m from the hose nozzle at the highest fire hose outlet, and

(b) be served by at least one **fire department** connection located on the outside of the **building** adjacent to a **street**, readily accessible to the **fire department**.

(6) Hose cabinets shall be

(a) of sufficient size to accommodate a hose, hose **rack**, hose valve and portable extinguisher,

(b) conspicuously identified, by lettering at least 50 mm high or by the provision of a sufficiently large glass panel in the door to ensure that the equipment in the cabinet is readily visible,

(c) equipped with a door without locks, constructed to open easily, unless otherwise **approved**, and

(d) so located that the door, when open, will not obstruct any doorway.

Firefighters' elevators

9.9.5.3. (1) At least one elevator shall be provided for use by firefighters in conformance with Articles 3.2.6.8. and 3.2.6.9. of the **1994 Building Code** in **buildings** where the vertical distance between the floor of the top **storey** and **grade** exceeds 18 m.

(2) An elevator is deemed to be in compliance with Sentence (1) where

(a) the elevator is capable of providing transportation from the **street** floor to every floor served by the elevator system,

(b) the elevator is identified on the **street** floor as an elevator provided for use by firefighters,

(c) the elevator satisfies the requirements of Sentences 3.2.6.8.(1) to (4) of the **1994 Building Code**, and

(d) other elevator cabs in the same shaft as the elevator for use by firefighters satisfy the requirements of Sentences 3.2.6.8.(1) and (2) of the **1994 Building Code**.

(3) An elevator system that requires transfer from one elevator to another to reach all floors above **grade** is deemed to be in compliance with Sentence (1) where

(a) the elevators are identified on the **street** floor and the transfer floor as elevators provided for firefighters' use,

(b) the elevators satisfy the requirements of Sentences 3.2.6.8.(1) to (4) of the **1994 Building Code**,

(c) emergency power is provided that is capable of operating one elevator car at a time, in **buildings** where the vertical distance between the floor of the top **storey** and **grade** exceeds 36 m, and

(d) other elevator cabs in the same shaft as the elevator for use by firefighters satisfy the requirements of Sentences 3.2.6.8.(1) and (2) of the **1994 Building Code**.

Sprinkler systems

9.9.5.4. Unless otherwise **approved**, where a **building** or portion thereof is required to be **sprinklered**, the sprinkler system shall be designed and constructed in conformance with Articles 3.2.5.13. to 3.2.5.16. of the **1994 Building Code**.

Emergency power supply

9.9.5.5. (1) Unless otherwise **approved**, emergency electric power provided by generators for fire alarm systems referred to in Sentence 9.9.4.1.(1) and for elevator cars referred to in Clause 9.9.5.3.(3)(c) shall be provided in accordance with CSA-C282, "Emergency Electrical Power Supply for Buildings".

(2) Unless otherwise **approved**, emergency electric power required for emergency lighting systems required in Sentence 9.9.3.14.(1) shall be installed in conformance with CSA-C282, "Emergency Electrical Power Supply for Buildings" or CSA-C22.2 No. 141, "Emergency Lighting Equipment", as applicable.

O. Reg. 213/07, Division B, Part 9; O. Reg. 150/13, ss. 16-21; O. Reg. 256/14, ss. 314-431.

DIVISION C
ADMINISTRATIVE PROVISIONS

SECTION 1.1 GENERAL

Subsection 1.1.1. Chief Fire Official

Appointment by Fire Marshal

1.1.1.1. (1) The Fire Marshal may appoint persons who are assistants to the Fire Marshal to be **Chief Fire Officials** for the purposes and subject to the limitations and conditions as are set out in the appointment.

(2) An appointment made under Sentence (1) may grant to the person appointed the exclusive authority to exercise all or any of the powers and perform all or any of the duties of a **Chief Fire Official** with respect to any class or classes of **building** or **occupancy** or within the territorial area specified in the appointment and, in such case, no other **Chief Fire Official** shall exercise such powers or perform such duties.

Appointment by Fire Chief

1.1.1.2. The Municipal Fire Chief may appoint a member or members of the **fire department** who are assistants to the Fire Marshal to be **Chief Fire Officials** for the purposes and subject to the limitations and conditions as are set out in the appointment.

SECTION 1.2 QUALIFICATIONS

Subsection 1.2.1. Qualifications and Responsibilities of Persons Performing Work on Fire Alarm Systems

Application

1.2.1.1. This subsection applies to every person who performs annual **tests** or annual **inspections** of a fire alarm system required under Article 6.3.2.2. of Division B and every person who repairs, replaces or alters components of a fire alarm system.

Qualifications and responsibilities

1.2.1.2. (1) A person who performs the work described in Article 1.2.1.1.

(a) must have successfully completed a program or course acceptable to the Fire Marshal,

(b) shall, at the request of the **owner** or the **Chief Fire Official**, produce for inspection a copy of a certificate or document attesting to the successful completion of a program or course referred to in Clause (a), and

(c) shall perform the **inspection**, **test**, repair, replacement and alteration in accordance with Article 6.3.1.8. and Subsection 6.3.2. of Division B.

(2) Despite Sentence (1), a person who has not successfully completed the required program or course may perform the work described in Clause (1)(c) provided that

(a) the work is done under the supervision of a person who has successfully completed a program or course required by Clause (1)(a),

(b) no more than two persons work under the supervision of the person referred to in Clause (a) at the same time, and

(c) the supervision is provided at the work site.

(3) A person supervising another under Sentence (2) shall advise the **owner** in writing that the work has been completed in accordance with Article 6.3.1.8. and Subsection 6.3.2. of Division B.

Responsibility

1.2.1.3. (1) Despite Article 1.2.1.1. of Division A, it is the person who performs the work described in Article 1.2.1.1. of this Division who is responsible for complying with Sentence 1.2.1.2.(1) of this Division; however, if Sentence 1.2.1.2.(2) of this Division applies, it is the person who supervises the work under Sentence 1.2.1.2.(2) of this Division who is responsible for complying with Sentence 1.2.1.2.(1) of this Division, as if he or she were the person performing the work.

(2) The **owner** shall ensure that the requirements of Article 1.2.1.2. are met.

Subsection 1.2.2. Qualifications and Responsibilities of Persons Performing Work on Interconnected Smoke Alarm Systems

Application

1.2.2.1. This Subsection applies to every person who performs annual **tests** of an interconnected **smoke alarm** system required under Article 6.3.2.6. of Division B and every person who maintains such an interconnected **smoke alarm** system.

Qualifications and responsibilities

1.2.2.2. (1) A person who performs the work described in Article 1.2.2.1.

(a) must have successfully completed a program or course acceptable to the Fire Marshal,

(b) shall, at the request of the **owner** or the **Chief Fire Official**, produce for inspection a copy of a certificate or document attesting to the successful completion of a program or course referred to in Clause (a), and

(c) shall perform the **test** and maintenance in accordance with Article 6.3.2.6. of Division B.

(2) Despite Sentence (1), a person who has not successfully completed the required program or course may perform the work described in Sentence (1) provided that

(a) the work is done under the supervision of a person who has successfully completed a program or course required in Clause (1)(a),

(b) no more than two persons work under the supervision of the person referred to in Clause (a) at the same time, and

(c) the supervision is provided at the work site.

(3) A person supervising another under Sentence (2) shall advise the **owner** in writing that the work has been completed in accordance with Article 6.3.2.6. of Division B.

Responsibility

1.2.2.3. (1) Despite Article 1.2.1.1. of Division A, it is the person who performs the work described in Article 1.2.2.1. of this Division who is responsible for complying with Sentence 1.2.2.2.(1) of this Division; however, if Sentence 1.2.2.2.(2) of this Division applies, it is the person who supervises the work under Sentence 1.2.2.2.(2) of this Division who is responsible for complying with Sentence 1.2.2.2.(1) of this Division, as if he or she were the person performing the work.

(2) The **owner** shall ensure that the requirements of Article 1.2.2.2. are met.

Subsection 1.2.3. Qualifications of the Person who Ensures Implementation of a Fire Safety Plan under Subsection 2.8.2. of Division B

Application

1.2.3.1. (1) Article 1.2.3.2. applies to

(a) a person designated by the **owner** of a **building** containing a **care occupancy**, a **care and treatment occupancy** or a **retirement home** to be responsible for ensuring that the fire safety plan required under Subsection 2.8.2. of Division B is implemented, or

(b) the **owner** of a **building** containing a **care occupancy**, a **care and treatment occupancy** or a **retirement home**, if the **owner** has not designated another person to be responsible for ensuring that the fire safety plan required under Subsection 2.8.2. of Division B is implemented.

Qualifications

1.2.3.2. (1) A person referred to in Sentence 1.2.3.1.(1)

(a) must have successfully completed a program or course acceptable to the Fire Marshal, and

(b) shall, at the request of the **Chief Fire Official**, produce for inspection a certificate or other document attesting to his or her successful completion of that program or course.

(2) This Article applies as of January 1, 2017.

Responsibility if person designated

1.2.3.3. (1) If an **owner** has designated a person to be responsible for ensuring that a fire safety plan is implemented

(a) the designated person is responsible for complying with Article 1.2.3.2. of this Division, despite Article 1.2.1.1. of Division A, and

(b) the **owner** is responsible for ensuring that the designated person complies with Article 1.2.3.2. of this Division.

Subsection 1.2.4. Qualifications of Chief Fire Officials

Application

1.2.4.1. This Subsection applies to every **Chief Fire Official** who is responsible for **approving** a fire safety plan for a **building** containing a **care occupancy**, a **care and treatment occupancy** or a **retirement home**.

Qualifications

1.2.4.2. (1) A person referred to in Article 1.2.4.1.

(a) must have successfully completed a program or course acceptable to the Fire Marshal, and

(b) shall, at the request of the **owner**, produce for inspection a certificate or other document attesting to his or her successful completion of that program or course.

(2) This Article applies as of January 1, 2017.

Responsibility

1.2.4.3. A person referred to in Article 1.2.4.1. of this Division is responsible for complying with Article 1.2.4.2. of this Division, despite Article 1.2.1.1. of Division A.

SECTION 1.3 ADMINISTRATIVE PROVISIONS

Subsection 1.3.1. Required Testing

Tests by owner

1.3.1.1. Where a **building** or its contents must be **tested** for compliance with this Code, the **tests** shall be carried out by the **owner** or the **owner's** agent within such reasonable time as the **Chief Fire Official** may determine.

Tests by Chief Fire Official

1.3.1.2. (1) The **tests** referred to in Article 1.3.1.1. may also be carried out by the **Chief Fire Official**.

(2) The **Chief Fire Official** shall only take such samples as are necessary in the circumstances in order to carry out the **tests** referred to in Article 1.3.1.1.

Subsection 1.3.2. Alternative Solutions

Approval

1.3.2.1. An **alternative solution** shall be submitted to the **Chief Fire Official** for review and **approval**.

Documentation

1.3.2.2. (1) An **alternative solution** submitted to the **Chief Fire Official** under Article 1.3.2.1. shall be accompanied by supporting documentation that demonstrates that the **alternative solution** meets the **objectives** and satisfies the **functional statements** attributed to the **acceptable solution** it is proposed to replace, as set out in Division A and OFMEM Fire Code Supplement FCS-1, "Objectives and Functional Statements Attributed to Acceptable Solutions".

(2) The documentation referred to in Sentence (1) shall include

(a) an analysis outlining the analytical methodology and rationale used to determine that a proposed **alternative solution** will achieve at least the minimum level of performance intended by the applicable **acceptable solution** in Division B in respect of the **objectives** and **functional statements** attributed to the **acceptable solution** as identified in Division A and OFMEM Fire Code Supplement FCS-1, "Objectives and Functional Statements Attributed to Acceptable Solutions", and

(b) information concerning any additional **check**, **inspection**, **test**, maintenance or operational requirements, including any commissioning requirements, and schedules not otherwise specifically addressed in Division B.

(3) The analysis referred to in Clause (2)(a) shall identify the **acceptable solution** that the **alternative solution** is proposed to replace, the **objectives** and **functional statements** attributed to that **acceptable solution**, and any assumptions, limiting or restricting factors, engineering studies or **building** performance parameters in order to allow for an assessment of compliance with this Code by the **Chief Fire Official**.

(4) The information provided under Sentence (3) shall be in sufficient detail to convey the design intent and to support the validity, accuracy, relevance and precision of the analysis.

(5) An **alternative solution** shall bear the signature and seal of a **Professional Engineer** or **Architect**, or both.

Review

1.3.2.3. (1) The **Chief Fire Official** shall, within 45 days after the receipt of an **alternative solution** submitted under Article 1.3.2.2., review the **alternative solution** for compliance with this Code and notify the **owner** or the **owner's** agent of the decision in writing.

(2) Where an **alternative solution** is not **approved**, the **Chief Fire Official** shall include the reasons in the decision.

(3) Notification shall be served either personally or by mail.

(4) Where notification is by mail, it is deemed to have been served on the fifth day after the date of mailing.

(5) An **owner** or an **owner's** agent who feels aggrieved by a decision not to **approve** an **alternative solution** may, within 30 days after receipt of the refusal, appeal the decision in the same manner as though it were an **Order**.

Implementation

1.3.2.4. **Approved alternative solutions** referred to in this Subsection and the requirements referred to in Clause 1.3.2.5.(3)(b) shall be implemented.

Records

1.3.2.5. (1) Documentation for every

(a) **approved alternative solution** to this Code, and

(b) alternative solution, as defined in the **Building Code**, with respect to fire safety

shall be kept on the premises to which it relates and be made available to the **Chief Fire Official** upon request.

(2) The documentation referred to in Sentence (1) shall be retained for as long as necessary to demonstrate compliance with this Code and the **Building Code**, as applicable.

(3) The **check**, **inspection**, **test**, maintenance and operational requirements

(a) referred to in Clause 1.3.2.2.(2)(b), or

(b) forming part of an alternative solution, as defined in the **Building Code**, with respect to fire safety, where such requirements are not otherwise specifically addressed in Division B

shall be included in the fire safety plan where such a plan is required under Section 2.8 of Division B.

Interpretation

1. (1) In this Act,

"area of employment" means an area of land designated in an official plan for clusters of business and economic uses including, without limitation, the uses listed in subsection (5), or as otherwise prescribed by regulation; ("zone d'emploi")

"area of settlement" means an area of land designated in an official plan for urban uses including urban areas, urban policy areas, towns, villages, hamlets, rural clusters, rural settlement areas, urban systems, rural service centres or future urban use areas, or as otherwise prescribed by regulation; ("zone de peuplement")

"committee of adjustment" means a committee of adjustment constituted under section 44; ("comité de dérogation")

"First Nation" means a band as defined in the *Indian Act* (Canada); ("Première Nation")

"land division committee" means a land division committee constituted under section 56; ("comité de morcellement des terres")

"local appeal body" means an appeal body for certain local land use planning matters, constituted under section 8.1; ("organisme d'appel local")

"local board" means any school board, public utility commission, transportation commission, public library board, board of park management, board of health, police services board, planning board or any other board, commission, committee, body or local authority established or exercising any power or authority under any general or special Act with respect to any of the affairs or purposes of a municipality or of two or more municipalities or portions thereof; ("conseil local")

"Minister" means the Minister of Municipal Affairs and Housing; ("ministre")

"Municipal Board" means the Ontario Municipal Board; ("Commission des affaires municipales")

"prescribed" means prescribed by the regulations; ("prescrit")

"provincial plan" means,

(a) the Greenbelt Plan established under section 3 of the *Greenbelt Act, 2005*,

(b) the Niagara Escarpment Plan established under section 3 of the *Niagara Escarpment Planning and Development Act*,

(c) the Oak Ridges Moraine Conservation Plan established under section 3 of the *Oak Ridges Moraine Conservation Act, 2001*,

(d) a development plan approved under the *Ontario Planning and Development Act, 1994*,

(e) a growth plan approved under the *Places to Grow Act, 2005*, or

(f) a prescribed plan or policy or a prescribed provision of a prescribed plan or policy made or approved by the Lieutenant Governor in Council, a minister of the Crown, a ministry or a board, commission or agency of the Government of Ontario; ("plan provincial")

"public body" means a municipality, a local board, a ministry, department, board, commission, agency or official of a provincial or federal government or a First Nation; ("organisme public")

"public work" means any improvement of a structural nature or other undertaking that is within the jurisdiction of the council of a municipality or a local board; ("travaux publics")

"regulations" means regulations made under this Act. ("règlements")

"renewable energy generation facility" has the same meaning as in the *Electricity Act, 1998*; ("installation de production d'énergie renouvelable")

"renewable energy project" has the same meaning as in the *Green Energy Act, 2009*; ("projet d'énergie renouvelable")

"renewable energy testing facility" has the same meaning as in the *Green Energy Act, 2009*; ("installation d'évaluation du potentiel en énergie renouvelable")

"renewable energy testing project" has the same meaning as in the *Green Energy Act, 2009*; ("projet d'évaluation du potentiel en énergie renouvelable")

"renewable energy undertaking" means a renewable energy generation facility, a renewable energy project, a renewable energy testing facility or a renewable energy testing project; ("entreprise d'énergie renouvelable")

"residential unit" means a unit that,

(a) consists of a self-contained set of rooms located in a building or structure,

(b) is used or intended for use as residential premises, and

(c) contains kitchen and bathroom facilities that are intended for the use of the unit only. ("unité d'habitation") R.S.O. 1990, c. P.13, s. 1; 1994, c. 23, s. 3 (2); 1996, c. 4, s. 1 (1-3); 2002, c. 17, Sched. B, s. 1; 2004, c. 18, s. 1; 2006, c. 23, s. 1 (1-4); 2009, c. 12, Sched. K, s. 1; 2009, c. 12, Sched. L, s. 19.

Limitation

(2) The term "public body" in subsection (1) excludes all ministries of the Province of Ontario except the Ministry of Municipal Affairs and Housing in respect of subsections 17 (24), (36) and (40), 22 (7.4), 34 (19), 38 (4), 45 (12), 51 (39), (43) and (48) and 53 (19) and (27). 1996, c. 4, s. 1 (4); 2006, c. 23, s. 1 (5).

Designation

(3) Despite subsection (2), the Minister may by regulation designate any other ministry of the Province of Ontario to be a public body for the purpose of the provisions referred to in subsection (2). 1996, c. 4, s. 1 (4).

Exclusion

(4) The Minister may by regulation exclude any board, commission, agency or official of the Province of Ontario from the definition of "public body" set out in subsection (1) in respect of the provisions referred to in subsection (2). 1996, c. 4, s. 1 (4).

Uses re "area of employment"

(5) The uses referred to in the definition of "area of employment" in subsection (1) are,

(a) manufacturing uses;

(b) warehousing uses;

(c) office uses;

(d) retail uses that are associated with uses mentioned in clauses (a) to (c); and

(e) facilities that are ancillary to uses mentioned in clauses (a) to (d). 2006, c. 23, s. 1 (6).

Information and material to be made available to public

1.0.1 Information and material that is required to be provided to a municipality or approval authority under this Act shall be made available to the public. 2006, c. 23, s. 2.

Purposes

1.1 The purposes of this Act are,

(a) to promote sustainable economic development in a healthy natural environment within the policy and by the means provided under this Act;

(b) to provide for a land use planning system led by provincial policy;

(c) to integrate matters of provincial interest in provincial and municipal planning decisions;

(d) to provide for planning processes that are fair by making them open, accessible, timely and efficient;

(e) to encourage co-operation and co-ordination among various interests;

(f) to recognize the decision-making authority and accountability of municipal councils in planning. 1994, c. 23, s. 4.

PART I
PROVINCIAL ADMINISTRATION

Provincial interest

2. The Minister, the council of a municipality, a local board, a planning board and the Municipal Board, in carrying out their responsibilities under this Act, shall have regard to, among other matters, matters of provincial interest such as,

(a) the protection of ecological systems, including natural areas, features and functions;

(b) the protection of the agricultural resources of the Province;

(c) the conservation and management of natural resources and the mineral resource base;

(d) the conservation of features of significant architectural, cultural, historical, archaeological or scientific interest;

(e) the supply, efficient use and conservation of energy and water;

(f) the adequate provision and efficient use of communication, transportation, sewage and water services and waste management systems;

(g) the minimization of waste;

(h) the orderly development of safe and healthy communities;

(h.1) the accessibility for persons with disabilities to all facilities, services and matters to which this Act applies;

(i) the adequate provision and distribution of educational, health, social, cultural and recreational facilities;

(j) the adequate provision of a full range of housing, including affordable housing;

(k) the adequate provision of employment opportunities;

(l) the protection of the financial and economic well-being of the Province and its municipalities;

(m) the co-ordination of planning activities of public bodies;

(n) the resolution of planning conflicts involving public and private interests;

(o) the protection of public health and safety;

(p) the appropriate location of growth and development;

(q) the promotion of development that is designed to be sustainable, to support public transit and to be oriented to pedestrians. 1994, c. 23, s. 5; 1996, c. 4, s. 2; 2001, c. 32, s. 31 (1); 2006, c. 23, s. 3; 2011, c. 6, Sched. 2, s. 1.

Decisions of councils and approval authorities

2.1 When an approval authority or the Municipal Board makes a decision under this Act that relates to a planning matter, it shall have regard to,

(a) any decision that is made under this Act by a municipal council or by an approval authority and relates to the same planning matter; and

(b) any supporting information and material that the municipal council or approval authority considered in making the decision described in clause (a). 2006, c. 23, s. 4.

Policy statements

3. (1) The Minister, or the Minister together with any other minister of the Crown, may from time to time issue policy statements that have been approved by the Lieutenant Governor in Council on matters relating to municipal planning that in the opinion of the Minister are of provincial interest. R.S.O. 1990, c. P.13, s. 3 (1).

Minister to confer

(2) Before issuing a policy statement, the Minister shall confer with such persons or public bodies that the Minister considers have an interest in the proposed statement. 1994, c. 23, s. 6 (1).

Notice

(3) If a policy statement is issued under subsection (1), the Minister shall cause it to be published in *The Ontario Gazette* and shall give such further notice of it, in such manner as the Minister considers appropriate, to all members of the Assembly and to any other persons or public bodies that the Minister considers have an interest in the statement. 1994, c. 23, s. 6 (1).

Idem

(4) Each municipality that receives notice of a policy statement under subsection (3) shall in turn give notice of the statement to each local board of the municipality that it considers has an interest in the statement. R.S.O. 1990, c. P.13, s. 3 (4).

Policy statements and provincial plans

(5) A decision of the council of a municipality, a local board, a planning board, a minister of the Crown and a ministry, board, commission or agency of the government, including the Municipal Board, in respect of the exercise of any authority that affects a planning matter,

(a) shall be consistent with the policy statements issued under subsection (1) that are in effect on the date of the decision; and

(b) shall conform with the provincial plans that are in effect on that date, or shall not conflict with them, as the case may be. 2006, c. 23, s. 5.

Same

(6) Comments, submissions or advice affecting a planning matter that are provided by the council of a municipality, a local board, a planning board, a minister or ministry, board, commission or agency of the government,

(a) shall be consistent with the policy statements issued under subsection (1) that are in effect on the date the comments, submissions or advice are provided; and

(b) shall conform with the provincial plans that are in effect on that date, or shall not conflict with them, as the case may be. 2006, c. 23, s. 5.

Duties of Minister unaffected

(7) Except as provided in subsections (5) and (6), nothing in this section affects nor restricts the Minister in carrying out the Minister's duties and responsibilities under this Act. 1996, c. 4, s. 3.

(8), (9) REPEALED: 1996, c. 4, s. 3.

Review

(10) The Minister shall, at least every five years from the date that a policy statement is issued under subsection (1), ensure that a review of the policy statement is undertaken for the purpose of determining the need for a revision of the policy statement. 1994, c. 23, s. 6 (3).

Delegation of Minister's powers

4. (1) The Minister, on the request of the council of any municipality, may, by order, delegate to the council any of the Minister's authority under this Act, other than the authority to approve or the authority to exempt from approval the official plan or amendments to the official plan of the municipality of which it is the council and, where the Minister has delegated any such authority, the council has, in lieu of the Minister, all the powers and rights of the Minister in respect thereof and the council shall be responsible for all matters pertaining thereto, including, without limiting the generality of the foregoing, the referral of any matter to the Municipal Board. R.S.O. 1990, c. P.13, s. 4 (1); 1996, c. 4, s. 4 (1); 1999, c. 12, Sched. M, s. 21; 2006, c. 23, s. 6.

Same

(2) The Minister, on the request of the planning board of any planning area in a territorial district, may, by order, delegate to the planning board any of the Minister's authority under this Act, other than the authority to approve or the authority to exempt from approval an official plan or amendments to an official plan, and where the Minister has delegated any such authority the planning board has, in lieu of the Minister, all the powers and rights of the Minister in respect thereof and the planning board shall be responsible for all matters pertaining thereto, including, without limiting the generality of the foregoing, the referral of any matter to the Municipal Board. R.S.O. 1990, c. P.13, s. 4 (2); 1996, c. 4, s. 4 (2).

Delegation where no request is made

(2.1) The Minister may, after the prescribed notice is given, by order delegate to the council of an upper-tier municipality or a single-tier municipality any of the Minister's authority described in subsection (1) if the municipality has an official plan. 2002, c. 17, Sched. B, s. 2.

Delegation to planning board

(2.2) The Minister may, after the prescribed notice is given, by order delegate to a planning board any of the Minister's authority described in subsection (2) if the planning board has an official plan. 1996, c. 4, s. 4 (3).

(3) REPEALED: 1994, c. 23, s. 7.

Conditions

(4) A delegation made by the Minister under this section may be subject to such conditions as the Minister may by order provide. 1996, c. 4, s. 4 (4).

Withdrawal of delegation of powers

(5) The Minister may by order, accompanied by a written explanation therefor, withdraw any delegation made under this section and, without limiting the generality of the foregoing, such withdrawal may be either in respect of one or more applications for approval specified in the order or in respect of any or all applications for approval made subsequent to the withdrawal of the delegation, and immediately following any such withdrawal the council or the planning board, as the case may be, shall forward to the Minister all papers, plans, documents and other material in the possession of the municipal corporation or the planning board that relate to any matter in respect of which the authority was withdrawn and of which a final disposition was not made by the council or the planning board prior to such withdrawal. R.S.O. 1990, c. P.13, s. 4 (5); 1993, c. 26, s. 49 (4); 1996, c. 4, s. 4 (5).

Further delegation of powers

5. (1) Where the Minister has delegated any authority to a council under section 4, such council may, in turn, by by-law, and subject to such conditions as may have been imposed by the Minister, delegate any of such authority, other than the authority to approve official plans or the authority to exempt from approval plans as official plans or amendments to official plans, to a committee of council or to an appointed officer identified in the by-law either by name or position occupied and such committee or officer, as the case may be, has, in lieu of the Minister, all the powers and rights of the Minister in respect of such delegated authority and shall be responsible for all matters pertaining thereto including the referral of any matter to the Municipal Board. R.S.O. 1990, c. P.13, s. 5 (1); 1996, c. 4, s. 5 (1).

Limitation

(2) Despite subsection (1), a council may not delegate the authority to approve or the authority to exempt from approval amendments to official plans without the prior written approval of the Minister, which approval may be subject to such further conditions as the Minister considers appropriate. R.S.O. 1990, c. P.13, s. 5 (2); 1996, c. 4, s. 5 (2).

Further delegation of powers

(3) In addition to the authority of a council to, in turn, delegate any authority under subsection (1), where the Minister has delegated to a council his or her authority for the giving of consents under section 53, such council may, in turn, by by-law, and subject to such conditions as may have been imposed by the Minister, delegate the authority for the giving of consents to a committee of adjustment constituted under section 44.

Conditions

(4) A delegation made by a council under subsection (1) or (3) may be subject to such conditions as the council may by by-law provide and as are not in conflict with any conditions provided by order of the Minister under section 4.

Withdrawal of delegation of powers

(5) A council may by by-law withdraw any delegation made under subsection (1) or (3), whereupon subsection 4 (5) applies with necessary modifications. R.S.O. 1990, c. P.13, s. 5 (3-5).

Consultation

6. (1) In this section,

"ministry" means any ministry or secretariat of the Government of Ontario and includes a board, commission or agency of the Government. R.S.O. 1990, c. P.13, s. 6 (1); 1998, c. 15, Sched. E, s. 27 (3).

Planning policies

(2) A ministry, before carrying out or authorizing any undertaking that the ministry considers will directly affect any municipality, shall consult with, and have regard for, the established planning policies of the municipality. R.S.O. 1990, c. P.13, s. 6 (2).

Grants

7. The Minister may, out of the money appropriated therefor by the Legislature, make grants of money to assist in the performing of any duty or function of a planning nature. R.S.O. 1990, c. P.13, s. 7.

PART II
LOCAL PLANNING ADMINISTRATION

Planning advisory committee

8. (1) The council of a municipality may appoint a planning advisory committee composed of such persons as the council may determine.

Joint planning by agreement

(2) The councils of two or more municipalities may enter into agreement to provide for the joint undertaking of such matters of a planning nature as may be agreed upon and may appoint a joint planning advisory committee composed of such persons as they may determine.

Remuneration

(3) Persons appointed to a committee under this section may be paid such remuneration and expenses as the council or councils may determine, and where a joint committee is appointed, the councils may by agreement provide for apportioning to their respective municipalities the costs of the payments. R.S.O. 1990, c. P.13, s. 8.

Local appeal body

8.1 (1) If a municipality meets the prescribed conditions, the council may by by-law constitute and appoint one appeal body for certain local land use planning matters, composed of such persons as the council considers advisable, subject to subsections (3), (4) and (5). 2006, c. 23, s. 7.

Local and upper-tier municipalities

(2) For greater certainty, this section applies to both local and upper-tier municipalities. 2006, c. 23, s. 7.

Term and qualifications

(3) A person who is appointed to the local appeal body,

(a) shall serve for the prescribed term, or if no term is prescribed, for the term specified in the by-law; and

(b) shall have the prescribed qualifications, if any. 2006, c. 23, s. 7.

Eligibility criteria

(4) In appointing persons to the local appeal body, the council shall have regard to any prescribed eligibility criteria. 2006, c. 23, s. 7.

Restriction

(5) The council shall not appoint to the local appeal body a person who is,

(a) an employee of the municipality;

(b) a member of a municipal council, land division committee, committee of adjustment, planning board or planning advisory committee; or

(c) a member of a prescribed class. 2006, c. 23, s. 7.

Power to hear appeals

(6) The council may by by-law empower the local appeal body to hear appeals under,

(a) subsection 45 (12);

(b) subsections 53 (14), (19) and (27); or

(c) the provisions listed in both clauses (a) and (b). 2006, c. 23, s. 7.

Effect of by-law under subs. (6)

(7) If a by-law has been passed under subsection (6),

(a) the local appeal body has all the powers and duties of the Municipal Board under the relevant provisions of this Act;

(b) all references in this Act to the Municipal Board in connection with appeals shall be read as references to the local appeal body; and

(c) appeals under the relevant provisions shall be made to the local appeal body, not to the Municipal Board. 2006, c. 23, s. 7.

Prescribed requirements

(8) The local appeal body shall comply with any prescribed requirements including, without limitation, requirements for the rules governing the practice and procedure before the local appeal body. 2006, c. 23, s. 7.

Fee

(9) An appellant shall pay to the local appeal body any fee that the council establishes by by-law. 2006, c. 23, s. 7.

Appeal

(10) An appeal lies from the local appeal body to the Divisional Court, with leave of the Divisional Court, on a question of law. 2006, c. 23, s. 7.

Saving

(11) For greater certainty, the local appeal body does not have power to make determinations under subsection 53 (4.1). 2006, c. 23, s. 7.

Exception, related appeals

(12) Despite subsection (7), an appeal under a provision listed in subsection (6) shall be made to the Municipal Board, not to the local appeal body, if a related appeal,

(a) has previously been made to the Board and has not yet been finally disposed of; or

(b) is made to the Board together with the appeal under a provision listed in subsection (6). 2006, c. 23, s. 7.

Same

(13) For the purposes of subsections (12) and (16), an appeal is a related appeal with respect to an appeal under a provision listed in subsection (6) if it is made,

(a) under section 17, 22, 34, 36, 38, 41 or 51 or in relation to a development permit system; and

(b) in respect of the same matter as the appeal under a provision listed in subsection (6). 2006, c. 23, s. 7.

Dispute

(14) A person may make a motion for directions to have the Municipal Board determine a dispute about whether subsection (12) or (16) applies to an appeal. 2006, c. 23, s. 7.

Final determination

(15) The Municipal Board's determination under subsection (14) is not subject to appeal or review. 2006, c. 23, s. 7.

O.M.B. to assume jurisdiction

(16) If an appeal has been made to a local appeal body under a provision listed in subsection (6) but no hearing has begun, and a notice of appeal is filed in respect of a related appeal, the Municipal Board shall assume jurisdiction to hear the first-mentioned appeal. 2006, c. 23, s. 7.

Same

(17) When the Municipal Board assumes jurisdiction as described in subsection (16), the local appeal body,

(a) shall immediately forward to the Board all information and material in its possession that relates to the appeal; and

(b) shall not take any further action with respect to the appeal. 2006, c. 23, s. 7.

Withdrawal of power

(18) The Minister may by order, accompanied by a written explanation for it, withdraw the power given to a local appeal body under subsections (6) and (7), and the order may be in respect of the appeals specified in the order, subject to subsection (19), or in respect of any or all appeals made after the order is made. 2006, c. 23, s. 7.

Exception

(19) An order made under subsection (18) does not apply to an appeal if the hearing before the local appeal body has begun on or before the date of the order. 2006, c. 23, s. 7.

Effect of withdrawal

(20) If an order is made under subsection (18),

(a) the Municipal Board shall hear all appeals to which the order applies; and

(b) the local appeal body to which the order relates shall forward to the Board all information and material in its possession that relates to any appeal to which the order applies. 2006, c. 23, s. 7.

Revocation of withdrawal

(21) The Minister may by order, accompanied by a written explanation for it, revoke all or part of an order made under subsection (18). 2006, c. 23, s. 7.

Exception

(22) An order made under subsection (21) does not apply to an appeal if the hearing before the Municipal Board has begun on or before the date of the order. 2006, c. 23, s. 7.

Effect of revocation

(23) If an order is made under subsection (21),

(a) the local appeal body shall hear all appeals to which the order applies; and

(b) the Municipal Board shall forward to the local appeal body all information and material in its possession that relates to any appeal to which the order applies. 2006, c. 23, s. 7.

Restriction

(24) This section does not authorize a municipality to,

(a) establish a joint local appeal body together with one or more other municipalities; or

(b) empower a local appeal body that is established by another municipality to hear appeals. 2006, c. 23, s. 7.

City of Toronto

(25) This section does not apply with respect to the City of Toronto. 2006, c. 23, s. 7.

Transition

(26) This section does not apply with respect to an appeal that is made before the day a by-law passed under subsection (6) by the council of the relevant municipality comes into force. 2006, c. 23, s. 7.

Planning area defined by Minister

9. (1) The Minister may define and name a planning area consisting of the whole of two or more municipalities that are situate in a territorial district or consisting of the whole of one or more municipalities and territory without municipal organization.

Planning board for planning area

(2) Where a planning area is defined under subsection (1), the Minister shall establish the planning board for the planning area and specify the name of the board and the number of members to be appointed to it by the council of each municipality within the planning area and the number of members, if any, to be appointed by the Minister.

Appointments to board

(3) The council of each municipality shall appoint to the planning board the number of members specified by the Minister under subsection (2) and, after the initial appointments, the appointments shall be made by each successive council as soon as practicable after the council is organized.

Term of office

(4) The members,

(a) appointed by the council of each municipality shall hold office for the term of the council that appointed them; and

(b) appointed by the Minister shall hold office for the term specified by the Minister in their appointment,

and until their successors are appointed. R.S.O. 1990, c. P.13, s. 9.

Planning area in unorganized territory

10. The Minister may define and name a planning area consisting of territory without municipal organization and may establish and name a planning board for the planning area and appoint the members thereof. R.S.O. 1990, c. P.13, s. 10.

Body corporate

11. (1) A planning board is a body corporate and a majority of its members constitutes a quorum.

Chair

(2) A planning board shall annually elect a chair and a vice-chair who shall preside in the absence of the chair.

Secretary-treasurer, employees, consultants

(3) A planning board shall appoint a secretary-treasurer, who may be a member of the board, and may engage such employees and consultants as are considered appropriate.

Execution of documents

(4) The execution of documents by a planning board shall be evidenced by the signatures of the chair or the vice-chair and of the secretary-treasurer, and the corporate seal of the board. R.S.O. 1990, c. P.13, s. 11.

Estimates

12. (1) A planning board established by the Minister for a planning area consisting of one municipality and territory without municipal organization shall submit annually to the council of the municipality an estimate of its financial requirements for the year and the council may amend such estimate and shall pay to the secretary-treasurer of the planning board out of the money appropriated for the planning board such amounts as may be requisitioned from time to time.

Two or more municipalities

(2) In the case of a planning board established for a planning area consisting of two or more municipalities or consisting of two or more municipalities and territory without municipal organization, the planning board shall annually submit its estimates to the council of each of such municipalities together with a statement as to the proportion thereof to be chargeable to each municipality.

When estimates binding

(3) If the estimates submitted under subsection (2) are approved, or are amended and approved, by the councils of municipalities representing more than one-half of the population of the planning area for which the board was established, the estimates are binding on all the municipalities.

Notification

(4) After the estimates have been approved as provided in subsection (3), the planning board shall so notify each municipality involved and shall notify each such municipality of the total approved estimates and the amount thereof chargeable to it, based on the apportionment set out in the statement submitted under subsection (2).

Where apportionment not satisfactory

(5) If the council of any municipality is not satisfied with the apportionment, it may, within fifteen days after receiving the notice under subsection (4), notify the planning board and the secretary of the Municipal Board that it desires the apportionment to be made by the Board.

Power of O.M.B.

(6) The Municipal Board shall hold a hearing and determine the apportionment and its decision is final.

Payment

(7) Each municipality shall pay to the secretary-treasurer of the planning board such amounts as may be requisitioned from time to time up to the amount determined by the planning board under subsection (4) or by the Municipal Board under subsection (6), as the case may be. R.S.O. 1990, c. P.13, s. 12.

Municipal grants

13. Any municipality within a planning area may make grants of money to the planning board of the planning area. R.S.O. 1990, c. P.13, s. 13.

Duties of planning board

14. (1) A planning board shall provide advice and assistance in respect of such planning matters affecting the planning area as are referred to the board,

(a) by the councils to which the board submits its estimates under section 12, or by any of such councils; or

(b) by the Minister, in the case of a planning board appointed for a planning area consisting solely or partially of territory without municipal organization.

Preparation of official plan

(2) A planning board shall prepare a plan suitable for adoption as the official plan of the planning area, or at the request of any of the councils mentioned in subsection (1), prepare a plan suitable for adoption as the official plan of the municipality of which it is the council. R.S.O. 1990, c. P.13, s. 14.

Joint planning areas

14.1 (1) The councils of two or more local municipalities that are within one or more counties whether or not they form part of a county for municipal purposes may by by-law define a municipal planning area, establish a municipal planning authority for the area and specify the name of the authority.

Approval of by-law

(2) The council of a municipality shall not pass a by-law under subsection (1) unless the proposed by-law is approved by the Minister after consulting with the council of any affected county.

Body corporate

(3) A municipal planning authority is a body corporate.

Composition

(4) All the members of a municipal planning authority shall be members of council.

Number of members

(5) The council of each local municipality shall appoint to the municipal planning authority the number of members prescribed and, after the initial appointments, the appointments shall be made by each successive council as soon as possible after the council is organized.

Term

(6) The members of the municipal planning authority shall hold office for the term of the council that appointed them and until their successors are appointed.

Vacancies

(7) If a vacancy occurs from any cause, the council shall, as soon as possible, appoint a member of its council to the municipal planning authority who shall hold office for the remainder of the unexpired term. 1994, c. 23, s. 8.

Municipal planning authority

14.2 (1) Each member of a municipal planning authority is entitled to one vote. 1994, c. 23, s. 8.

Quorum

(2) A majority of the members of a municipal planning authority constitutes a quorum. 1994, c. 23, s. 8.

Chair

(3) A municipal planning authority shall annually elect a chair and a vice-chair who shall preside in the absence of the chair. 1994, c. 23, s. 8.

Secretary-treasurer

(4) A municipal planning authority shall appoint a secretary-treasurer who may be a member of the authority. 1994, c. 23, s. 8.

Documents

(5) The execution of documents by a municipal planning authority shall be evidenced by the signatures of the chair or the vice-chair and of the secretary-treasurer and the corporate seal of the authority. 1994, c. 23, s. 8.

Records, inspection

(6) The secretary-treasurer shall keep on file minutes and records of all applications and the decisions on them and of all other business of the authority, and section 253 of the *Municipal Act, 2001* applies with necessary modifications in respect of the documents kept. 1994, c. 23, s. 8; 2002, c. 17, Sched. B, s. 3.

Finance

14.3 (1) On or before March 31 of each year, a municipal planning authority shall determine its financial requirements and the proportion of it to be chargeable to each municipality and shall notify the council of each of the municipalities within the municipal planning area of its financial requirements together with a statement as to the proportion of it to be chargeable to each municipality.

Determination by O.M.B.

(2) If the council of any municipality is not satisfied with the apportionment, it may, within 15 days after receiving the notice, notify the municipal planning authority and the Municipal Board that it desires the apportionment to be made by the Board.

Hearing

(3) The Municipal Board shall hold a hearing and determine the apportionment and its decision is final.

Payments

(4) Each municipality shall pay to the secretary-treasurer of the municipal planning authority such amounts as may be requisitioned from time to time up to the amount determined by the municipal planning authority under subsection (1) or by the Municipal Board under subsection (3), as the case may be. 1994, c. 23, s. 8.

County levy

(5) If a municipal planning authority has been established, a county shall raise the amounts required for county land use planning purposes by levying a special rate on rateable property not in the municipal planning area. 1997, c. 29, s. 65.

Expansion

14.4 (1) A municipal planning authority may, upon the request of the council of a local municipality that is within a county, whether or not it forms part of the county for municipal purposes, by by-law redefine the municipal planning area to add the municipality to the planning area and rename the municipal planning authority.

Approval of by-law

(2) A municipal planning authority shall not pass a by-law under subsection (1) unless the proposed by-law is approved by the Minister after consulting with the council of any affected county.

Appointments

(3) The council of a municipality added to a municipal planning authority under subsection (1) shall, as soon as possible, appoint to the authority the number of members prescribed and, after the initial appointment, the appointments shall be made by each successive council, as soon as possible, after the council is organized. 1994, c. 23, s. 8.

Removal

14.5 (1) Upon the request of the council of a local municipality that is within a municipal planning area, the municipal planning authority shall by by-law redefine the municipal planning area to remove the municipality from the planning area and may rename the municipal planning authority.

Approval

(2) A municipal planning authority shall not pass a by-law under subsection (1) unless the proposed by-law is approved by the Minister.

Adjustment

(3) The members of a municipal planning authority appointed by a local municipality which is removed from the authority shall cease to be members of the authority on the date the by-law passed under subsection (1) comes into effect. 1994, c. 23, s. 8.

Dissolution

14.6 (1) A municipal planning authority may by by-law dissolve the municipal planning area and the municipal planning authority.

Approval

(2) A municipal planning authority shall not pass a by-law under subsection (1) unless the proposed by-law is approved by the Minister.

Dissolution by Minister

(3) The Minister may by order dissolve a municipal planning area and a municipal planning authority.

Assets, liabilities

(4) All the assets and liabilities of a municipal planning authority dissolved under this section are assets and liabilities of the municipalities that formed part of the municipal planning area and, if such municipalities cannot agree as to the disposition of the assets and liabilities, the Municipal Board, upon the application of one or more of the municipalities, shall direct a final disposition.

Same

(5) If assets or liabilities are transferred or assigned to a municipality under an agreement or an order of the Municipal Board under this section, the municipality stands in the place of the municipal planning authority for all purposes.

Transitional matters

(6) Despite this or any other Act, the Minister may by order provide for transitional matters which, in the opinion of the Minister, are necessary or expedient to establish, expand or dissolve a municipal planning authority or to remove a municipality from a municipal planning authority. 1994, c. 23, s. 8.

Official plan

14.7 (1) If land in a municipal planning area is covered by the official plan of a county, the parts of the official plan which affect the land in the municipal planning area shall be deemed for all purposes to be the official plan of the municipal planning authority on the day the municipal planning authority is established and the county shall forward to the municipal planning authority all papers, plans and documents and other material that relate to the parts of the official plan that are deemed to be the official plan of the municipal planning authority.

Restriction

(2) The council of a county shall not exercise any power under section 17 in respect of land in the county that is in a municipal planning area. 1994, c. 23, s. 8.

Preparation of plan

(3) A municipal planning authority shall prepare and adopt a plan and, unless exempt from approval, submit it for approval as an official plan in respect of the land in the municipal planning area that is not covered by an official plan deemed under subsection (1) to be the official plan of the municipal planning authority. 1994, c. 23, s. 8; 1996, c. 4, s. 6 (1).

Application

(4) Section 17 applies with necessary modification to the preparation and adoption of a plan by a municipal planning authority and, unless exempt from approval, the approval of the plan as an

official plan as though the planning authority were the council of the municipality and the secretary-treasurer were the clerk of the municipality. 1996, c. 4, s. 6 (2).

Deemed official plan

(5) If land that is in a local municipality that forms part of a county for municipal purposes is removed from a municipal planning area, the parts of the official plan of the municipal planning authority which affect the land removed from the municipal planning area shall be deemed for all purposes to be the official plan of the county on the day the by-law removing the land is passed and the municipal planning authority shall forward to the county all papers, plans and documents and other materials that relate to the parts of the plan that are deemed to be the official plan of the county.

Revocation

(6) If land that is in a local municipality that does not form part of a county for municipal purposes is removed from a municipal planning area, the parts of the official plan which affect the land removed from the municipal planning area are revoked.

Deemed plan

(7) If land that is in a local municipality that forms part of a county for municipal purposes is in a municipal planning area that is dissolved, the parts of the official plan of the municipal planning authority which affect land in the local municipality shall be deemed for all purposes to be the official plan of the county on the day the municipal planning authority is dissolved.

Revocation

(8) If land that is in a local municipality that does not form part of a county for municipal purposes is in a municipal planning area that is dissolved, the parts of the official plan of the municipal planning authority which affect land in the local municipality are revoked.

Conformity with upper tier plan

(9) Section 27 applies with necessary modifications to the official plan of a planning authority as though the official plan of the municipal planning authority were the official plan of a county and the municipal planning authority were the council of a county. 1994, c. 23, s. 8.

Deemed council, municipality

14.8 (1) Sections 2 and 3, subsections 4 (1), (4) and (5), 5 (1), (2), (4) and (5), 6 (2), 8 (1) and (3), sections 16, 16.1, 17, 20, 21, 22, 23 and 26, subsection 51 (37) and (45), sections 62.1, 65, 66, 68 and 69 apply to a municipal planning area or a municipal planning authority, as appropriate, and the municipal planning area and municipal planning authority shall be deemed to be a municipality or a council of a municipality, respectively, for those purposes. 1994, c. 23, s. 8.

(2) REPEALED: 1996, c. 4, s. 7.

Upper-tier municipalities, planning functions

15. The council of an upper-tier municipality, on such conditions as may be agreed upon with the council of a lower-tier municipality, may,

(a) assume any authority, responsibility, duty or function of a planning nature that the lower-tier municipality has under this or any other Act; or

(b) provide advice and assistance to the lower-tier municipality in respect of planning matters generally. 2002, c. 17, Sched. B, s. 4.

PART III
OFFICIAL PLANS

Contents of official plan

16. (1) An official plan shall contain,

(a) goals, objectives and policies established primarily to manage and direct physical change and the effects on the social, economic and natural environment of the municipality or part of it, or an area that is without municipal organization; and

(b) such other matters as may be prescribed. 2006, c. 23, s. 8.

Same

(2) An official plan may contain,

(a) a description of the measures and procedures proposed to attain the objectives of the plan;

(b) a description of the measures and procedures for informing and obtaining the views of the public in respect of a proposed amendment to the official plan or proposed revision of the plan or in respect of a proposed zoning by-law; and

(c) such other matters as may be prescribed. 2006, c. 23, s. 8.

Second unit policies

(3) Without limiting what an official plan is required to or may contain under subsection (1) or (2), an official plan shall contain policies that authorize the use of a second residential unit by authorizing,

(a) the use of two residential units in a detached house, semi-detached house or rowhouse if no building or structure ancillary to the detached house, semi-detached house or rowhouse contains a residential unit; and

(b) the use of a residential unit in a building or structure ancillary to a detached house, semi-detached house or rowhouse if the detached house, semi-detached house or rowhouse contains a single residential unit. 2011, c. 6, Sched. 2, s. 2.

(4) REPEALED: 1996, c. 4, s. 8 (2).

Prescribed process

16.1 The council of a municipality or a planning board may by by-law elect to follow the prescribed processes and develop the materials prescribed for the preparation of an official plan and any processes followed or materials developed in the preparation of the plan may be considered under the *Environmental Assessment Act* with respect to any requirement that it must meet under that Act. 1994, c. 23, s. 9.

Approvals

17. (1) Except as otherwise provided in this section, the Minister is the approval authority in respect of the approval of a plan as an official plan for the purposes of this section. 1996, c. 4, s. 9.

Approval by upper-tier municipality

(2) An upper-tier municipality is the approval authority in respect of an official plan of a lower-tier municipality for the purposes of this section if the upper-tier municipality has an approved official plan. 2002, c. 17, Sched. B, s. 5 (1).

(3) REPEALED: 2002, c. 17, Sched. B, s. 5 (2).

Upper-tier become approval authority

(4) On the day that all or part of a plan that covers an upper-tier municipality comes into effect as the official plan of a municipality, the upper-tier municipality is the approval authority in respect of the approval of a plan as an official plan of a lower-tier municipality. 2002, c. 17, Sched. B, s. 5 (3).

(5) REPEALED: 2002, c. 17, Sched. B, s. 5 (4).

Removal of power

(6) The Minister may by order, accompanied by a written explanation for it, remove the power given under subsection (2) or (4) and the order may be in respect of the plan or proposed official plan amendment specified in the order or in respect of any or all plans or proposed official plan amendments submitted for approval after the order is made. 1996, c. 4, s. 9; 2002, c. 17, Sched. B, s. 5 (5).

Transfer of approval authority

(7) If an order is made under subsection (6), the Minister becomes the approval authority in respect of the plans and proposed official plan amendments to which the order relates and the council of the former approval authority shall forward to the Minister all papers, plans, documents and other material that relate to any matter in respect of which the power was removed and of which a final disposition was not made by the approval authority. 1996, c. 4, s. 9.

Revocation

(8) If the Minister revokes the order or part of the order made under subsection (6), the council reverts back to being the approval authority in respect of all plans or proposed official plan amendments to which the revoked order or revoked part of the order applied. 1996, c. 4, s. 9.

Exemption

(9) Subject to subsection 26 (6), the Minister may by order exempt a plan or proposed official plan amendment from his or her approval under this section and the order may be in respect of the plan or proposed official plan amendment specified in the order or in respect of any or all plans or proposed official plan amendments. 1996, c. 4, s. 9; 2006, c. 23, s. 9 (1).

Authority to exempt

(10) The Minister may by order authorize an approval authority to pass a by-law,

(a) exempting any or all plans or proposed official plan amendments from its approval under this section; and

(b) exempting a plan or proposed official plan amendment from its approval under this section. 1996, c. 4, s. 9.

Conditions

(11) An exemption under subsection (9) or (10) or an authorization under subsection (10) may be subject to such conditions as the Minister or the approval authority may provide in the order or by-law. 1996, c. 4, s. 9.

Removal of exemption or authorization

(12) The Minister may by order or an approval authority may by by-law, accompanied by a written explanation for it, remove any exemption made under subsection (9) or (10) or any authorization made under subsection (10). 1996, c. 4, s. 9.

Mandatory adoption

(13) A plan shall be prepared and adopted and, unless exempt from approval, submitted for approval by the council of a prescribed municipality. 2002, c. 17, Sched. B, s. 5 (6).

Discretionary adoption

(14) The council of a municipality not prescribed under subsection (13) may prepare and adopt a plan and, unless the plan is exempt from approval, submit it for approval. 2002, c. 17, Sched. B, s. 5 (7).

Consultation and public meeting

(15) In the course of the preparation of a plan, the council shall ensure that,

(a) the appropriate approval authority is consulted on the preparation of the plan and given an opportunity to review all supporting information and material and any other prescribed information and material, even if the plan is exempt from approval;

(b) the prescribed public bodies are consulted on the preparation of the plan and given an opportunity to review all supporting information and material and any other prescribed information and material;

(c) adequate information and material, including a copy of the current proposed plan, is made available to the public, in the prescribed manner, if any; and

(d) at least one public meeting is held for the purpose of giving the public an opportunity to make representations in respect of the current proposed plan. 2006, c. 23, s. 9 (2).

Open house

(16) If the plan is being revised under section 26 or amended in relation to a development permit system, the council shall ensure that at least one open house is held for the purpose of giving the public an opportunity to review and ask questions about the information and material made available under clause (15) (c). 2006, c. 23, s. 9 (2).

Notice

(17) Notice of the public meeting required under clause (15) (d) and of the open house, if any, required under subsection (16) shall,

(a) be given to the prescribed persons and public bodies, in the prescribed manner; and

(b) be accompanied by the prescribed information. 2006, c. 23, s. 9 (2).

Timing of open house

(18) If an open house is required under subsection (16), it shall be held no later than seven days before the public meeting required under clause (15) (d) is held. 2006, c. 23, s. 9 (2).

Timing of public meeting

(19) The public meeting required under clause (15) (d) shall be held no earlier than 20 days after the requirements for giving notice have been complied with. 2006, c. 23, s. 9 (2).

Information and material

(19.1) The information and material referred to in clause (15) (c), including a copy of the current proposed plan, shall be made available to the public at least 20 days before the public meeting required under clause (15) (d) is held. 2006, c. 23, s. 9 (2).

Participation in public meeting

(19.2) Every person who attends a public meeting required under clause (15) (d) shall be given an opportunity to make representations in respect of the current proposed plan. 2006, c. 23, s. 9 (2).

Alternative procedure

(19.3) If an official plan sets out alternative measures for informing and obtaining the views of the public in respect of amendments that may be proposed for the plan and if the measures are complied with, subsections (15) to (19.2) do not apply to the proposed amendments, but subsections (19.4) and (19.6) do apply. 2006, c. 23, s. 9 (2).

Open house

(19.4) If subsection (19.3) applies and the plan is being revised under section 26 or amended in relation to a development permit system,

(a) the council shall ensure that at least one open house is held for the purpose of giving the public an opportunity to review and ask questions about the proposed amendments; and

(b) if a public meeting is also held, the open house shall be held no later than seven days before the public meeting. 2006, c. 23, s. 9 (2).

Information

(19.5) At a public meeting under clause (15) (d), the council shall ensure that information is made available to the public regarding who is entitled to appeal under subsections (24) and (36). 2006, c. 23, s. 9 (2).

Where alternative procedures followed

(19.6) If subsection (19.3) applies, the information required under subsection (19.5) shall be made available to the public at a public meeting or in the manner set out in the official plan for informing and obtaining the views of the public in respect of the proposed amendments. 2006, c. 23, s. 9 (2).

Submissions

(20) Any person or public body may make written submissions to the council before a plan is adopted. 1996, c. 4, s. 9.

Comments

(21) The council shall provide to any person or public body that the council considers may have an interest in the plan adequate information and material, including a copy of the plan and, before adopting the plan, shall give them an opportunity to submit comments on it up to the time specified by the council. 1996, c. 4, s. 9; 2006, c. 23, s. 9 (3).

Adoption of plan

(22) When the requirements of subsections (15) to (21), as appropriate, have been met and the council is satisfied that the plan as finally prepared is suitable for adoption, the council may by by-law adopt all or part of the plan and, unless the plan is exempt from approval, submit it for approval. 1996, c. 4, s. 9.

Notice

(23) The council shall, not later than 15 days after the day the plan was adopted, ensure that written notice is given of its adoption containing the prescribed information to,

(a) the appropriate approval authority, whether or not the plan is exempt from approval, unless the approval authority has notified the municipality that it does not wish to receive copies of the notices of adoption;

(b) each person or public body that filed with the clerk of the municipality a written request to be notified if the plan is adopted; and

(c) any other person or public body prescribed. 1996, c. 4, s. 9.

Right to appeal

(24) If the plan is exempt from approval, any of the following may, not later than 20 days after the day that the giving of notice under subsection (23) is completed, appeal all or part of the decision of council to adopt all or part of the plan to the Municipal Board by filing a notice of appeal with the clerk of the municipality:

1. A person or public body who, before the plan was adopted, made oral submissions at a public meeting or written submissions to the council.
2. The Minister.
3. The appropriate approval authority.
4. In the case of a request to amend the plan, the person or public body that made the request. 2006, c. 23, s. 9 (4).

No appeal re second unit policies

(24.1) Despite subsection (24), there is no appeal in respect of the policies described in subsection 16 (3), including, for greater certainty, any requirements or standards that are part of such policies. 2011, c. 6, Sched. 2, s. 3 (1).

Exception

(24.2) Subsection (24.1) does not apply to an official plan or official plan amendment adopted in accordance with subsection 26 (1). 2006, c. 23, s. 9 (4).

Notice of appeal

(25) The notice of appeal filed under subsection (24) must,

(a) set out the specific part of the plan to which the notice applies, if the notice does not apply to all of the plan;

(b) set out the reasons for the appeal; and

(c) be accompanied by the fee prescribed under the *Ontario Municipal Board Act*. 1996, c. 4, s. 9.

Timing

(26) For the purposes of subsections (24) and (36), the giving of written notice shall be deemed to be completed,

(a) where notice is given by personal service, on the day that the serving of all required notices is completed;

(b) where notice is given by mail, on the day that the mailing of all required notices is completed; and

(c) where notice is given by telephone transmission of a facsimile of the notice, on the day that the transmission of all required notices is completed. 1996, c. 4, s. 9.

Decision final

(27) If no notice of appeal is filed under subsection (24) in respect of all or part of the decision of council and the time for filing appeals has expired,

(a) the decision of council or the part of the decision that is not the subject of an appeal is final; and

(b) the plan or part of the plan that was adopted and that is not the subject of an appeal comes into effect as an official plan or part of an official plan on the day after the last day for filing a notice of appeal. 1996, c. 4, s. 9.

Declaration

(28) A sworn declaration of an employee of the municipality or of the approval authority that notice was given as required by subsection (23) or (35) or that no notice of appeal was filed under subsection (24) or (36) within the time allowed for appeal is conclusive evidence of the facts stated in it. 1996, c. 4, s. 9.

Forwarding of record, etc.

(29) If a notice of appeal under subsection (24) is filed, the clerk of the municipality shall ensure that,

(a) a record is compiled which includes the prescribed information and material;

(b) the record, the notice of appeal and the fee prescribed under the *Ontario Municipal Board Act* are forwarded to the Municipal Board within 15 days after the last day for filing a notice of appeal;

(c) the notice of appeal and the record are forwarded to the appropriate approval authority within 15 days after the last day for filing a notice of appeal, whether or not the plan is exempt from the requirement for an approval, unless the approval authority has notified the municipality that it does not wish to receive copies of the notices of appeal and the records; and

(d) such other information or material as the Municipal Board may require in respect of the appeal is forwarded to the Board. 1996, c. 4, s. 9; 1999, c. 12, Sched. M, s. 22 (2).

Exception

(29.1) Despite clause (29) (b), if all appeals under subsection (24) in respect of all or part of the decision of council are withdrawn within 15 days after the last day for filing a notice of appeal, the municipality is not required to forward the materials described under clauses (29) (b) and (d) to the Municipal Board and under clause (29) (c) to the appropriate approval authority. 1999, c. 12, Sched. M, s. 22 (3).

Where appeals withdrawn

(29.2) If all appeals under subsection (24) in respect of all or part of the decision of council are withdrawn within 15 days after the last day for filing a notice of appeal, clauses (30) (a) and (b) apply. 1999, c. 12, Sched. M, s. 22 (3).

Withdrawal of appeals

(30) If all appeals under subsection (24) in respect of all or part of the decision of council are withdrawn and the time for filing appeals has expired, the secretary of the Municipal Board shall notify the clerk of the municipality that made the decision and,

(a) the decision or the part of the decision that was the subject of an appeal is final; and

(b) the plan or part of the plan that was adopted and in respect of which all appeals have been withdrawn comes into effect as an official plan or part of an official plan on the day the last outstanding appeal has been withdrawn. 1996, c. 4, s. 9.

Same

(30.1) Subsection (30) also applies, with necessary modifications, when there is no longer any appeal with respect to a particular part of the decision of council as the result of a partial withdrawal of one or more appeals. 2006, c. 23, s. 9 (5).

Record

(31) If the plan is not exempt from approval, the council shall cause to be compiled and forwarded to the approval authority, not later than 15 days after the day the plan was adopted, a record which shall include the prescribed information and material and any fee under section 69 or 69.1. 1996, c. 4, s. 9.

Other information

(32) An approval authority may require that a council provide such other information or material that the approval authority considers it may need. 1996, c. 4, s. 9.

Refusal to consider

(33) Until the approval authority has received the information, material and fee referred to in subsection (31),

(a) the approval authority may refuse to accept or further consider the plan; and

(b) the time period referred to in subsection (40) does not begin. 1996, c. 4, s. 9.

Action by approval authority

(34) The approval authority may confer with any person or public body that it considers may have an interest in the plan and may,

(a) approve, modify and approve as modified or refuse to approve a plan; or

(b) approve, modify and approve as modified or refuse to approve part or parts of the plan. 1996, c. 4, s. 9.

Notice

(35) If the approval authority makes a decision under subsection (34) it shall ensure that written notice of its decision containing the prescribed information is given to,

(a) the council or planning board that adopted the plan;

(b) each person or public body that made a written request to be notified of the decision;

(c) each municipality or planning board to which the plan would apply if approved; and

(d) any other person or public body prescribed. 1996, c. 4, s. 9.

Appeal to O.M.B.

(36) Any of the following may, not later than 20 days after the day that the giving of notice under subsection (35) is completed, appeal all or part of the decision of the approval authority to the Municipal Board by filing a notice of appeal with the approval authority:

1. A person or public body who, before the plan was adopted, made oral submissions at a public meeting or written submissions to the council.
2. The Minister.
3. In the case of a request to amend the plan, the person or public body that made the request. 2006, c. 23, s. 9 (6).

No appeal re second unit policies

(36.1) Despite subsection (36), there is no appeal in respect of the policies described in subsection 16 (3), including, for greater certainty, any requirements or standards that are part of such policies. 2011, c. 6, Sched. 2, s. 3 (2).

Exception

(36.2) Subsection (36.1) does not apply to an official plan or official plan amendment adopted in accordance with subsection 26 (1). 2006, c. 23, s. 9 (6).

Contents of notice

(37) The notice of appeal under subsection (36) must,

(a) set out the specific part or parts of the plan to which the notice of appeal applies unless the notice applies to all of the plan;

(b) set out the reasons for the appeal; and

(c) be accompanied by the fee prescribed under the *Ontario Municipal Board Act*. 1996, c. 4, s. 9.

Decision final

(38) If no notice of appeal is filed under subsection (36) in respect of all or part of the decision of the approval authority and the time for filing appeals has expired,

(a) the decision of the approval authority or the part of the decision that is not the subject of an appeal is final; and

(b) the plan or part of the plan that was approved and that is not the subject of an appeal comes into effect as an official plan or part of an official plan on the day after the last day for filing a notice of appeal. 1996, c. 4, s. 9.

Withdrawal of appeals

(39) If all appeals made under subsection (36) in respect of all or part of the decision of the approval authority are withdrawn and if the time for filing notice of appeal has expired, the secretary of the Municipal Board shall notify the approval authority that made the decision and,

(a) the decision or that part of the decision that was the subject of the appeal is final; and

(b) the plan or part of the plan that was approved and in respect of which all the appeals have been withdrawn comes into effect as an official plan or part of an official plan on the day the last outstanding appeal has been withdrawn. 1996, c. 4, s. 9.

Appeal to O.M.B.

(40) If the approval authority fails to give notice of a decision in respect of all or part of a plan within 180 days after the day the plan is received by the approval authority, any person or public body may appeal to the Municipal Board with respect to all or any part of the plan in respect of which no notice of a decision was given by filing a notice of appeal with the approval authority. 1996, c. 4, s. 9; 2004, c. 18, s. 3 (1).

Notice of appeal

(41) A notice of appeal filed under subsection (40) must,

(a) set out the specific part of the plan to which the appeal applies, if the notice does not apply to all of the plan; and

(b) be accompanied by the fee prescribed under the *Ontario Municipal Board Act*. 1996, c. 4, s. 9.

Documents to O.M.B.

(42) If an approval authority receives a notice of appeal under subsection (36) or (40), it shall ensure that,

(a) a record is compiled which includes the prescribed information and material;

(b) the record, notice of appeal and the fee prescribed under the *Ontario Municipal Board Act* are forwarded to the Municipal Board within 15 days after the last day for filing a notice of appeal under subsection (36) or within 15 days after the notice of appeal under subsection (40) was filed, as the case may be; and

(c) such other information or material as the Municipal Board may require in respect of the appeal is forwarded to the Board. 1996, c. 4, s. 9.

Exception

(42.1) Despite clause (42) (b), if all appeals in respect of all or part of the plan are withdrawn within 15 days after the last day for filing a notice of appeal under subsection (36) or within 15 days after the notice of appeal under subsection (40) was filed, the approval authority is not required to forward the materials described under clauses (42) (b) and (c) to the Municipal Board. 1999, c. 12, Sched. M, s. 22 (3).

Appeals withdrawn, decision

(42.2) If all appeals made under subsection (36) in respect of all or part of the decision of the approval authority are withdrawn within 15 days after the last day for filing a notice of appeal, clauses (39) (a) and (b) apply. 1999, c. 12, Sched. M, s. 22 (3).

Appeals withdrawn, plan

(42.3) If all appeals under subsection (40) with respect to all or part of a plan are withdrawn within 15 days after the last day for filing a notice of appeal, the approval authority may proceed to make a decision under subsection (34) in respect of all or part of the plan, as the case may be. 1999, c. 12, Sched. M, s. 22 (3).

Appeals withdrawn

(43) If all appeals under subsection (40) with respect to all or part of a plan are withdrawn, the Municipal Board shall notify the approval authority and the approval authority may proceed to make a decision under subsection (34) in respect of all or part of the plan, as the case may be. 1996, c. 4, s. 9.

Hearing

(44) On an appeal to the Municipal Board, the Board shall hold a hearing of which notice shall be given to such persons or such public bodies and in such manner as the Board may determine. 1996, c. 4, s. 9.

Restriction re adding parties

(44.1) Despite subsection (44), in the case of an appeal under subsection (24) or (36), only the following may be added as parties:

1. A person or public body who satisfies one of the conditions set out in subsection (44.2).
2. The Minister.
3. The appropriate approval authority. 2006, c. 23, s. 9 (7).

Same

(44.2) The conditions mentioned in paragraph 1 of subsection (44.1) are:

1. Before the plan was adopted, the person or public body made oral submissions at a public meeting or written submissions to the council.
2. The Municipal Board is of the opinion that there are reasonable grounds to add the person or public body as a party. 2006, c. 23, s. 9 (7).

New evidence at hearing

(44.3) This subsection applies if information and material that is presented at the hearing of an appeal under subsection (24) or (36) was not provided to the municipality before the council made the decision that is the subject of the appeal. 2006, c. 23, s. 9 (7).

Same

(44.4) When subsection (44.3) applies, the Municipal Board may, on its own initiative or on a motion by the municipality or any party, consider whether the information and material could have materially affected the council's decision and, if the Board determines that it could have done so, it shall not be admitted into evidence until subsection (44.5) has been complied with and the prescribed time period has elapsed. 2006, c. 23, s. 9 (7).

Notice to council

(44.5) The Municipal Board shall notify the council that it is being given an opportunity to,

(a) reconsider its decision in light of the information and material; and

(b) make a written recommendation to the Board. 2006, c. 23, s. 9 (7).

Council's recommendation

(44.6) The Municipal Board shall have regard to the council's recommendation if it is received within the time period referred to in subsection (44.4), and may but is not required to do so if it is received afterwards. 2006, c. 23, s. 9 (7).

Conflict with *SPPA*

(44.7) Subsections (44.1) to (44.6) apply despite the *Statutory Powers Procedure Act*. 2006, c. 23, s. 9 (7).

Dismissal without hearing

(45) Despite the *Statutory Powers Procedure Act* and subsection (44), the Municipal Board may dismiss all or part of an appeal without holding a hearing on its own initiative or on the motion of any party if,

(a) it is of the opinion that,

(i) the reasons set out in the notice of appeal do not disclose any apparent land use planning ground upon which the plan or part of the plan that is the subject of the appeal could be approved or refused by the Board,

(ii) the appeal is not made in good faith or is frivolous or vexatious,

(iii) the appeal is made only for the purpose of delay, or

(iv) the appellant has persistently and without reasonable grounds commenced before the Board proceedings that constitute an abuse of process;

(b) REPEALED: 2006, c. 23, s. 9 (10).

(c) the appellant has not provided written reasons with respect to an appeal under subsection (24) or (36);

(d) the appellant has not paid the fee prescribed under the *Ontario Municipal Board Act*; or

(e) the appellant has not responded to a request by the Municipal Board for further information within the time specified by the Board. 1996, c. 4, s. 9; 2006, c. 23, s. 9 (8-10).

Same

(45.1) Despite the *Statutory Powers Procedure Act* and subsection (44), the Municipal Board may, on its own initiative or on the motion of the municipality, the appropriate approval authority or the Minister, dismiss all or part of an appeal without holding a hearing if, in the Board's opinion, the application to which the appeal relates is substantially different from the application that was before council at the time of its decision. 2006, c. 23, s. 9 (11).

Representation

(46) Before dismissing all or part of an appeal, the Municipal Board shall notify the appellant and give the appellant the opportunity to make representation on the proposed dismissal but this subsection does not apply if the appellant has not complied with a request made under clause (45) (e). 2000, c. 26, Sched. K, s. 5 (1).

Dismissal

(46.1) Despite the *Statutory Powers Procedure Act*, the Municipal Board may dismiss all or part of an appeal after holding a hearing or without holding a hearing on the motion under subsection (45) or (45.1), as it considers appropriate. 2006, c. 23, s. 9 (12).

Dismissal

(47) If the Municipal Board dismisses all appeals made under subsection (24) or (36) in respect of all or part of a decision without holding a hearing and if the time for filing notices of appeal has expired, the secretary of the Municipal Board shall notify the clerk of the municipality or the approval authority and,

(a) the decision or that part of the decision that was the subject of the appeal is final; and

(b) any plan or part of the plan that was adopted or approved and in respect of which all the appeals have been dismissed comes into effect as an official plan or part of an official plan on the day after the day the last outstanding appeal has been dismissed. 1996, c. 4, s. 9.

Same

(48) If the Municipal Board dismisses an appeal under subsection (40) without holding a hearing and if there is no other appeal in respect of the same matter, the secretary of the Board shall notify the approval authority and the approval authority may then proceed to make a decision under subsection (34) in respect of all or part of the plan, as the case may be. 1996, c. 4, s. 9.

Transfer

(49) If a notice of appeal under subsection (24), (36) or (40) is received by the Municipal Board, the Board may require that a municipality or approval authority transfer to the Board any other part of the plan that is not in effect and to which the notice of appeal does not apply. 1996, c. 4, s. 9.

Powers of O.M.B.

(50) On an appeal or a transfer, the Municipal Board may approve all or part of the plan as all or part of an official plan, make modifications to all or part of the plan and approve all or part of the plan as modified as an official plan or refuse to approve all or part of the plan. 1996, c. 4, s. 9.

Same

(50.1) For greater certainty, subsection (50) does not give the Municipal Board power to approve or modify any part of the plan that,

(a) is in effect; and

(b) was not dealt with in the decision of council to which the notice of appeal relates. 2006, c. 23, s. 9 (13).

Matters of provincial interest

(51) Where an appeal is made to the Municipal Board under this section, the Minister, if he or she is of the opinion that a matter of provincial interest is, or is likely to be, adversely affected by the plan or the parts of the plan in respect of which the appeal is made, may so advise the Board in writing not later than 30 days before the day fixed by the Board for the hearing of the appeal and the Minister shall identify,

(a) the provisions of the plan by which the provincial interest is, or is likely to be, adversely affected; and

(b) the general basis for the opinion that a matter of provincial interest is, or is likely to be, adversely affected. 2004, c. 18, s. 3 (2).

No hearing or notice required

(52) The Minister is not required to give notice or to hold a hearing before taking any action under subsection (51). 2004, c. 18, s. 3 (2).

Confirmation by L.G. in C.

(53) If the Municipal Board has received notice from the Minister under subsection (51), the decision of the Board is not final and binding in respect of the provisions identified in the notice unless the Lieutenant Governor in Council has confirmed the decision in respect of the provisions. 2004, c. 18, s. 3 (2).

Action of L.G. in C.

(54) The Lieutenant Governor in council may confirm, vary or rescind the decision of the Municipal Board in respect of the provisions of the plan identified in the notice and in doing so may direct the Minister to modify the provisions of the plan. 2004, c. 18, s. 3 (2).

Delegation of approval authority

17.1 (1) If an upper-tier municipality is the approval authority under section 17 in respect of the approval of official plans of lower-tier municipalities, the council may by by-law delegate all or any of the authority to approve amendments to official plans to a committee of council or to an appointed officer identified in the by-law by name or position occupied. 2002, c. 17, Sched. B, s. 6.

Conditions

(2) A delegation of authority made by a council under subsection (1) may be subject to such conditions as the council by by-law provides. 1994, c. 23, s. 10.

Withdrawal of delegation

(3) A council may by by-law withdraw a delegation of authority made by it under subsection (1) and the withdrawal may be in respect of one or more requests for approval specified in the by-law or any or all requests for approval in respect of which a final disposition was not made by the committee or officer before the withdrawal. 1994, c. 23, s. 10.

Recommendation of plan

18. (1) Where a plan is prepared by a planning board, the plan shall not be recommended to any council for adoption as an official plan unless it is approved by a vote of the majority of all the members of the planning board. R.S.O. 1990, c. P.13, s. 18 (1).

Submission of plan to council

(2) When the plan is approved by the planning board, the board shall submit a copy thereof, certified by the secretary-treasurer of the board to be a true copy,

(a) in the case of a plan prepared for a planning area, to the council of each municipality that is within the planning area; and

(b) in the case of a plan prepared at the request of a single municipality, to the council of that municipality,

together with a recommendation that it be adopted by the council. R.S.O. 1990, c. P.13, s. 18 (2).

Adoption of plan

(3) Each council to which the plan is submitted may, subject to subsections 17 (15) to (22), by by-law adopt the plan and the clerk of each municipality, the council of which adopted the plan, shall provide the secretary-treasurer of the planning board with a certified copy of the adopting by-law and shall comply with subsections 17 (23), (32), (33) and (34). R.S.O. 1990, c. P.13, s. 18 (3); 1994, c. 23, s. 11 (1); 1996, c. 4, s. 11 (1).

Submission of plan

(4) When the secretary-treasurer of the planning board has received a certified copy of an adopting by-law from a majority of the councils to which the plan was submitted, he or she shall, unless it is exempt from an approval, submit the plan for approval together with each certified copy of the adopting by-law and subsections 17 (31) to (50.1) apply with necessary modifications in respect of the plan as if the planning board were the council of a municipality and the secretary-treasurer of the planning board were the clerk of the municipality. 1996, c. 4, s. 11 (2); 2006, c. 23, s. 10 (1).

Application of subss. 17 (15-50)

(5) Where a planning area consists of the whole of one or more municipalities and territory without municipal organization subsections 17 (15) to (50.1) apply, with necessary modifications, in respect of the part of the planning area that consists of territory without municipal organization as though the planning board were the council of a municipality and the secretary-treasurer of the planning board were the clerk of the municipality. R.S.O. 1990, c. P.13, s. 18 (5); 1994, c. 23, s. 11 (3); 1996, c. 4, s. 11 (3); 2006, c. 23, s. 10 (2).

Unorganized territory

19. In a planning area consisting solely of territory without municipal organization, section 17 applies with necessary modifications to a plan being prepared and adopted by a planning board and that is to come into effect as the official plan of the planning board as if the planning board were a council of a municipality and the secretary-treasurer were the clerk. 1996, c. 4, s. 12.

Deemed council

19.1 Sections 34 to 39 and 45 apply in respect of land within the planning area consisting of territory without municipal organization and the planning board shall be deemed to be a council of a local municipality and the secretary-treasurer of the planning board shall be deemed to be the clerk of the municipality for those purposes. 1994, c. 23, s. 12.

Lodging of plan

20. (1) A certified copy of the official plan shall be lodged in the office of the clerk of each municipality to which the plan or any part of the plan applies.

Who to lodge plan

(2) The lodging required by subsection (1) shall be carried out,

(a) in the case of an official plan that applies to only one municipality or part thereof or to only one municipality and territory without municipal organization, by the clerk of the municipality; and

(b) in the case of an official plan that applies to more than one municipality or parts thereof, by the clerk of the municipality that has the largest population.

Public inspection

(3) All copies lodged under subsection (1) shall be available for public inspection during office hours. R.S.O. 1990, c. P.13, s. 20.

Amendment or repeal of plan

21. (1) Except as hereinafter provided, the provisions of this Act with respect to an official plan apply, with necessary modifications, to amendments thereto or the repeal thereof, and the council of a municipality that is within a planning area may initiate an amendment to or the repeal of any official plan that applies to the municipality, and section 17 applies to any such amendment or repeal. R.S.O. 1990, c. P.13, s. 21 (1).

(2) REPEALED: 1994, c. 23, s. 13.

Request for amendment

22. (1) If a person or public body requests a council to amend its official plan, the council shall,

(a) forward a copy of the request and the information and material required under subsections (4) and (5), if any to the appropriate approval authority, whether or not the requested amendment is exempt from approval; and

(b) hold a public meeting under subsection 17 (15) or comply with the alternative measures set out in the official plan. 1996, c. 4, s. 13; 2004, c. 18, s. 4 (1); 2006, c. 23, s. 11 (1).

Request to planning board
